Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Trials of a Congressman's Wife

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 1, 1957

Mr. NEUBERGER. Mr. President, Senators and Representatives in considerable numbers demonstrate by their wide use of newsletters, tape recordings, and columns in newspapers the importance they place on a well-informed electorate. In this highly vocal era, no opportunity is overlooked to reach the public eye and ear. All this, we know, means we are living in the heyday of the public-relations counsel. Although we may criticize sharply the way he at times employs his arts, he is, after all, only making use of the very new and very old techniques placed at his disposal.

I am sure these counselors would applaud enthusiastically the use of one of the oldest methods of communication, the letter, as used by Anita Ullman, the charming wife of the new Representative from the Second District of my home State of Oregon, ALBERT C. ULLMAN. During the last campaign thousands of people in this vast district came to know and like the lady who was always at her husband's side as he drove through the valleys, mountains, and high desert plateaus which separate the centers of population in eastern Oregon.

Mrs. Ullman was at all times alert and responsive to the interests and thinking of the wives and mothers in her husband's district. That is illustrated by the exceedingly interesting letter she has written to her friends. In it she describes frankly and sincerely the details—that only a wife and mother can fully appreciate—of transplanting a family.

Mr. President, the editor of the Wallowa County Chieftain, Gwen T. Coffin, of Enterprise, Oreg., published this letter in the issue of Thursday, March 21. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRIALS OF CONGRESSMAN'S WIFE REVEALED BY MRS. AL ULLMAN

The Chieftain believes that many friends of Congressman AL ULLMAN and Mrs. Ullman will find the observations of a Congressman's wife on activities at Washington, D. C. interesting. The following letter from Mrs. Ullman tells of her busy schedule:

MARCH 5, 1957.

DEAR FRIENDS: AL and I finally arrived in Washington after a long hard trip across the United States with the children. We drove along a southern route. The children became very weary and were happy to finally arrive here.

The first week in Washington we stayed at the Francis Scott Key Hotel. Finding a house was a big problem, but we finally rented a furnished house in Arlington, Va., just across the Potomac River from Washington. It is very conveniently located and it is easy for AL to drive to the Capitol. Kenneth has only 2 blocks to walk to Taylor Elementary School and Anita Jo has only 6 blocks to go to get to Stratford Junior High.

There are several nice children in the neighborhood about the same age as Wayne, so he has plenty of playmates. When we have snow, the children have fun sledding on the rolling hills in the area.

This is a very friendly neighborhood and we feel lucky to have found such a homey atmosphere so far away from home. The children miss their dog, Lassie, and Poncho, our burro. Both are in good hands though. Lassie is with the children's grandparents, the E. R. Curfmans, of Baker, and Poncho is with the Joe Updegraffs at their lovely little ranch at the edge of Baker Valley.

Kenneth loudly protests being away from his friends and teachers in Baker. He was thrilled to get letters from his friends there. He is corresponding with them and has also written a 10-page letter to his teachers in Baker. Kenneth was devoted to all of them and it will take some time for him to get adjusted to living without them.

Anita Jo misses her friends but adjusts more easily than Kenneth—but then she is older and more understanding. She corresponds with her friends back home and has received newsy letters from them.

We have rented a spinet piano and the children are taking piano lessons. Anita Jo is continuing her band work with the clarinet and will be taking a trip with the band soon to the historic town of Williamsburg, Va.

MANY ATTRACTIONS

The children and I are going to make a special effort to take advantage of all the music recitals and symphonies available here in Washington. I was pleasantly surprised to learn that so many good recitals and symphonies are free. Many of these recitals are held in the Library of Congress and the National Gallery of Art. During the summer months, the United States military bands perform on the steps of the Capitol. When AL is unable to take us to these functions, the children and I plan to just get on a bus and go anyway.

It is a big treat when the children get their daddy to take them to the National Airport to watch the planes land and take off. However, this treat is limited to Sunday afternons as that is the only free time AL seems to have.

The city of Arlington has an official welcome wagon to greet newcomers to their town. The wagon lady visited me and gave me four tickets to the National Symphony to be conducted by Sir Thomas Beecham, the British conductor.

One of our neighbors invited me to lunch the other day and served a typical southern lunch—black-eyed peas. They were quite delicious and she was kind enough to give me her recipe. It is easy to prepare—just boil the black-eyed peas with a piece of ham bone for about 3 hours. Just before they are done, put in a pod of hot green pepper and a finely chopped onion. When ready to serve pour a little vinegar on the top. This dish should be served with either cracklin' bread or cornbread and always with buttermilk. This makes a perfect southern meal and is certainly different from anything I have eaten out West.

A quaint custom here is the big George Washington Day sales in the downtown stores. It is really fantastic and hard to believe. People wait in line all night sometimes in order to be first in line for some big bargain such as a 99 cent typewriter, a $1.98 washing machine, a 39 cent radio, etc. Some pack a lunch pail, bring coffee in thermos jugs, wrap themselves in woolen blankets and settle down for the night at the front door of the store of their choice.

I miss so many of the conveniences I had at home in Baker. I especially miss my clothes dryer and my clothesline. AL just hasn't had time to put up a line for me yet. I miss my refrigerator there too. The one I have here won't keep ice cream and the children love it so.

BUSY SCHEDULE

AL's average lunch while at work is a corned beef on rye sandwich with a glass of buttermilk. He sometimes is unable to get lunch until 2 p. m. However, he does eat a good breakfast before leaving for the office at 7:30 a. m., but sometimes he has dinner meetings and does not get home until around 10:30 or 11 p. m.

AL and I knew there would be "black tie" affairs here in Washington that we would be required to attend, but little did we think we would be confronted with one the first week here. The Board of Trade gave a dinner to welcome the incoming Senators and Congressmen and their wives. Neither AL nor I had formal clothes with us and had to rush downtown to get them. AL ordered a tuxedo and asked the salesman to have it delivered to the hotel. He stressed to the salesman that he wanted a complete outfit so that he would have everything he needed. The salesman was very efficient and sent along the tux, shirt, socks, studs, handkerchief and cumberbund. Everything was fine until AL started dressing, then he discovered the salesman had failed to send along suspenders. AL had none with him and had to send out a frantic call for a last minute accessory. I had to buy a formal dress and evening slippers for the occasion.

Our first week in Washington was a merry-go-round. I had visited Washington before but it wasn't quite like this. I gained a lifetime of experience the first few days in how to read maps, shop for clothes on a minute's notice, look for and move into a house, enroll the children in school, buy groceries, etc.—all of this was sandwiched in between a round of official functions that kept us stepping lively.

One day in particular was a busy one. At 8 a. m we attended a special service at the National Presbyterian Church to observe the opening of the 85th Congress. When we arrived at the church, we were surprised to find the area overflowing with policemen and row after row of Cadillacs. The place was alive with Cabinet members, Senators, Ambassadors, and VIPs. President Eisenhower sat about six rows in front of us. It was a very inspiring service and an experience that I will never forget. After the service, the audience stood until the President had left the church.

Al took us to the hotel and rushed away to the Capitol in preparation for the swearing-in ceremony. Al's administrative assistant, Charles Serns, picked us up and took us to the Capitol for the occasion.

Kenneth had left earlier as he had been chosen as an honorary page for the day. Congresswoman EDITH GREEN's son, having been so honored when his mother was sworn in, graciously offered to show Kenneth the ropes. Capitol police checked our credentials about a dozen times before we reached the gallery. The room was brightly lit for the television, radio, and press. Anita Jo, Wayne and I sat in the gallery and looked down to the floor watching Al and Kenneth. I was so proud of Kenneth as a page and feel it was a great honor for him. I was especially proud of my husband because I know better than anyone just how deeply he feels about being a Member of Congress. We were all so proud of our daddy.

After the swearing in was over, AL drove us back to the hotel, we packed our belongings, and drove to our new house. We had exactly 30 minutes to spare before leaving for the National Women's Press Club dinner. We spent the first 15 minutes resting and the next 15 minutes finding a grocery store and buying food so the children could have their supper. However, one of the neighbors, being a Navy family and globetrotters, so to speak, understood our predicament and graciously offered to feed the children.

The dinner was attended by Ambassadors, Senators, Congressmen, television artists, radio commentators, and press correspondents.

Next, on January 5, was the special joint session of the Congress. Tickets were at a premium and each Member of Congress was allowed only one ticket. Consequently, I had to leave Kenneth and Anita Jo at the Smithsonian Institution to browse around for 2 hours while I attended the joint session. I did take Wayne with me and held him on my lap. He had been having trouble with a tooth and wasn't feeling too well so slept most of the time. (Oh, yes, during all the rushing around, we had to find a good dentist for Wayne and have his tooth pulled.) I had a good seat (No. 40 in row 2), just five seats over from Mrs. Eisenhower and Mrs. Nixon. I had just been seated when I noticed the Members on the floor looking up to the gallery and applauding. I turned around just in time to see Mrs. Eisenhower come in and be seated. Mrs. Eleanor Roosevelt sat immediately in front of me. Seeing Wayne asleep in my arms, she said maybe he didn't agree with the proceedings. I shook hands with her and thanked her for coming to Oregon during the campaign. Mrs. Roosevelt is very gracious.

The ceremony was very impressive. Speaker SAM RAYBURN came in first, then the Vice President, then the Senators came in by pairs, as did the foreign diplomats, Supreme Court Judges in their robes, and the Cabinet members. Each group was announced loudly by the Doorkeeper of the House as they came through the door. Then the President of the United States came in and was given a standing ovation.

My sister, Evelyn, came to visit us from Detroit and attended several of the inauguration affairs with us. It was certainly nice seeing her again.

We attended a brunch given by Senator and Mrs. Neuberger in honor of Governor and Mrs. Robert Holmes. We were pleased to be able to attend this particular function because we are very fond of both Governor and Mrs. Holmes.

King Saud's visit to the United States caused quite a flurry here in the Capital. Newspapers carried full details of the official functions in connection with his visit. However, I witnessed an unofficial scene that was quite amusing. I happened to be passing a lingerie counter in one of the big department stores downtown when I noticed two of the King's aides buying lingerie. They were interested in only the bright colors, buying a bright red filmy gown and matching negligee. I didn't wait to find out what else they bought—I didn't quite dare.

We have had the pleasure of being entertained at the homes of Senators KEFAUVER, NEUBERGER, and MORSE. They are our very best friends here and we enjoyed visiting with them. They informed us that all the new Members and their wives are given a big rush the first month or so to welcome them to Washington and after that things settle down to normal.

We have attended several different churches here, but of course will keep our membership at the Baker Presbyterian Church. That is home. We attended a service conducted by Episcopal Bishop Angus Dun at the Washington Cathedral. When completed, this will be the sixth largest cathedral in the world and the second largest in the United States. Next Sunday we plan to visit the New York Avenue Presbyterian Church. This is an old historic landmark in Washington and the illustrious Peter Marshall was once pastor of this church. You may recall the movie of his life based on the book A Man Called Peter written by Mrs. Peter Marshall.

I hope I haven't bored you to death with all the details of the Ullman family. I am looking forward to hearing from you often and will have to depend on you to keep me informed of what you and your family are doing and the local happenings there.

With best regards from the entire family,

Sincerely,

ANITA ULLMAN.

ARLINGTON, VA.

Rapid Recovery of Western Germany

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, April 1, 1957

Mr. JOHNSON of Texas. Mr. President, one of the most startling aspects of the past decade has been the rapid recovery of Western Germany following the destruction of World War II.

This recovery was well summarized by Charles Lucey, distinguished commentator for the Scripps-Howard newspapers, in an article which appeared last Saturday. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEST GERMAN MIRACLE

(By Charles Lucey)

(Most talked about of the postwar economic miracles is the comeback of Western Germany. It's a phenomenon that has furrowed the brows of world statesmen and trade experts. In the following dispatch, Charles Lucey examines at close hand the strides which have marked German achievement—after a second disastrous war defeat in a generation.)

BONN, March 28.—West Germany's recovery is aptly called the miracle of postwar Europe.

Twelve years after this whipped country crawled out from under the bomb ruins, its economic forward march is so rapid it is getting out of step with most of the world except the United States. Only Japan offers a parallel.

West Germany is reclaiming markets all over the globe.

Its export earnings so much exceeds payment for what it buys abroad, it is draining its neighbors' gold and dollar reserves.

It is directing its home economy with discipline and skill.

Its currency has held more stable in terms of purchasing power than that of any major nation.

In February, West German exports totaled more than $650 million, a one-third gain in a year. Surplus of exports over imports for that 1 month was almost $75 million. In 1956, West German exports were valued at almost $8 billion, a margin over imports of $750 million.

The symbol of the German comeback is the little Volkswagen, competitive now wherever autos roll. A half million or so will be made this year, half of them for export. Germans here at home may wait 6 months to get one. Last year German auto exports totaled about $750 million.

Germany's machinery exports were running at twice the rate of auto sales abroad. Electrical equipment, chemical products, textiles, optical and precision goods were increasing overseas money earners.

From bitter experience Germany knows the horrors of runaway inflation, so the pressure has been constant and relentless to hold prices and wages at home in check.

Living standards still are substantially below those of the United States worker. In many cases the German makes only as many deutschemarks as an American makes dollars—and it takes 4 marks to make $1. Aside from sausage he may have meat on his table only three times a week.

But the living standard is rising. Most Germans dress well, many even expensively in the larger cities. Auto ownership is increasing.

The contrast with Communist East Germany is striking. East Germans have made a comeback, also, but not to match West Germany. Thousands of them continue to thwart Communist border controls and escape into the West.

What factors are behind the West German miracle?

United States aid was important—about $3,500,000,000 was pumped in here. Calling in the first postwar mark and establishing a stable currency were vital.

Germany's own belt-tightening shows in the fact it has poured back into plant investment more than $1 of each $5 of profits.

Letting the intensely competitive German have his head in a largely free economy has been a factor. There is state pressure against inflation and tax inducement to plow profits back into plant, but tight rationing and price controls were given up long ago.

Germany's rebuilt modern industrial plant permits high productivity.

The average industrial workweek is more than 48 hours, compared with about 40 in the United States and other industrial nations.

Here is a testimony to West German stability:

Since 1949 West German mark has lost only 5.3 percent of its purchasing power. The American dollar has lost 13.2 percent; the British pound 29 percent; the franc nearly 32 percent; the Italian lire 22 percent; the Swiss franc 7.3 percent.

Federal Security Laws

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, April 1, 1957

Mr. BUSH. Mr. President, several weeks ago I referred to the work which

the Securities and Exchange Commission is doing to carry out the provisions of the Federal securities laws for the protection of the investing public in the securities markets of this country—CONGRESSIONAL RECORD, February 21, 1957, pages 2113–2117.

The proper functioning of our Nation's securities markets is vital to the success of our free-enterprise system.

I mentioned the great activity in the capital markets, and the problems the Securities and Exchange Commission is coping with, in policing those markets. I called the attention of the Senate to the address which the Chairman of the Commission, J. Sinclair Armstrong, had delivered on February 20, 1957, before the New York Society of Security Analysts.

Recently the Commission and its key staff members have participated in a 2-day briefing conference on securities laws and regulations under the auspices of the Federal Bar Association, in cooperation with the Bureau of National Affairs. This is the third such briefing conference in recent years. At the first such conference, in the summer of 1954, the distinguished senior Senator from Indiana, Senator HOMER E. CAPEHART, who at the time was chairman of the Committee on Banking and Currency, and who is now the ranking minority member of that committee, was the principal guest speaker.

These briefing conferences have attracted hundreds of lawyers, accountants, representatives of business organizations, and brokers and dealers, and members of the public, and provide an important medium for the dissemination to those who are subject to regulation of information from the Commission about the requirements of the laws and regulations, and the work of the Commission in carrying out the policies of the Congress expressed in the Federal securities laws. The members of the Commission and its staff are to be commended for their participation in these briefing conferences, and the Federal Bar Association is to be commended for sponsoring them in cooperation with the Bureau of National Affairs.

In opening the conferences, Chairman Armstrong, of the Commission, delivered an address which summarizes many of the present-day accomplishments of the capital markets in providing for industry, from the savings of our people, enormous amounts of money needed for investment capital purposes, and also many of the accomplishments of and problems faced by the Commission, which is entrusted by the Congress with the administration of the Federal securities laws in providing to investors and the public the protection intended by the Congress in those laws.

The Subcommittee on Securities, of which I am a member and of which the distinguished junior Senator from Ohio, Senator FRANK J. LAUSCHE, is chairman, has recently inquired into the subject of ownership of shares of American corporations by foreign financial institutions to see to what extent problems are posed to the Commission in administering the Federal securities laws. In my opinion, a great deal more study is needed of this difficult subject, and the Subcommittee on Securities will require the continued cooperation of the Commission in our efforts to determine whether new legislation may be needed.

Mr. President, I ask unanimous consent that the address delivered by Mr. J. Sinclair Armstrong on this occasion be printed in the Appendix of the RECORD.

I advise the Senate I have received from the Public Printer an estimate that there would be involved a cost of $179.67. I nevertheless ask unanimous consent that it be printed.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CURRENT OBJECTIVES AND PROGRAMS OF THE SECURITIES AND EXCHANGE COMMISSION

(Address by J. Sinclair Armstrong, Chairman, Securities and Exchange Commission, before the briefing conference on securities laws and regulations sponsored by the Federal Bar Association in cooperation with the Bureau of National Affairs, New York, N. Y., March 28, 1957)

I am particularly pleased that the Securities and Exchange Commission and key members of our staff have been invited to participate again here today in the briefing conference on securities laws and regulations sponsored by the Federal Bar Association in cooperation with the Bureau of National Affairs. It is always most helpful to us to discuss our objectives and problems with practitioners in the legal and accounting professions, representatives of industry and others whose day-to-day business brings them into close contact with the statutes we administer. These conferences provide an excellent forum for the interchange of ideas which enables all of us to do our jobs more effectively.

In tackling our problems it is only natural that there will be differences of opinion or of approach between the Commission, its staff, and yourselves as representatives of the securities industry and the business community as to the administrative methods and procedures and business practices or conduct with which we all are concerned. But we all share one common interest—the investor. If you or we fail to serve the investor, or serve him badly, our country is the loser.

Our fluid capital markets and our well-organized machinery for accumulating vast sums of the savings of our citizens have no equal anywhere in the world. At no time in the Commisison's experience, have capital market flotations and market trading activity reached as high levels as those witnessed in recent years. This tremendous upsurge has taken place in a relatively short period of time. For example, the dollar amount of securities registered under the Securities Act of 1933 increased by 75 percent from $7.5 billion in the comparatively recent fiscal year 1953 to $13.1 billion in the fiscal year 1956. During the 1930's the average dollar amount of securities registered fell below $1 billion in some years and from 1945 to 1950 the amount averaged $4.5 billion a year.

The aggregate market value of all stocks traded on all national securities exchanges, which never exceeded $100 billion before 1946, except briefly in 1929, increased from $111 billion on December 31, 1950, to $265 billion on December 31, 1956. The dollar value of securities that changed hands on all securities exchanges in the calendar year 1956 totalled $35.1 billion, more than double the total of $16.7 billion reported for 1953. It is believed that similar increases occurred in the over-the-counter market, although unfortunately no statistics are available.

The value of the gross national product totaled $412 billion in 1956 as compared with $345 billion in 1952 and $104 billion in 1929.

The latest survey of investment intentions conducted jointly by our Division of Trading and Exchanges and the Department of Commerce indicates that businessmen plan to spend $37.5 billion on new plans and equipment in 1957, an increase of 6.5 percent above the previous all-time high reached in 1956, and 30 percent above the total of $28.7 billion for 1955.

Where will business get all of the money it needs to finance this expansion? New securities offered for cash in the United States in 1956 totalled $11 billion, another new all-time high. A survey conducted by our Division of Trading and Exchange indicates that businessmen presently intend to sell 6 percent more corporate securities in 1957 than they did in 1956.

But not all of the proceeds of these securities goes into plant and equipment, because securities previously issued are constantly being retired through sinking funds and serial maturities and for other reasons. As a result, the net additions to capital from sales of new securities in 1956 reached another alltime high of $8.5 billion, or approximately 25 percent of the total requirement for the year. The balance of the money needed to pay for these expenditures and to finance a small increase in working capital during the year came from retained earnings, depreciation accruals and temporary bank borrowing.

We are so accustomed to reading about figures in the billions, that the full magnitude of the capital formation process that goes on in this country year after year may pass unappreciated or unnoticed. Up to the outbreak of World War II an offering of as much as $100 million in new securities in one operation was a rare instance. Today, a $100 million bond or stock offering is rather commonplace. In the past 5 years our business corporations made 29 separate bond offerings, each one of which amounted to more than $90 million with aggregate proceeds of $5.9 billion. Eleven were in amounts ranging from $200 million to more than $600 million and they produced $3.7 billion of capital. American Telephone successfully sold at competitive bidding another $250 million of debentures just the day before yesterday.

If we look over the record of stock offerings in the last 2 years, we find 4 offerings ranging in amounts of $131 million to $657 million. Two of these were nonunderwritten rights offerings to shareholders—the other two had conventional underwriting.

Recently our Commission had occasion to ascertain the total amount of stocks and bonds issued and sold by private business organizations in several of the larger countries of Western Europe. We found that the aggregate sales of these securities in the United Kingdom, West Germany, Holland, France, Belgium, Sweden, and Switzerland in 1956 amounted to somewhere in the neighborhood of $2.5 billion—a rather striking comparison with the $11 billion of corporate securities sold for cash in this country in that year.

Capital formation is tremendously important to the economy of our country. You cannot have capital formation without willing investors. Capital is formed only by the voluntary cooperation of the public, and the work of the Commission in administering the Federal securities laws is one of the essential factors giving the public confidence in the integrity of the capital markets. There is nothing in these laws which is designed to impede the raising of capital. If well administered, they will help, and not hurt the capital formation process.

As a matter of orientation at this point, let me first state briefly the objectives of the

Congress expressed in the statutes which we administer. Collectively and colloquially, we speak of them as the Federal securities laws. They were enacted in the years 1933 through 1940 and were intended to provide to public investors in new issues of corporate securities offered and sold in interstate commerce and in the issues listed and traded on national securities exchanges certain basic business and financial information about the corporations issuing them. These laws were also designed to provide regulation of the exchange markets so as to insure free, fair, and open orderly markets; to provide a limited degree of regulation in the over-the-counter markets; to provide corporate simplification and physical integration and continued regulation of the financial structure of public utility holding company systems; to provide regulation of investment companies to assure adherence to standards protective of public investors; and to provide against manipulation, pools, rigging of prices, insider advantages, and misrepresentation and fraud in the purchase and sale of securities.

The Commission's responsibility in administering these laws is both positive and negative in character. Affirmatively, it is our job to see to it that the responsibilities of persons subject to our jurisdiction are assumed by them; in other words, that the securities laws are complied with. It is the responsibility of the corporation registering securities to state the required information in its registration statement and periodic reports. It is the responsibility of the person soliciting proxies in listed companies to state the facts required by our rules. The registration statement, the proxy statement, and other filings are the statements of the persons filing them, not of the Commission, and our job is only to see that the informational requirements of the statutes and our rules are met.

It is the public investor that these statutes and rules seek to protect, but the protection afforded is to put the investor in an informed position to make his own investment devisions, to assure him free and fair markets, but not to prevent him from making his own investment decisions and certainly not have a Federal agency to make his decisions for him. It is not our responsibility to tell an investor what security to buy or sell or which side to vote for in a proxy contest. It is not our responsibility under the acts we administer to prohibit or prevent the purchase of securities, though many who charge that we should do something to prevent raiding seem glibly to assume that the Congress gave us, or should give us, some such power.

The Congress made an extremely important legislative decision in enacting the Federal securities laws which should always be remembered in considering the respective responsibilities of the Commission, of the securities industry, and of the investing public and corporations and others subject to these statutes. This decision gives emphasis to the word "free," when we use free in describing the securities markets and in speaking of the free enterprise system.

The Federal securities laws do not, and I hope never will, give the Commission power to pass on the investment merits of securities.

The Commission's basic approach and philosophy in administering the Federal securities laws and in dealing with the problems which are presented to us, was well stated in 1953 by Ralph H. Demmler, a distinguished member of the bar who was then Chairman of the Commission, and whom we are most pleased to have as a participant on our program this morning. To use his words, "The Government should not interpose unnecessary obstacles to the raising of capital." He also emphasized that we should not sacrifice any of the essential safeguards for the protection of the investing public which had been built up over the years. Rather we were then seeking, and we still seek to make these programs conform to the statutes and be more effective.

Since the capital markets are not static but on the contrary are ever changing, it is necessary for us at the Commission to be constantly on the alert to adapt our procedures and our policies so as to accomplish the objectives of the statutes under the conditions which we find in the securities markets. For the past several years activity and prices in the securities markets have reached highs unprecedented in the experience of the Commission. This, of course, is all to the good and the achievements in capital formations over this period reflect great credit upon the securities industry and all who are connected with it.

At the same time, administration of the Federal securities laws under these conditions involves certain problems not present in the depressed markets of the thirties or under the conditions of war. We have many new investors in the securities market. According to a study made by the New York Stock Exchange, the number of people owning shares in publicly held corporations at the end of 1955 was 8,630,000—an increase of 33 percent since early 1952, with about half of this increase occurring in 1955 alone. Clearly, many of these new investors are inexperienced and in particular need of the protection of the statutes.

There has been a marked increase also in the number of registered broker-dealers, which now exceeds 4,700 as compared with 3,994 on June 30, 1952. Many of these new broker-dealers are likewise inexperienced, and some of them have been drawn into the business in the hope of making a quick profit in the existing market rather than with the expectation of establishing a sound business based on just and equitable dealings. The securities industry organizations, such as the registered exchanges and dealers associations, have made a valiant effort to audit and inspect their members, and industry cooperation is a vital part of the regulatory scheme to protect the public investor. Unfortunately, violations have been found in increasing numbers and increasing magnitude.

We have accordingly found it necessary to step up our enforcement efforts with respect to brokers and dealers and to expand our inspection program. In the current fiscal year we will make more broker-dealer inspections than ever before in Commission history. We have in recent years tightened our net capital requirements for registered broker-dealers primarily by increasing from 10 to 30 percent the so-called haircut—that is, the deduction from the market price of stocks in inventory which is required to be made in computing the net capital of brokers and dealers. We are insisting upon compliance with this rule by registered brokers and dealers, particularly in connection with underwriting commitments, and we do not hesitate to go into Federal district court and seek an injunction when we find a broker-dealer operating with insufficient capital.

Generally, rising markets have created conditions favorable to the marketing of speculative securities and would appear, unfortunately, to have diminished to some degree the caution and prudence of many investors. We have found that there are people who are willing to purchase as unknown speculative security upon the basis of a telephone call from a stranger. These conditions have produced a resurgence of old-fashioned boilerrooms. A boilerroom, as I am sure you know, consists of a group of fast-talking salesmen assembled in a back room somewhere, selling securities by fraudulent high-pressure methods over the long-distance telephone. We are making every effort to stamp out these activities and despite the obstacles which we encounter I am optimistic concerning our progress.

There is another phase of what may be a related problem which gives us cause for concern. I refer to what appears to be an increasing effort to avoid compliance with the registration requirements of the Securities Act of 1933 in the distribution of securities by attempted resort to some of the exemptions provided in the statute. The problem is related in the sense that a boilerroom must have securities to sell and it obviously does not sell them in compliance with the prospectus requirements of the Securities Act, and in practically every case some exemption from registration is claimed for the securities being distributed, but the possibility of abuse of the exemptions from registration is by no means limited to boilerrooms.

We must make every effort to see that investors receive the protection of the registration and prospectus requirements of the Securities Act in those cases where under the law they are entitled to this protection and that exemptions are confined to the area in which Congress intended them to operate.

There is, for example, an exemption for transactions by an issuer not involving any public offering. The Supreme Court has indicated that this exemption was intended for situations where the offerees had access to all material information about the security, and accordingly do not need the protections of registration. Other relevant factors must be considered, including the number of offerees, which the Commission in past years and at least one congressional committee recently felt by "rule of thumb" should not exceed 25. We have encountered a number of situations where securities issued ostensibly in reliance on this exemption have in fact entered channels of public distribution without any reliable information concerning the issuer being available—a result which seems contrary to the statutory intent. Similarly, there is an exemption for securities which are part of an issue offered and sold only to persons resident within a State where the issuer is organized and doing business. This exemption is clearly designed for purely local financing which is subject to the effective control of the State concerned. Again we find securities issued in reliance upon this exemption finding their way into the interstate securities markets without the information called for under the Securities Act being supplied.

A Commission interpretation of long standing has provided that no sale, for the purposes of the registration provisions of the Securities Act, is deemed to occur insofar as shareholders of a corporation are involved where, pursuant to State statute, there is submitted to the vote of such stockholders a plan for merger, consolidation, reclassification of securities, or the transfer of assets of such corporation in consideration for voting stock of the transferor. The underlying rationale of this interpretation, expressed in Commission Rule 133 under the Securities Act, presumably is that in such a case the element of individual contract or volition which is part of the ordinary concept of a sale is not present, as such stockholders receive new securities in lieu of the old ones by operation of corporation law rather than by individual agreement. Recently the Commission has had occasion to reexamine the soundness of this proposition and that question is still under study. This reconsideration has brought forcibly to our attention the fact that widespread misunderstanding exists as to the scope of the rule. There seems to be an impression abroad that the use of a stockholder's vote in such a transaction operates to free the securities from the registration requirements of the Securities Act so that they can immediately be redistributed to the investing public without

registration. Such an assumption reads into the rule something that the Commission did not intend. The rule expressly provides that no sale is deemed to be involved "so far as the stockholders of a corporation are concerned." It does not afford any exemption for resale of a security to others. The Commission has no power under the act to grant an exemption from registration which the act itself does not expressly provide. To the extent that the rule may in effect do this, its validity in my opinion is open to serious question.

Another recent development in the administration of the Federal securities laws has been the increasing frequency and intensity of proxy contests for the control of major corporations. Under section 14 (a) of the Securities Exchange Act of 1934 the Commission is granted jurisdiction to prescribe rules governing the solicitation of proxies in respect of securities registered on national securities exchange. A basic purpose of the Commission's rules under this section is to obtain for investors and stockholders the fair disclosure of material facts and to prevent, by seeking relief in the Federal courts where necessary, as the statute provides, the dissemination of false and misleading information. After 2 years of intensive study the Commission in aJnuary 1956 adopted a revision of its proxy rules designed to clarify and make more specific the intent of the rules as they relate to contests for control. Among the more important changes made by this revision were to establish for the first time uniform ground rules governing solicitation prior to the furnishing of a formal proxy statement and to provide specifically for the furnishing of detailed factual information as to participants in contests, both the nominees for election as directors and those actively participating in their election campaign. This includes information about the identity and background of such persons, their interest in securities of the corporation, and certain other important information, particularly with reference to arrangements or understandings with respect to the acquisition of securities and the financing of the contest. The revised rules also contain examples of statements which may be made in the heat of proxy fights and which, depending upon the particular facts, may be misleading. The new rules have generally worked well and have been of marked assistance to the Commission in the discharge of its statutory duties under the conditions created by hotly contested proxy contests. However, in recent proxy contests the Commission has had to use its investigative powers to the utmost to obtain and then require participants to disclose in their proxy statements basic material facts necessary for full and fair disclosure to the stockholders. This has often had to be done in an atmosphere of apparent hostility among various participants, and under circumstances that make our traditional impartiality in proxy contests difficult but vitally important. Also, committees and Members of the Congress have for the first time in our administration of the rules required us to report to them our enforcement activity on a day-to-day basis during particularly proxy fight, and Members of the Congress have commented both favorably and unfavorably on various participants and on the Commission. I believe it is something of a new development for administration of the law hitherto left to the Commission and the courts to have been the object of such close surveillance by the Congress during a particular proxy fight.

These, and other problems, will be discussed in greater detail today and tomorrow. We are most happy to have the opportunity to meet with you and to sit down together for a discussion of our mutual problems, and I wish again to express our appreciation to the Federal Bar Association and the Bureau of National Affairs for making this possible.

Statement by Hon. John Marshall Butler, of Maryland, on 12th Anniversary of Soviet Enslavement of Rumania

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, April 1, 1957

Mr. BUTLER. Mr. President, on March 6 last, 12 years had elapsed since the Soviet enslavement of the Rumanian Nation in 1945. Through overwhelming Soviet military and political pressure, Rumania is still occupied by Russian troops and is subjected to the suppression of all political and human rights, as well as to savage economic exploitation. In honor of the courageous people of Rumania, I ask unanimous consent to have a statement I have prepared printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BUTLER

This sad day for 20 million souls, the 12th anniversary of Romania's enslavement by the Soviets on the 6th of March 1945, should bring to our minds more vividly the tragedy of modern slavery.

Victim's of Moscow's aggressive expansionism and of international failures which abandoned the eastern part of Europe to the absolute rule of the Soviets, the Rumanians have proceeded far on the road to calvary.

The starting point for this Rumanian drama was one of the most flagrant and brutal examples of interference and seizure of a free nation by the Soviets. The two important witnesses reporting the circumstances of the seizure, presented in the first documents forwarded by the Rumanian leaders to the United States authorities—the late General Radescu, former Prime Minister at the time of the seizure, and Mihail Farcasanu, head of the anti-Communist movement of the national liberal youth of Rumania—give us a clear picture of what happened. In their declarations delivered respectively in Lisbon, August 26, 1947, and in Rome, August 19, 1947, they record the series of Soviet overt acts, ranging from press-censorship to terror and assassination, aimed at bringing the country under the heel of their Communist agents.

"During the extremely trying period in which I held the premiership," noted General Radescu, "Soviet troops have been indulging in looting and were killing people at random. Every morning I used to receive reports showing the robberies and assassinations perpetrated during the preceding 24 hours."

Together with such conditions a Communist armed force was built up, while massive reductions in the Rumanian Army and police were arbitrarily imposed. According to the order received by the Communist leader Gheorghiu-Dej in Moscow in January 1945, a direct action for seizing the government was undertaken by the Communists on February 24. They tried to assassinate the Prime Minister and take over the administration. This Communist coup not succeeding Moscow sent Vishinsky with full powers to forcibly install a Soviet stooge government. So, 2 weeks after the Yalta Declaration 1 of the signatories, Soviet Russia, was ruthlessly crushing the independence of a country with a brazen display of brute force. This is in fact what happened on February 27, when Vishinsky delivered his ultimatum to King Michael.

It is to the honor of the Rumanian people that, after 12 years of Communist terrorism, deportations, slave labor camps, religious persecution, and economic bleeding, their spirit of resistance is still strongly alive. I think it is proper for the Congress to salute the fight for freedom of a friendly nation and not forget her people's ordeal.

Report of Grand Jury of Hinds County, Miss., Relating to Beatrice Young

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Monday, April 1, 1957

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a report of the grand jury of the first judicial district of Hinds County, Miss. Some weeks ago a witness from Jackson, Miss., Beatrice Young, testified before a subcommittee of the Senate. Her testimony seemed to reflect upon the administration of justice and the conduct of certain officials connected with the State of Mississippi.

There was not time, before the record was closed, to investigate the facts in that case. But since then an investigation has been made by the authorities in Mississippi and also by the FBI. The result of that investigation is reflected in the pertinent parts of the grand jury report. I ask unanimous consent that those parts only be printed in the Appendix of the RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

REPORT OF THE GRAND JURY OF THE FIRST JUDICIAL DISTRICT OF HINDS COUNTY, MISS., MARCH 1957 TERM

To the Honorable LEON F. HENDRICK, CIRCUIT JUDGE:

In response to the excellent and informative charge of Your Honor, we have sat as the grand jury for the first judicial district of Hinds County, Miss., for 3 days during the week of the first Monday of March 1957, on March 12, 1957, and on March 26, 1957.

* * * * *

We have given particular attention to that portion of Your Honor's charge relative to reports that there have been abuses of prisoners and enforced confessions in the Hinds County jail. Such practices, where they prevail, strike at the very heart of justice, and we condemn them unreservedly as crippling the operation of courts and the fair administration of the law. Although we are laymen and unversed in the processes of the courts, we are advised and verily believe that our entire judicial machinery, from the the Supreme Court of Mississippi down through the trial courts, jealously seeks out and voids convictions whenever there is even any reasonable probability of coercion.

Wide publicity in the press of the Nation has been given to certain events said to have occurred in our county jail in which it is alleged prisoners were beaten or abused. Witnesses and parties said to have been so abused have gone or been transported to the Nation's Capital and have appeared before congressional committees with great fanfare of publicity. During the weeks we have been in session, we have made a search

investigation of these matters and have exhausted every means or facility at our disposal to get at the real truth of the matter. We feel that a detailed report is in order concerning at least two of these charges.

First is the case of one Beatrice Young. This witness was transported to Washington and caused to testify before a committee of the Senate of the United States, and her testimony was heralded over the Nation. She was carried there to testify in aid of pending civil-rights legislation. She told a story of being abused in our jail.

Our painstaking examination shows, very briefly, the following to be the facts: The sister of Beatrice Young, Etta Jackson, a worthy and respected Negro woman, appeared at the sheriff's office and informed the officers that her 16-year-old daughter, Mildred Magee, was being led astray and into the path of moral delinquency by her sister, Beatrice Young. Seeking to settle the matter over the telephone, the officer testified he was met by a torrent of cursing, abuse, and threats from Beatrice Young. He then advised Etta Jackson he could go no further without a warrant. The Jackson woman, as the record shows before us, went to a justice of the peace and made a charge of contributing to the delinquency of a minor against Beatrice Young. The sheriff and this officer went to the home of Beatrice Young, stated the purpose of their visit and the nature of their warrant, and returned her to the county jail. They deny any mistreatment, and we find nothing to support the charge made by her of any beating. They do say that at one time they were compelled to seize her to prevent her doing bodily harm to herself. A fine was paid by Beatrice Young, we understand and our evidence shows, not by her but by her husband and she was released from jail. She was at the time, however, being advised by counsel highly competent to advise her.

Contributing to the delinquency of a minor is defined in section 7185–02, Mississippi Code of 1942, volume V, recompiled, as, among other things, inciting and encouraging a child to such conduct as "to injure or endanger the morals or health of himself or any other person." It can cover a variety of things.

Our studied judgment, after careful consideration of the evidence, is that Beatrice Young was contributing to the delinquency of Mildred Magee, the minor child of only 16 years. She was according to the proof before us, keeping this child away from her home; keeping her away from school; carrying her to taverns and places where drinking was going on, and subjecting her to the association of mature men who habituate such places. The proof shows that a strange Negro man carried her to her home for her clothes while her mother was away, and lurked in the distance while she went in the house for them.

When our officer went out to summon Beatrice Young before our body, he reported to us that he found her at Massie Hawkins' place. Massie Hawkins is a notorious criminal character who for more than 35 years has carried on bootlegging and gambling establishments and bawdy houses in this county and city. She was convicted more than 10 years ago for conducting a house of prostitution in which both white soldiers and Negro women were accommodated. That was during the late war when many soldiers were quartered in this city. Her character is so infamous as to contaminate any person found associating with her.

The proof shows that the officers did not drop the matter of looking after the Jackson child after Beatrice Young was in jail. The next day, Etta Jackson called and said she had not yet located the child. The deputies went on a search for the child and found her at the home of one of Beatrice Young's friends. They took the Jackson girl to the courthouse and contacted the youth court judge and placed her under his care.

We called before us the Honorable William T. Horton, our most respected and competent county judge and judge of the youth court of this county. He handled the case of the Jackson girl in his official capacity. The judge, noted for his most conscientious attention to all youth court matters, pictured to us the young Jackson girl as a girl of unusual talent and promise. It is not difficult to gather from the judge's testimony, though always dignified and restrained, that it is his opinion that unless rescued, the young Jackson girl would have been led into an immoral and dissolute life by the association of Beatrice Young.

We summoned before us two Government agents who were busily conducting an investigation under the direction of the Justice Department in Washington, at the very time we were attempting to carry out your honor's mandate to us to investigate these charges. This apparently caused great consternation in the Justice Department. Our district attorney, who himself testified before us, stated that the Justice Department representatives hurriedly informed him that the Federal Bureau of Investigation agents could not testify before a State grand jury. They were prevented by an Executive order.

The Justice Department advised the district attorney that their investigation showed that there was no foundation for the charges of Beatrice Young. The district attorney demanded a letter setting out just these facts. So far the letter has not been forthcoming.

* * * * *

And now, having rendered this report, the undersigned members of this grand jury pray that they be discharged, subject to the call of the court during the present term.

Soviet Threats Against Scandinavian Countries

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, April 1, 1957

Mr. JOHNSON of Texas. Mr. President, the most striking development of recent weeks has been the aggressive campaign of the Soviet Union to intimidate some of the smaller countries of Western Europe. This campaign has been directed with great force against the Scandinavian nations.

The Scandinavians are not strangers to pressure from the East. They have resisted it before—and resisted it most effectively. There is heartening evidence that they do not intend to be intimidated.

I ask unanimous consent that an editorial which summarizes the question very well, and which was carried in last Saturday's Washington Daily News, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THEY DON'T SCARE

There is heartening evidence that the Scandinavian countries are not going to be scared out of their boots by the latest Soviet threats.

Norway has indicated she will declare for herself whether to permit guided-missile bases to be stationed there under NATO—despite warnings by Soviet Premier Bulganin she would pay dearly for it if war came.

The Swedish press, and public officials, are properly indignant at such an obvious Moscow effort to frighten public opinion in the northern countries. Sweden herself previously had been accused of a linkup with alleged American espionage in the Baltic area. And Finland has been cautioned against a revival of the military spirit—meaning a readiness to talk up to Russia.

They are in good company—the growing list of free-world nations which in the past year have received blustering Bulganin letters or Pravda prophecies of doom. Recipients include Turkey, Iran, and the other Baghdad Pact members, Japan, France, England, and Israel—the last three in connection with the Middle East crisis.

The nervousness that Moscow betrays in these crude blackmail efforts is not likely to be overlooked on this vital northern flank of NATO. It can even help convince the Scandinavians of the very necessity of good defenses.

The Late Ramon Magsaysay, President of the Republic of the Philippines

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, April 1, 1957

Mr. CARLSON. Mr. President, every week our beloved Chaplain, Dr. Frederick Brown Harris, writes a column which appears in the Washington Sunday Star under the heading "Spires of the Spirit."

In yesterday's Washington Sunday Star, Dr. Harris wrote an article entitled "To His Dying Day," in which he wrote of his visit with a great friend of the United States and a great friend of Dr. Harris, the late President of the Philippine Islands, Ramon Maysaysay.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPIRES OF THE SPIRIT

(By Dr. Frederick Brown Harris, Chaplain of the U. S. Senate)

TO HIS DYING DAY

"I shall remember this hour to my dying day." So spake Ramon Magsaysay, intrepid leader of the Philippines last September in the palace at Manila. In the presence of a distinguished company of Americans and Filipinos, the Chaplain of the United States Senate, on behalf of Freedom's Foundation, had just presented to the President of the Philippine Republic a distinguished achievement award. On the plaque which the President took in his hands with evident appreciation and satisfaction were engraved these words: "Ramon Magsaysay has given accent to the fundamental belief in God underlying free life and has rendered unending, stern, effective opposition to cynical atheistic world socialism commonly known as communism." These words were read as the herald of Freedom's Foundation and the President of the Philippine Republic stood face-to-face in that impressive setting. In its dignified and ornate beauty the palace seemed vocal of the old Spanish days and

of the dawn of democracy when Admiral Dewey sent the Spanish squadron to the bottom of the bay.

Those privileged to be present will never forget the stirring reply made by President Magsaysay as perhaps as never before in a public address he vividly relived his valiant fight to rid the islands of the Huk menace backed by the Communists like vultures feeding on the misery of the Philippine people. There he stood that September day dressed in spotless white with his cabinet about him similarly attired. In that high hour Ramon Magsaysay looked the part he had conspicuously played over the turbulent years in the ceaseless fight to make men free. In his stalwart rugged form he was democracy incarnate. In his presence one became conscious of a word made flesh. From the common people he had come—to all the people he belonged. There was no man in Asia who loathed communism more. At first hand he knew its spurious promises and its venomous fangs. Yet the passion of his dynamic life was not to be against evil but to be for the good. With all his ardent nature he believed that the most deadly foe of communism is democracy practiced. The career of this Lincoln-like leader from auto machinist raised in the home of an obscure blacksmith, showed once again that when the Almighty seeks a man to carry out His purposes the path that took Honest Abe from pioneer railsplitter to the White House and to the ages is still open.

Magsaysay knew that every inch of appeasement costs a yard of aggression. He detested and repudiated anything which savored of a safe and straddling neutralism in that which he clearly saw was a global fight to the death against malignant forces. During his last 24 hours—literally on his dying day—in an address which to make cost him his life he declared, "Neutralism is un-Filipino." By that he meant that anywhere to shake hands with the devil of totalitarianism is treason to the free world. As was said eloquently in the chorus of lamentation on the floor of the United States Senate, "His death leaves the image of a man who saw that freedom was little more than a word unless it touched the weak as well as the strong, unless it reached down to the last rice farmer in the smallest barrio in the islands. The life and presidency of Ramon Magsaysay was dedicated to giving meaning to freedom." It was his proudest boast, "I gave the people what communism only promises." That was the telling blow that broke the back of the Huk gangster movement.

On that day in the palace with deep feeling he narrated the story of the smashing of that rebellion against law and order and of the ferreting out of communistic agents. He affirmed his belief in spiritual forces, for he was a devout Christian. He poured out his credo—his I believe—that day as America through the Freedom's Foundation said, "Well done."

Even as I write, open before me on the desk in the United States Capitol, with the white pillared loveliness of the Supreme Court framed by the nearby window, is a letter in which the sender speaks of the power of prayer in the world. There are very personal things in the message which it would not be fitting to quote, but here is a sentence: "I am thinking of your visit to the Philippines and the presentation of the plaque. That was a very memorable event for me and has encouraged me further to take every opportunity of forging closer the ties between the Philippines and the United States—two nations dedicated to the cause of freedom and democracy in the world." The letter is signed, "Cordially, Ramon Magsaysay."

Always to me our countries will seem closely linked and leagued and always will there be a wistful memory of a great occasion and a great personality as I carry an exquisitely fashioned inlaid walking cane with the Philippine coat of arms upon it and around it a silver band with the inscription, "To the Reverend F. B. Harris from President Magsaysay." The one from whose hands that gift was put into mine would have gladly adopted as his own lines which were written by another servant of humanity on the very day his life was snuffed out in a collision of trains. These verses might well be called "To My Dying Day."

"Let me die working.
Still tackling plans unfinished, tasks undone,
Clean to its end, swift may my race be run,
No lagging steps, no faltering, no shirking.
Let me die working.

"Let me die thinking.
Let me fare forth still with open mind,
Fresh secrets to unfold, new truths to find,
My soul undimmed, alert, no question blinking.
Let me die thinking."

And the verses not finished when the sudden summons came had been indicated thus, "Let me die giving, let me die aspiring." What a swan song to pen on life's last morning. Like President Magsaysay, the one who wrote those verses as the train rushed on to disaster, never reached his destination. And like him he fared forth as all the trumpets sounded for him on the other side. For Ramon Magsaysay's dying day was a coronation day—here and there.

"The Reasoning of the Rockhound"

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 1, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a poem written by Mrs. Bea Thomas, entitled "The Reasoning of the Rockhound" and published in the January 1957 issue of the Western Associated Mining News.

In this effective bit of writing Mrs. Thomas has captured the essential spirit and motivation of the prospectors and other treasure hunters in our vast Western States, who roam the lonely hills and uplands in quest of precious metals.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

THE REASONING OF THE ROCKHOUND

(By Bea Thomas, penname, Sagebrush Sally)

Some folks say Rockhounds are crazy, perhaps they believe it too.
For to them the picture's hazy of the things we think and do.
They say do something useful, settle down and farm some land.
It's always easy to condemn what we do not understand.

Now the gold and the silver that backs the Nation's tills,
Represents years of patient searching over deserts, streams, and hills.
And the phosphate and the nitrate so essential to farm soil,
Are a tribute to the miner's careful study, search, and toil.

It's a pleasure to go walking in the morning after rain,
And find a lovely agate with a pattern clear and plain.
In those patterns is God's writing, everlasting on the rocks
And a lesson for our learning like a baby's painted blocks.

It matters little where I am, I'll be a Rockhound still,
Always hoping that I'll strike it, just beyond that next high hill.
I find peace and solace watching sunset colors change and blend,
And I'll follow dim old winding trails right to the journey's end.

Reduction of the Budget

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, April 1, 1957

Mr. THURMOND. Mr. President, the people in this country are more concerned than at any time in my memory about economy in government.

I believe the people are opposed to extravagance in government at any level, and particularly in the Federal Government. The mail which comes to my office indicates that they are aroused and intend to seek and bring about greater economy in the Federal Government.

The senior Senator from Virginia [Mr. BYRD] has been a stalwart figure in the Senate for 24 years, and has fought and earned the name of being the chief advocate of economy in government.

This year he has offered budget reduction suggestions amounting to a total of $6½ billion. These reductions would include $1½ billion for national-security activities, $2 billion for foreign aid and international affairs, and $3 billion for domestic civilian activities.

The Camden Chronicle, a newspaper in South Carolina, pointed out in a recent editorial that Senator BYRD "has a habit of going to the heart of matters in his public statements. He has done this in his analysis of the proposed $71.8 billion Federal budget."

Mr. President, I agree with this editorial and I agree with Senator BYRD. He is a great American, and his recommendations on the budget should be followed.

Mr. President, I request unanimous consent to have the editorial to which I referred printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEVER GETS OUT

Senator BYRD has a habit of going to the heart of matters in his public statements. He has done this in his analysis of the proposed $71.8 billion Federal budget.

Much of the increase, he says, is accounted for by an increase in civilian domestic spending. The budget would provide for Federal grants to States in 13 new fields

(bringing to 67 the number of such activities in which the Federal Government is involved). Total contributions would be $4 billion.

This has much more significance than its inflationary influence on 1 year's budget. For, as Senator BYRD states, "Once the Federal Government gets into a field it never gets out and it inevitably increases its contributions from year to year." So, if these budget proposals are approved, we will have established a precedent leading to ever-increasing spending in the years ahead.

How Secure Is Right of Jury Trial?

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, April 1, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from the Greenville (S. C.) News of March 29, 1957, entitled "How Secure Is Right of Jury Trial?" Former United States Senator Roger C. Peace is publisher of the Greenville News, and it is edited by Mr. Wayne M. Freeman, one of our able newspaper editors in South Carolina.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW SECURE IS RIGHT OF JURY TRIAL?

Rather smugly, perhaps, we Americans have taken for granted our right to a trial before a jury when we stand accused of violating the law.

So fixed in our system of jurisprudence and our common concepts of justice is the jury trial that few of us ever have stopped to consider the difference between having our guilt or innocence determined by a group of ordinary citizens and having a judge, a creature of the government, mete out justice single-handedly, as he alone sees fit.

Article III, section 2 of the United States Constitution, says that "The trial of all crimes, except in cases of impeachment, shall be by jury."

The 6th amendment, article VI of the Bill of Rights, spells out further the right to the accused in criminal proceedings "to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed. * * *"

It goes on to guarantee the accused the right to be informed specifically of the charges against him to confront the witnesses against him, to subpena witnesses in his favor and to be represented by counsel.

The 7th amendment, article VII of the Bill of Rights, provides that in suits at common law the right of trial by jury shall be preserved.

One would think that, with all these references in the Constitution, the right to a jury trial would be secure. But liberal elements, including our own Department of Justice, advocating passage of proposed "civil rights" legislation are teaching us that this basic right is not so secure as we might have thought.

For the bills now before the Congress would, in fact, deny persons accused of violating the civil rights of others the right of a trial by a jury of citizens of their State and district. And the NAACP and Attorney General Brownell are insisting on this provision of the bill. Attempts of southern Senators and Congressmen to write into it a guaranty of that right have thus far been beaten down.

If the bill is enacted, the Government would be empowered to bring civil, rather than criminal charges, against an individual accused of violating someone else's rights. He would be prosecuted by a Government attorney before a Federal judge, who might be sent in from outside his State, who would pass on the facts as well as the law and would pass sentence.

The accused would be just as apt to go to jail on the civil charge as he would if he were charged with a criminal offense in which the jury trial would be guaranteed. Indeed, the chances of his going to jail might be even greater.

But that is only part of it.

The bill would create a new division in the Justice Department with an unlimited number of lawyers employed to investigate and bring civil-rights suits. This division could bring suit in behalf of a named plaintiff, even though that individual had never raised a complaint. If the individual did complain, the Government would bear the whole cost of prosecuting his case.

The defendant, on the other hand, would find himself faced with the necessity of hiring a lawyer and, perhaps, of going through a long series of court proceedings that could very well break him financially.

This could become vicious persecution instead of reasonable prosecution.

This threat of persecution is no less real in another phase of the proposed civil-rights legislation relating to the creation of a commission empowered to investigate alleged incidents of discrimination, economic boycotts and the like.

If this plan became a reality, a citizen accused of discriminating against a member of a minority, or of applying economic pressure against him, could be ordered to report to a place in Washington at a given time and be subjected to an investigation. His need for counsel and, hence, the expense of defending himself, could be just as great as it would be if he were accused of some crime.

All of this is being proposed in the name of civil rights by persons calling themselves liberals.

How can we create rights by destroying rights? And how liberal is it?

Humane Slaughter of Animals

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 1, 1957

Mr. HUMPHREY. Mr. President, the Washington Star of March 31, 1957, published an article entitled "Congress Shows Interest in Humane Slaughter," written by Ann Cottrell Free. My colleagues well know of my own long-time interest in humane slaughter legislation and of my earnest hope that a meaningful humane slaughter bill will pass Congress during this session.

Tomorrow the House Agriculture Subcommittee will begin hearings on the humane slaughter bills now pending in the House. For that reason Mrs. Free's article is of considerable interest today, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESS SHOWS INTEREST IN HUMANE SLAUGHTER

(By Ann Cottrell Free)

Growing political concern over an issue not often discussed by lawmakers, though it involves both heart and purse, is shaping up in Congress.

The issue is the extent to which the Federal Government should spread its mantle of protection over animals. Specifically, should there be a law providing a more merciful death for the millions of animals and fowl sold in interstate commerce each year?

On Tuesday, a House Agriculture Subcommittee will hear witnesses and examine five bills asking for compulsory human slaughter. Later, a Senate committee will study four bills.

The compulsory bills all ask that effective methods be used to make animals insensible to the thrust of the knife. They provide for a 2-year compliance period and exempt slaughter practices of religious groups, such as Orthodox Jews.

This 1957 congressional drive for humane slaughter is bipartisan. The Department of Agriculture, however, takes the view of the meat packers and opposes the proposed law.

AVOID EMOTIONAL APPEAL

Supporters of compulsory legislation avoid emotion and stick, instead, to facts and figures. The chief battleground is economics. The issue turns of packers' willingness to retool to modern ways. Packers freely admit their prime worry is the expense of installing anesthetizing equipment. But humane groups maintain that such equipment pays for initial expenditures in the long run.

While that dispute continues, these facts emerge:

Practical methods for humane dispatch are available.

Fifteen countries, all or in part, require humane methods.

Meat packing accident rate nearly doubles that of general manufacturing.

Meat packers lose millions annually from meat bruised or otherwise damaged during slaughter.

Economic loss in slaughter houses due to injury of man and beast is unusually high in this country. The struggle of excited animals often injures workmen. The Labor Department says that there are 21.3 accidents per million manhours in the meat packing industry compared to 12.1 in general manufacturing.

Injuries to animals are measured by losses suffered when bruised meat is turned down by inspectors. Such losses cost packers $16 million in 1955.

Few persons dispute that injury to man and beast can be eliminated if animals are anesthetized before being killed. The George A. Hormel Co., the first to develop the carbon dioxide tunnel, reports a saving of $50,000 on bruised hams the first year. Also the accident rate among workers dropped.

During Senate Agriculture Subcommittee hearings last spring conducted by Senator HUBERT HUMPHREY, Democrat of Minnesota, on his bill, R. W. Regensburger, of Swift & Co., representing the American Meat Institute, went to the heart of the packers of the packer's objection:

"The cost of installing facilities * * * is exceedingly high by reason of building alterations and new enclosures to accommodate the unit."

The equipment runs in price from $3,500 for small units to $39,000 for the largest.

Somewhat less opposition is voiced over the adoption of substitutes for the traditional poleaxe used to knock out beef cattle. Already about a dozen companies are using more efficient weapons, such as the captive bolt pistol or a special stunning gun developed by Remington Arms. Packers' chief economic worry along this line has not been cost of weapon (prices range from $100 to $200) but damage to marketable beef brains.

UTAH SIDELIGHT

A dramatic political sidelight to the slaughter issue is being enacted by three Republican Mormons from Utah. In one corner Representative WILLIAM A. DAWSON. In the other, Agriculture Secretary Ezra Taft Benson and Senator ARTHUR V. WATKINS.

Mr. DAWSON introduced a compulsory slaughter bill after several letters to Secretary Benson. He was convinced that maintenance of the status quo was the objective of both the Department and the packers.

Mr. DAWSON'S bill, along with the other six introduced this session, apparently prompted the introduction of Senator WATKINS' bill. As pressure for legislation mounted, Agriculture and the packers realized that their view should be embodied in legislation, too. That view, as presented in S. 1213 by Senator WATKINS, provides for Agriculture Department-financed study and development of improved methods. Senator WATKINS does not ask for compulsory adoption of humane methods, but encourages their acceptance.

Milwaukee Welcomes the Industries of the Nation

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, April 1, 1957

Mr. WILEY. Mr. President, I was pleased to note in the Friday, March 29, issue of the Milwaukee Journal an article concerning the appointment of an industrial task force of 20 leading Milwaukeeans, to serve as a clearing house for inquiries from businesses throughout the Nation which might be interested in locating in the Milwaukee area for industrial expansion purposes.

I commend the enterprising Milwaukee Association of Commerce for this fine effort, for this evidences more than the spirited activity of a city determined to move ahead in orderly progress; it demonstrates a grassroots self-reliance in looking after the needs of a community and of its population.

Mr. President, it may be recalled that on February 20 of this year I pointed out how the Federal Reserve Bank of Chicago had issued a glowing report on Milwaukee's great future. The bank showed the Milwaukee had all of the necessary ingredients with which to be an outstanding attraction for American business.

It has a well-deserved nationwide reputation of civic pride. It is a clean city, in every definition of that term. It has a dynamic capital-goods iddustry, a skilled labor force, and port facilities that are generally regarded as the finest and most modern on the lakes system. It has diversified industry, with a tremendous variety of goods and services.

I send to the desk now this Milwaukee Journal article describing this splendid grassroots effort to further acquaint the Nation and the Nation's industries with Milwaukee's assets. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TASK FORCE TO AID IN BID FOR INDUSTRY—ASSOCIATION OF COMMERCE APPOINTS 20 BUSINESS EXPERTS TO ASSIST FIRMS CONSIDERING SITES HERE

The Milwaukee Association of Commerce has organized an industrial task force of 20 Milwaukee business executives to act as a clearinghouse for inquiries from companies interested in the Milwaukee area as a potential industrial site.

Lester S. Olsen, association president, said Friday that the 20 fields represented on the task force were chosen as most likely to be of interest to a firm considering locating here. The executives chosen are considered to be experts in these fields.

CRABB IS COORDINATOR

Charles G. Crabb, manager of the association's industries division, who will act as coordinator of the task force, explained that its members would be called for consultation and advice.

"Depending upon the needs of an inquiring company," Crabb said, "only the task force members whose talents will be of help in solving specific poblems will be called on for guidance."

The task force members and their fields of representations are:

County coordination: William R. McGovern, former president of the Wisconsin Telephone Co. and a member of the Milwaukee County Park Commission. Investment and finance: Joseph T. Johnson, president of the Milwaukee Co., investment banking firm. Industrial communications: A. Walter Seiler, president of the Cramer-Krasselt Co., advertising agency. Vocational training: Ebner F. Luetzow, president of the South Side Laundry & Dry Cleaners and a director and secretary of the Milwaukee Vocation School.

TAX, POWER INCLUDED

Harbor and port operations: William D. Vogel, president of the P. & V. Atlas Industrial Center, Inc., and a director of the Great Lakes-St. Lawrence Seaway Committee. Tax data and administration: Clarence H. Benton, parner of Reilly, Penner & Benton, certified public accountants. Electric power: Almer Skretting, general sales manager of the Wisconsin Electric Power Co. Water supply and resources: Samuel J. Gates, partner in Gates, Wiess & Kramer, water engineering consultants.

Industrial and labor relations: Robert G. MacDonald, vice president and industrial relations director for the Heil Co. Cultural facilities: Ben Barkin, partner in Barkin, Herman & Associates, public relations consultants.

Wage rates: Gerald H. Machesky, assistant manager in charge of special services, Wisconsin State employment service. Recruitment of labor force: Willet S. Main, Milwaukee district manager for the Wisconsin State employment service. Industrial sites: Frank L. Heilbronner of the Frank L. Heilbonner Co., industrial and commercial real estate specialists. City coordination: Roland D. Berger, city of Milwaukee industrial development coordinator.

Natural gas: Jack H. Mikula, sales manager for the Milwaukee Gas Light Co. Business research: James A. Swoboda, general partner, Paine, Webber, Jackson & Curtis, investment banking firm. Traffic and transportation: Frank L. DeGroat, general traffic manager, Jos. Schlitz Brewing Co. Metropolitan sewers: Raymond D. Leary, chief engineer and general manager, Milwaukee metropolitan Sewerage Commission. Construction costs: Louis J. Selzer, president of Selzer-Ornst Co., general contractors.

The task force was organized, Crabb explained, to supplement the industrial promotion campaign being conducted by the association's industries division since last November.

Three promotional mailings have been sent to manufacturers around the country so far and more are planned, Crabb said.

Dilemma Facing Pee Dee Tobacco Growers

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, April 1, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Florence (S. C.) Morning News of March 29, 1957, which I believe expresses the feelings of most of our tobacco growers in South Carolina regarding our current tobacco problems. This excellent editorial is entitled "Leaf Hearings Reflect Dilemma Facing Pee Dee Tobacco Growers." The Florence Morning News is published by Mr. John M. O'Dowd, and it is edited by Mr. James A. Rogers, both of whom are able and experienced South Carolina newsmen.

The article and editorial were ordered to be printed in the RECORD, as follows:

LEAF HEARINGS REFLECT DILEMMA FACING PEE DEE TOBACCO GROWERS

Two facts emerged clearly from the hearings here Wednesday on the tobacco acreage-poundage measure of Senator KERR SCOTT, of North Carolina: First, that Pee Dee farmers don't want it; and second, they aren't happy about the whole tobacco situation in general.

If Scott's measure should be enacted, it will be because of the preponderant influence of North Carolina growers. But even in North Carolina, sentiment on the measure is sharply divided. Certainly, Georgia and Florida gave the Senate subcommittee, even before they reached South Carolina, every reason to believe growers of those two States are opposed to it.

At the Florence meeting, Pee Dee growers took occasion to voice their disapproval of company buying and manufacturing practices. Specifically, they charged that the companies are not playing fair with the grower by failing to make it clear what kind of tobacco they want, that they are now using stems and trash, hitherto considered waste, and refuse to label the content of their cigarettes. What the farmer once considered quality tobacco is no longer quality tobacco but what quality tobacco is he doesn't know. He suspects, too, as suggested at the Wednesday meeting, that the tobacco companies are using the Stabilization Corporation as a storing agency and that this helps to account for the burdensome surplus now hanging over the heads of tobacco growers.

The farmer finds himself enmeshed in a tangle of conditions created by surplus supply, high yields, a revolution in consumption habits, acreage control, and stringent Govenment growing and marketing regulations. The Government has told him how many acres he can grow and now proposes legislation that would tell him how many pounds he can produce on these acres without penalty. To add to the difficulty, he examines a filter cigarette and finds a homogenized tobacco that includes stems, trash and floor scrapings that once had no value. He wonders whether there's any premium to

be obtained from growing now what he once thought was good tobacco. It is a many-faced dilemma.

What will be the outcome is anybody's guess at the moment. Nobody seems to be sure that any of the steps being taken or proposed are the answer to the problems. Another growing and marketing season may see the situation improved, or even worsened. But it is important to remember that the tobacco program under which the farmer has successfully operated stands in danger. It is a program that has cost the Government nothing. It has been self-supporting. At the same time it has permitted the tobacco farmer to have a 90 percent of parity guaranty when other crops were under lower price protection. It is important to protect that program. It would be a pity if the present difficult situation resulted in its loss.

Federal Tax Burden on States

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks I wish to include an editorial from the Livingston County Press, published at Howell, Mich., discussing the Federal tax burden as it falls on the people of the various States.

This editorial, like so much of my mail recently, reveals a growing awareness by the people that the cost of each Federal appropriation has a price tag which must be paid in Federal taxes. I assuredly agree with the main point of the editorial that the cost of every appropriation, however worthy, comes back in some degree to each and every taxpayer in the United States. People this year are demanding that Congress consider not only the merit of each expenditure but the tax burden it would impose. This editorial and the breakdown by States of the Federal tax burden can continually remind us just how appropriation bills will affect the taxpayers of our States.

THOSE FEDERAL TAXES

From a dozen sources comes news that lawmakers in Washington are being swamped with letters demanding they give careful thought to Federal spending—and specifically to the reduction thereof. Business interests, wage earners, and people in most every classification want those income taxes reduced.

Congressmen have always been impressed by the voice of the people raised in spontaneous concert, but will the result be a large reduction in the pending budget? Probably not, but if it will discourage the upward trend in spending perhaps we can hope for a little relief in another year. Postponed hope and continued high taxes can't keep receiving the congressional brushoff without rousing rebellion back home.

Publication of the staggering figures contained in the President's record-breaking, peacetime budget recommendations coinciding with the admission from all quarters that there could be no general tax reductions, apparently touched off this avalanche of spontaneous public interest.

Only five States pay more into the United States Treasury through Federal taxes than does Michigan. In view of the undoubted interest of our readers in the tax-and-tax, spend-and-spend routine, we print the following recent tabulation by the Council of State Chambers of Commerce in reference to the new Federal budget proposal:

	Percent of Federal tax burden borne by States	Cost of proposed budget to the States
Alabama	1.02	$732,360,000
Arizona	.47	337,460,000
Arkansas	.49	351,820,000
California	9.81	7,043,580,000
Colorado	.89	639,020,000
Connecticut	1.97	1,414,460,000
Delaware	.40	287,200,000
Florida	1.80	1,292,400,000
Georgia	1.34	962,120,000
Idaho	.25	179,500,000
Illinois	7.46	5,356,280,000
Indiana	2.62	1,881,160,000
Iowa	1.26	904,680,000
Kansas	1.06	761,080,000
Kentucky	1.09	782,620,000
Louisiana	1.16	832,880,000
Maine	.43	308,740,000
Maryland	1.93	1,385,740,000
Massachusetts	3.37	2,419,660,000
Michigan	5.63	4,042,340,000
Minnesota	1.68	1,206,240,000
Mississippi	.48	344,640,000
Missouri	2.50	1,795,000,000
Montana	.35	251,300,000
Nebraska	.66	473,880,000
Nevada	.20	143,600,000
New Hampshire	.31	222,580,000
New Jersey	4.22	3,029,960,000
New Mexico	.34	244,120,000
New York	12.65	9,082,700,000
North Carolina	1.42	1,019,560,000
North Dakota	.23	165,140,000
Ohio	6.48	4,652,640,000
Oklahoma	1.00	718,000,000
Oregon	.99	710,820,000
Pennsylvania	6.98	5,011,640,000
Rhode Island	.52	373,360,000
South Carolina	.66	473,880,000
South Dakota	.22	157,960,000
Tennessee	1.24	890,320,000
Texas	4.39	3,152,020,000
Utah	.37	265,660,000
Vermont	.16	114,880,000
Virginia	1.62	1,163,160,000
Washington	1.69	1,213,420,000
West Virginia	.75	538,500,000
Wisconsin	2.13	1,529,340,000
Wyoming	.17	122,060,000
District of Columbia, Alaska, Hawaii, and Puerto Rico	1.14	818,520,000
United States total	100.00	71,800,000,000

The next time you want some Federal money as a pension for a veteran, aid for a worthy cause, a new building not entirely necessary, or a service we could perhaps do without—just remember it is the total of these things that increase taxes. If we are to have economy we will have to begin where it hurts—at home.

Speech of Hon. Winfield K. Denton, of Indiana, United States Representative, Eighth District, at the Thomas Riley Marshall Democratic Dinner, Honeywell Memorial Building, Wabash, Ind., Fifth Indiana Congressional District, Thursday, March 21, 1957

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. EDMONDSON. Mr. Speaker, under leave to extend my remarks, I am pleased to place in the RECORD a speech by our distinguished colleague from Indiana, the Honorable WINFIELD K. DENTON, which was delivered at the Thomas Riley Marshall Democratic dinner at Wabash, Ind., on March 21, 1957.

This highly interesting speech was called to my attention by the Honorable Paul Hillsamer, a good friend in Marion, Ind., who shares my high regard for the splendid service in this House by WINFIELD DENTON.

The address is an eloquent tribute to a former Vice President, who fought hard for the principles which made America great—the same principles for which WINFIELD DENTON is today fighting. His speech follows:

We meet tonight to honor a great American and a great Democrat: Thomas Riley Marshall.

Tom Marshall was truly a distinguished son of Indiana—the governor of our State for a very memorable 4 years, and for 2 terms Vice President of the United States. He was a typical Hoosier, and Wabash County can feel highly honored that he was born here, 103 years ago this month.

He was the son of Dr. Daniel Marshall, who was practicing in North Manchester during the 1850's, and whose family had settled in Indiana the year after statehood. His mother was a descendant of the famous Charles Carroll, of Maryland, who was a signer of the Declaration of Independence and a leader in the American Revolution. His paternal ancestors came from Virginia, and he is reputed to have been related to the great Chief Justice, John Marshall. But it was in true Tom Marshall style that he said, "So far as I know I am the only man of my name who does not trace his origin * * * to the great Chief Justice * * * with the utter recklessness of a Hoosier, I do not care."

Because of the delicate health of his mother, Marshall's family left Indiana when he was 2 years old and traveled and lived in the West for a time, but they returned to the State when he was 6 years of age. Tom Marshall was educated in the Indiana schools, and graduated from Wabash College. He began the practice of law as a typical country lawyer at Columbia City, in neighboring Whitley County, where he became a leader in the community, in his church, and in his fraternal order.

Tom Marshall was an active Democrat at the age of 18; after more than 20 years' faithful work in our party, he became 12th district chairman, and thus a member of the Democratic State central committee, in 1896. But he was a candidate for public office on only one occasion before he ran for governor in 1908; he was defeated in an election for county prosecutor in 1880.

When he was elected Governor of Indiana in 1908, our party had been out of power in the State for 12 years. Not only did he bring new life to the party, but his administration was refreshing to the whole State. Tom Marshall brought to the statehouse a rugged honesty, a lively sense of humor, a thorough fairness, and discretion, a strong spirit of economy—and he was a liberal, as he said, "a liberal with the brakes on."

Marshall did not place much importance on family history; but he did have good reason in his family for being a Democrat. His father and grandfather were staunch supporters of the Union cause during the Civil War, but they were also partisan Democrats, and remained so, when, with the Union Army in the field and soldiers dying, feeling ran strong against the Democrats.

At that time, the two elder Marshalls were notified by the minister of their church that he would have to strike their names off the

church roll if they continued to vote the Democratic ticket. Marshall's grandfather announced that he was willing to take his chances on hell, but never on the Republican Party. His father withdrew from that church and joined a church of another denomination. You wouldn't think such prejudice as the Marshalls suffered then would show up at the present day; but I must mention that the man who now holds the second highest office in the land has accused all Democrats in effect of being traitors and disloyal to their country.

We Democrats can take pride in what Tom Marshall did as our Governor nearly 50 years ago. During his term in the State house, he advocated the direct election of United States Senators; a uniform primary election law; laws to prevent the watering of stock in corporations; better regulation of insurance companies; the creation of a State board of accounts; and labor legislation that included the employers' liability law (which paved the way for workmen's compensation), a mine-safety program, railroad-labor safety, a weekly wage law, and a child-labor law.

Marshall asked for a new State constitution; a State inheritance tax; a corrupt practices act; a voters' registration law; protection for bank depositors; and the power to break up business trusts and monopolies.

Such a program as that seems commonplace to us today (for most of it is now an accepted fact), but in Tom Marshall's time it was considered a very progressive program—some of it so progressive that he was unable to get it all enacted. In those days, Indiana ranked as one of the most progressive States of the Union.

What a far cry that is from what we have today—a State that now has enacted a misnamed right-to-work law.

Maybe those who pushed the right-to-work law get a kind of savage satisfaction out of punishing other people; but the passing of a law which would tend to destroy labor unions and deprive a working man of his hard-won right to organize and bargain collectively is not a laughing matter. It was a deadly serious business.

But doesn't it reflect the real spirit of the Republican Party in Indiana—clear to the highest office in the State? The new governor, who was elected last fall with certain labor support, did not lift even a finger to prevent the passing of this nefarious bill, but permitted it to be come a law without his signature. (I understand he has already had more visitors at the State house since he took office than any other Governor has had in the history of Indiana.) Why didn't he either sign or veto the so-called right-to-work bill?

There has been another change at the State house since Tom Marshall served there. When Marshall was governor, the State's expenditures were reduced, the sinking fund to pay the State debt was built up, and State taxes were lowered. Oh, if we could only have another State administration like that, after these years of Republican spending and waste in Indiana.

First, we had Governor Craig, who by his extravagance depleted the $75 million surplus which Governor Schricker had left in the State treasury when he retired from office. And now there is Governor Handley, whose regime in just 9 weeks has handed us an amazing list of tax increases and a State budget he has himself called fantastic.

This Republican budget ended up totaling nearly $800 million, even larger than the 1955 Craig budget, and it is the highest budget in the history of the State.

In spite of an early delay with some faulty arithmetic on tax rates, the Governor finally obtained a 50 percent increase in the gross-income tax. Also, he got a 50 percent increase in the gasoline tax. He got a payroll withholding tax on gross income. He got the taxes or fees raised on barbershop licenses, beautyshop licenses, birth certificates, marriage licenses, and death certificates. And he got the fees increased for fishing licenses and hunting licenses.

All of us have worried a lot about the cost if living. But, under Governor Handley, it is going to cost you more to be born, or to get married, or to die. Don't think you can get away from these taxes. You can't even relax and forget about them by going fishing or taking time out for a haircut.

With these new taxes popping up all around, one of my Republican colleagues in Washington received a letter the other day from a very angry Hoosier. He said, "If an election were held in Indiana today, the Republican ticket would draw only 3 votes; those 3 votes would be from Senator Jenner, Governor Handley, and Congressman Halleck."

I am going to let you in on a good one: Our Governor had been planning to make a trip to Washington last Thursday and give a talk to the United States Chamber of Commerce. Now the subject of his lecture to them was going to be, of all things, Economy in Government. (I heard he wanted to ask the Federal Government to move over a little and leave open more things on which he could levy taxes.)

But, as it happened, the Governor had to cancel the trip and remain in Indianapolis, because the legislature stayed in session 50 hours longer than he had thought they would. And, so long as that was the case, he might just possibly have a chance to put through a few more taxes here.

But let me get back to a more pleasing subject: Tom Marshall. After serving a very successful term as Indiana's Governor, he was nominated for Vice President on the ticket with Woodrow Wilson and was elected in the year 1912. He was reelected in 1916 and served in that office for a total of 8 years.

He raised quite a stir among the financiers when he got back East. Marshall was afraid of the power of great wealth, for he had already seen its manipulations here in Indiana. He feared that, unless the growth of wealthy interests were somehow controlled, free enterprise and democracy would be destroyed.

So, when Marshall became Vice President, he made a number of speeches dwelling on this danger in very plain-spoken terms. The eastern Republicans thought he was a reckless radical trying to pull down their temples. And the New York newspapers for years were incensed that Indiana had sent such a man to Washington. By 1920, these papers admitted he was a highly sensible Vice President.

That was no temporary problems about which Marshall gave warning. It is still with us. When we see a national administration today controlled by a Cabinet of 10 millionaires, and where the real power of Government is not in Washington but in Wall Street, we can realize all over again how sound was the advice he gave us then.

Woodrow Wilson's administration was a very progressive era, which saw the enactment of many long-needed reforms, and, while Marshall's private views differed with these in some respects, he gave them his loyal support as Vice President. Probably his greatest contribution to Wilson, however, was his patient and long-continued effort to obtain ratification of the League of Nations Covenant by the Senate, at the close of World War I.

Having worked so long and hard to build the idea of the League, only to fall critically ill at the peak of the struggle, Wilson saw his cherished plan at the mercy of the Republican Senate. Marshall, as the Presiding Officer there, sought by every possible means to steer the League Covenant through. Confronted on the one hand by Wilson's desperation, and thwarted at every turn by Senator Henry Cabot Lodge and his band of Republican followers, Marshall cast about in every direction to find agreement on joining the League, but at last it was defeated after seven votes that were needed could not be found. There, the United States lost a great chance to take world leadership which might have avoided the tragedy of World War II.

In that fateful struggle in the Senate, Tom Marshall saw before his eyes the costly result of bitter Republican partisanship on a grave question of foreign policy. Before Wilson had negotiated in Paris to form the League of Nations, Senator Lodge and other leading Republicans had endorsed the idea. But when Wilson came back to get their formal approval, this cynical group took the opportunity to humiliate and discredit him as a public figure in order to better the political chances for the Republican Party.

For the moment, the Republicans won a victory; but no one can guess how great was the cost to America in the long run. Possibly we as a people did not fully realize our strength at that time. But we had world leadership thrust at us, and for 12 years under the Republican rule that followed we failed to grasp hold of it.

The United States has gone a long way since that time. Even our Republican Secretary of State today believes we should play a great part in world affairs—although he can never quite decide just what part it should be.

John Foster Dulles is a great world traveler, but it seems that every place he goes he stirs up discord and strife. Someone said Secretary Dulles has been to every place but the moon, and it is only with the moon that we are still enjoying friendly relations.

And, now, Dulles' zeal for travel seems to have spread to the rest of the team. A few days ago, Dulles was in Australia; NIXON was in Africa; and the President was cruising on the high seas. It seems that the whole Eisenhower team was on the road last week. But all our foreign policy seems to be is travel and conference, without aim or direction.

Why our foreign policy is so poor that other countries are practically forcing us back into isolationism. The other nations won't even have anything to do with us and we may be reaching the point soon where they won't even take our money.

We have no foreign policy today. What we need now is a foreign policy like we had under Woodrow Wilson, Franklin D. Roosevelt, and Harry Truman.

That Senate struggle in Tom Marshall's day when the League of Nations was beaten was not by any means the last time the Republicans have played politics with our foreign policy. We have seen plenty of that in recent years, no matter how much the Republicans like to make a show of bipartisanship. The Middle East situation is a prime example.

As all of us here remember very well, the Republicans unfortunately sought to make "war versus peace" an issue in the election campaign last year. They told the American people that our party was the party of war, but that the Republican Party was the party of peace. With good reason, the public was anxious about the possibility of a crisis developing around the Suez Canal. But the President and the Secretary of State went on playing the peace theme heavily and kept assuring everyone there was no danger of the United States' becoming involved in the Middle East.

The fact is, though, that the United States has a very important interest in the Middle East—to keep the great oil resources there available to ourselves and our allies in case of war and to keep this oil away from the control of our enemies. And, too, this Republican administration is very sensitive to what happens in the Middle East, because of the holdings of some large American oil companies in that area.

But, with the Republican peace cry being repeated day after day, apparently both our enemies and our allies took the Eisenhower administration at its word and felt they had a free hand to make their moves in the Middle East. Then the Suez Canal situation exploded and fighting broke out in late October.

Having pressed the peace issue so widely here at home, the Eisenhower administration found itself almost totally without influence among the troublemakers in the Arab world. As soon as the election was over, the administration began to try to shake off the peace label; but the Republican officials felt they had to get something besides their own word to back them in dealing with the Middle East situation.

So, the President and Secretary Dulles hurried to Capitol Hill early this year to ask that Congress reassure them of power already granted in the Constitution for the President to use American troops to protect our interests in the Middle East. The President also asked much greater freedom in spending $200 million of foreign-aid funds in that area. But the administration had first drawn up the proposal without consulting any Democrats in Congress, and got it publicized all over the world as American policy. Then they dropped it in the lap of Congress and staged a great plea for bipartisanship.

At that point, a refusal to support the Middle East proposal might have given the impression to the world that there was a division between the Republican President and the Democratic Congress on a matter so vital as preventing Communist aggression. Congress had no sensible alternative then but to approve the measure in some form, but we did modify the Middle East resolution, to make it clear that President still has the constitutional duty of carrying out foreign policy, and also to make sure Congress keeps some control over spending for foreign aid.

Here we saw a Republican administration in severe difficulty, because of their reckless campaign statements, now calling upon a Democratic Congress to save them from the predicament in which their folly had placed them. The Democrats in Congress had a tempting opportunity to take partisan advantage of this Republican administration, who had blundered into this Middle East crisis and then reaped political profit from it last November.

Instead, the Democrats in Congress rose above party and showed once again their refusal to play politics with the national interest in the face of danger. How different things might have been if the Republican Party had shown such bipartisanship with the League of Nations when Tom Marshall was Vice President.

The Republican Party did not have much of a program in Tom Marshall's day. Mainly, it consisted of blind, bitter opposition to every move of the Democrats, such as we saw in the League of Nations debate. And the Republicans have never developed any program since then.

Oh, for 20 years they cried and yelled about Government spending and financial insolvency. They said that Franklin Roosevelt and Harry Truman were taking the Government to wrack and ruin. I wonder how the Republicans feel about that today?

When their General was a candidate in 1952, he went up and down the country making pious statements about economy, and ridiculing the Democrats for what he called crazy spending. General Eisenhower promised he would cut the budget down to $60 billion, reduce the national debt, and cut taxes. But, even with an administration loaded with the tycoons of industry and business, what has happened?

The Eisenhower budget this year is $73.6 billion—the highest in peacetime history. Whereas the Truman administration showed a net surplus of $4 billion in the 6 fiscal years after World War II, under Eisenhower the Government has gone in the red nearly $6 billion.

In 4 years with Eisenhower the national debt has gone up $9 billion, while the Truman administration had reduced the debt $12 billion below its World War II peak. By the end of June, the Eisenhower administration will have spent $61 billion more than the expenditures under Harry Truman in a comparable 4½ years. I wonder if the economy General Eisenhower promised is still somewhere just around the corner?

As to the tax cut he promised, that came to pass—not for you and me, of course, but for the corporations, who got 73 cents out of every dollar of benefit.

So long as we have known our party, the Democrats have always moved forward with a positive program. We have seen such programs as the new freedom in Tom Marshall's time, and, in more recent times, the New Deal and the Fair Deal.

Now when President Eisenhower looked over the election returns last fall, and saw the Republicans were unable to elect a Congress, no matter how popular their candidate for President was, he decided maybe they had better bring out something new.

So, the President announced he was going to remake the Republican Party (and for that statement he deserves a medal for bravery)—he was going to remake it along the lines of a new Republicanism. Now let's see what this new Republicanism is, if we can.

From the President or various officials in his administration have come statements saying we should repeal the union-busting provisions of the Taft-Hartley law; that we should extend the minimum-wage law to more people; that we should enact a law giving women equal pay for equal work; that we should extend the public-housing program; and that we should provide Federal aid for school construction.

Also, they are urging that the States improve their workmen's-compensation and unemployment-insurance laws; that employers give more job opportunities to people over 45; and that Congress provide increased appropriations for medical and educational research, reduction of juvenile delinquency, and assistance for retarded children.

All of this sounds very much like New Deal and Fair Deal programs, which the old-line Republicans denounced so bitterly for 20 years. I am afraid it is going to be a bitter pill for them to swallow such proposals now, and I predict they won't.

But the real test of whether the Eisenhower administration is sincere about this new Republicanism and liberal welfare programs is going to come when we see if the administration asserts itself and exercises the leadership necessary for these programs to get the support of Republicans in Congress.

There have been a few occasions when the President did exert leadership to get certain bills through Congress. He used White House pressure to get the tidelands oil bill passed without amendment; to kill a bill to preserve the waterpower resources in Hells Canyon for the benefit of all the people; and to prevent any change in Ezra Taft Benson's program of sliding-scale farm prices.

Do any of us really think the President will use the same influence of his office, to put across the New-Deal-type measures he claims to favor, as he did when the interests of the big oil companies and utilities syndicates were at stake? I have my doubts.

When President Eisenhower submitted this year's budget that broke all peacetime records, his closest friend in the Cabinet, Secretary of the Treasury George Humphrey, immediately called a press conference—obviously with the approval of the administration. At this press conference, Humphrey said the budget should be cut, and that, if it were not cut, there would be a depression that will curl your hair.

We called Secretary Humphrey before the House Appropriations Committee, and asked him for suggestions about where the budget could be cut. But he was unable to give any particulars. Since then, other administration officials have kept the publicity going about wanting a budget cut, but they never name any items they want cut.

Thus, we find the administration trying to play both sides of the street. They propose liberal programs to please the liberals, and are willing to let the reactionary Republicans kill the legislation in Congress. They propose a recordbreaking budget, with large expenditures for all liberal programs; and then they have Secretary Humphrey, the darling of the conservatives, proclaim that the administration wants Congress to cut the budget.

There you have the new Republicanism. This plan of talking out of both sides of the mouth has worked very well under General Eisenhower, who is regarded by many people more as a constitutional monarch than as a President. But when the Republicans have to select another candidate for President, from among less popular men, I don't believe they will find a man who will have such a chameleonlike disposition that he can be all things to all people.

Signs are on the horizon that a bitter storm is brewing in the Republican Party over the question of how far to push the new Republicanism. But, in the meantime, if anyone asks you what a new Republican is, you can tell him: A new Republican is one who talks like Franklin Delano Roosevelt—and then votes like Herbert Hoover.

When Tom Marshall was nominated and elected Governor of Indiana, the Democratic Party had been out of power for 12 years. The party here in the State was disorganized, and it was broke.

I have heard the elder Judge Spencer, a former State supreme court justice who lived in my home county of Vanderburgh, tell of the condition of the party's finances when he served with Tom Marshall on the Democratic State Central Committee. There was no money in the party treasury; there was not even money for postage. So, each of the 13 members of the State committee contributed $5 to buy stamps. That made $65, and it was all the money the Democratic State Central Committee had.

In 1908, the Indiana Republicans were split, as they are now. But there was also bitter dissension in the Democratic Party. There were six candidates for Governor in the Democratic convention of 1908. There were the organization candidate, and the antiorganization candidates; then there were Tom Marshall and three other candidates.

Marshall was nominated on the fifth ballot, as a dark horse. His own District, the 12th, supported him solidly, but he was largely unknown over the State of Indiana.

When he made his acceptance speech, he stated, in effect, that when a new emperor was crowned in ancient Rome, the soldier legions marched in review before him. The head of each legion lifted his hand to heaven and swore to be loyal to the emperor and to Rome, and then every common soldier, raising his right hand, cried out, "This for me."

Marshall noted there were then a number of hyphenated Democrats in Indiana, of one faction or another, but that, like the Apostle Paul who had determined to know none among the Corinthians save Jesus Christ, he was determined to know none among his party save just plain Democrats.

Tom Marshall concluded that speech by saying that he would not accept the nomination unless every man in the convention rose to his feet, lifted his hand to heaven,

and pledged that from that time forward he would be a Democrat and nothing else.

He immediately undertook the task of solidifying the Democratic Party in the State. Marshall was elected in 1908, in spite of the fact that the Republican candidate for President carried Indiana that year, and that all the State offices went Republican but two.

Marshall was so successful in unifying the party that a Democratic Senator was nominated and elected 2 years later without serious opposition. And, 4 years later, Samuel Ralston was nominated for Governor unanimously and the Democrats of Indian rallied behind Tom Marshall in a solid body when he was nominated for Vice President.

Today, we have a Democratic majority in both Houses of Congress, in spite of the fact there is a Republican President. There are 29 Democratic governors to the Republicans' 19.

Here in Indiana, we have our share of county and township offices over the State. Today, 73 out of Indiana's 106 mayors are Democrats—the highest percentage in the history of the State. Why, I have heard it said that the Republican Party was founded here in Wabash County, but the city of Wabash now has a Democratic mayor.

But there are two Republican Senators from Indiana, a Republican Governor, and a Republican in every office in the statehouse. It is true we have discord and dissension in our party. But conditions are too serious in the State and the Nation, and Republican mismanagement is too great, for us to enjoy the luxury of party strife.

Let us follow the example of Tom Marshall and serve notice that there will be no hyphenated Democrats, and that we are determined to know just plain Democrats.

In Tom Marshall's figure of speech, let each Democrat lift his hand to heaven and pledge to be just a plain Democrat and nothing else.

If we can but go forward as a united party, the Democrats will be returned to power in the State of Indiana. Indiana is ripe for a Democratic victory.

A New Way to Handle Gifted Children

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 1, 1957

Mr. NEUBERGER. Mr. President, we of Oregon are justifiably proud of the enlightened program put into effect by the Portland school system for the selection of so-called gifted children, and for the full development of the skills and potentialities of these special students.

An excellent article about this program appeared in the March 31 issue of Parade magazine, under the title, "A New Way to Handle Gifted Children."

The article pays tribute to the leadership of Clifford W. Williams in heading this program, and of a capable and idealistic Portland teacher, Mrs. Idella Watson, in originating it. The undertaking is of particular interest to Mrs. Neuberger and to me, because Mrs. Neuberger herself is a former Portland schoolteacher of physical education and English. Furthermore as chairman of the House education committee in Oregon's State Legislature, she helped to sponsor and put through a pilot program for training teachers to assist so-called exceptional children, who often are children at the other end of the spectrum—that is, children who, through no fault of their own, are mentally or physically retarded.

I ask that the fine article from the March 31 issue of Parade, which appeared in this city with the Washington Post and Times Herald, be printed in full in the appendix of the RECORD, so that other members of Congress may become familiar with the splendid leadership of Portland's school district No. 1 in this vital field.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A NEW WAY TO HANDLE GIFTED CHILDREN

PORTLAND, OREG.—At Alameda School here recently, a group of sixth-graders put their heads together to build a Geiger counter. "I don't know what they'll do with it," their teacher commented. "Probably make the greatest uranium strike in history. With these kids, nothing would surprise me."

Portland parents know what she meant. They feel "these kids" are teeming with surprises—and have been for 5 years, ever since this city launched an experiment that may rescue the forgotten children of United States education: the student with real brainpower.

Today in Portland, high-IQ students—from 5th grade through 12th—receive special direction in all classes and meet once daily for special classes. For the first time, bright students are being given their heads.

One high-school class is receiving instruction from a Reed College professor in projective geometry, the binary system of numbers and other mathematics beyond the ken of most adults. A group of sixth-graders is digging simultaneously into physics, optics, and astronomy. One seventh-grade girl read 60 books—more than 3 a week—on top of her regular work.

Despite such feats, the students keep asking for more—and more yet. "It's impossible" wailed a 14-year-old recently. "I won't live long enough to learn all I want to know."

Yet too often the very thing that distinguishes a gifted child is his distaste for school. The schools have to educate everyone, and the pace is that of the slowest learner. For a bright student's far-ranging mind, school is a prison.

WHY BRIGHTIES GO WRONG

So he is bored. Often he is lazy. Or he thinks up pranks to keep himself occupied. Some years ago, a student here was picked up by police. To his teachers' surprise, he was found to have an extremely high IQ.

That was Portland then, and it is much of the United States now. True, many bright students emerge from school brimful of knowledge and eager for more. But educators admit that this often is in spite of the schools, not because of them.

In isolated cases, things are changing. The science-engineering shortage has turned the spotlight on brains, and schools in a number of cities have realized they were doing little to produce them. In Portland, the program actually dates back to 1947, the year an extraordinary number of bright boys turned up in Mrs. Idella Watson's Grant High School mathematics class. They whizzed through their regular work, demanded more.

ELECTRONICS AND CALCULUS

Mrs. Watson, a teacher with a flair for experiment, decided to give it to them. She went to a Reed professor and asked for help. Soon Mrs. Watson's bright boys were getting lessons in electronics, radar, and calculus—all well outside the usual high-school diet. They loved it.

More Reed professors got into the act with other subjects. By the end of the year, 50 boys and girls were voluntarily attending these high-level discussion groups. Portland authorities looked at the results and decided to put the program on a regular footing. They went to the Fund for the Advancement of Education, an arm of the Ford Foundation, and got $400,000 for a 5-year start.

Looking back, even the program's cautious director, Clifford W. Williams, admits the $400,000 has been well spent. Portland set up its experiment on a control group basis. In 14 of 72 elementary schools and 8 of 12 high schools, bright kids were given special classes and extra work; in the others, they pegged along at the old pace.

All of the results indicate students in special classes got more—a lot more—out of school. Williams has recommended that the board of education end the experiment and extend the program citywide next fall.

Then as now the goal will be not geniuses but all children with special talent, whether in specific subjects or such attributes as leadership. Tests for these things (IQ's, personality tests and such) start early here. Unlike other cities, however, Portland backs them up with close observation, interviews, and intricate records that note all signs of real brainpower.

After 5 years, the students have been studied and compared and reexamined for special gifts. What amounts to the top 10 percent has been identified. And the special classes begin.

The child gets a choice. For 1 hour a day, he can take a stepped-up course in social science and English, or in foreign languages, or in science and mathematics. The group works together, at a fast pace, but there is plenty of room for individual projects.

The students dive into these with enthusiasm. One seventh-grader, in a literature course, recorded his book reports on tape; the finished version included background music, voices of neighborhood children acting out parts, street noises and other sound effects.

The projects get more and more elaborate as the students move through school. By high school, a student may be taking 2 or 3 special classes and working up projects for each. One recent senior coupled work on a home-made electronic brain with a tremendous volume of reading in literature.

Nor are the classes always in allied fields. A student sometimes spends a year in a high-powered math course and the next year switches to literature. The whole approach has been kept flexible. Neither Williams nor the school board wants to be accused of running a crash program to grind out scientists, as some other classes for the gifted have done.

STUDIES PLUS

Special classes require only an hour a day; the rest of the time the students spend with their classmates. But while they study the same American history course as the boy at the next desk, they are loaded with special projects, outside reading, more detailed questions—all of which give them vastly more knowledge of the same ground. Teachers, particularly those handling special classes, have lightened loads so that they can be better prepared to channel the bright students.

Results now are appearing in the colleges. Reed and Oregon State Colleges have instituted special courses for alumni of the project and projects like it. Several of last spring's graduates won scholarships handily.

This might indicate that the project has succeeded in its long-range goal—training brains for the years beyond school—but Williams hesitates to say so. Not for 10 or 15

years, he feels, will Portland know the full results of the project.

THEY'RE REALLY SPECIAL

Currently Portland's children are riding high; but their classmates do not seem to mind. One of the reasons for keeping the brighties with average groups was the fear that they might be regarded as odd. Actually, the reverse has happened; some of those passed over for special classes have been cramming frantically, trying to get in.

Nor has Portland found any evidence that its bright kids fit the stereotype of the sickly, bespectacled little genius. One of the best students to come out of the program recently was a 6-foot 8-inch basketball star. Another was president of the student body for 2 years. The special students participate in all school activities and furnish the leadership for many of them.

At the same time, those few who aren't born leaders, athletes or glad handers have found a new source of strength. One mother reports her boy wanted much to be admired; he had tried football, basketball, track, but wasn't quite good enough. After work on his special project—his own radio network—he became the idol of a radio-minded clique of classmates. And he's happy.

In Portland, and schools across the United States should take notice, it's smart to be smart.

Joker in Federal Grants

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Camden (S. C.) Chronicle of March 27, 1957:

JOKER IN FEDERAL GRANTS

Federal grants-in-aid to the States and to local government—which are now made for all manner of purposes, running the gamut from airports to traveling libraries—are the biggest con game in politics. And it is an ever-expanding con game, which is currently adding $5 billion a year to our Federal tax bill.

That is the opinion of a man who has had considerable experience with these grants-in-aid—Alfred E. Driscoll, former Governor of New Jersey. His account, written in collaboration with Charles Stevenson, appeared in a recent issue of the Reader's Digest.

Governor Driscoll defines grants-in-aid as "nothing more than our own taxes which Federal bureaus distribute to States and localities for specified services, usually with the requirement that the recipients put up some matching cash." In an earlier era, the grants involved comparatively small sums of money, and most of that was earmarked for roads. Today, by contrast, they have become, in his words, "the fastest-growing gimmick in politics" and they embrace some 50 different programs.

The grants have come in for heavy attack from authoritative quarters. The Governors' conferences have demanded their curtailment time and time again. The Commission on Intergovernmental Relations, created at President Eisenhower's request early in his first administration, came up with all kinds of evidence of waste. "Yet," says Governor Driscoll, "pressure groups and politicians, lacking the ability or courage to sell their projects to their own hometown or home State constituents for financing at home, prevail upon Congress to hand out more and more Federal tax money."

There is, as the article makes clear, nothing free about this money. In the first place, Government rules concerning wages and other matters tend to run the costs up. Payments to contractors may be long delayed, so bids are frequently increased to compensate for this. According to a Missouri official, "In most cases a community could build an adequate facility for less than its half-share of the Federal aid project." Then there are so-called concealed costs, such as Federal administrative overhead. No one knows how big this total comes to, but an investigatory commission found that for every dollar granted for slum clearance, about 22½ cents went for Federal overhead and the figure for low-cost housing is estimated at 39.9 cents.

Governor Driscoll disputes the claim that the grant money goes to areas so poor they can't supply their own essential services. He says, "Since qualifying for a grant usually means putting up matching funds, the biggest returns go to those States which repudiate economy and, at the sacrifice of real requirements, put the bulk of their cash into Washington-blessed programs designed to produce handouts at the expense of somebody else."

The root-trouble of the grants-in-aid concept seems to have been well summed up by our own James F. Byrnes in these words: "Whenever a State or county receives a grant which officials can spend without the responsibility of collecting the money by taxes, you are certain to have extravagance." Governor Driscoll quotes that and concludes, "Let us destroy this free-money myth before it destroys us."

Reply to Drew Pearson's Washington Merry-Go-Round Published Friday, March 29, 1957

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. MILLER of New York. Mr. Speaker, under leave granted I wish to call to the attention of the Congress, particularly the House of Representatives, my reply to the column entitled "The Washington Merry-Go-Round" written by Drew Pearson as it appeared in many newspapers Friday, March 29, 1957.

My reply follows:

I have read with some interest and great astonishment today's column entitled "The Washington Merry-Go-Round" written by Drew Pearson, in which he once again by inference, innuendo, and distortion attempts to prove that my motives, in attempting to correct what I deem to be objectionable features in the civil-rights bills introduced this year in the House of Representatives and recently considered by the House Committee on the Judiciary, are prompted by an unholy alliance which I have with Representatives SMITH and COLMER, of the House Committee on Rules. According to Mr. Pearson, the alleged purpose of this alliance is mutual help in defeating civil-rights legislation and promoting the redevelopment of the Niagara hydroelectric project by private enterprise.

The fact and indisputable truth of the matter is that on the 9th day of July 1953 Congressman SMITH, of Virginia, and Congressman COLMER, of Mississippi, voted in favor of the bill which I had introduced providing for the development of the additional hydroelectric power in the Niagara River by private enterprise. I think that vote is consistent with their entire public record in the House of Representatives and occurred long before I had met either of the gentlemen personally and years before there was any civil-rights legislation before the House of Representatives for consideration. All who are familiar with the governmental philosophy of Messrs. SMITH and COLMER would know that I did not have to compromise a single principle in which I believe in order to enlist theid aid in support of my position concerning the Niagara redevelopment project. However, the Pearson story becomes more rdiculous when, because of the Schoellkopf disaster of last year and because of the critical emergency of the present power situation in the Niagara frontier, I am no longer promoting my private enterprise position but have this year introduced a compromise measure providing for the development to be made by the Power Authority of the State of New York and I could almost state, without fear of opposition, that neither Mr. SMITH nor Mr. COLMER are aware of this change of circumstances and of the introduction by me of an entirely new bill incorporating an entirely new concept for the development of the Niagara project. As a matter of fact, with but very slight differences there is no longer any conflict existing concerning the Niagara power project which has to be resolved by the House of Representatives.

It is true that I introduced and originally supported a year ago a civil-rights bill. It is also true that after further study and further examination of the Constitution and laws pertaining thereto and a further probing of my conscience, I moved to recommit the bill when it was up for consideration before the House of Representatives. But contrary to Mr. Pearson's statement, I did not succeed in blocking the bill. I made that motion on July 19, 1956, and my reasons therefore were fully set forth by me and are still fully set forth in the CONGRESSIONAL RECORD of that day. I based my objections on the Constitution and statutory laws as I know and understand them. What has been the history of this legislation since my remarks of July 19, 1956?

1. My first objection was that the legislation created a commission with the authority to subpena anyone in this country to any place within the country no matter how far distant from their home and hold them interminably at their own expense.

The Subcommittee of the Committee on the Judiciary by unanimous action, including the votes of the present authors of the civil-rights legislation, Representatives CELLER and KEATING, of New York, voted to amend the bill to provide that a person could be subpenaed to a place only within the judicial district in which he resides and that he must be paid a witness fee and a mileage allowance at the time he is served with a subpena.

2. I charged that a person could be subpenaed for interrogation on some loose allegation that he was exerting unwarranted economic pressure on somebody.

The subcommittee again by unanimous action amended the bill to provide that all allegations against someone must now be in writing and sworn to and the provision of the bill relating to unwarranted economic pressure and social and economic problems were stricken from the bill upon an amendment offered by me in full committee on the grounds that this was an authorization to a presidential commission to make investigations into the fair-employment practices field which the Congress has repeatedly refused to authorize and because it was an encroach-

ment into a field in which the Federal Government has no constitutional jurisdiction.

3. I charged again on July 19, 1956, that the bill permitted the utilization of the services of an unlimited number of volunteers to work for this commission and to be paid a per diem allowance. I charged that this was a highly emotional issue and that no one would volunteer for work in this field who was not biased and prejudiced on one side or the other of the issue and that there were already at work in this country many volunteer organizations crusading on both sides of the issue.

As a result of this charge, the full committee unanimously, including the authors of the legislation, accepted the amendment restricting the number of volunteers assisting in the work of the Commission to 15 and the report will include a statement that no more than 8 shall be from any 1 particular organization.

4. On July 19, 1956, I charged that the provision of the bill authorizing the Attorney General to institute an action in the name of an individual against an individual defendant without the Attorney General even having the permission of the person in whose name the action was to be instituted constituted barratry in its worse form and was something if done by any other lawyer would subject him to disbarment proceedings.

As a result of this charge, the committee considering the bill, not upon my motion, voted to provide that the Attorney General could institute an action for protection of civil rights for the United States or in the name of the United States, but could not act as an attorney for one individual in a litigation involving another individual.

On July 19, 1956, I set forth two other objections to the bill in its then present form. I attempted to correct one of these objections by an amendment which Mr. Pearson referred to as a "hamstringing" civil-rights amendment and which did lose by a vote of 15 to 17 in the full Committee on the Judiciary and not in the Rules Committee as reported by Mr. Pearson. It is highly significant to me and I think it should be to the reading public of America that although Mr. Pearson professes to know the full details of all that occurred in this executive session of the Judiciary Committee, he does not attempt to describe or explain the amendment which I offered and which lost by a close vote, but simply prefers to refer to it as a "hamstringing" civil-rights amendment.

The amendment which I offered reads as follows:

"Notwithstanding any other provision of law or of the rules of procedure of the United States district courts, in all cases of contempt arising in any proceeding under this act, the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the contempt shall have been committed.

"This section shall not apply to contempts committed in the presence of the court or so near thereto as to interfere directly with the administration of justice."

Under title 18 of the United States Code, all persons tried in criminal contempt cases are entitled to a jury trial except where the United States is a party to the action. This civil-rights legislation provides for actions to be brought by the Attorney General against individuals in the name of the United States, so without the amendment which I offered, people would not be entitled to a jury trial. It is most noteworthy that when the Congress has passed labor legislation such as the Norris-LaGuardia Act, it always contained provisions that even though the United States was a party to an action, the defendant in a labor dispute would be entitled to a jury trial. Should we not extend the same protection of the law to local police officers, school board members, and others as we extend to leaders and members of labor unions? I am in favor of the protection accorded to leaders and members of labor unions and so I am in favor of the same treatment being accorded to all segments of our people. What Mr. Pearson fails to report is that this identical amendment, when offered in the subcommittee of the Senate Committee on the Judiciary, was supported by Senator JOSEPH O'MAHONEY, Democrat of Wyoming, who has and is proud of his record as a liberal and is reputed to be as his record would indicate, a staunch supporter of public power and an arch foe of the public utilities industry from whom I am accused by Mr. Pearson of having an abnormal loyalty.

In my House floor speech of July 19, 1956, I also objected to the provisions of the bill which authorizes the Attorney General in instituting civil-rights actions to circumvent the State courts and State administrative machinery which I believed then and now believe to be a fundamental rock upon which our system of States rights rests.

An attempt was made in the full Committee on the Judiciary to correct that section which effort I supported, although I did not inaugurate it. But that effort was defeated in committee. What Mr. Pearson fails to disclose concerning the executive session of the Judiciary Committee on which he reports is that I voted against several amendments offered by the so-called southern bloc which were aimed at crippling or defeating the legislation. I am not now in the position nor have I ever been in the position of opposing a civil-rights bill in any form and under any circumstances.

In closing, I wish to repeat what I stated on July 19, 1956. I believe now and have believed all my life in the fundamental proposition of civil rights. It is a fundamental precept of the creed and religion in which I believe. In the emotion and hysteria surrounding this legislation, it must be remembered that in this country, thank God, we still have a Government of laws and not of men. It is generally believed that this bill is designed and has for its purpose the promotion of the interests and equality of the colored race. But no where in this bill does the word "colored" appear. It refers only to minorities and all of us whether because of our race, our color, our creed, our religion or our national origin, are—standing alone—a minority. This legislation, in the hands of the wrong type of commissioners or law-enforcement officers, could be a vehicle for the persecution of any or of all of us, unless the bill includes proper constitutional safeguards. If the day ever comes when it is felt expediency is more important than constitutional law, we will come very close to the total destruction of the principles which have made our country the greatest and strongest in all the world. Since the beginning of our country, all minorities, within and because of our constitutional framework, have risen to the highest standards of living of any groups anywhere in the world. This is and will be increasingly true of the colored race, but if we disregard our constitutions and our laws in an effort to help them now, someone else at another time may also disregard the constitution and laws of the land to destroy them.

So that there will be no misunderstanding, may I therefore repeat that if the objectionable provisions of the former bill which have been deleted by committee action are not restored by floor action, and if the amendments which I have referred to relating to jury trials and States rights are enacted, I will gladly and enthusiastically speak for, support and vote for the legislation. Otherwise, I would once again vote against the measure not because of any alleged unholy alliance but because of my profound devotion to the constitutional system of government which I have taken an oath to protect and preserve.

Six Billionth Ton of West Virginia Coal Will Be Mined During April 1957

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mrs. KEE. Mr. Speaker, the sixth billionth ton of West Virginia coal will be mined during this month of April 1957, a significant moment in the economic progress of the beautiful State of West Virginia.

Coal is one of America's most versatile and precious minerals. It made possible the tremendous industrial revolution of our country in the past half century. Without this most basic fuel—the United States would still be the agrarian Nation of Thomas Jefferson's time—a nation of small farmers and a limited national economy. Our tremendous production and consumption of electric power—the network of rails transversing the country from ocean to ocean—the development of our great manufacturing centers—our industrial might—came about because of the availability and production of coal. Without this miracle mineral America could not have successfully defended our way of life through our recent World Wars.

Coal is West Virginia's principal industry and the keystone of our State's economy.

Especially is the mining of the sixth billionth ton of West Virginia coal significant when we realize that West Virginia still has recoverable deposits of over 52 billion tons.

Coal was first found in the West Virginia section of the Appalachian Basin in 1750. Just 50 years later, in 1800, a few commercial mines commenced production in Brooke and Monongalia Counties in northern West Virginia.

In 1863, the historic year in which West Virginia became the 35th State of the Union, West Virginia for the first time produced one-quarter million tons of bituminous coal annually. With the closing of the Civil War, West Virginia's coal production rose rapidly, and by 1869 our annual production first exceeded 1 million tons. Following World War I, in the year 1923, West Virginia's annual production exceeded 100 million tons.

There are workable seams of coal found in 49 of West Virginia's 55 counties which include 37 counties with mines that are currently in production. In 1931, West Virginia became the Nation's chief producer of bituminous coal and has retained this distinction ever since. With our remaining recoverable deposits exceeding 52 billion tons—West Virginia will retain this leadership.

It is interesting to note that West Virginia will produce approximately 30 percent of the 516 million tons estimated to be produced in United States coal mines this year.

It is with a feeling of pardonable pride that I have the honor to represent the

Fifth District of West Virginia, the Nation's second largest coal-producing congressional district, which is currently mining nearly one-third of West Virginia's total annual output.

Mr. Speaker, I feel it is entirely fitting to pause these few moments—to pay tribute and give justly due credit to the coal operator and the coal miner, who join together—each dependent upon the other—to accomplish this remarkable feat. Appropriate recognition goes also to the investor, the railroads, railroad labor, and our shipping industry, who make it possible to deliver this miracle mineral to its worldwide markets. I am proud, too, to recognize the manufacturers and distributors of modern mining machinery who are bringing this important medium of automation to the mining communities. It is a source of gratification that so many in this important industry are centering their activities in my home city of Bluefield.

I am pleased also to have this opportunity to salute the electric utilities, coking coal, steel and rolling mills, railroads, cement mills, and other industrial consumers of coal.

In this atomic age our Nation's demands will be for more and more electric power, more steel, aluminum, chemical products, and cement. This can only mean a demand for more and more coal. In addition, more and more people daily demand greater quantities of coal's essential byproducts such as: aspirin, vitamins, ammonia, sulphur drugs, baking powder, perfume, lipstick, nylons, dye, detergents, phonograph records, film, plastics of all kinds, linoleum, synthetic rubber, synthetic gasoline, TNT, and many others. Those responsible for these byproducts are to be justly recognized.

I feel it my duty to highly commend the members and the staff of the Coal Research Committee of the House of Representatives for the dedicated manner in which they have been engaged in their extremely important work. I have full confidence that the final result of their labor will be of substantial benefit to the coal industry, as well as to every American citizen. Every American every day is dependent upon coal.

I am grateful for the opportunity to work with all of those engaged in this basic industry.

Yes, Mr. Speaker, April 1957 is an important month in the life of every American citizen as we look to the future with full confidence.

We Can't Give Freedom to Anyone

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Rock Hill (S. C.) Evening Herald of March 26, 1957:

WE CAN'T GIVE FREEDOM TO ANYONE

One of the weaknesses of Americans is that we're so sold on democracy, independence, and the "American way of life" that we want everyone else to have these things in exactly the form we have them.

We fail to realize that our Western ideas may be meaningless to people who have lived a completely different way of life for centuries.

We fail to realize how many things are necessary to make independent democratic statehood work.

Before people can handle independence and a democratic form of government, they must have unity. They must have a reasonably high level of education. They must have understanding of the meaning and responsibility of freedom. Before people can develop a stable, democratic form of government they must have a sound, prosperous economy that will produce the national wealth a nation must have to pay its operating costs.

Freedom, democracy, and a sound economy cannot be given to any group of people. These things must be achieved.

Libya, in northern Africa, is a prize example of a country given independent statehood and a democratic form of government without the tools to make statehood and democracy work. The former Italian colony was set up as a free nation under the guidance of the United Nations. The United States was one of the main backers of the move.

Libya's constitution and government is supposed to serve an Arab nation of traditional wanderers. Most of these people cannot read or write. For centuries these people have been governed by simple community processes. There is little feeling of national unity. There is no sound economy to provide the national income and the tax revenue needed to support the government.

How long Libya can keep its independence without the tools a free nation must use remains to be seen.

These are things to think about as we try to bestow freedom and democracy upon undeveloped countries in other parts of the world. There is such a thing as trying to go too fast.

Imports of Foreign Shovels

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. NEAL. Mr. Speaker, the upper strata of the export-import interests go the limit to justify further reduction of tariffs on hundreds of commodities produced by well-established manufacturers who, for the most part, employ especially skilled labor.

The following letter is typical of complaints from my district from those who are gradually being destroyed by competitive low-labor-cost finished products imported under low-tariff provisions:

DEAR CONGRESSMAN NEAL: I am writing in regard to the importation of foreign shovels, particularly from West Germany and Japan. These shovels are being laid down in the United States at prices approximately two-thirds of the lowest price shovel which American manufacturers can offer. The trend is definitely increasing and is affecting our employment here in Parkersburg. We employ approximately 850 persons, and I am positive that this employment will be reduced if the importation of foreign shovels is not reduced.

As you may know, the import duty on foreign shovels was 30 percent just a few years ago but has gradually been reduced to only 7½ percent. If the duty were restored somewhere near its former level, these foreign shovels made with cheap labor and inferior materials could not so successfully compete with the American product.

Both management and labor in our company are extremely worried about this prospect as we have definite proof here in Parkersburg of what foreign competition did to the glass marble business.

The Dutch Side of the Airline Expansion Program

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, April 1, 1957

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the magazine Knickerbocker, which states the Dutch side of the controversy which has arisen because of the request of the KLM Airline for an extension of their services in the United States.

Without taking sides in the issue, I should like to state that I have in my State many proud descendants of the people of the Netherlands, and therefore I ask that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DUTCH SIDE OF THE AIRLINE EXPANSION PROGRAM HAS NOT BEEN HEARD

Netherlands purchases in the United States exceed American purchases in the Netherlands by about $300 million a year. Unless KLM is granted some expansion of its routes in the dollar area, the strain on Holland's economy will be too severe to enable it to perform as a customer of American goods and as a close partner of the United States in international obligations, to the extent American businessmen and Washington anticipate. This is a matter of simple arithmetic instead of emotion.

The Netherland Government is at present attempting to obtain landing facilities and commercial rights for KLM in Houston and Los Angeles. During the postwar years few issues between the United States and the Netherlands have given more reason for concern to Dutch public opinion. Since the days of empires have passed, international trade has become more than ever before the lifeblood of countries like the Netherlands. The United States has encouraged and even pressed for this development.

American circles concede that granting KLM landing rights in Houston and Los Angles would not hurt American airline interests to any significant degree. But for Holland such landing rights—already granted to other countries here—have an immediate bearing on Holland's future as a commercial nation.

Americans are quite unaware of the deep concern this issue has caused among the Dutch people.

Here are the key points of the Netherland's case:

1. For the Netherlands, international aviation is a matter of far greater consequence than merely the successful operation of the national airline KLM. To Holland's economy, its main airport, Schiphol, is on a par with the nation's great harbors of Rotterdam and Amsterdam. It is quite unthinkable that the United States Government would, for instance, prevent seagoing vessels carrying the Netherlands flag from entering the port of San Francisco. Can landing rights for the Dutch flag carrier KLM in Los Angeles then be refused?

2. Despite the considerable increase in productivity and the resulting rise of Netherlands exports, the nation's trade balance (the difference between its imports and exports) reflects a great deficit. On the payments balance, this deficit is largely offset by Holland's so-called invisible exports, which include all such services as sea and air transportation and tourism. Thus, the refusal to let the Netherlands flag carrier do what comes naturally, that is, spread its wings and develop according to the traditional Dutch thesis of navigare necesse est, would constitute a direct threat against the economic condition of the Netherlands.

3. The thesis that New York should be the terminal point of westbound transatlantic flights is rapidly proving outdated. Air France, Lufthansa, Scandinavian Airlines, British Overseas Airways, Italian Airlines, and other companies have already received the right to establish transatlantic terminals at Boston, Philadelphia, Chicago, Detroit, and Los Angeles. The introduction of jet aircraft will confirm and accelerate that trend. Direct flights to Western Europe from the west coast or the Southwest will be demanded by the public. Some foreign airlines have already been granted commercial rights in these areas.

On the other hand, Schiphol is an obvious terminal for long-range flights in the approaching jet age. KLM's equipment policy clearly reflects this awareness. The company is the first in Europe to receive deliveries of Lockheed's prop-jet Electra, which in the decade to come is to be operated on the inter-European feeder routes connecting with long-range all-jet services.

The trend toward use of western airports is intercepting traffic which historically has moved through New York. The major foreign carriers have established traffic rights in the big population centers of the West and Midwest. In denying KLM landing rights outside of New York, the United States would in effect prevent the airline from maintaining its position in international air traffic.

4. Projections as to actual volume of passengers to be carried between these points and Amsterdam leave no doubt that these air links will be economically profitable.

5. In this connection, it is interesting to note that the Netherlands airline, traditionally, is playing a larger role among its competitors than the size of its national territory would indicate. This is accurately reflected, for instance, in typical figures for transatlantic flights based on this past summer.

Official figures for a typical week of the past summer, the week ending June 21, for instance, show a total of 488 transatlantic flights completed in either direction. In this "average week" the traffic was divided as follows:

Pan American: 160 flights or about 33.5 percent.
TWA: 100 flights, or about 21 percent.
KLM: 45 flights, or about 9.5 percent.
SAS: 40 flights, or about 8.5 percent.
BOAC: 35 flights, or about 7.3 percent.
Air France: 32 flights, or about 6.8 percent.
Lufthansa: 22 flights, or about 4.7 percent.
Sabena: 18 flights, or about 3.7 percent.
Swissair: 16 flights, or about 3.3 percent.

The two American carriers accounted for a little more-than 54 percent of all flights. The European carriers divided the rest of the traffic, but KLM originated more flights on this route than any of the other European carriers.

6. This greater efficiency (and consequently higher profit) helps explain why KLM remains in business without direct Netherlands Government subsidy or indirect subsidies in the form of mail contracts.

Also KLM has been able to pay its stockholders an annual dividend since 1953. Against this, the American taxpayer has been supporting Pan American Airways' operations to the tune of $248 million in the period 1951–56.

AND A GOOD CUSTOMER, TOO

7. KLM is the biggest foreign customer of the American aircraft industry, having placed some $230 million worth of orders in the postwar period, including the order for the delivery of eight Douglas DC–8 jets, and an equal number of Lockheed Electra turboprop planes. These facts speak for themselves. However, KLM would not have purchased this equipment if its management was not certain of getting a maximum return on their capital by placing these purchases in the United States.

Such facts, rarely published in the United States, materialily contribute to reducing the reciprocity issue to its proper place in the scheme of things. True, none of the overseas airports on which landing facilities can be granted by the Netherlands equals Schiphol in commercial importance. But some of them offer, and may increasingly develop, major strategic or touristic advantages.

Many people in the United States as well as in Holland hope that the Netherlands, with its spotless war and peace record as an American ally, will not be totally denied what, in the face of much less impressive records, others have already received.

Passing the Budget-Cutting Buck

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Winnsboro (S. C.) News and Herald of March 28, 1957:

PASSING THE BUDGET-CUTTING BUCK

Congress has attempted to pass the buck—in the budget-cutting field—to President Eisenhower, but the President has handed it back to Congress. It all started, of course, when President Eisenhower proposed a $71-billion budget for the 12 months starting July 1.

This total was so high that even the President's Secretary of the Treasury, George Humphrey, could hardly swallow the pill and criticized the budget even though he was a top member of the administration proposing it.

Humphrey was pulled into line, so to speak, in the next few days, and he has since refused to say where the budget could be cut. Congress is convinced that it should be cut, although hesitant to do the whacking. But Congress will have to do it if it is done.

In order to put the President on the spot, the House recently passed a resolution calling on the President to tell it where the budget should be trimmed. This was ridiculous, in more ways than one, because the President had already proposed the budget, and he couldn't be expected to criticize it.

As expected, Mr. Eisenhower said that it was up to Congress to reduce the total, and he was ready for them to go ahead and cut it, if they could. He even said he would be just as helpful as he could.

This leaves Congress where it was in January, after the budget had been presented. The intervening resolutions and statements have been mostly political byplay, which is accomplishing nothing, but which is producing headlines and little else. It is the business of Congress to appropriate money and to levy taxes to acquire that money. It is also up to Congress to cut the budget, if it needs to be reduced. Therefore, Congress should go ahead and curtail and stop asking the President to do its job.

Meantime, taxes remain at a record high and April 15 is approaching apace. Where will it all end?

Address by Hon. Hubert Humphrey, of Minnesota, to New Jersey Gasoline Dealers

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 1, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an address which I delivered before a group of New Jersey gasoline dealers on December 13, 1956, at Haddon Heights, N. J., be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN ADDRESS BY SENATOR HUBERT H. HUMPHREY BEFORE A GROUP OF NEW JERSEY GASOLINE DEALERS, HADDON HEIGHTS, N. J., DECEMBER 13, 1956

It is certainly a pleasure to be here with you tonight in the famous Cherry Hill Inn, enjoying your hospitality and being warmed by your kind words of friendship. While speaking with many of you individually this evening, it occurred to me that as a group you seem more relaxed and happier than when we last met. Perhaps one reason for this change is because most, if not all, of you are aware of the progress you have made as businessmen in the past year. And that real progress has been made, no one can deny.

Because the past often illuminates the present, please bear with me if I stir some unpleasant memories by saying that I found gasoline retailers during the war to be generally dispirited and quite apprehensive of their future. It seemed as though an atmosphere of gloom and doom had pervaded their ranks. And small reason why. I remember dealer witnesses testifying how they had been drawn unwillingly into the horrors of the price conflict and how, once involved, they were powerless to free themselves. I recall their describing how the war was denying them a livelihood, was draining away their savings, and, in too many instances, was costing them their businesses. I remember, too, the moving testimony of dealers' wives, like Mrs. Helen Beehler and Mrs. Marie Hoffman, who told of the hardship and privation that the war had brought to their families.

In looking back to the price war period, I am coninced that it was the unhappiness so

prevalent among dealers that most influenced my determination to search out a solution. I know that only a situation of near-catastrophic proportions could reduce the usually effervescent small-business man to such a depressed state. All of my life, I have known and associated with small-business men. As you know, my father was a druggist in a small South Dakota town and I worked closely with him for many years. I have learned that the key to the success of the small-business man everywhere is his indomitable will, his hope and confidence in himself, and his rare talent for finding happiness under even the most trying of circumstances. When these qualities cannot be found in small-business men, help is needed in the worst way. And I am the kind of fellow who will see that help is given, even if it means investigating a gasoline price war.

While the investigation of the New Jersey gasoline price war was designed primarily to relieve your particular competitive problems, it also had a secondary purpose which must not be overlooked. This was that the principles by which competitive problems were to be resolved in New Jersey should serve as well to relieve distress among dealers in other marketing areas. After all, it was argued, only a variance in degree distinguished the severity of problems confronting New Jersey dealers from those experienced by your fellow workers in other parts of the country. Surely, a study of a market where dealers' problems were most pronounced would produce salutary effects in other areas as well.

The extensive public hearings which were held demonstrated to my satisfication that the major oil companies operating in New Jersey could bring the predatory and ruinous price war to an abrupt halt if they wanted to hard enough. Shortly after the close of the hearings, the price war was ended, seemingly because the major suppliers wanted to hard enough. Whatever the reason, with the advent of fair trade competition, the ruthless and irresponsible price war that had prevailed in the market waned and soon was no more than a dreadful memory for those thousands of dealers who had endured its hardships.

As you know, my keen interest in the well-being of gasoline dealers in New Jersey has not faded away with the adoption of fair trade competition. It has become my habit, to keep abreast of developments in this market by reading your letters and by occasionally talking with some of you by long-distance telephone. Only a month ago, I sent the counsel of my subcommittee up here to conduct an on-the-spot survey of post-price-war conditions.

At the present time, my information is that fair trade competition is working successfully in your State. It appears that dealers are working hard and making modest profits, that unethical practices have largely been eliminated, and that the motoring public is generally pleased with the rare combination which it is receiving of quality products, excellent service, and reasonable prices. Incidentally, gasoline prices in New Jersey are the lowest on the eastern seaboard.

I have also learned that fair trade is being practiced in a number of other Eastern States. The system is now found in Massachusetts, Connecticut, Rhode Island, and Pennsylvania. Except for one major supplier fair trading in California, the system is not being used in any other part of the United States, although in several Midwestern States, another form of resale price maintenance called suggested pricing has been adopted. It should be mentioned that suggested pricing is not expressly protected by Federal legislation and, therefore, involves serious antitrust problems, including price-fixing. In the spread of fair trade competition and even in the use of suggested pricing, there is a strong suggestion that at long last the major suppliers are definitely concerned over dealers' problems and are trying to resolve them in their fashion.

Now that fair trade is well-established in New Jersey, it may be that you would like to hear my views on the system. In my judgment, fair trade is a specialized competitive system offering great practical benefits to qualified manufacturers, wholesalers and retailers, and the consuming public alike. The system assures the manufacturer of a stable market for his product. But it does not give him an unfair advantage or a monopoly because, even with the protection of fair trade legislation, he is obliged to compete successfully with other manufacturers of the same or similar products. Should he fail to maintain the quality of his product or if he sets the price too high, he loses out to competitors, fair trade notwithstanding. However, fair trade does protect his product from possible destruction as a result of loss-leader selling and irresponsible price-cutting.

Fair trade benefits the retailer by placing him on an equal footing with all other retailers of the same branded or trade-marked products, whether such competitors are large or small. Most importantly, his margin of profit is fixed to yield him a fair return and he is protected against destructive competition from others who might be disposed toward the vice of predatory price cutting

The benefits of fair trade to wholesalers are remarkably similar to those received by retailers.

The consumer, too, benefits from fair trade in a number of ways. He knows that the fair traded product may be purchased at a standard price wherever he goes to buy it. Fair trade eliminates the necessity for shopping around. He knows that the price is reasonable. By the very nature of fair trade laws, a price-fixed product cannot survive in the market place unless it competes successfully with similar items produced by other manufacturers. Fair trade also assures a consumer that an outstanding product will remain on the market. It will not be lost to the consumer through destructive price tactics.

That fair trade competition is basically sound in policy and purpose is evidenced by its 25 years of successful operation in the Nation's market places. In this, the Silver Jubilee Anniversary year of fair trade, the system remains strong and vigorous despite the disquieting setbacks it has received recently in a few State courts. The important fact is that the majority of State courts have consistently upheld the legal basis of fair trade. Moreover, it is heartening to note the record of the Supreme Court and the lower Federal courts in generally striking down attempts to destroy fair trade. And certainly not to be disregarded in this connection is the high favor in which fair trade is held in both Houses of Congress. As a matter of fact, so respected is this attitude of Congress that no move has been made to repeal the so-called Federal fair trade laws in the year and a half which has elapsed since such action was recommended by the Attorney General's National Committee To Study the Antitrust Laws. Nor do I see any likelihood that Congress would ever take such ill-advised action.

As you may be aware, it has become fashionable in certain circles nowadays to disparage fair-trade competition. I do not refer to those opponents of fair trade who are honestly and sincerely motivated by their own estimates of the system. Though disagreeing with such critics, I still respect their opinions and feel that debate with them can be constructive. My targets here are the professional critics of fair trade and those who think fair-trade criticism is some sort of parlor game. I am outraged by the actions of the former group and amused by those of the latter.

It is my opinion that the arguments of a person who is paid to hold a certain position are worthless. That person says what he does because it is financially remunerative for him to do so and not because he has studied the problem and arrived at a judgment on the merits. As a practical matter, such a person probably does more of a disservice to himself than to the cause of fair trade. At any rate, he is a man of slight influence on the future of fair trade, despite his noise and windmilling tactics.

For those who think that ridicule of fair trade is a parlor game, I have a suggestion or two to make. First, they could set up a small business and get first hand experience of the injurious effects of loss-leader selling and other predatory pricing practices. Another suggestion would be for them to seek out the views of small-business men on the advantages of fair-trade competition. They will find that the small-business men who are in the best position to know the merits of fair trade and the hazards of unrestricted price competition enthusiastically endorse fair trade. But even if the parlor game crowd remains unconvinced after following such suggestions, their voices like those of the professional opponents, will not constitute a threat to the continuation of fair trade.

This is not to suggest, however, that the future of fair-trade competition in gasoline marketing will be uneventful. As a matter of fact, there are unmistakeable signs that such will not be the case. You have heard or read of what is happening to fair trade in the Boston Federal courts. There, 2 antitrust suits are involved, 1 a criminal proceeding by the Department of Justice against Socony-Mobil, the other a suit by Esso Standard seeking injunctive relief against a price-cutting marketer named Secatore's Inc. Both cases raise substantial fair trade questions. Briefly, I will examine what I feel are the significant aspects of each case.

In the Socony Mobil case, it was alleged by the Department of Justice that the major supplier had fixed the gasoline prices charged by some of its dealers. At first blush, therefore, the case would seem to be a routine action under the Sherman Act. What distinguishes the case, however, is the defense raised by Socony Mobil to the indictment. On a motion to dismiss, the oil company argued that its price-fixing agreements with dealers were, in effect, fair-trade contracts and, therefore, immune from Sherman Act prosecution. Most interesting in this respect is that the Socony-Mobil Co. apparently had no written fair-trade contract with any of its dealers at the time the alleged offense was committed, nor had it made any public announcement of its adoption of fair trade. Thus, it would appear that Socony Mobil is advancing a most novel theory—that a fair-trade contract may be oral in character and need not be publicly announced or in fact even made known to the dealers who would be bound by it.

As this case is now pending in Court, I feel obliged to limit my remarks on its issues. All I will say is that a fair-trading seller should be proud to have the fact publicized and should be prepared to show documentary evidence of his fair-trade program.

Another important feature of this case is that the fair-trade argument of Socony-Mobile has afforded the Department of Justice an opportunity to reveal its traditional bias toward fair-trade competition in the brief which it filed with the Court. Not only has the Department in its brief joined issue with Socony Mobil on the subject of oral fair-trade contracts but it has also availed itself of a chance to argue that gasoline is not a product which can be lawfully fair traded.

Whether or not these fundamental issues concerning fair trade will be fully resolved in the Socony Mobil case remains to be seen. But since they have been raised, it is to be hoped that Socony-Mobil's defense of fair-trade principles will be spirited and vigorous. Regarding the price-fixing charges, however, the oil company is on its own.

The injunctive proceeding by Esso Standard against Secatore's is equally of interest to gasoline dealers. In that case, Secatore's a large Boston gasoline retailer, successfully defended against Esso's enforcement action by arguing that Esso could not lawfully fair trade its products so long as it was competing directly with its dealers. The theory underlying this defense is that the fair-trade law of Massachusetts prohibits the use of fair-trade contracts between competing sellers. In its decisions, the Court held that Esso was competing directly with Secatore's for consumer accounts and, therefore, could not lawfully make or enforce fair-trade contracts in Massachusetts. Accordingly, the Court dismissed Esso's application for injunction.

This case should not be especially disturbing to you dealers dependent upon fair trade. After all, the rule in the case merely follows the precedent established by the Supreme Court in the McKesson and Robbins case. There, the court held that, where direct competition exists between 2 sellers, even though 1 may also be a customer of the other, it is unlawful for them to enter into a fair-trade contract. In other words, the Supreme Court said that you cannot run with the hare and hold with the hounds. Either fair trade properly or abandon it! Surely no one can reasonably disagree with the soundness of such a position.

Henceforth in the case of every fair trading major oil company, there will be an important issue of fact presented: Is or is not the seller competing directly at any marketing level with his dealers? Should it be found that he is, the supplier must then address himself to choosing between fair trade and competition with his dealers. In his answer to that question will be considerable evidence concerning the major supplier's true feeling toward his dealers.

At this point, I feel it appropriate to remind you that the Senate Small Business Committee cautioned in its report on the New Jersey price war that fair trade was not a panacea for all of the competitive problems besetting gasoline dealers. "Fair trade competition in New Jersey it was emphasized, is ending only the price war; it is not eliminating the competitive conditions which produced it nor the marketing practices which prolonged it. Basic competitive problems stemming from the tremendous disparity in economic power existing between the major suppliers and gasoline retailers remain unresolved and are as threatening now as before the introduction of fair-trade competition."

In the light of these considerations, I strongly urge you to support the resolution which I have introduced in the Senate calling for a comprehensive investigation of competitive conditions in the oil industry. It seems to me that only through such an intensive study will Congress ever gain the information necessary for an informed judgment concerning the desirability of divorcement legislation. You may be assured that I intend to press in the next session of Congress for early action on this resolution. Already, strong backing for the measure has been received from many dealers' associations. To insure success, however, the united support of dealers' organizations throughout the country is needed.

Another legislative matter that warrants speedy action next year is the "Equality of Opportunity" bill. That measure, as you know, is designed to prevent the use of discriminatory pricing practices that tend to create monopoly. Enactment of the bill will be of especial help to gasoline retailers who are so often the victim of serious price discriminations. In view of the opposition which is now being organized against this measure by the major suppliers, your support of it is indeed vital.

Now for a few words of advice in conclusion. Be sure to ask your supplier for a fair-trade contract if you have not already signed one. Active participants in and not passive supporters of fair trade are needed to make the system truly effective. Then, become informed and articulate spokesmen for the advantages of fair-trade competition. Discuss these benefits with your fellow dealers and with your friends whenever an opportunity is presented. In particular, talk to your labor-union friends about how fair trade means quality products at reasonable prices, enabling manufacturer and marketer to pay fair wages. And, do not forget to let yours views on fair trade be made known to your elected representatives at local, State, and Federal levels.

Remember always that you have great responsibilities under fair-trade competition. You must insure that the consumer patronizing your service station receives full value for every dollar spent. Service and courtesy must not be neglected. Most importantly, your business must be operated efficiently and with integrity.

Live up to your responsibilities and fair trade will long serve you well. I can assure you that Congress and the antitrust agencies will not allow the major oil companies to use the system selfishly. We must, however, be on guard against unwarranted price increases by the major oil companies, under the guise of pressures from the international situation. The Suez Canal crisis must not be used to justify profiteering or price gouging. A fair price and fair profit are always, in the long run, jeopardized by selfish exploitation in times of crisis.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Camden, S. C., News of March 28, 1957:

FEDERAL AID TO EDUCATION

Congress is now being urged to provide Federal aid for public schools—both elementary and secondary schools. Tomorrow it will be Federal aid for colleges and universities; in fact, the movement has already started.

We wonder if the people who are urging this aid realize that the only money the Federal Government has is that which it must first take away from the citizens of the States on taxation. The Federal Government has not one cent of its own.

There is not a State in the Union but which can support its schools. The Intergovernmental Commission on Education said in a report:

"We have been unable to find a State that is economically unable to support an adequate school system."

To those who are urging Federal aid we would suggest that they read this statement from Dean Clarence Manion:

"In the Communist manifesto Karl Marx made control of public education 1 of the 10 commandments of communism. Crypto-Communists, fellow travelers, and left wing progressives in the field of education have kept their sights fixed upon this objective ever since. Twenty-five years ago a group of the American Historical Society, and financed with more than a quarter of a million dollars from the Carnegie and other foundations, went into a long learned huddle and finally came out with a 15-volume report. In their findings they declared that our form of Government was a failure and should give way to a collectivized society, wherein the individual should be made to surrender his liberty in the interest of group welfare. They determined that only the schools of the country could bring about this revolutionary change in our American system, and that it was the duty of every educator to see that the schools did so."

Woodlawn Finds a Way To Make Democracy Work at Grassroots

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. O'HARA of Illinois. Mr. Speaker, Woodlawn is a community in the heart of the district that I have the honor to represent. It is an old and a beautiful community in the south shore region of Chicago, with 63d Street the principal east-west highway. Until recent years it was an all-white community, or nearly so. Today perhaps a majority of its residents are of the Negro race and its representative in the city council of Chicago is of that race, a very able and highly respected alderman, the Honorable Sidney Jones, Jr.

The story of how Woodlawn is meeting and conquering its problems should be an inspiration to the other urban communities. It also should prove interesting and illuminating to my colleagues from other sections of the country, especially those from the rural districts. I am sure that if the Members from other districts better understood the problems of the urban north, east and west we would receive a larger measure of cooperation.

The story of Woodlawn is one of democracy working at grassroots. It furnishes proof that when neighbors are encouraged and given the facilities to join together in the attainment of that which is of common interest, the betterment of the neighborhood in which they live, they will find the right answers to all the problems, big and little, of community living together. In Woodlawn it is being brought home to the people, not by preachement but by practice and example, that the test of being a desirable neighbor is in doing those things that contribute to neighborhood welfare and in refraining from doing those things that are outright harmful or are annoying and irritating to other neighbors.

WORK THROUGH BLOCK CLUBS

Functioning through the United Woodlawn Conference, in every block in Wood-

lawn is a block club. Residents of the block are all encouraged to attend meetings of the block club. They sit down as members of a family discussing family matters. Some neighbor has been tooting a horn at late hours, when especially the children in the block are asleep. Some of his neighbors volunteer to invite him to the next block meeting. No scolding, just an invitation to join with the team in the race with other block teams for the distinction of having the best block. Some neighbor, carelessly and perhaps inadvertently, has been throwing waste on the street or in the yard. Again no scolding, no striking a pose and telling someone else what you think he should do, just a friendly invitation to join the team to make his block the cleanest and best block in the city. On matters that affect the block, the block club keeps in constant touch with the police and fire captains, the ward superintendent, the alderman, and city officials charged with enforcement of ordinance requirements. If he has a grievance or a suggestion, the resident of the block has only to present it at a meeting of the block club and if in the judgment of his neighbors it has merit he is assured of block support and action.

MANY SHARE IN THE CREDIT

Woodlawn is making giant strides as a successful integrated community, an accomplishment in which many share. The Woodlawn Booster, an excellent community newspaper, has been of great help. Clarence Beutel, president of the largest bank, has pursued a far-visioned policy of keeping open the credit lines for all legitimate needs in a changing community, facing and conquering many problems and with a future bursting with promise with the development of the Cal-Sag Waterway. The businessmen, the Boys' Club, the YMCA, the churches, and the schools all are doing their tremendous share. The Sixth Ward Regular Democratic organization, of which Committeeman Robert Miller is the head, maintains large headquarters, open the year around for the accommodation of residents of the ward who have problems they wish to take up with their alderman, State representatives, or Congressman. When I am in Washington, which is as in the case of my colleagues necessarily pretty constant, my able Chicago congressional aid, Russell De Bow, most efficiently fills in for me. I should add that this service of the sixth ward organization in bringing the people in close touch with their representatives in city, State, and National Governments is strictly nonpolitical except by the rule that good service is good politics.

DEMOCRACY AT GRASSROOTS

I cannot give too much credit to the United Woodlawn Conference and the block clubs. I am never so thrilled as when I drop in at one of the block meetings, a witness at the ringside to democracy functioning at grassroots. I leave heartened and confident that here, where neighbors gather as family members at the fireside to plan for family welfare, has been founded at grassroots level an institution that assures the permanency of our democracy and the attainment of our goal of a real brotherhood.

Esther Davis is president of the United Woodlawn Conference. The first vice president is Theodore F. Crawley; the second vice president, Moses M. Shaw; the secretary, Mrs. Paul Rasmussen; the treasurer, Joseph Wahala; and the executive director, Mrs. Ruth C. Porter. They and the devoted block captains have the deep appreciation of the entire Woodlawn community. I am humbly proud to be their Congressman.

Mr. Speaker, I am extending my remarks to include the memorandum that the United Woodlawn Conference presented to Mayor Richard J. Daley at its conference with the chief executive of Chicago on March 6, 1957. This illustrates the way the block-club concept carries through from the discussions of neighbors at block meetings to presentation of their suggestions to the highest local authority. I am sure that this will prove of interest and of value to other communities.

The memorandum was given Mayor Daley by a delegation of 12. The mayor called Building Commissioner Ramsey into the meeting, which lasted over an hour, with immediate results in the extention of inspection of housing-code violations and progress in other areas requiring study and planning. Press, radio, and TV gave coverage.

MEMORANDUM TO THE MAYOR

The memorandum follows:

MARCH 6, 1957.

MEMORANDUM

To: His Honor, The Mayor of Chicago.
From: United Woodlawn Conference.

We submit this memorandum for the mayor's convenience as a summary of the thinking of our organization on ways in which his good office can help us, and, we hope, other communities like Woodlawn in our city, to cope with the mounting problems of inadequate and unsafe housing.

ON ENFORCEMENT OF THE NEW HOUSING CODE

We commend the Mayor's most recent action in setting up inspection teams to secure more rapid compliance with the new housing code. We strongly urge that the primary attention of these teams be focussed on the owners and operators of large buildings. The recent fire tragedies in Woodlawn emphasize the fact that it is these larger buildings which constitute the greatest hazard to the greatest number of people. To protect the greatest number of lives most quickly, we ask that these buildings be given priority by the inspection teams.

ON A DEMONSTRATION GRANT FOR WOODLAWN

We request the mayor's support for Woodlawn's bid for a 314 demonstration grant, to make possible a study which could provide us with urgently needed data and techniques to halt community deterioration and help us achieve a stable interracial community of high standards.

Woodlawn is faced with the serious problem of overcrowding and inadequate community facilities, complicated by the pressure of a large-scale clearance program now under way in the contiguous area of Hyde Park. While the citizens of Woodlawn have been aware of these problems for several years and have continuously sought assistance from public and private agencies, only token help has been given.

The people of this area are aware that improvements can be made only through a substantial program which combines the resources of various governmental agencies with their own efforts. It was with this in mind that the services of our two aldermen and technically qualified housing and planning experts were enlisted in the preparation of the above-mentioned proposal for a 314 demonstration grant. The study it would make possible would not only mitigate existing conditions in Woodlawn, but could serve also as a guide in helping other areas confronted with our problems.

ON ENLARGING CHICAGO'S SUPPLY OF LOW- AND MIDDLE-INCOME HOUSING

Even with the most thorough and rigid enforcement of the housing code, the basic problem of overcrowding and its dangerous byproducts will continue to plague Woodlawn and similar communities throughout Chicago. The population growth envisaged with the development of the Cal-Sag project lends further urgency to this problem.

It is generally acknowledged that resistance to nonwhite occupancy in many parts of our city is mainly responsible for the lag in construction of multiple-dwelling units for low- and middle-income families. Segregation has made the operation of slum neighborhoods more profitable for many private investors than the construction of new housing. It has also been encouraged by the placement of low-income public housing projects in the already overcrowded, segregated areas of our city.

(a) Low-income housing:

The United Woodlawn Conference is in full accord with the recent recommendation, in the December 1956 report by the advisory committee to the Chicago Housing Authority of the Welfare Council of Metropolitan Chicago, that the mayor, or a committee designated by him, rather than the city council, be given final authority in the approval of sites for future public-housing projects. We are confident that the mayor, in line with his own past statements in support of a democratic public-housing policy, would exercise such a policy in the placement of these projects, assuring their equitable distribution without regard to local prejudices—a practice which the city council has demonstrated its inability, or unwillingness, to accept.

We therefore ask the mayor to call publicly on the current session of the Illinois General Assembly to amend the State law so that the city council's power of site approval for public-housing projects could be transferred to himself or to a committee of his designation.

(b) Middle-income housing:

We strongly urge the mayor's public endorsement of the resolution sponsored by Aldermen Despres and Jones now before the city council which calls upon the general assembly to authorize government subsidization of private builders for the construction of middle-income housing. Our middle-income families are most sorely pressed by the unavailability of rental units or purchaseable dwellings within their means. There is virtually no construction in progress for other than high or low-income families. The majority of our citizens fall into neither of these categories. They need governmental recognition of their housing plight, and immediate help.

(c) Nondiscriminatory housing for all: As we have indicated above, discriminatory housing practices constitute the major brake on expansion of Chicago's housing supply. To permit this situation to continue is to doom Woodlawn and increasing numbers of other communities to perpetual overcrowding, upheaval, deterioration, and decay. We ask the mayor to initiate action for a city and State law similar to laws now in effect in the city and State of New York[1] which would ban discriminatory practices in any housing program, public or private, which is aided or insured by Government funds.

[1] Sharkey-Brown-Isaacs ordinance in New York City, Metcalfe-Baker bill, New York State.

(d) Emergency Federal aid for Cal-Sag housing needs: We ask the mayor to explore the possibility of securing an emergency Federal appropriation to provide housing for the Cal-Sag labor force entering Chicago by the thousands. We believe that a Congress which saw the merit of our seaway project and made it possible will also be open to persuasion on the merit of its aid to enable the workers needed by that project to live in decent housing. We believe further that the responsibility for initiating this request rests in the first instance with the chief executive of our city. We pledge to rally the support of our people on behalf of such a request of Congress by the mayor.

Submitted by:

MRS. RUTH C. PORTER,
Vice President on Housing and Community Conservation.
MISS ESTHER DAVIS,
President, United Woodlawn Conference.

American Taxpayers Contribute Staggering Sum for Foreign Aid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the Economics Division of the Library of Congress has again prepared an invaluable and detailed report on the extent of United States expenditures in support of the foreign-aid program.

Mr. Hermann Ficker, analyst in international finance and trade has brought his previous study on this subject up through June 30, 1956. He is to be commended for a job well done. It will be of great value to Members of Congress and to the public.

Mr. Speaker, we are soon to consider another request for foreign aid at a time when the people of this country are demanding economy in government.

The report which I shall submit indicates that as of July 1, 1956, the money available from prior authorizations was $9.3 billion. In the last session Congress added another $4.5 billion, which when added to the $9.3 billion made available for fiscal 1957 a total of $13.8 billion.

Mr. Speaker, while the information is not available at this time as to what was expended in this fiscal year, it is safe to assume that a considerable balance will be available for the next fiscal year. Obviously there is no need to appropriate new money this year.

The information that follows, Mr. Speaker, indicates that since 1940 through June of 1956, the American taxpayer has contributed the staggering sum of $130,350,032,000 in foreign assistance. The detailed report follows:

UNITED STATES FOREIGN AID DURING PERIOD JULY 1, 1945, THROUGH JUNE 30, 1956

Foreign aid disbursed by the United States to all countries and international organizations for the postwar period ending June 30, 1956, amounted to—

Grants	$49,095,405,000
Utilized loans	14,845,330,000
Total	63,940,735,000

This total does not include United States capital investments in the International Bank for Reconstruction and Development ($635 million) and the International Monetary Fund ($2,750 million) although these add to the foreign aid underwritten (reclaimable) by the United States Government.

In general no repayment for grants in aid is requested. The only condition stipulated in all grant agreements is that the United States may request a return of a percentage (usually 10 percent) of counterpart funds (local money deposited by the recipient government in a central bank and roughly equaling the aid rendered) in national currencies or in strategic raw materials from the recipients of aid.

Credits are loans or other agreements which give rise to specific obligations for repayment.

Total aid received since July 1, 1940, through June 30, 1956, can be recapitulated as follows:

1. War period (July 1, 1940 to June 30, 1945):	
Lend-lease	$46,728,287,000
Grants-in-aid	1,400,010,000
Credits	1,096,000,000
Total	49,224,297,000
2. Postwar period (July 1, 1945–June 30, 1945):	
Grants in aid	$49,095,405,000
Credits	14,845,330,000
Total	63,940,735,000
3. International Bank and fund	3,385,000,000
Total	116,550,032,000

On July 1, 1956, estimated funds available from prior authorizations amounted to $9.3 billion. To this total should be added another $4.5 billion in new funds comprising $3.8 billion provided for Mutual Security under Public Law 853; $.2 billion available for famine and other extraordinary relief under Public Law 540; $.5 billion as estimated proceeds under extension of the Agricultural Trade Development and Assistance Act or Public Law 962.

Thus an additional $13.8 billion available during fiscal year 1957 should be added to the 3 totals mentioned above and bringing total United States aid until June 30, 1957, to the grand sum of $130,350,032,000.

Who Will Liberate Us?—It's Not Funny

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by Mr. Eugene Lyons that appeared in the January 1957 issue of National Review. Mr. Lyons raises the question as to "Who Is Going To Liberate Us?" and, as I have suggested, this is not a question which will amuse our people nor Members of this body. The article follows:

WHO WILL LIBERATE US?—IT'S NOT FUNNY

(By Eugene Lyons)

In the last or cold-war decade we have heard a lot of talk about saving and liberating the peoples under the Kremlin yoke. But when the great tests came—first in East Germany and then, even more challengingly, in Hungary—the talk was exposed as hollow and largely hypocritical. If anything is clear today it is that the so-called free world, suffering paralysis of the will, itself needs saving and liberating.

The decades—nearly four—since the advent of Soviet communism, have witnessed magnificent courage and readiness to stake life for liberty. Millions of ordinary people have traded their blood for honor and conviction. But this glory and this nobility has been manifest only on the dark side of the Iron Curtain.

East Berlin in 1953; Tiflis and Poznan and Budapest in 1956; the slave revolts in Vorkuta; the heroic escapes from Communist prison lands; the stubborn peasant resistance to state feudalization in Soviet Russia and all the other captive countries—these have been historic assertions of the human spirit. Where in the free world are the episodes of individual or national valor to compare with them?

A journalist in West Berlin, assessing the mood in East Germany today, is able to write: "Ideas are the weapons most likely to be Ulbricht's undoing, genuine European ideas, nourished behind the Iron Curtain, that are storming in from the East across the long Polish frontier."

The ideas flowing from the East, the very sovietized East that had been written off by most of our experts as lost to our civilization, are no different from those offered by the West. They are, in truth, merely reaffirmations of the basic values of freedom, justice, and human dignity by which Western man has lived for centuries. Why, then, do they have such a powerful impact upon East German minds which are little if at all affected by freedom propaganda from the West?

Because behind the Iron Curtain these elementary ideas are being given spiritual vigor by ultimate dedication and ultimate risk. Because there the tired platitudes of the Judaeo-Christian world are being revitalized through self-sacrifice so spontaneous and uncalculating that heroism seems the inappropriate word for it.

Heroism implies a conscious choice, whereas the victims of communism protest, demand, and fight in response to imperious inner compulsions. A correspondent of the Commonweal who witnessed the struggle in Budapest reports that the people "fought with a superhuman spirit without hope from the beginning." It was "as if they fulfilled a function, the meaning of which was still obscure, but which had to be fulfilled."

The free world needs saving precisely because, in the face of a challenge to all its professed beliefs and ideals, it feels no such inner compulsions to act. Our best hope today is that the oppressed men, women, and children in the Soviet world may liberate us. Their suffering and sacrifice in defiance of physical force may yet drive us to put duty and honor above comfort and security.

The proof that there is still a flicker of life in the anemic ideals we think we cherish is that we are deeply ashamed of our failure to answer the calls for help that reached us from Hungary, and are trying to smother the shame with angry rhetoric, ritual resolutions, and, above all, mumblings about "moral force."

American organizations raising funds for Hungarian relief report a remarkably generous response. In other non-Soviet countries, too, the response has been impressive. Governments which have been scandalously indifferent to the fate of fugitives from communism are suddenly opening their doors wide to Hungarian refugees. We are today like men who, having watched the obscene murder of a neighbor without daring to interfere, rush to help his widow and orphans.

Certainly there is ample reason for our feeling of guilt. The gallantry of Poles and Hungarians, increasingly in evidence also among students and workers in Soviet Russia itself, has been matched among free men only by a sullen determination to play it safe.

Even the toothless League of Nations in Geneva found the courage to expel Russia after its invasion of Finland, but not its successor in New York after the Hungarian massacres. History must record that while Soviet tanks and guns were slaughtering tens of thousands of freedom fighters, the pettifogging lawyers of the so-called civilized world were bargaining over the wording of "rebukes" to the butchers. The presumptive leader of the freedom forces among the nations, though it acted promptly and firmly against its friends in Suez, could find only wrathful adjectives against the sworn enemy of human-kind engaged in crushing a brave people.

The peoples under Red puppet regimes and in Soviet Russia itself now know that should they, too, revolt against despotism, the free world stands ready to applaud them, to pass resolutions, to ring church bells, and provide relief handouts for survivors—in short, to do anything except risk its own precious skin.

Free peoples are no less culpable than their governments. Where are the volunteers against communism to match those raised by the Communist during the Spanish civil war? Where are the fund drives for arms and planes to match those raised for Israel in its fight against the British and the Arabs? Where is the current equivalent of the Flying Tigers in China?

I for one am convinced that while the inertia and cowardice of the free world may slow up self-liberation in the Communist world, they cannot prevent it. Despite official warnings by Washington and Bonn and NATO that rebellion against Red tyranny and terror cannot count on outside support, despite the eagerness of free-world statesmen to help Moscow stabilize its slave empire, the collapse of Communist power is inevitable.

And in the process we, too, may be saved and liberated.

Nasser and the United States

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. HEMPHILL, Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Gaffney (S. C.) Ledger of March 28, 1957:

NASSER AND THE UNITED STATES

It seems probable that the recent moves of President Nasser in Egypt are to seriously affect the appraisal of President Eisenhower's foreign policy in the Middle East. It might even be said that President Nasser holds in his hand the key to success or failure of the Eisenhower policy of recent months.

The President put enough pressure on Israel to force that country to withdraw its troops from the Gaza strip. As soon as Israeli troops were removed, the Egyptian dictator sent an Egyptian general into the area, which was occupied by United Nations troops at the time, amid bitter protests from Israel.

The United States had hoped Egypt would refrain from taking any inflamatory move until tension had relaxed in the area. And even though it was the United States which forced Israel to withdraw, Nasser did not appreciate this effort.

As this is written, the situation stills hangs by a thread, although it appears Nasser has succeeded in restoring administrative control over the area.

If the British press is right, then the United States and President Eisenhower hold the direct responsibility for Nasser's subsequent action. It was this country which prevented Great Britain, France, and Israel from running Nasser out of Egypt.

It was this country which forced Israel to finally withdraw from the Gaza Strip and other territory. Now, it is squarely up to President Eisenhower to use similar pressure on Egypt to see to it that all of his efforts in the past are not translated into failure by the policies of Nasser.

Timely Observations

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. HULL. Mr. Speaker, the March 24 edition of the Sunday News Press, St. Joseph, Mo., has a most enlightening and factual editorial entitled "Timely Observations." These timely observations by my good friend and venerable journalist, Arthur V. Burrows, very aptly elucidate a serious situation confronting our Air Force in its endeavor to secure and retain qualified personnel for the defense of these United States.

One man who has repeatedly warned the Congress, this administration, and the Nation of the folly of not maintaining our air defense at its peak; who has consistently argued that the Air Force must be administered in a manner and at a level that our young men would be proud to be a part of it; and who has had years of experience that qualifies him to speak authoritatively on the subject is, as Editor Burrows points out and I am proud to state, the distinguished Senator and fellow Missourian, the Honorable STUART SYMINGTON.

Under unanimous consent, I ask that this editorial be printed in the Appendix of the RECORD in its entirety, as follows:

TIMELY OBSERVATIONS

The Air Force must not be our stepchild. We agree completely with Missouri's junior United States Senator in his analysis of the importance of American defense in this age of atomic energy. We have applauded each time this distinguished Missourian has come to the Senate with arguments for the United States Army Air Force. We hold that there are two mighty nations in the world today. One is the United States of America. The other is the United States of Soviet Republics.

America can keep this world from going Communist. Yes, but not by crippling air defense. Our first line of defense is the Air Force. Make no mistake about that. We have come eons in practical reality, though only 16 decades since Washington's day when the Atlantic Ocean was our great first line of defense against an Old World with its centuries of hates and wars. We have come ages, too, in reality though only 2 decades since the great Franklin Delano Roosevelt said that our front line defense was the Rhine.

America's front line defense today is the United States Army Air Force. We are cognizant that Federal spending often is uncontrolled and often is wasteful. Not on defens. We have strong views on the Air Force. There are times when saving is no saving but the most expensive and wholly false economy. We believe that is true in our stingy attitude toward the monumental task of getting and keeping the very best men of America in our Army, in our Air Force.

What incentive is there for a young man, airminded, to give his life to the Regular Army, when he can go into aviation in private industry. None, really none, unless that man cares for neither home nor family and can afford to dedicate himself to a cause few can. We live in days where the butcher, the grocer, and the baker must be met and paid. We live in an age when the male American, be he in Air Force or in private plant, wonders how he can set aside for that security of old age.

Here is a practical illustration. Let us take the highest rating of a noncommissioned man. Let's assume he has 16 years in the service. Let's assume he is master sergeant. His base pay is $288.60. If he flies he gets $105 additional. True, he gets quarters allowance, plus separate rations, be he married and with the family. The total, all enumerated, would be $500 a month.

Here is the highest skilled man Uncle Sam has with all that experience. Now what? Mark this. A private company manufacturing aircraft pays a flying engineer as a starting salary $650 a month. Mark this, too. The flier working for this private aircraft company is raised to $750 a month when he meets the company's qualified standards.

Many men are leaving the service of Uncle Sam. Why? Because they can better themselves by getting work with aircraft companies at much more inviting, at much higher remuneration. What is our weak reasoning that we penalize American men by urging them, just for patriotic reasons, to accept positions in the Air Force, when we know they can start out better with a private company than they can attain after a decade and a half with the United States Army, our Department of Defense.

True; yes; we are living in new and strange times. You may be one of those who look at that master sergeant's pay, even with his 16 years seniority, and say "I'll trade jobs with him." Every man is worthy of his hire. The national economy has changed. We are in an era of high living costs. We personally cannot understand why we want to spend billions on Federal aid to education, yet keep the pay of Air Force men unjustly lower than that of his fellow workers, same skill, same background, in private aircraft.

We are as a rule a generous people. We spend millions and billions to win the friendship of free peoples, ideologically, as are we, opposed to the taint that is Red communism that had its birth in Russia. Recently, as Newsweek pointed out in its current issue, an expert on public expenditures was insulted when he dared appear before a House subcommittee to argue that schools are a State and local problem, not a Federal one. These men seem itching to make the States accept money for schools. Do they rise to demand equal pay for men in America's defense?

Men of the House and of the Senate: If our Air Force fails, by depleted manpower—trailing away to private industry—we face national disgrace. Why cannot we see that all the so-called Federal aid to education will not amount to a tinker's dam if Red Russia, highly airminded, ever gets the ascendancy over us. Gone forever is our isolation of George Washington's day. Gone is the era of the safety in battleships when Britain was world leader. We must now think of air defense first and foremost.

Two employers want Bill for a certain job. Bill may like the one employer personally better than the other. But in the final analysis Bill will, if he is bright, go to that employer who pays him best. He will go to him most likely to provide best for wife and children, to lay away for that day when he can no longer work.

Report of President and Secretary of American Group of the Interparliamentary Union for 1957

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. REED. Mr. Speaker, as president of the American group of the Interparliamentary Union, I respectfully submit to the Congress of the United States my annual report for 1957, together with the report of Hon. HENRY O. TALLE, secretary of the American group of the Interparliamentary Union:

REPORT OF THE PRESIDENT, AMERICAN GROUP, INTERPARLIAMENTARY UNION, 1957

Although no formal meeting of the election of officers has been held since 1955, the group met informally on many occasions since March of that year. In 1952, the bylaws were amended to elect officers to serve for each Congress rather on a yearly basis and this meeting today is to review the work of the past 2 years, as well as to elect officers for the duration of the 85th Congress.

There have been four formal meetings of the Interparliamentary Union since our last official meeting. First, the council meeting in Rome; second, the 44th conference in Helsinki; third, the council meeting in Dubrovnik; and last the conference—the 45th for the Interparliamentary Union in Bangkok.

We have had briefings at the Department of State or here on the Hill before each council meeting and conference. Because of the campaign in 1956, these briefings were only with those who could be in Washington but we provided for it by a special report of the executive secretary, who for 2 weeks previous to leaving for Bangkok represented us in meetings abroad with the British, French, Swiss, and Italian groups, as well as a meeting with DeBionay at bureau headquarters in Geneva.

We have been represented, as well, by Congressman COOLEY, serving on the Union Executive Committee, for these last 4 years but since his term has now expired, we can have no representative on that committee elected until 1958. The place on that committee is an extremely important one in relation to our position in the union and though the 1958 conference will not be obliged to elect a United States delegate, it is a position we have held almost continuously in the union since its inception.

The theme of the conferences in 1955 and 1956, as well of course of the council meetings, has veered from peaceful coexistence to the major subject of disarmament. We are required to report the actions of our congress on the resolutions made at these conferences and I am happy to say that over the 2 years and over the 9 years preceding

them since we met in Cairo after World War II, we have always been able to report that we either already had the recommendations of the conference in force in our country before they were passed or that action was taken during the ensuing year to bring them into being.

Unfortunately, I was not able to lead the delegation at Helsinki or Bangkok, but I have followed with intense interest the work of each conference as well as the Dubrovnik council meeting at which we were ably represented by Senator ROBERTSON and our beloved former president, Senator Alben Barkley. I should like to express here also my grateful thanks to Congressman TALLE, who took over the burden of acting as chairman at Helsinki and Bangkok. I should like to express my thanks, too, to Senator PURTELL, who acted for Congressman COOLEY at the postconference session of the executive committee in Helsinki, where a further attempt was made to violate the expressed wishes of the council and the conference in the proposed admission of Communist China to the Union.

The action of the executive committee meeting in Delhi in 1955, taking advantage of a bare quorum in which the presiding officer, Lord Stansgate, cast a vote for such recommendation, is a symptom in my opinion, of a far greater problem and conspiracy, in fact, to take over the Interparliamentary Union by Communist forces, representing the Soviet and her satellites.

It was significant that at the Praesidium of the Soviet Republics in February 1955, that the word "Parliament" was first applied to the single-party assemblies of the Soviet and that shortly before and during that time, the offending ex-members of the Union, once independent governments, returned one by one to the fold of the Union, preparatory to the admission of the Soviet as a member at Helsinki in 1955. It is true that Spain and Liberia were admitted at the same time but the Soviet and its satellite, Albania, came in to complete the Soviet bloc, already returned to membership.

The union now stands at 51 member nations. It must include over 30 more nations to, in any way, balance the membership of the U. N., of which it is a part. In the admission of Brazil and now Peru to the small Latin American group, we have a greater world representation as well, as in the admission of Australia, New Zealand, and little countries like Laos and Cambodia and our neighbor, Canada, which has already taken steps to resume membership after almost 20 years of absence from our conferences. In the words of our secretary general, membership has become more realistic but realism buys with it many new problems.

My own view is that the union, even with the menacing force of the Soviet bloc, is becoming a more powerful voice in world affairs and so long as it remains a free body, presents many opportunities for the free world. It is an excellent place to make tests of world opinion and an excellent meeting ground for representative members of our Congress to gain an intimate knowledge of other points of view and to resolutely state our own positions clearly and unequivocably to members of other parliaments.

For these reasons, I believe that the upcoming council meeting in Nice and the London conference in September are particularly important to us. Our Department of State was deeply concerned with the outcome of the conference at Bangkok and will be equally concerned with that of London, where an opportunity will be provided to not only adjust our differences with European powers but also to strengthen our relations with our friends in the Near and Middle East. The subject of colonialism has been debated for over 50 years in the interparliamentary union and steady growth has been obtained in a much more enlightened attitude on the part of the governing and nonself-governing powers in that time.

It is imperative that right leadership be provided the Union in the election of the new President of the Council who is actually the guiding spirit of the Union this year, and it is imperative that every advantage be taken of the 1958 conference in Rio de Janeiro to get our Latin American neighbors into the Union, with a subsequent meeting of the new executive committee, 1958, which is proposed to occur in Washington, following the conference.

In 1957 Thai and Swiss representatives leave the executive committee, 1 voting with us, 1 against us on the Communist China matter. It is likely that a new Far Eastern representative will be elected and another European representative. It is in the interest of the future democratic development of the Union that these new members both represent the free world.

These few matters I have discussed with you in this report which bear upon our continued influence in the Union. Another abortive attempt will be made at Nice to recommend Communist China, still unrepentant and still unrecognized by the U. N., to membership, in contradiction to the past vote of the Council. We should see that this action, antagonistic to world peace, based on justice, shall not take place.

DANIEL A. REED,
President of the American Group, Interparliamentary Union.

MINUTES OF THE ANNUAL MEETING, INTERPARLIAMENTARY UNION, 1955

The regular anual meeting of the American group, Interparliamentary Union, recessed from the third Monday in January, was opened at 10:15 a. m., March 15, 1955, in the old Supreme Court chambers at the Capitol. There were approximately 30 Members of the House and Senate present. Congressman DANIEL A. REED, vice president of the group, presided.

The short minutes of the meeting of January 17, 1955, were unanimously approved.

The minutes of the annual meeting of the group held on January 18, 1954, were distributed and, reading being dispensed with, were unanimously approved.

The report of the executive secretary was read and approved. The former president, Senator Homer Ferguson, being now United States Ambassador to the Philippines, sent greetings from Manila and allowed his previous report covering the Washington Conference of the Interparliamentary Union to speak for his administration of group affairs.

It was moved by Senator ROBERTSON and seconded by Senator Wiley and Senator SPARKMAN that Congressman DANIEL A. REED, of New York, be elected to the office of president of the American group to serve for the period of the 84th Congress. The vote being unanimous, Congressman REED took the chair and called for resumption of the regular business of the meeting.

Nominations and elections of other officers for this period of the 84th Congress were then in order. Congressman COOLEY nominated HENRY O. TALLE, of Lowa, for the office of secretary. Being duly seconded, Congressman TALLE was declared elected. Congressman POAGE nominated for the three offices of vice president, Congressman COOLEY, of North Carolina; Senator ROBERTSON, of Virginia; and Senator WILEY, of Wisconsin. Being duly seconded, the vice presidents were declared elected. Congressman KEATING nominated Congressman POAGE, of TEXAS, for the office of treasurer. Being duly seconded, Congressman POAGE was declared elected.

The following Members of Congress were elected to serve on the executive committee: Senator Albert Gore, of Tennessee; Congressman Clifford R. Hope, of Kansas; Congressman John M. Vorys, of Ohio; Congressman Antoni A. Sadlak, of Connecticut; Sentor Thomas C. Hennings, Jr., of Missouri; Senator John J. Sparkman, of Alabama; Senator Paul H. Douglas, of Illinois; and Congressman W. Robert Poage, of TEXAS. Dr. Franklin Dunham was continued as permanent executive secretary. Congressman HAROLD D. COOLEY, of North Carolina, and Congressman DANIEL A. REED, of New York, were elected as members of the Interparliamentary Council, Congressman COOLEY being already a member of the executive committee of the Interparliamentary Union.

On nomination by Congressman Poage, seconded by Congressman Hope, Ambassador Ferguson and former Congressman Lucas, of TEXAS, were elected as honorary members of the American group.

A discussion was then entered into as to the size of the delegation to be appointed to the 44th conference to be held in Helsinki in September 1955.

Senator ROBERTSON spoke to the point, advising that the group be of sufficient size to adequately present the United States in relation to the size of other delegations of leading world powers. On motion by Congressman COOLEY, seconded by Congressman POAGE, the president was authorized to appoint the delegation, not to exceed 15 Members of Congress.

Senator HENNINGS spoke of the necessity of assembling the members of the delegation at a time well in advance of the conference, so that the delegation could properly organize to discuss its position on questions offered for debate and resolution.

President REED spoke from the chair, advising that the British were always well organized for the conferences, having a permanent secretariat located in the House of Commons, with a full-time secretary, secretarial help and budget to cover adequately many meetings and the reception of foreign visitors during the year. Congressman COOLEY also spoke of the regular IPU committee assignments which should be made early in order to make the delegates chosen familiar with their respective roles in the conference. Senator SPARKMAN noted that the conference agenda is set up after the April council meeting and that such assignments could be made after that meeting.

The original motion, regarding the delegation was thereupon amended to include as well 15 alternates who could be used as a priority list from which to draw names of delegates in case of vacancies occurring in original designations.

Congressman COOLEY introduced the question of raising the prescribed contribution of the United States to the Interparliamentary Bureau to the newly assessed charge of $18,000.

On motion, it was agreed that Senator ROBERTSON in the Senate and Congressman REED in the House would handle the matter of such increase which is, at present, $3,000 above the usual amount recommended in the Department of State budget.

Senator ROBERTSON was also asked by the group to handle the matter of air transportation facilities to and from Helsinki, in late August.

There being no further matters for immediate discussion, the meeting was declared adjourned at 11 a. m.

Respectfully submitted,
HENRY O. TALLE,
Parliamentary Secretary.

Countersigned:
FRANKLIN DUNHAM,
Permanent Executive Secretary.

Read and approved by United States group, IPU, at business meeting, February 19, 1957.

MINUTES OF INTERPARLIAMENTARY UNION LUNCHEON MEETING, APRIL 23, 1956

The officers of the United States group held a luncheon meeting in the Vandenberg room of the Capitol on April 23 for the purpose of hearing reports on the meetings of the IPU Council held in Dubrovnik, Yugoslavia, from April 3 through April 8. The United States group was represented at the meeting by Senators Alben W. Barkley and A. WILLIS ROBERTSON.

Senator A. WILLIS ROBERTSON provided those attending this meeting with copies of a mimeographed report.

Senator Alben W. Barkley gave an oral account. In his report Senator Barkley emphasized that the most difficult problem dealt with at the meeting was the persistent demand by Russian delegates that Red China be admitted to membership in the IPU.

It was made clear that, although the attempt to seat Red China failed at this meeting of the Council, another attempt would undoubtedly be made at the forthcoming conference scheduled to be held in Bangkok, Thailand, in November.

Following a period of discussion in which members reviewed earlier attempts by the Russian delegates to get Red China seated in the IPU, and after considering steps that might be taken to defeat this purpose, the meeting was adjourned.

Respectfully submitted.

HENRY O. TALLE,
Secretary, United States Group,
Interparliamentary Union.

Read and approved by United States group, IPU, at business meeting, February 19, 1957.

MINUTES OF INTERPARLIAMENTARY UNION LUNCHEON MEETING, JULY 27, 1956

A luncheon meeting of the delegates appointed to attend the Interparliamentary Union Conference in Bangkok, Thailand, November 15 through November 22, was held in the Vandenberg room, Senate wing of the Capitol, on Friday, July 27, at 12:30 p. m.

In addition to the delegates the following persons from the State Department attended the luncheon meeting:

Mr. Walter S. Robertson, Assistant Secretary of State in charge of Far Eastern Affairs,

Mr. Robert Hill, Assistant Secretary of State in charge of congressional liaison,

Mr. Jack Leahy, Department of State, congressional liaison staff member.

President DANIEL A. REED introduced the guests from the Department of State and after briefly explaining the importance of the Bangkok Conference, he asked Mr. Robertson, of the Department, to brief the delegates on the Department's point of view relative to the matter of Red China being admitted to membership in the union. He was also invited to suggest what he believed should be done by the United States group to prevent such action.

Mr. Walter S. Robertson gave a good explanation which, concisely stated, was that the IPU is yearly becoming increasingly important as an international organization; that the Soviet are most anxious to control it by adding as many satellites as possible and that the United States group must be a strong leader of the free-nation members to prevent the seating of Red China.

At the conclusion of Mr. Walter S. Robertson's briefing a general discussion took place relative to the action of the United States group in preventing the seating of Red China.

The meeting adjourned at approximately 2 p. m.

Respectfully submitted.

HENRY O. TALLE,
Secretary, United States Group,
Interparliamentary Union.

Read and approved by United States group, IPU, at business meeting, February 19, 1957.

A Basis for Settlement of Arab-Israeli Dispute

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday March 28, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, a most interesting suggestion has been made as to the basis for final settlement of the highly volatile situation in the Middle East. This subject was contained in the Jewish Newsletter of February 4 and I am sure that Members of this House will be interested in reading it.

VIEWS OF SECRETARY HAMMARSKJOLD'S REPORT

There is extensive belief here that Mr. Hammarskjold's report to the United Nations, on the 25th, has an importance transcending its rather pedestrian, legalistic treatment of the precise situations in Gaza and the Sharm el Sheikh territories. Topical commentators and observers may debate the immediate efficacy of the report as a contribution toward resolution of these two, specific issues. But those grappling with the totality of American interests in the Middle East and who are more than propagandists are encouraged by the fact that this report, together with the Secretary General's comprehensive report of his trip to the Middle East last spring, is building an integrated, consistent and orderely record of first principles upon the basis of which alone any final settlement of the Palestine problem can be predicated.

The contrast to, and conflict with, the Israeli position over the two territories now at issue is more profound than the obvious question of unconditional withdrawal. Or, it might be said that if Israel is prepared to accept the working thesis of the Secretary General's report, there would remain little disagreement with the Secretary General over the conditions Israel is attempting to secure before withdrawal: reduction of border incursions and recognition of transit rights in Suez and the Aqaba Gulf. The bold differences in approach to these objectives—not the objectives themselves—will, and should, be the nub of debate.

The Israeli case is predicated upon an appeal for recognition of the justice of its case against border raids and obstruction of its transport in the canal and the Aqaba Gulf. The Secretary General does not deny the justice of Israel's claims. But—he says in legal language and documented citations—justice is compounded of an intricate and, in many situations, an interlocking series of fundamental provisions reaching back to the cease-fire and armistice agreements of 1948–49.

Above all, he asserts that justice cannot be achieved by unilateral definitions and actions. "The United Nations cannot condone a change of the status juris resulting from military action contrary to the provisions of the charter," he says. And he continues, "The organization must, therefore, maintain that the status juris existing prior to such military action be reestablished by a withdrawal of troops, and by the relinquishment or nullification of rights asserted in territories covered by the military action and depending upon it." This is the nub of Mr. Hammarskjold's report, because it is a fundamental principle of world order and a prerequisite to any peaceful settlement of any international disputes. It is therefore the application of the central purpose of the United Nations to the problem to which the Secretary General was addressing himself.

Mr. Hammarskjold's report offers legal and orderly ways by means of which all parties of good faith might achieve objectives which most of the world has agreed it wants. The strategy proposed by Mr. Hammarskjold might restore the armistice agreements to some semblance of the authority it was hoped they would have nearly a decade ago. This, according to the Secretary General, would bring about the state of nonbelligerency which Israel now is attempting to impose as a price for its withdrawal. The Secretary General suggests that after the authority of the armistice agreement is reestablished, recognition of the international rights of shipping through the canal and the Gulf of Aqaba—including Israel's rights—might be expected from Egypt.

A phrase which recurs constantly in the Secretary General's report is that full compliance with the armistice agreements—on many points—would have an important positive bearing on other problems in the area. This is essentially the same theme Mr. Hammarskjold hit last spring. The feeling here is that the Secretary General is building, brick upon brick, a way out of the Palestine dilemma. And, for the same reason, the feeling here is that Mr. Eisenhower's policy of attempting to work out this part of the Middle East problem through the United Nations is justified.

WASHINGTON, *January 28.*

Old Argument

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. BARTLETT. Mr. Speaker, under the heading of an Old Argument the Jacksonville (Fla.) Journal for March 22 makes the point that senatorial representation from the States having smaller populations than others is a system which in our Government has worked well and may be expected to when Alaska becomes a State. I take pleasure in presenting that editorial here:

OLD ARGUMENT

One of the points of argument in debate on the question of statehood for Alaska has been the contention that, as a State, it would have a voice in Congress greater than its population justifies. This point of view was expressed before a House subcommittee when Representative JOHN R. PILLION, of New York, said that permitting Alaska to elect 2 Senators would be a "disservice to the people of the 48 States."

PILLION'S expression of this viewpoint had in it echoes that go back to the founding days of the Republic. This question of giving the smaller States equal voting power in the Senate was one of the main points of difference among delegates to the Constitutional Convention in Philadelphia in 1787. It was only by the narrowest possible margin that they reached the so-called great compromise giving the States proportional representation in the House but equal power in the Senate.

Experience since then has shown that, on the whole, this is an effective system for representing the best interests of the people. There is no reason to think that giving

Alaska two Senators would be harmful, or a "disservice to the people."

It is true that Alaska's population is very small when compared to that of most States. But it must be remembered that there are several States whose people are outnumbered by hundreds of thousands rather than by millions. Among these are Nevada, Wyoming, Delaware, Vermont.

That, however, is not the main point. The main point is that throughout our history the best Senators have not only served their home States well but have been conscious of their broader responsibility to the Nation as a whole. Why should we suppose that Senators from Alaska, if that Territory should be granted statehood, would do otherwise?

Egyptian Violations of International Law

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. MULTER. Mr. Speaker, we have heard and read a great deal about violations of international law by Egypt. The following, however, is an itemized bill of particulars and documentation establishing these charges:

EGYPTIAN VIOLATIONS OF INTERNATIONAL LAW

UNITED NATIONS CHARTER

Belligerency

Egypt's exercise of alleged rights of war under her oft-proclaimed doctrine of unilateral belligerency; her continued armed attacks against Israel; her naval blockade and economic boycott; the repeated threats of her leaders to annihilate Israel and their consistent refusal to arrive at a peaceful settlement with Israel are in clear and open violation of the following provisions of the United Nations Charter:

The Charter

"We the peoples of the United Nations, determined * * * to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained * * * and for these ends to practice tolerance and live together in peace with one another as good neighbors * * * and to insure, by the acceptance of principles and the institution of methods, that armed force shall not be used, save in the common interest, and to employ international machinery for the promotion of the economic and social advancement of all peoples, have resolved to combine our efforts to accomplish these aims."—(Preamble.)

"The purposes of the United Nations are * * * to develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples"—(art. 1 (2)).

"All members shall settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered"—(art. 2 (2)).

"The parties to any dispute, the continuance of which is likely to endanger the maintenance of international peace and security, shall, first of all, seek a solution by negotiation, inquiry, mediation, conciliation, arbitration"—(art. 33 (1)).

"All members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the purposes of the United Nations"—(art. 2 (4)).

The Violations

From the signing of the Israel-Arab Armistice Agreements in February 1949 to the end of 1956, Arab attackers, including Egyptian-trained Fedayeen, carried out 3,367 raids into Israel territory, killing 443 Israelis and wounding 963.

"They tried to force us to negotiate with Israel, but we refused. I informed them * * * that we will never negotiate with Israel." (Abdul Nasser, July 6, 1955.)

"There is no sense in talking about peace with Israel. There is not even the smallest place for negotiations between the Arabs and Israel." (Abdul Nasser, October 14, 1955.)

"Egypt will be glad when her army and that of Syria will meet on the ruins of this treacherous people, these Zionist gangs." (Abdul Nasser, December 18, 1955.)

Economic warfare

Egypt's economic warfare against Israel, including the blockade against Israel-bound vessels at the Suez Canal and the Gulf of Aqaba, the air blockade and the general anti-Israel economic boycott, is in violation of the following provisions of the charter (in addition to the provisions of the preamble quoted above):

The Charter

"The purposes of the United Nations are * * * to achieve international cooperation in solving international problems of an economic character" (art. 1 (3)).

"The members of the United Nations agree to accept and carry out the decisions of the Security Council in accordance with the present Charter" (art. 25).

"With a view to the creation of conditions of stability and well-being which are necessary for peaceful and friendly relations among nations * * * the United Nations shall promote * * * solutions of international economic * * * problems" (art. 55 (b)).

"All members pledge themselves to take joint and separate action in cooperation with the organization for the achievement of the purposes set forth in article 55" (art. 56).

The Violations

"No person, or other legal entity, is permitted to conclude an agreement, directly or indirectly, with institutions or persons in Israel, or persons acting on her behalf in another country. This covers any commercial, financial, or other transactions." (Art. 1, boycott regulations adopted by the Arab League Council in Cairo on December 14, 1954, and published in the Egyptian Official Journal on October 23, 1955.)

In 1949 and 1950 Egypt established a series of gun emplacements in the Sharm el Sheikh area in order to prevent ships from sailing freely in the Gulf of Aqaba to and from the port of Eilat. These guns have blockaded the Gulf of Aqaba for the past 6 years.

"In accordance with the orders dated July 7, 1955, issued by the Minister of War and the commander in chief of the armed forces, the regional boycott office for Israel is appointed to be the only authority for issuing permission to vessels to pass through the Egyptian territorial waters in the Gulf of Aqaba." (Egyptian orders for maritime traffic in the Gulf of Aqaba, 1955.)

In defiance of the Security Council resolution of September 1, 1951, which called on Egypt "to terminate the restrictions on the passage of international commercial shipping and goods through the Suez Canal wherever bound," the Egyptian authorities persisted in acts of confiscation, detention, and sheer molestation of ships proceeding to and from Israel even in respect of goods which were not included in the contraband list.

"There can hardly be any doubt that all seafaring nations, and for that matter all nations, must, as a matter of principle, be very greatly concerned in the maintenance of the freedom of international shipping—not least through the Suez Canal. * * * In the view of my Government, the measures decided upon by the Egyptian Government and the practices applied by it cannot be reconciled with the charter." (Mr. Borberg, representative of Denmark, at meeting 663 of the Security Council, March 25, 1954.)

(See also violations listed under United Nations resolutions.)

Persecution of minorities

Egypt's acts of persecution, expropriation, and deportation perpetrated against foreign nationals in Egypt—and the Jewish community in particular (including Egyptian nationals of the Jewish faith as well as non-Egyptian Jews) constitute a grave violation of the following provisions of the charter:

The Charter

"The purpose of the United Nations are * * * to achieve international cooperation in solving international problems of an economic, social, cultural or humanitarian character, and in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion" (art. 1 (3)).

"The United Nations shall promote * * * universal respect for, and observance of, human rights and fundamental fredoms for all without distinction as to race, sex, language, or religion" (art. 55c).

"All members pledge themselves to take joint and separate action * * * in cooperation with the Organization for the achievement of the purposes set forth in article 55" (art. 56).

The Violations

The Egyptian Government, in line with its policy of deporting all Jews not in possession of Egyptian nationality—and depriving of their citizenship and deporting those who acquired Egyptian nationality after January 1, 1900—has, since early November 1956, ordered some 21,000 Egyptian Jews to leave the country (4,000 of them within 7 days). The deportees are compelled to leave virtually all their property behind them.

Jewish hospitals in Cairo and Alexandria have been sequestrated, the sick ejected, and the medical staff arrested. There has been interference with the supply of food to Jewish humanitarian institutions.

About 1,000 Jews of foreign nationality have been imprisoned under wretched physical conditions in the Prison des Barages in Cairo. Special detention centers are operating in various public buildings, where detainees are herded together in crowded and unsanitary conditions. Altogether, between 2,000 and 3,000 Jews have been arrested.

Bank accounts have been frozen, property sequestrated, hundreds of industrial and commercial concerns taken over by the Government (among these the department stores of Cicurel, Chemla, Hanau, and Chalos, the banking houses of Zilka and Mosseri, and the Pinto cotton firm) and Jewish employees generally dismissed. (Based on official lists of sequestration under Egyptian Military Proclamation No. 4, published in the Extraordinary Egyptian Official Journal of November 8, 1956.)

The assets sequestrated or frozen by the Egyptian Government up to the end of November 1956 are estimated at well over $220 million.

UNITED NATIONS RESOLUTIONS

Invasion of 1948

The invasion of Israel by the Arab States, headed by Egypt, in 1948, was in open defiance of the following General Assembly and Security Council resolutions:

U. N. Action

"The General Assembly * * * appeals to all governments and all peoples to refrain from taking any action which might hamper or delay the carrying out of these recommendations." (Concerning the establishment in Palestine of a Jewish and an Arab state). (General Assembly, Resolution 181 (II), November 29, 1947.)

"The Security Council * * * appeals to all governments and peoples, particularly in and around Palestine, to take all possible action to prevent or reduce such disorders as are now occurring in Palestine." (Security Council, 691, March 5, 1948.)

"The Security Council calls upon all * * * to take immediately * * * the following measures: (a) cease all activities of a military on para-military nature, as well as acts of violence, terrorism or sabotage; (b) refrain from bringing and from assisting and encouraging the entry into Palestine of armed bands and fighting personnel, goods, individuals, whatever their origin." (Security Council, 723, April 17, 1948.)

"The Security Council * * * calls upon all governments and authorities, without prejudice to the rights, claims or position of the parties concerned, to abstain from any hostile military action in Palestine, and to that end to issue a cease-fire order to their military and para-military forces to become effective within 36 hours after midnight, New York Standard Time, May 22, 1948. (Security Council, 733 May 22, 1948.)

"The Security Council * * * addresses an urgent appeal to the interested parties to accept in principle the prolongation of the truce for such a period as may be decided upon in consultation with the Mediator." (Security Council, 875, July 7, 1948.)

The Violations

"The Charter and the United Nations will not crumble, will not fall apart, if one more of the General Assembly's resolutions is not put into effect. We do not choose to comply with the General Assembly's resolution on Palestine." (Mahmoud Fawzi, Egyptian representative in the Security Council, February 25, 1948 (Doc. S/PV 255).)

"The Royal Egyptian Government declare, now that the British Mandate in Palestine has ended, that the Egyptian armed forces have started to enter Palestine." (Cable from the Egyptian Minister of Foreign Affairs to the Security Council, May 15, 1948 (S/743).)

"On the termination of the British Mandate in Palestine, instructions were given to forces of the Egyptian Army to enter Palestine. * * *

The Egyptian regular forces are proceeding with their operations." (Official communication delivered by the Egyptian Government to the Security Council May 22, 1948 (S/767).)

"The Egyptian Government regrets that it cannot abide by the recommendation of the Security Council to cease fire in Palestine." (Reply of the Egyptian Government, May 26, 1948.)

"The Arabs are not prepared to accept prolongation of the truce." (From the Mediator's Report to the Security Council, July 8, 1948 (S/873).)

"The Security Council, taking into consideration that the Provisional Government of Israel has indicated its acceptance in principle of a prolongation of the truce in Palestine; that the States members of the Arab League have rejected successive appeals of the United Nations Mediator and of the Security Council in its resolution of July 7, 1948, for the prolongation of the truce in Palestine, and that there has consequently developed a renewal of hostilities in Palestine; determines that the situation in Palestine constitutes a threat to the peace within the meaning of article 39 of the Charter." (Security Council, 902, July 15, 1948.)

Raids across the border

In continuing, to this day, the incursions into Israel of the fedayeen, the Egyptians have been violating that portion of the General Assembly's resolution of November 2, 1956 which—

U. N. Action

"* * * urges the parties * * * to desist from raids across the armistice lines into neighboring territory." (General Assembly 997 (ES–I), November 2, 1956.)

The Violations

The following Israeli casualties were incurred, as a result of illegal incursions across the border, during the months of November and December 1956 and January 1957: November—8 killed, 16 wounded; December—1 killed, 4 wounded; January—4 wounded.

Suez and Aqaba blockade

The economic war being waged by Egypt against Israel—in particular, the blockade of the Suez Canal and the Gulf of Aqaba—violates the following United Nations resolutions:

U. N. Action

"The Security Council—

"Further noting * * * that the Egyptian Government has not complied with the earnest plea of the Chief of Staff, made to the Egyptian delegate on June 12, 1951, that it desist from the present practice of interfering with the passage through the Suez Canal of goods destined for Israel. * * *

"Finds that the maintenance of the practice mentioned in paragraph 4 above is inconsistent with the objectives of a peaceful settlement between the parties and the establishment of a permanent peace in Palestine set forth in the armistice agreement;

"Finds further that such practice is an abuse of the exercise of the right of visit, search, and seizure;

"Further finds that such practice cannot in the prevailing circumstances be justified on the ground that it is necessary for self-defense;

"And further noting that the restrictions on the passage of goods through the Suez Canal to Israel ports are denying to nations at no time connected with the conflict in Palestine valuable supplies required for their economic reconstruction, and that these restrictions, together with sanctions applied by Egypt to certain ships which have visited Israel ports, represent unjustified interference with the rights of nations to navigate the seas and to trade freely with one another, including the Arab States and Israel;

"Calls upon Egypt to terminate the restrictions on the passage of international commercial shipping and goods through the Suez Canal, wherever bound, and to cease all interference with such shipping beyond that essential to the safety of shipping in the canal itself and to the observance of the international conventions in force." (Security Council, 2322, September 1, 1951.)

"The Security Council * * * agrees that any settlement of the Suez question should meet the following requirements:

"There should be free and open transit through the canal without discrimination, overt or covert—this covers both political and technical aspects * * *.

"The operation of the canal should be insulated from the politics of any country." (Security Council, 3675, October 13, 1956.)

"This occupation being in no sense intended to interfere in any way whatever with innocent traffic through the stretch of sea separating these two islands from the Sinai coast of Egypt, it goes without saying that this passage, the only practical one, will remain free, as in the past; which is in conformity with international practice and with the recognised principles of international law." (Aide-Mémoire on the Egyptian occupation of the islands of Tiran and Sanafir, handed by the Egyptian Foreign Minister to United States Ambassador Caffery, January 28, 1950.)

"The General Assembly * * * urges that upon the cease-fire being effective, steps be taken to reopen the Suez Canal and restore secure freedom of navigation." (General Assembly, 997 (ES–I), November 2, 1956.)

The Violations

Some of the cases of interference with shipping through the Suez Canal and the Gulf of Aqaba:

On October 31, 1952, the Norwegian ship *Rimfrost*, en route from Eritrea to Israel, was detained at Port Said and its cargo of frozen meat confiscated.

On September 2, 1953, a cargo of Israel-assembled motorcars consigned to Kenya was confiscated aboard the Greek freighter *Parnon*.

On December 14, 1953, a cargo of meat was confiscated at Port Said aboard the Italian steamship *Franca Mari* on her way to Haifa.

On December 22, 1953, a shipment of motorcycles and personal effects consigned to Israel was confiscated from the Norwegian freighter *Triton*, en route from Melbourne to Genoa.

On July 8, 1955, a similar consignment was taken off the Dutch vessel *Fedala*.

On September 28, 1954, the Israel freighter *Bat Galim*, en route from Eritrea to Haifa with a cargo of food and hides, was stopped by the Egyptian authorities at the entrance to the Suez Canal. The ship was seized, the cargo confiscated, and the crew imprisoned. Not until January 1, 1955, was the crew liberated, but the vessel itself was not released.

On December 3, 1953, Egyptian guns fired at the United States vessel *Albion* at the entry to the Gulf of Aqaba, in belief (as the Egyptian authorities later explained) that the ship's destination was Eilat. (Actually, the *Albion* was carrying a cargo of wheat to the Jordanian port of Aqaba.)

On January 1, 1954, Egyptian gunfire was directed, at the entry to the Gulf of Aqaba, against the Italian ship *Maria Antonia* on her way from Massawa to Eilat. The ship was forcibly compelled to return to its port of origin.

On July 3, 1955, the British ship *Anshun* was fired upon by Egyptian batteries at the entrance to the Gulf of Aqaba because she failed to stop and identify herself.

"The anti-Israel boycott committee asked for the passing of legislation designed to tighten the siege against Israel, both by confiscating all Israeli goods of all kinds and by seizing all ships carrying goods to or from Israel, as is being practiced in all other Arab countries. The Arab Government also asked Egypt to take appropriate measures in order to confiscate food shipments going to Israel through Egyptian territorial waters in a manner similar to the measures undertaken by the Governments of Iraq, Syria, and Jordan. * * * In conclusion, the Director (of the Coastal Guard Department) asked that the decree of February 10, 1950, be amended in such a manner as to allow confiscation of food and other commodities." (Egyptian Government memorandum, September 1955.)

"Egypt will not permit the passage of Israeli vessels through the canal." (Kamal e-Din Hussein, Egyptian Minister of Education, November 16, 1956.)

"Israeli vessels shall never pass through the canal." (Mahmoud Fawzi, Egyptian Foreign Minister, as reported on Radio Cairo, December 3, 1956.)

Refusal to make peace

Egypt's refusal to reach a peaceful settlement with Israel is contrary to the following United Nations resolutions:

U. N. Action

"The Security Council * * * decides that, in order to eliminate that threat to the peace

in Palestine and to facilitate the transition from the present truce to permanent peace in Palestine, an armistice shall be established." (Security Council, 1080, November 16, 1948.)

"The Security Council * * * expresses the hope that the Government and authorities concerned, having undertaken * * * to extend the scope of the armistice negotiations and to seek agreement by negotiations conducted either with the Conciliation Commission or directly, will at an early date achieve agreement on the final settlement of all questions outstanding between them." (Security Council, 1376, August 11, 1949.)

"The General Assembly * * * calls upon every nation * * * to settle international disputes by peaceful means and to cooperate in supporting United Nations efforts to resolve outstanding problems." (General Assembly 290 (IV), December 1, 1949.)

"The Security Council * * * reminds Egypt, Israel, and the Hashemite Kingdom of Jordan that the armistice agreements to which they are parties contemplate the return of permanent peace in Palestine, and therefore urges them and the other States in the area to take all such steps as will lead to the settlement of the issues between them." (Security Council, 1907, November 17, 1950.)

"Under the Charter of the United Nations, all states are bound to settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered." (General Assembly, 704 (VIII), April 8, 1953.)

"The General Assembly * * * reaffirms its resolutions 110 (II) and 290 (IV) * * * which condemn all propaganda against peace." (General Assembly, 381 (V), November 17, 1950.)

"Under the Charter of the United Nations, all States are bound * * * to refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any State, or in any other manner inconsistent with the purposes of the United Nations." (General Assembly, 704 (VII), April 8, 1953.)

The Violations

"Egypt has rejected a suggestion that an Egyptian officer should meet an Israeli in no-man's land to discuss the situation on the Israel-Egyptian border. Egypt will have no direct talks with Israel." (Col. Salah Gohar, Director of Palestine Affairs in the Egyptian War Ministry, December 1, 1954.)

"Today I see how the U. N. acts in fulfilling Israel's aspirations. They tried to force us to negotiate with Israel, but we refused. I informed them that we will answer aggression with aggression and that we will never negotiate with Israel." (Gamal Abdul Nasser, July 6, 1955.)

"The hatred of the Arabs against the Zionists is very strong, and there is no sense in talking about peace with Israel. There is not even the smallest place for negotiations between the Arabs and Israel." (Gamal Abdul Nasser, October 14, 1955.)

"No one can force the Arab States to make peace with Israel; this question has not even occurred to the leaders of the Arab States. There has been no change whatsoever in the policy of the Arab States with regard to Israel." (Saif Abu el-Lama, Deputy Secretary General of the Arab League, October 28, 1956.)

"There is no thought of signing a peace with the Jews, or even recognizing them." (Muhammed Salah E-Din, Egyptian Foreign Minister, June 24, 1951.)

War propaganda and threats

The countless threats uttered against the State of Israel by Egyptian leaders, both in personal statements and through Government organs, in the press, and over the radio have violated the following United Nations resolutions:

U. N. Action

"The General Assembly * * * condemns all forms of propaganda, in whatsoever country conducted, which is either designed or likely to provoke or encourage any threat to the peace, breach of the peace, or acts of aggression." (General Assembly, 110 (II), November 3, 1947.)

"The General Assembly * * * calls upon every nation: To refrain from threatening or using force contrary to the Charter; to refrain from any threats or acts, direct or indirect, aimed at impairing the freedom, independence, or integrity of any state." (General Assembly, 290 (IV), December 1, 1949.)

The Violations

"Egypt irrevocably opposes the recognition of the so-called state of Israel." Mahmoud Fawzi, Egyptian Foreign Minister, July 14, 1955.)

"Israel will not be saved from the Arabs. The day will soon come when Israel will be destroyed under the feet of Arab fighters and the flag of freedom will be unfurled over Palestine." (Ibrahim Tahawi, Deputy Secretary of the Liberation Rally and member of the Egyptian Cabinet, as reported in Al Ahram, October 29, 1955.)

"Disperse your enemies with the sword. * * * I assure you that the present truce is only a pause between war and war." (Sheikh Abdul Latif, in sermon delivered at El Azhar Mosque, Cairo, as reported by United Press, November 12, 1955.)

"Egypt will be glad when her army and that of Syria will meet on the ruins of this treacherous people, these Zionist gangs, so that our dead may rest in peace in the knowledge that our countries have been liberated of all foreign encroachment." (Gamal Abdul Nasser, as reported by Near East Broadcasting Service, December 18, 1955.)

"We have finally resolved to defend the Arab cause. Our army stands at the frontier read to teach the Zionists a lesson they will never forget, when the time is ripe." (General Abdul Hakim Amer, Egyptian Minister of War, January 22, 1956.)

"Wait and see, Ben-Gurion Soon will be proved to you the Arabs' prowess and strength of will. Egypt and the Arab nation will teach you a lesson and quieten you forever. Egypt will grind you to the dust." (Anwar el-Sadat, Egyptian Minister of State, April 8, 1956.)

"The Israel danger no longer exists. The Egyptian Army is strong enough to wide Israel from the map of the world." (Abdul Hakim Amer, June 11, 1956.)

"We must be strong in order to gain forcibly the rights of the Palestinian people." (Gamal Abdul Nasser, June 19, 1956.)

"The United States and others talk of borders and their preservation. Yet they know very well that Israel has no borders and that she is not a state in the legal sense. She presently finds herself behind a string of armistice lines—lines that cannot serve as borders, even if there should be carried on, in the Middle East, a series of long drawnout battles for many generations." (Al Akhbar, Egyptian daily, as quoted by Radio Cairo, January 15, 1957.)

Israel-Egyptian Armistice Agreement

The exercise by Egypt of the "rights of war" to which she has laid claim throughout the period of the armistice with Israel has been in flagrant violation of the following provisions of the Israel-Egyptian General Armistice Agreement:

The obligations

"With a view to promoting the return of permanent peace in Palestine * * * the following principles, which shall be fully observed by both parties during the armistice, are hereby affirmed:

"(1) The injunction of the Security Council against resort to military force in the settlement of the Palestine question shall henceforth be scrupulously respected by both parties.

"(2) No aggressive action by the armed forces—land, sea, or air—of either party shall be undertaken, planned, or threatened against the people or the armed forces of the other.

"(3) The right of each party to its security and freedom from fear of attack by the armed forces of the other shall be fully respected.

"(4) The establishment of an armistice between the armed forces of the two parties is accepted as an indispensable step toward the liquidation of armed conflict and the restoration of peace in Palestine (art. 1).

"No element of the land, sea, or air military or paramilitary forces of either party, including nonregular forces, shall commit any warlike or hostile act against the military or paramilitary forces of the other party, or against civilians in territory under the control of that party" (art. 2 (2).

"The basic purpose of the armistice demarcation line is to delineate the line beyond which the armed forces of the respective parties shall not move except as provided in article 3 of this agreement" (relating to the withdrawal of the armed forces of the two parties on the day following the signature of the General Armistice Agreement (art. 5 (3)).

"Rules and regulations of the armed forces of the parties, which prohibit civilians from crossing the fighting lines or entering the area between the lines, shall remain in effect after the signing of this agreement with application of the armistice demarcation line defined in article 6" (art. 5 (4)).

"In the area of the western front under Egyptian control, Egyptian defensive forces only may be maintained. All other European forces shall be withdrawn from this area to a point or points no further east than El Arish—About Aoueigila" (art. 7 (3)).

"On the Egyptian side of the frontier, facing the El Auja area, no Egyptian defensive positions shall be closer to El Auja than El Qouseima and Abou Aoueigila" (art. 8 (3)).

The Violations

"We are still legally at war with Israel. An armistice does not put an end to a state of war. It does not prohibit a country from exercising certain rights of war." (Egyptian representative on the Israel-Egyptian special committee, June 12, 1951.)

"These volunteers were recruited for service in the national guard, and not in the regular forces, by the chief of intelligence in Palestine, and most of them have a criminal past and they have but one desire: to wreak vengeance on Israel and to steal there. The action of the volunteers was taken in accordance with the proposal of the abovementioned chief of intelligence to the commanding general of the armed forces, who approved it on condition that the volunteers constitute a part of the Egyptian national guard." (From a memorandum by Lt. Col. Ahmed Salem, commander of the Egyptian military force in Sinai, July 10, 1955.)

"The basic purpose of training this year is the transition from a defensive to an offensive position. The administrative units must work together with the other units and must prepare their men for these operations." (From the training instructions for 1956–57, to the administrative units of the 3d Egyptian Infantry Division.)

"Every commander must prepare himself and his soldiers for the important battle with Israel in which we are fully immersed, with the aim of realizing our lofty tradition, that is to overpower and destroy Israel in the shortest possible time and with the greatest brutality and bestiality in battle." (From the directives of the commander of the 3d Egyptian Infantry Division, dated February 15, 1956.)

From the signing of the Israel-Arab armistice agreements in February 1949 to the end of 1956, Arab marauders, including Egyptain-trained fedayeen, carried out 3,367 raids into Israel territory, killing 443 Israelis and wounding 963.

In August 1955, an Egyptian Army unit crossed the international frontier into the El Auja area. These forces dug themselves in along several kilometers and set up artillery positions. They refused to heed U. N. appeals to withdraw and had to be dislodged by the Israel Army in November 1955.

The Egyptians established a strong offensive deployment, including artillery, in the area between El Auja and Abou Aoueigila.

(See also violations listed under United Nations resolutions—Suez and Aqaba blockade.)

International aviation agreements

Egypt's air blockade against Israel and the extensive restrictions she has placed on international air traffic are incompatible with the aims of the International Civil Aviation Organization and are in contravention of the Convention on International Civil Aviation as well as of the International Air Services Transit Agreement. The following provisions of these two treaties have been violated:

The Obligations

"Each contracting state grants to the other contracting states the following freedoms of the air in respect of scheduled international air services:

"(1) The privilege to fly across its territory without landing;

"(2) The privilege to land for nontraffic purposes." (International Air Services Transit Agreement, art. 1 (1).)

"Each contracting state agrees that all aircraft of the other contracting states, being aircraft not engaged in scheduled international air services, shall have the right, subject to the observance of the terms of this convention, to make flights into or in transit nonstop across its territory and to make stops for nontraffic purposes without the necessity of obtaining prior permission, and subject to the right of the state flown over to require landing." (Convention on International Civil Aviation, art. 5.)

"Prohibited areas shall be of reasonable extent and location so as not to interfere unnecessarily with air navigation." (Convention on International Civil Aviation, art. 9.)

The Violations

Under Egyption regulations governing her air boycott, no aircraft may overfly Egypt, if in the course of its journey it has made or is going to make a landing in Israel.

Flight information is withheld from such planes even in cases of serious danger. Aircraft flying to and from Israel cannot fly upon search and rescue services in accordance with annex 12 of the convention on International Civil Aviation. Radio messages exchanged between Israel airports and aircraft flying to and from Israel are frequently jammed. Furthermore, Egypt and the other Arab states have consistently refused to cooperate in the establishment of a single Flight Information Center for the region, thereby undermining centralized control over aircraft movements in the area and endangering air safety.

Egypt has declared the area of the Straits of Tiran (Sharm el Sheikh), the sole space through which aircraft may reach Israel from the south without overflying Arab territory, to be a prohibit zone, and an Egyption regulation establishes that "fire will be opened at or into the contravening aircraft without any previous warning" (October 1955).

Geneva Convention relating to civilians

Egypt's acts of persecution, deportation, and hatemongering against foreign nationals in Egypt, as well as against Egyptian nationals of the Jewish faith, constitute also a breach of the following provisions of the Geneva Convention relative to the protection of civilian persons in time of war and the universal declaration of human rights:

The Obligations

"Persons protected by the Convention are those who, at a given moment and in any manner whatsoever, find themselves, in case of conflict or occupation, in the hands of a party to the conflict or occupying power of which they are not national." (Geneva Convention, art. 4.)

"Protected persons are entitled, in all circumstances, to respect for their persons, their honor, their family rights, their religious convictions and practices, and their manners and customs. They shall at all times be humanely treated, and shall be protected especially against all acts of violence or threats thereof and against insults and public curiosity.

Without prejudice to the provision relating to their state of health, age, and sex, all protected persons shall be treated with the same consideration by the party to the conflict in whose power they are, without any adverse distinction based, in particular, on race, religion or political opinion." (Geneva Convention, art. 27.)

"The taking of hostages is prohibited." (Geneva Convention, art. 34.)

The Violations

Since early November, some 21,000 Egyptian Jews have been arbitrarily expelled from Egypt. About 1,000 Jews of foreign nationality have been imprisoned under wretched physical conditions in the Prison des Barages in Cairo.

On November 23, the preachers in Egyptian mosques throughout the country read a proclamation by the Egyptian Minister of Religious Affairs, telling the Egyptian people that all Jews were Zionists and enemies and that Egyptians should not collaborate with them.

Some 900 persons—for the most part members of deported families—are being held as hostages to insure the silence of these families after they leave the country.

Universal declaration of human rights

The Obligation

"No one shall be arbitrarily deprived of his nationality nor denied the right to change his nationality." (Universal Declaration of Human Rights (art. 15,2), adopted and proclaimed by the U. N. General Assembly, December 10, 1948.)

The Violation

Egyptian Jews who acquired Egyptian nationality after January 1, 1900, are being stripped of their nationality and being expelled, in their thousands, from Egypt.

Geneva Convention relating to prisoners of war

The ill treatment of Israel prisoners of war in Egyptian hands, and the inhuman methods employed by the Egptian authorities to extract military information from them, contravened the following provisions of the Geneva Convention relative to the treatment of prisoners of war:

The Obligations

"Prisoners of war must at all times be humanly treated. Any unlawful act or omission by the detaining power * * * seriously endangering the health of prisoners of war in its custody is prohibited and will be regarded as a serious breach of the present convention" (art. 13).

"No physical or mental torture, nor any other form of coercion may be inflicted on prisoners of war to secure from them information of any kind whatever. Prisoners of war who refuse to answer * * * may not be threatened, insulted, or exposed to unpleasant or disadvantageous treatment of any kind" (art. 17).

"All effects and articles of personal use * * * shall remain in the possession of prisoners of war" (art. 18).

"The evacuation of prisoners of war shall always be effected humanely. * * * The detaining power shall supply prisoners of war who are being evacuated with sufficient food and potable water, and with the necessary clothing and medical attention" (art. 20).

"Prisoners of war may not be held in close confinement except where necessary to safeguard their health and then only during the continuation of the circumstances which make such confiment necessary" (art. 21).

"Prisoners of war shall be quartered under conditions as favorable as those for the forces of the detaining power. * * * The said conditions shall make allowance for the habits and customs of the prisoners and shall in no case be prejudicial to their health.

"The foregoing provisions shall apply in particular to the dormitories for prisoners of war as regards both total surface and minimum space and the general installations, bedding, and blankets" (art. 25).

"The basic daily food rations shall be sufficient in quantity, quality, and variety to keep prisoners of war in good health and to prevent loss of weight or the development of nutritional deficiencies. Account shall also be taken of the habitual diet of the prisoner" (art. 26).

"Prisoners of war shall have the right to make known to the military authorities in whose power they are, their requests regarding the conditions of captivity to which they are subjected.

"They shall also have the unrestricted right to apply to the representatives of the protecting powers * * * if they consider it necessary * * * in order to draw their attention to any points on which they may have complaints to make regarding their conditions of captivity.

"These requests and complaints shall not be limited. * * * They must be transmitted immediately. Even if they are recognized to be unfounded, they may not give rise to any punishment" (art. 78).

The Violations

"Instead of receiving medical aid, he was subjected to renewed maltreatment and interrogation by more modern methods. He was subjected by his interrogators to powerful electric shocks by means of electrodes attached to his head and also to his genitals. * * * This went on in the presence of a medical officer who certified now and then that the 'treatment' could go on. (From summary of statement by Lt. J. Etkes before Israel medical board, in presence of Maj. J. Austin of UNEF, January 27, 1957.)

"On January 17, 10 soldiers entered our cell and started beating us cruelly. * * * They threw me to the floor and started jumping on my body. I was hit flush on my right eye by a nailed jackboot. The effect of the blow is still clearly discernible." (From Lieutenant Etkes' statement.)

"The next morning a group of officers arrived and started interrogating him, first threatening him with physical violence, and then beating him and thrusting lighted cigarettes into his nostrils and ears and throwing burning matches at his face in order to extract information from him. * * * The same maltreatment and interrogation went on after lunch and in the evening. The prisoner was given multiple infections all over his body, which caused, in his words, 'frantic hardening of the muscles.' Then one of the officers put a loaded pistol to Etkes' head and threatened to shoot him, explaining that 'bullets are very cheap in Egypt.' On a number of occasions he was put on the 'operating table,' pushed off it, and dragged about the room." (From Lieutenant Eitkes' statement.)

"He was found by an Egyptian patrol, which tried to find out by pricking him with

a bayonet whether he was still alive. (He had collapsed from loss of blood 5 hours earlier.) They stripped him of his outer clothes, documents, and wristwatch. His wound was left unattended * * *. After a delay of an hour or so, he was taken on his way to Cairo * * * a journey which lasted 3½ days. No medical treatment was offered during this time, and he received practically no food or drink." (From Lieutenant Etkes' statement.)

"On the left upper third of his thigh there is an irregular retracted flesh wound, still discharging, of approximately 1 inch length, which apparently was not sutured because of infection and probably inadequate wound excision." (From Lieutenant Etkes' statement.)

"His prison room was small and very dark and got hardly any light from a small window near the ceiling. He was not taken for a walk until the visit of the representative of the Red Cross on December 17, 1956, 6 weeks after his capture." (From Lieutenant Etkes' statement.)

"For a long time he was kept in his tiny cell, the size of which was no more than 3 by 3.5 meters. It was only after he started a hunger strike lasting 2 days that he was allowed into the prison court for a few hours every day." (From Sgt. J. Anixter's statement, January 27, 1957.)

"The prisoner suffered severely from acute diarrhea. His food consisted of some tea and bread in the morning, beans for lunch and sometimes a small piece of meat in the evening, which he was not always able to eat." (From Lieutenant Etkes' statement.)

"On the 12th of November the Red Cross representative was due to visit them again. Before his arrival an Egyptian officer threatened that they would be decapitated if they dared complain." (From Sergeant Anixter's statement.)

Constantinople Convention of 1888

Egypt's blockade of the Suez Canal violates the following provisions of the Constantinople Convention:

The Covenants

"The Suez Maritime Canal shall always be free and open, in time of war as in time of peace, to every vessel of commerce or of war, without distinction of flag.

"Consequently, the high contracting parties agree not in any way to interfere with the free use of the canal, in time of war as in time of peace.

"The canal shall never be subjected to the exercise of the right of blockade" (art. 1).

"The Maritime Canal remaining open in time of war as a free passage, even to the ships of war of belligerents, according to the terms of article 1 of the present treaty, the high contracting parties agree that no right of war, no act of hostility, nor any act having for its object to obstruct the free navigation of the canal, shall be committed in the canal and its ports of access, as well as within a radius of 3 marine miles from these ports, even though the Ottoman Empire should be one of the belligerent powers" (art. 4).

"The measures which shall be taken in the cases provided for by articles 9 and 10 of the present treaty shall not interfere with the free use of the canal" (art. 11).

(Article 9 states: "The Egyptian Government shall, within the limits of its powers resulting from the Firmans, and under the conditions provided for in the present treaty, take the necessary measures for insuring the execution of the said treaty.")

(Article 10 states: "Similarly, the provisions of articles 4, 5, 7 and 8 shall not interfere with the measures which His Majesty the Sultan and his Highness the Khedive, in the name of his Imperial Majesty, and within the limits of the Firmans granted, might find it necessary to take for securing by their own forces the defense of Egypt and the maintenance of public order.")

The Violations

"We are still legally at war with Israel. An armistice does not put an end to a state of war. It does not prohibit a country from exercising certain rights of war." (Egyptian representative on the Israel-Egyptian special committee during discussion on Suez blockade, June 12, 1951.)

"Egypt prevents any ship flying the Israeli flag from passing through Suez, regardless of what cargo it carries. Moreover, the Egyptian authorities confiscate both the ship and the cargo together. Regarding non-Israeli ships which are passing through the canal with cargoes bound for that country, their papers, cargoes, and transactions are examined, and if any merchandise suspected of being war material is found, this is instantly confiscated. The Arab League is at present discussing the possibility of including foodstuffs for Israel in the category war material with the view of immediate confiscation." (Izadin Abdul Haziz, Egyptian chargé d'affaires in Amman, August 28, 1956.)

Urban Renewal Programs

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. DINGELL. Mr. Speaker, the urban renewal programs of many of our cities are threatened by a financial crisis. Local public agencies are finding it difficult if not impossible to obtain the money to pay their share of the costs of these programs. In today's tight money market, funds, if available at all, can be borrowed only at prohibitively high interest rates. At the same time, we are accumulating billions of dollars of reserves in our social-security trust funds. These reserves should be put to work for the benefit of our people.

To make this possible, I have introduced a bill to authorize the managing trustee of the Federal old-age and survivors insurance trust fund and the Federal disability insurance trust fund to invest up to $1 billion in bonds or other obligations issued by local public agencies for urban renewal projects. Not only bonds issued for projects being assisted by the Federal Government, or for local grants-in-aid for such projects, but also for any project found by the Housing and Home Finance Administration to be substantially within the definition of urban renewal projects in the Federal law would be eligible for investment of social-security funds. Such bonds would be guaranteed by the Housing and Home Finance Administrator as to both principal and interest. Local agencies would pay premiums for this insurance which would be deposited in a guaranty fund to be used as a revolving fund for paying defaulted obligations. An appropriation of $20 million would be authorized for the establishment of the guaranty fund.

Thus insured, these obligations would be gilt-edged investments for the social-security trust funds. In addition to the interest earned for the trust funds, they would yield large social dividends in the rebuilding of blighted areas in our cities. I shall press for enactment of this bill as a measure of constructive financial management.

Hon. Stuart Symington, of Missouri, Addresses Missouri Cotton Producers

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. JONES of Missouri. Mr. Speaker, it was my privilege and pleasure to attend the annual meeting of the Missouri Cotton Producers Association, held at Sikeston, Mo., on Thursday of last week. As usual, an outstanding program had been prepared. Participating on this program was one of my colleagues on the House Committee on Agriculture, the Honorable WILLIAM S. HILL, Representative from the Second Colorado District, who was visiting southeast Missouri for the first time. Since he was speaking extemporaneously, I am unable to report in detail the text of his address which was well received by my constituents.

At the banquet held on Thursday night, the principal speaker was the Honorable STUART SYMINGTON, the junior Senator from Missouri. Since his address does include much information in which I believe most of my colleagues are interested, particularly those who are interested in the agricultural problem, under permission to extend by remarks I include the text of Senator SYMINGTON'S address, which follows:

As always, it is a privilege to be in Sikeston, one of the great towns of our State; and it is also a special privilege to be honored as a guest of this great association of cotton growers.

During the last year I have worked with one of the leading citizens of Missouri, who, as you know, is president of the American Cotton Producers Association, one who has been working hard in Washington in the interest of both the cotton producers of Missouri and of the Nation—A. L. Story.

I could not let the opportunity pass to express my appreciation to Abby for all the help he has given me in learning about cotton as a relatively new member of the Senate Agriculture Committee; and I also thank the executive vice president of the Missouri Cotton Producers Association, Hilton Bracey, for his guidance.

I also want to thank my senior agriculture colleague, your great Congressman, PAUL JONES, for his consistent aid, not only on the problems of cotton but also on all problems of Missouri.

As a member of the House Agriculture Committee, Congressman JONES has done at least as much as any other Missourian in his efforts to promote the welfare of the farmer.

Now let's talk about the primary reason we are all here.

Cotton is, by far, the world's leading textile fiber.

It is our principal source of clothing.

It is a major fiber in the furnishing of our homes.

It is the outstanding material used wherever yarn or cloth is needed in our industrial civilization.

Approximately 1 million farmers in the United States grow cotton. It is the principal source of income for these producers in States across the country, reaching from the Atlantic to the Pacific, and from the Mexican border north to this great cotton country I have the honor of visiting today.

But cotton is also important to many other segments of our economy. For every 100 citizens who work in manufacturing industries in the United States, 15 work in textiles and apparel, where cotton is predominant.

The United States has the largest area of land adaptable to the production of cotton of any nation in the world, and the productivity of cotton in the United States is about 50 percent higher than the average productivity of all the rest of the world combined. Historically, American cotton farmers have shown a willingness, desire, and ability to engage in successful cotton production.

In the past 5 years, cotton production has averaged approximately 14 million bales, but production efficiency has increased almost 100 percent in 20 years, from slightly over 200 pounds per acre to an average in 1956 of over 403 pounds per acre.

It was only natural that continually increasing efficiency brought on an ever larger production of cotton.

Surpluses began to appear. Prices fell. Farm income declined.

Cotton farmers, along with most other farmers, then realized that production should be reduced. They agreed to acreage control.

Restrictions have become severe, however, and price supports lowered. As Mr. Hilton Bracey stated before the Cotton Subcommittee of the House Agriculture Committee:

"We feel, gentlemen, that we are being 'nibbled.' Acreage cuts, price reduction, the soil bank, one thing after another tightens the squeeze on the cotton farmer and the cotton economy. We canot long survive the application of a policy which takes away, in turn, our acreage and our prices."

This statement about cotton applies generally to the rest of the agriculture economy.

In 1952 net farm income was $15.1 billion.

Then came Mr. Benson, with his new experts, to express his own incredibly theoretical ideas.

Farm income has declined ever since.

In 1956, even after some extraordinary efforts to put money out where it would get votes, farm income declined another $100 million, to $11.6 billion; a drop of some $3.5 billion in 4 years.

This is the lowest figure for any peacetime year since 1940.

Was the farmer, under the extraordinary theories of Mr. Benson taking his licking along with the rest of the economy?

He was not. Let's look at the record.

In 1956 as against 1952, wages increased 22 percent.

During the same period, corporate profits after taxes increased 33 percent.

And the average increase of common stocks was 77 percent.

At the same time farm income declined 30 percent, with the parity ratio down in these 4 years from 100 in 1952 to 83 in 1956.

What right has this administration to force the farmers of America to undergo such economic pressures, when at the same time it establishes policies which bring unprecedented prosperity to the other segments of our economy?

This question is vital to our State, because agriculture is Missouri's most important industry. Cash receipts from farming in Missouri last year were slightly over $1 billion—9th highest State in the United States.

On January 29 last, Secretary Benson testified before the Senate Agriculture Committee. Despite the fact that net farm income had reached lowest level in 14 years, with the index of prices down from 288 in 1952 to 236 in 1956; despite all these indications that the American farmer was and is in trouble, the man in this administration who is supposed to represent the farmers, the Secretary of Agriculture, had this to say to our committee:

"Mr. Chairman, and members of the committee, this is the first time in many years that a Secretary of Agriculture has been able to come before your committee and report such favorable developments as these."

The first of these favorable developments he said was that "prices received by farmers have been running 7 percent above a year ago."

It is true prices in December 1956 were 7 percent higher than in December 1955. But why did not Mr. Benson give the complete picture?

That is his duty as a public servant. If he had, he would have said that prices for the year 1956 averaged exactly the same as in 1955, according to figures from his own Department. These figures show the index of prices received was 236 in 1955 and 236 in 1956.

Another favorable development Mr. Benson reported was that "realized net farm income in 1956 was 5 percent above 1955."

What he failed to mention was that the 5 percent increase applied to net farm income before inventory adjustments. After adjustments for inventories, that income was less in 1956 than in 1955.

Anyone with any banking or business experience knows that under the sound accounting principles of good business practice, no businessman would dare to submit to his stockholders a balance sheet and earning statement without giving a true picture of the inventory expressed as part of his current assets.

If he did on a listed stock, he would be in trouble with the SEC.

And while the Secretary of Agriculture has been touring the country recently, continuing to talk about this favorable overall agriculture picture, the situation has become worse.

The index of prices received dropped 4 points in February as against January—and the parity index shows that during the same period prices paid by farmers went up 2 points, from 292 to 294.

And listen to this: The parity ratio as of February 15 is now 80, 2 points lower than the previous month, and lower than any annual average since 1939.

Yes, my friends, Mr. Benson's own figures disprove Mr. Benson's own statements.

But there is a bright light in an otherwise gloomy picture.

That is the cotton export program.

As many of you know, exports of cotton from the United States in 1955–56 were the lowest for any peacetime year in 85 years, since 1872, with the exception of 1947–48.

For the year ending July 31, 1956, we exported only 2,321,000 bales of cotton. The August 1, 1956, carryover was 14,540,000 bales—the largest on record.

But, because of advice from organizations such as yours, the Congress handed Mr. Benson a mandate which required his Department to take positive steps to regain our historic export market by means of the competitive pricing of our own cotton in the world market.

This was done despite objections, and predictions of failure, from high officials in the Department of Agriculture.

The result has been remarkable. Latest figures show that 1956–57 exports are expected to be about 6.5 million bales, the largest annual export since 1934.

These favorable results have been brought about under the various export financing programs that Congress insisted Mr. Benson use. They included Public Law 480, International Cooperation Administration programs, and Export-Import Bank loans.

In the February 5 issue of the Cotton Situation, the Department of Agriculture estimates that cotton disappearance will be about 15.5 million bales this year; and as a result of this outstanding success of the export programs, the carryover at the end of the season will probably be about 2.2 million bales smaller than the record high of 14.5 last August 1.

Althouhg the success of the present program exceeded our hopes, Secretary Benson announced to the Senate Agriculture Committee on January 29 that the administration was considering converting the new cotton export program into a program of direct subsidies. He said that, although some of the major farm organizations are against such a change—I might add that the Missouri Cotton Producers Association, and your very able A. B. Story, were part of the opposition—the cotton exchanges were for a plan whereby they would handle the sales and get a direct subsidy from the Government.

We were glad to see the announcement that the present cotton export program would be continued in the 1957–58 marketing year.

Such gains do not come easily. A subcommittee of the Senate Agriculture Committee held exhaustive hearings in the spring of 1955. These hearings disclosed that cotton was being treated like a political football in our international relations.

Let me give you an example.

It was the consensus of the cotton trade that because of our various aid-to-other countries programs, the United States might, in 1953, export up to 6½ billion bales of cotton.

In 1951 Brazil had an unrealistic support-price program. It fixed the support price at 50 cents per pound. This price was above the world price and the entire Brazilian crop was taken over under loan.

In 1952 Brazil's support price was 40 cents a pound. The entire crop was again placed under loan.

The National Bank of Brazil financed the cotton support-price program. It took over both these crops; and thereupon these two cotton operations rendered the bank insolvent.

In 1953 Brazil fixed her cotton-export price first at $10 per bale under the American price; then at $20 per bale under that price.

We of course advocated that the Commodity Credit Corporation meet this price, on a competitive basis, from our own cotton stock.

But the State Department refused; and as a result our exports fell to 3¼ billion bales.

Three hundred million bales were added to our surplus.

This administration thereupon listened to the pleas of the Brazilian bank that had gone broke because of supporting these two cotton crops. It bailed the bank out; and as a result, in 1953, it permitted Brazil to take over most of the export market of the American cotton farmers.

The final result was that the additional surplus caused reduced acreage allotments for United States cotton farmers.

Time does not permit my presenting you with other illustrations of how, in this agriculture field, one Department works against the other.

If recent gains through our export program are to continue, however, world consumption of cotton must increase. The greatest opportunity to that end lies in expanding per capita consumption.

At present average per capita world consumption is about 6.8 pounds—about one-fourth the United States average.

If the world average could be raised to only half of the current United States level, cotton would be in deficit supply unless production was greatly expanded.

For some 20 years Congress has encouraged direct farmer participation in administration

of the farm program, through democratically elected community and county farmer committees.

During the depression years of the thirties and the war years of the forties, these farmer committees proved their effectiveness, as they placed national policies into action in rural America.

In recent years, however, some of us have been disturbed by what appears to be unjustified interference with the work of these duly elected committees.

As example, in many of our Midwestern States the county committee has been relegated to the position of an advisory group.

The steadily declining participation of farmers in governmental farm programs may be a direct result of this single action, because one of the outstanding features of the committee system, prior to this administrative change, was the direct personal contact between farmers and their elected committeemen.

In the past 4 years many Missouri farmers have written, complaining about this and other changes in the administration of the Missouri agricultural stabilization and conservation program.

These complaints were called to the attention of the Department of Agriculture, by letter, by telegram, by speeches on the floor, and in complaints to committees in both Houses of Congress.

No satisfactory action was taken.

On July 29, 1955, therefore, we asked that a Senate committee conduct an investigation of this matter.

This request was necessary, because, in our State, at least, many county committeemen elected by their farmer neighbors were being removed from office, often as the result of improper and unsubstantiated charges.

During a 3-year period some 55 committeemen were removed from office in Missouri—at one time 29 percent of all such removals in the entire country.

As a result of our request, a subcommittee of the Senate Committee on Agriculture and Forestry held extensive hearings and thereupon made a report on the operation and administration of the farmer committee system.

Last month Senator HUMPHREY, of Minnesota, chairman of the subcommittee, introduced a bill which was the outgrowth of those hearings. A few days later your able Congressman, PAUL JONES, introduced a companion bill in the House.

I was pleased to cosponsor the Senate bill because it is an honest and able attempt to provide safeguards which will insure the continued operation of our farmer committee system—the backbone of our entire farm program.

Some of the important provisions of the bill are as follows:

1. The right of county committees to decide by States whether they wish to follow an office manager system.

2. Clear-cut establishment of the authority of the county committee to hire, discharge, and supervise the work of their employees.

3. The right of county committees to elect one member of the State committee.

4. A limitation on the authority of the State committee in removal proceedings against county committeemen, by specifically requiring a fair hearing before removal action may be taken.

5. Elimination of the present regulation which requires a removed committeeman's appeal be made to the State committee.

While the Department of Agriculture has not yet sent its report on the bill, it should be noted that this measure is in no sense a reprisal for past actions. It seeks only to prevent the recurrence of such abuses in the future.

When read together with the hearings and report of the subcommittee, it is clear that this bill points the way toward a better and more representative farm program.

Therefore, we are hopeful of its passage during this session of Congress.

The greatest problem of the free world today is the gathering cloud of the growing strength of the Communist conspiracy.

We must also recognize our domestic problems, however, because in our way of life, our defense strength can only come from our military strength.

In a totalitarian state the coin of the realm is the order of the dictator. In our system of free enterprise, however, nothing could be farther from the truth. Economic strength and military strength go hand in hand.

That is why the position of the farmer should be raised at least to a reasonable level of equality with the rest of the component parts of our economy. If history repeats itself, and farm income continues to fall, it can only drag down the rest of us.

That would be grave in its implications, because we must maintain a strong economy if in turn we are to remain a free people.

The Future Design of the Capital City

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1957

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the address of Mr. Ralph T. Walker, distinguished architect and recipient of the American Institute of Architects' Centennial Medal, before the Washington Metropolitan Chapter of the American Institute of Architects on March 26, 1957:

A NEW CENTURY BECKONS: THE FUTURE DESIGN OF THE CAPITAL CITY

When this Capital of ours was first planned, it was not thought of as either a small village or as a thriving modern metropolis. The industrial age represented by the Black Country in England, and the then much more pleasant manifestations in New England were but tiny forebodings understood by Jefferson perhaps, if not by the others interested in the design. The Capital City was, however, planned on a grand scale, the scale of the 18th century. No meager little plan was left to us as a heritage, although the result, that is before the McMillan resurrection of the plan, belied the famous words supposedly said by Burnham: "they have no magic to stir men's minds"—for a truly noble plan, like so many others, gathered the all too-familiar dust. But it was not the widths and positions of streets alone that concerned our political forefathers, because they saw, if not a new Athens, at least a new Rome arising on the banks of the Potomac with buildings of distinction and of permanence, with all the beauty of a disciplined and aesthetic organization of parts. They were wise in the liberal ways of the ancients and took unto themselves the democratic ideals which men ever seek and through negligence fail to grasp. The new Capital was no new Utopia but it was inspired by one of the greatest bouquets of political minds that has ever existed. This Capital of ours represents the keen perceptions of the men who wrote the Bill of Rights and who once agreed to hang together.

There was no question in the minds of those early Americans that grandeur had its place, not only in the public buildings but also in the houses which would naturally spring up along the vista-reaching avenues and all about the wide circles and the generous squares. That early planner, L'Enfant, said in his message to the future, through General Washington himself: "As matters stand, the site assigned to the Congress House and the President's Palace exhibits a sumptuous aspect, and claims already the suffrage of crowds of visitors serving to give a grand idea to the whole—the grand avenue connecting the Palace and the Federal House will be magnificent with the water of the cascade (falling) to the canal which will extend to the Potomac; as also the several squares which are intended for judiciary courts, the national bank, the grand church, the playhouse, markets and exchange, offering a variety of situations unparalleled for beauty, suitable for every purpose, and in every point convenient (and here I blush a little) calculated to command the highest price at a sale."

The plan was excellent, the hopes were high that this Capital City now in evidence all about us would finally overcome the urgent commercial needs of a young nation, and in a faraway place develop into the magnificence desired not only by L'Enfant but also by Washington and Jefferson—no mean architects themselves.

Whatever these men foresaw as to the bigness of our present, we, I am sure, exceed it in actuality in this great city sprawling now over the land far beyond the regional boundaries of the district, and I mean sprawling, for when you consider a suburbia like Silver Spring (Md.) you appreciate the primary impulse of L'Enfant has been widely dissipated into meagerness. And as you get out of the District you realize that Virginia and Maryland have had little respect for the possible majesty of the National Capital. The creeping paralysis of commercialism, first cautiously indicated in the planning of L'Enfant, has accelerated even more than the acknowledgment of the aesthetic need.

We have had, however, a tremendous heritage of idealism because as an architectural profession, perhaps as plain architects, we have more than others respected the greatness possible within the concept of the Capital. Again and again, men, great and humble, have arisen to develop and protect the magnificence which we should continue to deliver to our successors. It is a very excellent place, perhaps, to reiterate that famous pledge of Athenian youth: "That we serve the city with our lives and that we leave it more beautiful than ever before." You know I am not quoting exactly but the meaning is clear. Each citizen, each architect, was expected to look to and recreate the great ideal. He hopes not necessarily to increase his own stature but that of the possible magnificence extolling the greatness of his country. The momentary stunt, the impermanent, shall we wish them here? No. In Washington there should be no room for anything except statesmanship in architecture. What is statesmanship in architecture? It is the understanding of how to make a great city even greater. It means that each unit added to the first produces a continuous victory for greatness. As one walks, and so often one does, along the Seine from the Isle de Cite down with the current toward the sea, the additions 1 by 1 enfold to entrance the historically minded, even aesthetically unaware, with the feeling that each generation (like the Greek) left a richer heritage for the following.

We have, as I have just said, a remarkable heritage and it should be thought precious, enriched rather than debauched. Here in America we have a strange proclivity to destroy beauty and preserve and enlarge slums. I was reminded of this the other evening when I heard that Frank Lloyd Wright's Robie House was to be torn down—

just imagine, with all the terrible background of slums in south Chicago. And this is true concerning the really fine buildings we have inherited from those early days. I personally think it is an outrage to move the east front of the Capitol, to change in any degree whatsoever the magnificent forecourt in which the traditional inaugural ceremonies have taken place.

Could anyone imagine an Englishman suggesting that the front of the British Museum should be changed? The Times would thunder, the Manchester Guardian would blast the impudence. Here in Washington is an even more noble front, and because of an inhibited desire for purity and plausibility, and merely because an iron dome overhangs a portico below, a fine facade, one of the finest in Washington, must be desecrated. We also hope the old Patent Office can be saved from this wanton destruction. It is the religious care of these things that gives the absorbing and continuing interest to other capital cities, such as Rome, Paris, London. The past is not good because it is the past, neither is the present because we exist. The Capitol should persist as a continuing symbol. I have been much interested in the rebuilding of the House of Commons in its historical symbolism, and also by the need of the Poles to reconstruct Warsaw. That symbol was considered more important than the memorial to Stalin.

A capital city is bound to have a certain bigness and its architecture should have a classical quality, and by that I mean a certain formality, a certain richness of detail, an intelligent use of ornament to add grace. I think our present-day reluctance to use sculpture, painting, and decorative ornament is a blind spot caused by the extremely stupid concepts, promulgated by a few but influential Europeans, that the machine as a tool has limitations never before associated with tools; as I have said before, an animistic lifting of these limits to philosophical absurdity. I do not mean by the word "classical" the heedless copying of the Roman, Greek, and Renaissance past, just as I do not mean the meagerness and the dry monotony of the factory style now so fashionable. Certainly classicism does not mean "We do not try to please people, we are driving to the essence of things." As architects I would ask but one question. Just why do we exist but to please; for whom actually is the city built?

I do not see why, using the climatic conditions which exist here in Washington, a truly fine architectural expression might not be achieved, one using the modern techniques of structure, but also one using originality (I mean individual expression) in the development of stone and marble, metal and glass, if you will.

In the first place, I think the skyscraper does not belong in a climate such as Washington, that is if it really belongs anywhere. Here trees and green spaces are desperately needed to add comfort to eye and body, if only for those moments when necessity makes one cross the crowded streets with the further outpouring of discomforts from the constant stream of automobiles. The character of the buildings should go hand in hand with the present open plan which still persists so largely in the city, together with sufficient green spaces to reduce, as they do, the temperature noticeably.

The scale of the buildings does not have to be so enormous to be monumental. I do not believe that everybody has to be under the same roof, but with the amount of land still available here beautiful groups of lower buildings could take care of the same population.

I was told that Herbert Hoover when he was Secretary of Commerce did not want the Commerce Building where it now is, and had made serious studies as to where the building would be better placed to avoid the motor congestion he foresaw. He picked a building site out on the fringe of the city. He had made traffic studies and the pattern of the living habits of people working in the Department, and these determined the area chosen. These studies, however, went into the wastebasket together with the idea that governmental buildings should be economically constructed. I understand that greatest Secretary of the Treasury, Andrew Mellon, defeated him and the Triangle was the result. Now, somewhere between Hoover's idea and the architecture of the Triangle is what we should aim at in a city like Washington.

I looked over carefully the report of the committee advocating a cultural center and was greatly amused at what at other times I have called below the wrist thinking, which leads naturally to World's Fair stunt-like results. Here in Washington the stunt certainly should be absent. What is needed is an architecture of simplicity in which the new columns, if any, are incorporated with purpose with the structure. Certainly useless pipe stem colonades, which never give adequate protection from the sun or rain, can be as rediculous as an overdetailed Corinthian order.

I repeat that I believe the architecture of our Capital should have a grandeur which can only be obtained by the use of permanent materials. Why I would eschew a large use of metals is because they need constant cleaning to look well. Neglected, the patina they collect has a shabby, muddy appearance. Even though these remarks might be taken to mean advertising some materials and damning others, I would still persist in thinking that here we need a different philosophy.

I have no quarrel with a so-called wall punched with holes. I believe that in a world of humid glare, windows have more reason than the continued stretch of venetian blinds which jail-like preclude vision. After all, the thermal problems attending the all-glass building, which may have its place in the greyer European world, mean added first costs equivalent to fine masonry building and lifelong high maintenance and operational costs.

I think, moreover, that monumental building should have more pleasant forms than the boxlike structures now being designed for laboratories and office buildings elsewhere in the Nation. They resemble factories, and I would question whether the engineer mind is not in control, because it is evident that work in any of these manifestations is rarely a pleasure and always a task.

There is no question that the architect and the owner, whether the Government or private enterprise, should think of buildings here in the Capital as having a tremendous amount of dignity. Our people and Nation represent true greatness and our architecture should reflect this in every way.

To be modern is to understand the nature of the problem to be resolved, and the character of an architecture which embellishes Washington should have allied with it the best of the arts of sculpture and painting; arts however which have meaning. We should not be afraid to glorify Democrats in a Republican administration, and vice versa. There are still rich personalities in the world and their virtues, if not their faults, can be passed on tenderly and beautifully to succeeding generations.

I do not think ornament is necessarily immoral or that it may not belong in our age. Quite the contrary. We all like patterns, men increasingly in sport clothes and ties, women from the skin out. This love of pattern should not be thought wicked, for if our life is drab, our architecture meager, it may mean actually that our morals need revision. To make a virtue of a negative seems crooked philosophy.

We will see more interesting forms developed from the use of concrete, but again they must be used to increase pleasure and comfort, but not as a stunt.

Perhaps we should seek for our times an expression of modernism which cannot be symbolized by direct dogma. Fortunately we do not live as a people under the depressing symbolism of the fasces, the swastika, and the sickle and hammer—all of them in brief times as potent as the cross and the crescent. Nor do we need the symbol of revolution, but in truth we need once more to gain a spiritual independence which was evident at the founding of this city.

To be modern does not necessarily say that we must glorify the cast-iron pipe, however useful, nor the endless ribbon of plate glass. What we must seek is some charm—a feeling of rich life expressed in designs which are not stark manifestations of a poverty of imagination. Moreover, the architecture of the Capitol of these United States should clearly indicate, no matter how large the bureaucracy they may house, that the individuals making up the group are not robots.

Finally I would like to suggest that the zoning height in the business areas be further restricted so that the appearance, long since held elsewhere in the city, would be that of a city dominated by nature, and that the ordinance further demand that all building in an area be constructed to the complete limitation imposed. There is nothing so distressing in a great city such as this as the raggedness of the building line. Let New York and all other points west, north, and south have sky lines that look like a broken comb. This city should try to preserve constant area heights, for the Capitol Building should always dominate the city. This is by no means absurd, for a place that has as extensive slums as Washington does not have to follow the present trend to make them larger by permitting the sweating of some properties.

We have been talking about the architecture and the plan as related to the District of Columbia but what about the sprawl that is developing in the two neighboring States—when the limits of the District were determined no one could have foreseen the impact of the railroads and the crushing force of the automobile upon city life and form. The old city form no longer exists except as a political entity without validity. Washington, then, is no longer the District but contains the great outlying suburbia in which most of the city workers either do now or will soon live. The traffic congestion within the city at peak hours, like that of every city in the world, is unbearable and a downright nuisance.

The form of the new city has never been planned—the city streets still act as the spokes without even an outer rim to the wheel. Intelligent bypassing is still in its infancy. Nevertheless the automobile is forcing out actively, so a decentralization of work, play—such as it is, and living, what planning there may be, is done mostly by use of zoning ordinances and the result of this type of planning is a chaotic community with fringes that are sorry indeed. Industry and commercial usages either are spot zones (which if intelligent is not a detriment) or permitted to group themselves into a new congested form, or further as hasty urban developments extending out from city's immediate influence and laws. Washington joins all other cities in having this chaotic amorphous growth just outside its borders.

Here the problems are further aggravated by the Federal Government seeking to gain some dispersal of its administrative services and thereby siting some activities in the region but again without much in the way of actual plannng, either of individual position or of the effect upon the community's

growth and character, which will develop about the scattered sites.

Of course there is some sophistry about these services being so important that they must be taken out of the city, leaving behind the President and the Congress. Since 1940, the value of dispersal patterns have come into serious doubt, for if Washington were to be destroyed it would involve an area saturation. The reasonableness of the military necessity for this dispersion can be questioned but the idea of decentralizing for the sake of traffic has much more validity, and if the worker pattern is important and the community life also, then the sprawl of indirection should have some forthright thought given to it immediately.

What might be then a proper regional pattern for Washington? I understood that other than museums and movies, there are few cultural qualities to be found in the city—that the inhabitants do not think of it necessarily as a cultural center and while I questioned the external character of the center proposed for Foggy Bottom I definitely believe in its need. I would place the siting of Government buildings as close in as possible to the present limits of the District developing if their siting ring was to take the traffic. I would do this because I think that the symbol of the Nation should not be permitted to ravel away in that the workers within our Government should be permitted to avoid being on general display. In bigness there is a further need for unity of purpose and this unity can be dissipated by too great a dispersion.

I do not think that all city patterns have to look alike—cities like New York or Chicago can well afford a wider dispersal than can a national capital. I would try in Washington to maintain the integrated plan as started by L'Enfant, not a continuation of Le Notre's boulevards and circuses, but a plan that appreciates a larger growth in population and an increase in the number of automotive vehicles in the United States to 100 million or more. Unless we plan now, the impact of 40 more million cars on our cities and countryside will be terrific.

We need to develop in Washington, as elsewhere in the country, regional authorities, which, under the charters establishing them, will have ample authority to deal with all regional problems. One of the blights of the democratic way of life is to be found in our unplanned communities. There is sufficient precedent for this type of authority—the Port Authority of New York being one of them.

I firmly believe the time has come when the present planning commission in the District is to be considered outmoded and that a newer and greater approach is needed.

I come back for a moment to Hoover's idea of economic building. I deplore meagerness for economy's sake. In a world where many billions are spent for wanton destruction it would still seem possible to spend a a few millions relatively on increasing the amenities of work.

The plan and architecture of this city should be not only a matter of heritage but also a symbol to all the world that we are a cultural people who encourage and enjoy the beautiful.

Federal Aid to Education Legislation

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, April 1, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Greenville (S. C.) News of March 29, 1957, entitled "House Urges No Federal Aid."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOUSE URGES NO FEDERAL AID

COLUMBIA, March 28.—The South Carolina House of Representatives today called upon Congress to refrain from enacting any Federal-aid-to-education legislation.

The concurrent resolution, sponsored by Representative P. Eugene Brabham, of Bamberg, noted that the people of South Carolina "are now, always have been and shall always be unequivocally, incontrovertibly and unalterably opposed to any Federal invasion, encroachment or infringement of the fundamental right, obligation, and duty of the people and their local governmental authority to provide, supervise, and control the education of the children of this State or the educational processes concomitant thereon which would directly or indirectly infringe upon the rights, duties, and obligations of local or State governments."

The resolution was referred to the education committee in the Senate.

There Must Not Be Another Munich

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. DINGELL. Mr. Speaker, all of us in the free world share the concern of Israel for the situation in which she finds herself. A Munich started World War II. Another Munich in the Middle East can start world war III. One of the easiest ways for this to happen will be for the free world to sell out Israel in the way that Czechoslovakia was sold out. I am today inserting into the RECORD an editorial on the subject by my close personal friend, Mr. Philip Slomovitz, which appeared in the Detroit Jewish News on March 22, 1957:

THERE MUST NOT BE ANOTHER MUNICH

The world faces the danger of a repetition of the Munich betrayals which preceded the tragic Second World War.

Shocking bargaining is going on behind the scenes. First Dr. Ralph Bunche was reported to have acceded to Egypt's right to govern the Gaza strip, then came a denial from Bunche that he had issued such orders, and on the heels of his denials an Egyptian governor marched in, contrary to decisions of the United Nations that the area was to be governed by the United Nations emergency force.

It is no wonder, therefore, that the term "betrayal" is now bandied around, that there are charges of highhanded methods resorted to by U. N. officials, that the integrity of the United States is being questioned.

Is it any wonder that many news analysts speak of the new Middle East situation as packed with "double talk" and others insist that Israel was "double-crossed"?

Our Government cannot afford to have it said that it was a party to a "doublecross," and if our Secretary of State is responsible for a policy that disgraces us in the eyes of the entire world, the American people should speak up in protest against it.

While this is a matter that was primarily a U. N. responsibility, no one forgets that the Eisenhower administration exerted the main influence in forcing Britain and France, and later Israel, to leave the disputed areas. Now there are threats again that the Nasser regime will bar Israel's boats both from the Straits of Tiran and from the Suez Canal, contrary to assurances given Israel that her rights to the freedom of the seas will be protected.

It is in order, therefore, to demand that there shall not be another Munich, that there shall be complete adherence to the assurances given by President Eisenhower, in his letter to Israel Prime Minister David Ben-Gurion, on March 2, "that Israel will have no cause to regret having thus conformed to the strong sentiment of the world community as expressed in the various United Nations resolutions relating to withdrawal."

The hour for a showdown has been reached. Whatever happens, we are certain that Israel will not again submit to humiliation, that she will acquire her rights to free passage through international waters, that all the combined threats of the Arab nations will not suffice in the enfofcement of her rights.

The State Department has denied having given assurance to Israel, but if it is true that the Department had seen an advance copy of Mrs. Golda Meir's address to the U. N. General Assembly on March 1 and had made some changes in it, then it must be viewed as a pledge and the State Department must be held to its assurances.

We pray that our Government should not again have to be asked to make good on its promissory notes, and not to permit the assurances and encouragement given Israel to be defaulted. A firm stand by the United States—as firm as that which was taken against her best friends, including Israel—will assure world peace. Any other stand will perpetuate chaos and lead to world warfare.

Redirecting Farm Education and Research

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mrs. KNUTSON. Mr. Speaker, a speech on the farm problem has just come to my attention. It is entitled "Redirecting Farm Education and Research" and was presented by Robert K. Buck of Waukee, Iowa, at the National Farm Institute, February 16, 1957, in Des Moines, Iowa. The general subject within which this speech was made was in answer to the provocative question "Can We Shrink Production?"

Under leave to extend my remarks, I insert this excellent speech with its inspiring subject and thought:

REDIRECTING FARM EDUCATION AND RESEARCH

(By Robert K. Buck, of Waukee, Iowa, at the National Farm Institute, Des Moines, Iowa, February 16, 1957)

I am grateful for the opportunity to present a farm operator's viewpoint at this National Farm Institute. Our subject this afternoon is "Can We Shrink Production?" My argument will be:

1. Farm production has been and is continuing to expand faster than market demands. Farm income is always depressed under these conditions. As farmers, our number one interest therefore, is to slow down the rate of interest in production.

2. One of the principal contributing factors to this unprecedented expansion in pro-

duction is our Government sponsored programs for increasing production efficiency on the farm—mainly through USDA and land-grant college research and education.

3. These public resources for research and education can contribute substantially to solutions of our basic farm problem by shifting emphasis away from production efficiency and concentrating more efforts on finding solutions to the current and pressing problems of agriculture.

I. OVERPRODUCTION—OUR NO. 1 PROBLEM

Nearly everywhere we look in farming today we see production outrunning markets—cotton, wheat, corn, beef, broilers, turkeys, eggs, and until recently—pork.

Several authorities see a continuation of over production for several years to come.

It has long been clear that producers, be they farmers or industrial, never prosper when production outruns markets. For farmers the reason is clear. It has to do with the nature of the demand for farm products. Economists call it inelastic. For every 1 percent increase in farm output, farm prices drop 2 or 3 percent and realized net farm income drops 6 to 9 percent.

I wish economists could think up better ways of getting across this concept of elasticity. Nevertheless, we farmers have got to become as familiar with it as we are with vitamins, fertilizers, or rotations. If Ford cars were sold at $400 each, every family would have 3 or 4. But if eggs sold for 10 cents a dozen and hogs at 10 cents a pound, American families still would not eat 3 or 4 breakfasts. Therefore, the demand for pork and eggs is less elastic than is the demand for cars.

II. WHAT IS THE SOURCE OF THIS RAPID EXPANSION OF FARM OUTPUT?

During the last 15 years farm production has increased by 40 percent, yet during this same period we held the acres of land in crops about constant, and we decreased our labor force by 25 percent.

One example of the revolution in production efficiency in the last 30 years is the 27 percent increase in pork produced with fewer sows farrowing. The increase in pigs weaned per litter was 24 percent. Live weight production of cattle and calves per cow increased 48 percent during the last 30 years.

This great increase in productivity of American agriculture is not an accident. It is largely a result of the persistent concentration on increasing farm production efficiency by the USDA, the land grant colleges, farm organizations and associations, farm magazines and by farmers themselves.[1] Moreover, there is a pressure from industry—exerted subtly and relentlessly—to keep farm production running at full tilt.

III. THE ROLE OF GOVERNMENT SPONSORED RESEARCH AND EDUCATION IN EXPANDING PRODUCTION EFFICIENCY

Our USDA—land grant college—vocational agriculture system continues to develop with great vigor. Financial support has increased fairly steadily and especially so in the last few years. Research findings are reaching farm people and being applied more quickly than ever before. This is accomplished through the Extension Service programs, the teaching of students at the colleges, the vocational agricultural programs in the high schools, and through mass media such as radio, TV, farm magazines, newspapers, and bulletins, as well as commercial farm management services and private industry.

Almost from the beginning, the major emphasis in the research programs has been the development of new production technology—the increase of farming efficiency. The list of achievements is impressive—new crop varieties, hybridization, new machines, new fartilizers, improved breeding, better feeds (the vitamins, minerals, antibiotics, hormones) new insecticides and pesticides. The results are amazing. There has been a steady increase in output per unit of input—in yields per acre, pigs weaned per litter, milk per cow, and pounds of meat per pound feed consumed—only to cite a few.

Over the years the major justification for increased Government support of research and education on new production technology has been to increase net farm income. Some even argue that this approach is the fundamental solution to our present farm problems. While there are good and sufficient reasons for the large program of research on production technology (which I would like to discuss later) I don't believe we farmers should deceive ourselves in believing that such programs will increase our net income.

IV. EFFECTS ON FARM INCOME

Why is it that farmers do not generally benefit as producers from aggregate farm technological advance? This is the answer given by most authorities who have studied the question: With most new techniques (say stilbestrol) output of one commodity is increased and in many cases (say fertilizer, improved drainage, etc.) farm output is increased generally. Demand for most farm products is relatively inelastic and demand for total food in general is extremely inelastic. Here we have the basis for the classic squeeze:

1. Increased output with inelastic demand results in lower total receipts. (This is so because a 1 percent increase in output results in more than 1 percent decrease in price.)

2. The adoption of most new techniques increases total money costs on the farm.

With lower receipts and higher costs, the result is inescapable, lower net farm income. Even if costs stayed the same, net income would still fall.

Most farmers have observed, in a very personal way, the amazing effects on net farm income of a small increase or decrease in total output. A 5 percent increase in total supply of hogs usually results in a drop in hog prices of 8 to 12 percent, and a 20 to 30 percentage drop in net income of hog producers.

Why do we adopt new practices then? As individuals we do it when we are convinced that it will either lower the per unit cost of production or expand the total number of units at the same cost per unit. Moreover, we know we will be hurt even more severely if we lag behind. Where there is a substantial lag before widespread adoption the innovator increases his net income because total output has not increased enough to lower prices so he has larger volume, the same price, and lower average costs. But as soon as a majority of farmers adopt the practice total output increases significantly, price drops and the whole group is actually worse off because prices have dropped more than costs have been reduced. And with some techniques, producers are stuck with a substantial capital investment or recurring cash outlay.

As farmers, we tend to look at the situation only as one producer. We assume, correctly, that our own action will have no significant effect on price. Projecting the existing price, we make a strong case for going ahead. We generally do not consider the inevitable downward pressure on prices when a majority of other producers will have adopted the same technique. We usually underestimate how quickly the practice will become widespread. Sometimes we overemphasize the benefits from being first. Because of the high prestige and status value placed on being an innovator by farm magazines, farm organizations, and the Extension Service, we often hurry to be among the first to try the new practices regardless of income considerations.

It seems almost as if the individual farmer is on a treadmill. The faster he runs, the faster goes the treadmill, yet he gets nowhere. Even though his net income will be lower when the new practice becomes widely adopted, he must get in step because he would generally be worse off if he failed to adopt the practice.

If farmers don't benefit from improved efficiency, then why has farm income increased over the years? Actually, farm income has risen in the aggregate during the last 25 years in spite of (not because of) the great outpouring of new output-increasing, price-depressing techniques. Farm income has increased because demand has expanded through a steady population increase, higher incomes of consumers, and special war and postwar demands.

It is often assumed that farm income now would be much lower had we not made the great advances in production efficiency. Look at it this way: If farmers in 1956 had been using the 1940 labor force, land capital, and methods (production efficiency, and had 1940 level of output then how would the have fared compared with 1956 actual income?

Given the fact that net farm income rises 4 to 6 percent for each 1 percent reduction in supply, the 30 percent smaller output of 1940 produced at 1956 higher cost rates and marketed under the larger population and higher consumer income conditions of 1956, would have brought anywhere from 50 to 75 percent more net income to farm operators than they actually got in 1956. Allowing for the fact that there were 30 percent more farmers in 1940 than there are today, net income per farmer would still have been 20 to 30 percent higher than the 1956 actual.

It is obvious that such a short food supply would not be tolerated. Rationing would be necessary. I make this comparison in order to show that expanding demand, not improved production efficiency, is the significant cause of higher farm income in the past 25 years.

Only when markets are expanding faster than total farm output is farm income increased by the type of new production practices we have been adopting in recent years. This is true, because as I said earlier, increased production efficiency sponsored by our USDA and land grant college system is almost all output increasing. Instead of being a cure for the present farm problem, a stepped up program to increase production efficiency of this type merely enlarges and intensifies the farm problem.

V. THE LARGER VIEWPOINT—ECONOMIC GROWTH

Can farmers share more fully in the fruits of an expanding, prosperous industrial economy? We have achieved economic development undreamed of even 20 years ago. The revolution on our farms has been an essential part of this growth. One of the major, unanswered questions of our time is how can we prevent farmers being hurt severely by the abundance they have created? How can the one who is still needed to produce food for 19 persons in the city, buy the cars, and houses and appliances and services produced by those who are no longer needed to produce food?

VI. REDIRECTING OUR EFFORTS IN RESEARCH AND EDUCATION

As we look ahead, what can we do to make government sponsored research and education most effective in helping farm people earn incomes comparable with nonfarm people?

In the first place we could turn more of our research efforts to measuring and analyzing costs to farm people of our systematic introduction of new technology and new capital into farming through various government-sponsored programs. I'm not talking

---

[1] T. W. Schultz says: "There is a growing body of evidence which strongly indicates that new knowledge has become the most important resource in the growth of output; it accounts for most of the additional observed output of farm products." See page 72, A Look To the Future. W. K. Kellog Foundation, June 21, 1956.

about stopping progress. Let's remember, however, that science is a problem-solving tool. In order to survive as farmers, of course we must adjust to the revolution created by research.

But we must insist that research be used to help solve the problems caused by research.

Research is not directionless. These new developments are not accidental. The emphasis and direction is determined by decisions of administrators as well as the decisions of legislature bodies in appropriating funds. And basic, too, is what farm people ask for in new research projects.

The pressing need as we move into the next decade is to change the emphasis of what we farm people ask for in research and education. We should insist that work be expanded on the important and critical problems of the present and the future, not those of 25 years ago. I believe we would all agree that getting the last worm out of a hog or increasing pigs weaned per litter to 8.5 or getting corn yields up to 100 bushels per acre are not among the critical problems of today and tomorrow.

In a general sense, I suggest that we support a shift of resources to long-range, basic research projects—to fundamental and theoretical problems as contrasted with applied and more immediately practical ones. The results from such projects might not be available for many years.

Among the more specific needs that should have highest priority, I would suggest these three:

1. Agricultural adjustment: How do we bring farm production into balance with demand at a level where farmers can make a decent income? Or put it another way, how do we slow down the rate of expansion of our farm plant? This is a very difficult, but unquestionably one of the most important problems in national policy; it is a great challenge to our scientists and educators.

We need to bring our research efforts to bear on farm production and production response in the aggregate—nationwide and regionwide. We must look at farm production from a much broader viewpoint than per acre, per animal, per man, or per farm.

Part of the present squeeze on farm income stems from the upward spiraling farm costs. Research administrators in every subject-matter field, both in the USDA and the land-grant colleges, should shift some resources to those projects which show promise of reducing farm-operating costs without increasing output.

One difficult part of our adjustment problem grows out of the situation where more than half the boys and girls reared in the country must leave the farm for work in town or city. Since 1940, approximately 27 percent of the working force on farms have shifted to off-farm work. Many of those leaving the farm have been at a disadvantage because of inadequate training or lack of information on job opportunities.

Greater concern must be given to the social and economic costs borne by those families uprooted and those bypassed by the technical revolution in agriculture. Research projects should be developed to measure and analyze those costs and to develop methods for reducing the hardships of the families involved.

New research is especially needed as a basis for development and improvement of farm programs. Without it, we tend to go off half cocked. Do we have to wait until the problems explode in our face before we get the research started? What amount of participation in the soil-bank acreage reserve will different rates of payment per acre obtain? What payment per acre would lure a Corn Belt farmer to seed down land for 5 years and keep stock off? Can the researcher not devise better means of establishing individual allotments or soil-bank bases than our present clumsy reliance on history? How much will we cut total farm production if we put 10 percent, 20 percent, or 30 percent of our land in the soil bank?

2. Marketing, processing, and distribution: One farmer put the matter this way, "Where we have been concentrating on producing two where we produced one before, now we must concentrate on selling two where we sold one before."

Emphasis in this area should be put on research projects which lower the cost of marketing a specific volume of products or improve the quality of products. Actuallly many of the present marketing research projects are in the nature of production projects. Clever methods are developed to reduce spoilage and result in a larger volume of food for the human stomach. This type of marketing research merely increases the problems of overproduction: They are of benefit to consumers. But should not be justified as helpful to farmers.

Greater emphasis should be given to research on the characteristics of consumer-purchase patterns and ways and means of increasing consumption by low-income people of high-quality foods, especially red meats, poultry, and dairy products. Let's have a pilot research project where we test out the costs and benefits of a food-allotment program in a few cities.

There is wide interest in increased research to develop new crops and new uses for farm products. This has a strong appeal to everyone. Of course, we should leave no stones unturned here; however, I would argue that we should not expect much help in this area. We should take a sober look at what we have accomplished in development of new uses during the past 40 years. Often the new crop or the new use is simply a substitution for an old use. One of the major reasons for research in this area is help farm products hold their own in competition with synthetic products.

3. Community adjustment and family living: There is great need to expand research and education on the problems of community adjustment to our rapidly changing agriculture. These adjustments involve neighborhood organization, local government, taxes, schools, churches, transportation, and facilities for health, recreation, etc. Research and education can contribute much to enrich family living on the farm and shorten working hours.

When we farmers get together, we like to talk production efficiency and to exchange ideas and experiences on new practices. Let's also discuss what happens to total output and prices and to our net incomes when a majority of farmers put these new practices into operation. Let's get as familiar with supply and demand price elasticities as we are with antibiotics, hormones, and fertilizers. Let's tell our farm magazine editors that we are getting fed up with constant urgings to adopt improved practices which will increase total output at a time when most farm products are outrunning markets.

In the interest of slowing down the rate of expansion of farm output and of improving the net income and welfare of farm people, I suggest:

1. This is not the time to expand Government-sponsored research and educational programs on production efficiency. This doesn't mean necessarily that we stop what we are doing. Some of these projects are of long-run nature. And there is the general interest in a backlog of technology in case of war, but we have our staffs and facilities built up to good levels now. Maintaining these levels of support will still mean a very large program in production research.

2. This is the time to expand research and education in the areas of critical need, especially agricultural adjustment, distribution, processing, and marketing, as well as community adjustment and family living. This is an undertaking that will require all fields of science and education, the nature and the social sciences, applied and theoretical research. This is a strategic time to shift emphasis to those long-range basic research projects the results of which may not be available for a number of years.

Redirection of research and education along the lines suggested here would not alone provide a solution for our farm problem. But if we put less emphasis on production efficiency, we might slow down the rate of increase in output. If we concentrate more research and educational resources on the current and pressing problems and issues, we may find solutions more quickly, and our agricultural policies and programs will be sounder.

The Deadly Doctrine

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial which appeared today in the Wall Street Journal, as follows:

THE DEADLY DOCTRINE

"I don't know what the amount of taxes represent when we talk about $70 billion. Is that this room full of bills, or is it three truckloads? I don't know. But I do know this: We can't afford what we're spending and stay strong enough to lead the world to peace."

Those words were spoken by General Eisenhower at Paterson, N. J., in October 1952. The Republican candidate for the Presidency was discussing Democratic spending. The country, he said, was maintaining military strength "above our capacity to pay for it." But "frugality, efficiency, information, knowledge properly used can bring us a defense organism that will be balanced with our capacity to pay and so will keep and make us strong.

In New York City, at the closing session of the Herald Tribune Forum on October 21, 1952, Mr. Eisenhower said, "Certainly I know that we must find a substitute for the purely temporary business of bolstering the free nations through annual handouts. That gets neither permanent results nor real friends."

The same month, at Peoria, Ill., General Eisenhower said that, if elected: "My goal, assuming that the cold war gets no worse, is to cut Federal spending to something like $60 billion within 4 years."

And in Kansas City, he told of one way to do it by likening Government to the family. "If in your family affairs you find that your plan to build an addition on the house is going to cost a lot more than you figured on, what do you do? You don't go ahead regardless. You call up the carpenter, the painter, and the brick mason—and you call off the project."

During his first 4 years, President Eisenhower carried out his promise of a balanced budget and of a tax cut. The Government reduced spending to a low of $64.6 billion in 1955, almost $10 billion lower than was spent in 1953, a fiscal year he shared with Mr. Truman.

But in 1956 the spending was higher. In 1957 the spending was higher. And for the 1958 fiscal year the Government budget is $71.8 billion—or nearly $2 billion more than Mr. Eisenhower mentioned at Paterson, N. J.

when he talked about spending more than we could if we were to stay strong.

Now, just the other day in his press conference, President Eisenhower discussed this $71.8 billion budget. And he had this to say:

"But I tell you it is futile to talk about the United States keeping up the position it must keep up in the world and measurably sticking to the programs that have already been adopted in the United States or have been agreed to be necessary for the United States and cut that budget severely."

Among the spending he mentioned that could not be cut safely were military expenditures and foreign aid: "And of all of those (in the security field) I would say none is more important than so-called foreign aid." As for much of the rest: "Someone else will have to say that it is not important to keep up our obligations to veterans, that is not in the interests of all of us to try to keep a healthy agriculture, that it is not in the interest of all of us to get some schools built. * * * If these programs are not essential to us, why, then, of course you can save a lot of money. I happen to think they are essential, and that is the way I am operating."

The difference between what President Eisenhower said the other day and what he was saying in 1952 is obvious. Perhaps conditions have changed a great deal since then; perhaps the "temporary business of bolstering foreign nations with annual handouts" now is as right as Mr. Eisenhower believed it to be wrong in 1952. Perhaps "frugality and efficiency" have reduced the military budgets as low as national safety permits. Perhaps, also, programs such as $450 million for schoolrooms across the country are such necessary additions to our national house that it would be wrong to call up the carpenter, the painter, and the brick mason—and call off the project.

Perhaps all these things are essential and perhaps nothing can be done about reducing the budget.

If so, the attitude of the administration has become the attitude of hopelessness General Eisenhower rejected in 1952.

On October 28, 1952, he said at Pittsburgh:

"In this—as in our whole national life—we cannot be ruled by the deadly doctrine of: It can't be done."

New President of Wilkes-Barre Junior Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of March 27, 1957, which comments on the selection of Hugh A. Carr, Jr., of Dallas, Pa., as the new president of the Wilkes-Barre Junior Chamber of Commerce:

JAYCEES' NEW PRESIDENT

Election of Hugh A. Carr, Jr., Dallas, to the presidency of the Greater Wilkes-Barre Junior Chamber of Commerce is recognition that had been anticipated by individuals familiar with his activities in the organization and in other fields.

Mr. Carr, who is associated with the Commonwealth Telephone Co., has impressed associates with his leadership and enthusiasm.

A member of the board of governors, he has been identified annually with four major projects. Currently, he is cochairman of the membership drive. He has the knack of working with others and getting them to work with him.

Through the years, his interest in the Jaycees has been manifested through regular attendance at local meetings and State conferences. Fidelity to duty in his case has been matched by outstanding ability.

From all indications, he is a worthy successor to Robert Edgerton, who retired from office last night with an exceptionally fine record of service to the organization and the community.

United States Shortchanges Los Angeles in Smog Fight

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. HILLINGS. Mr. Speaker, the Los Angeles Examiner carried an article by Mr. Magner White on March 31, 1957, pointing up the fact that the Federal smog program is shortchanging some 5,400,000 people in Los Angeles County. The 5-year Federal program was authorized by the Congress to spend $25 million in an effort to find the answer to this menace which has struck Los Angeles and certain other cities in our country.

I intend to do everything possible to check on the allegations contained in the article which I am including as part of my remarks. If these allegations are correct, it is time the Congress and the President took positive action to see that the program is properly administered so that the citizens of Los Angeles County will receive fair and proper treatment.

The smog menace is national in scope but it has manifested itself primarily in the Los Angeles area. I suggest that the Federal Government concentrate its efforts in Los Angeles in an effort to meet this problem.

The article follows:

(By Magner White)

Twenty months ago, on July 14, 1955, Congress enacted the Air Pollution Research and Technical Assistance Act, and mighty was the national publicity thereon. Uncle Sam was going to get into the war on smog.

What happened?

We were shortchanged, smog officials here estimate, by perhaps as much as $500,000.

The act authorized a 5-year $25 million comprehensive program under the United States Public Health Service, but the first fiscal year, 1955–56, only $1,785,000 was appropriated.

This was for the whole Nation.

It was only about half as much as the smog-plagued citizens of Los Angeles County had paid for their own smog fight through the air pollution control district—they've spent nearly $10 million up to now since 1947.

How much did the Los Angeles County air pollution control district get in the way of Federal help out of this first $1,785,000?

Just about $0.00. That's no typographical error.

This fiscal year, 1956–57, with the first year of getting the Federal program organized out of the way, the appropriation was not the authorized $5 million, but only $2,740,000, and again, remember, this was for the whole Nation.

This $2,740,000 was for research, technical assistance to communities, and for training of men to help out wherever needed in the smog fight.

This year the taxpayers of Los Angeles County are spending nearly $4 million for the county's smog fight alone—and a lot of this finances smog control research and studies which Uncle Sam could draw on, but virtually ignores.

How much did Los Angeles County, the world's center of the biggest of all fights on smog, the center of pioneering research, of investments of $50 million by industry to control smog—how much of his $2,740,000 did Uncle Sam focus out here this year?

Just about $37,000. Or a fraction less than 1.4 pennies out of every $1.

It isn't that we aren't paying our Federal way out here—down to everyone who makes over $600 a year and must file an income-tax return.

Los Angeles County's current Federal income-tax payments are estimated to exceed $2 billion.

In other words, through our income tax—which hits nearly everyone—we send money to Washington, part of which finances the 5-year, $25 million Federal smog program. Then we spend our own money on smog. We—you—pay twice to fight smog.

And get back from Washington almost nothing.

We got $37,000—in salaries for 3 or 4 Federal men assigned to help survey refinery emissions. They are good men, smog officials say, but smog is a new field, and they have to be given some training when they arrive here before they can work efficiently.

Although grateful for any help, since finding engineers is difficult because of industry's fierce competition for them, Smog Control Chief Smith Griswold and our California Congressmen get pretty sore when they think of that mere $37,000.

Here have been made about all the known important discoveries relating to control of our gaseous type of smog—at the Air Pollution Control District, in Dr. J. A. Haagen-Smit's laboratory at the California Institute of Technology, and in industrial and private and university laboratories.

GRISWOLD RAPS UNITED STATES SETUP

"What we need from the Federal Government," says Griswold, "is help to add onto the knowledge we already have."

Under the Federal smog program, direct research, which is costing $823,000 this fiscal year, is done at or through the Government's Robert A. Taft Sanitary Engineering Center, Cincinnati, Ohio.

This is a long way from the resources and trained engineering corps of the Air Pollution Control District.

"It is simply ridiculous on the face of it," says Griswold, and many practical men agree, "not to have a large part of this center's smog research operations out here.

"It would save everyone money, and speed up smog research to control smog, without duplications of effort.

"It isn't a question of Federal aid so much as it is a question of Federal cooperation, and particularly coordination of money, men, and effort, with us, and between us, for the benefit of our community and others over the Nation."

What are some of these Federal direct research projects? Many will sound familiar to the smog-wise citizens of Los Angeles County:

"Investigations related to characteristics quantities and reactions of pollutants in the atmosphere."

"Research and development concerned with control devices."

THEY COULD LEARN FROM LOS ANGELES

It is believed that Federal researchers might learn something to their advantage here, where industry already has spent about $50 million on smog-control devices.

"Study of the economics of air pollution."

Whatever is found by this project will, of course, tend to indict smog as, economically, a very bad thing. You may have the impression this has already been proved.

We already know that, besides endangering health, smog has caused up to $3 million a year crop damage in southern California—amply demonstrated in the University of California Riverside campus studies of Dr. John A. Middleton and staff.

Next, here's a project which Arthur C. Stern, chief, Community Air Pollution Program, of Taft Center, in a speech called "a project which defies rigid classification": Out in the ocean, off San Francisco, on a lonely Farallon Island, is a station to sample "exotic air!"

This joint Federal-State health project is to pick up the "exotic air," if any, blowing in off the Pacific Ocean.

"Exotic air" is not defined, but a check shows that, so far, this lonely sampling station, drawing in minute puffs of air from the trillions of cubic miles of air over the Pacific Ocean, hasn't produced anything significant.

If it does pick up any "exotic air" bearing on the problem of how to stop Los Angeles' smog—say air from a passing boat filled with lotus blossoms or banana oil—the Examiner will rush the startling fact into print.

But don't wait up for this.

Pacific air currents may affect the distribution of smog in Southern California—after the smog is made in the sky. But to you, a citizen, it may seem that if smog is controlled, and none or little gets into the sky, where the winds blow would make no difference—wouldn't you say?

You may feel, from information here, the Government might save millions of dollars if it moved all or part of the division of Taft Sanitary Engineering Center devoted to smog, from Cincinnati to Los Angeles, as many are suggesting.

But, of course, there would be screams in Congress. Some Congressmen have found in the new smog research movement a mighty handy thing with which to impress the folks at home, to whom smog can be made very mysterious.

Congressmen in five southern States, for instance, have asked, and received, a project to study dust from cotton gins—one in a small South Carolina community.

A request to Federal sources for information on this brought forth a picture titled, "Sampling at a Cotton Gin."

However, Charles Merkel, head of the United States Cotton Ginning Laboratory, at Stoneville, Miss., told a fellow newspaperman down there that while samples of trash had been collected at various gins, "there has been no report written and nothing definite to report."

"Usually," this newsman says, "the gin owners are able to make small adjustments in their plants which satisfy the people in the neighborhood."

Our own California Congressmen have to put up with such projects as these, because that's the way things are in Congress; if you want something to stop the smog in your State you have to let the boys from elsewhere have their share of any research money available.

SPECIAL COMMITTEE FORMED

But because they have a growing impression that the Federal Government is overlooking a real chance to study control of smog right here, where so much already has been done, our California congressional delegation has formed a special 21-man smog committee.

Congressman JOSEPH HOLT heads this, and he and Congressmen GLENARD LIPSCOMB and JAMES ROOSEVELT and the others say they are going to make a pitch to get more Federal attention put on control of smog, especially out here.

They want the proposed 1957–58 Federal $4,100,000 smog budget upped to the authorized $5 million. And they want $1 million spent here for Federal men to work with the air pollution control district.

They have reason to insist on this: We face a foreseeable smog crisis. An auto exhaust control device is not near. We have held the smog line amazingly well for more than a year, what with new controls, stiff law enforcement, and other things. The October 1 incinerator ban will help.

But we will continue to grow and expand. This, once more, unless we find more solutions, will bring new smog beyond our means to control it.

Our Economy Is Geared to the Buying Power of the People

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. PATMAN. Mr. Speaker, I am inserting herewith a very interesting article from the Progressive Farmer, published at Birmingham, Ala., entitled "Increase Buying Power of Lowest 40 Percent." It is as follows:

INCREASE BUYING POWER OF LOWEST 40 PERCENT

Of all ways to safeguard American prosperity, one of the greatest is to increase the buying power of the lowest 40 percent of our population. The latest figures in the Statiscal Abstract of the United States 1956 show that the lowest 20 percent of our population—34 million people out of 170 million—received only 4.2 percent of the Nation's money-income, the percentages by fifths being as follows:

	Percent
Lowest fifth gets	4.2
Second fifth gets	10.5
Third fifth gets	16.1
Fourth fifth gets	22.3
Highest fifth gets	46.9

It will thus be seen that of the total income received by all our people, the highest fifth of our population gets nearly 50 percent, which the lowest two-fifths receive less than 15 percent.

America might well set out to double the incomes and buying power of the lowest 40 percent of our people. And this might result, not mainly by charity and social security, but most of all, by helping these people help themselves. A threefold program to this end might well be:

1. More and better education, including adequate vocational education.

2. Better health by good health programs, adequate hospital and medical insurance and services, and better nutrition.

3. By increased social security for the aged poor, the sick, and disabled.

Our wealthier classes may well consider if America would not be safer and communism less threatening if we should provide such a threefold help for our neediest people. Such a policy would increase the sales of all kinds of manufactured products and farm products, largely reducing all food surpluses. In annual per capita consumption of milk and other dairy products, we are told, the United States ranks No. 13 among all nations; and of meat, No. 5. The food stamp plan would help poorer families receive a more adequate diet. This would, in turn, increase their health and earning capacity and be a helpful stimulant to American business. We think now of elderly widows unable to work who receive only $30 a month in social security benefits and who cannot get adequate food while surpluses of farm products pile up and depress prices.

Our poorer farmers, and especially our tenant farmers, help to make up this lowest 40 percent of our population who receive less than 15 percent of the country's money income. It is these groups on our farms, our unskilled wage earners, and our poorer "white collar workers" whose low income keeps them from providing the purchasing power needed to keep our factory wheels turning and our businesses prospering at top rates. To help them by such a threefold program as we have suggested—with especial emphasis on education, health, and nutrition—would not only be a noble form of Christian effort, but would be a statesmanlike way to safeguard the prosperity of all Americans.

Mr. Speaker, I am also a great believer in adequate care for the aged, first because I believe it is our duty to make sure that aged people are properly and adequately taken care of and that they do not suffer because of the lack of food, clothing, housing, and medical care. But I also believe that in carrying out this great duty and responsibility to our aged that it will actually help the entire country at the same time.

Much is said about the enormous increase in the number of babies born each year and about what a wonderful market there will be supplying their needs in the future. This is all well and good, and we are all for it, and we know that an expanding population will mean greater expansion of our entire country if we allow our country to progress and prosper by reason of the increased demands caused by the increase in population. At the same time, we should not overlook the fact that we have 14 million people here in the United States over 65 years of age. Many of them are in destitute circumstances, do not have adequate food, adequate clothing, adequate housing, or adequate medical care—in fact, it is no compliment to our great, rich country to permit so many of our aged citizens to suffer as they are now permitted to suffer because of a lack of attention and lack of care. If we take care of these aged people properly, it will not only help them, but it will help everybody.

I have a bill, H. R. 77, which provides for a minimum payment of $75 per month for people over 65 years of age. I will not quarrel with anyone who says that there should be limitations in certain instances in regard to payments made to people who do not need it. I would not be particular about any reasonable limitations or restrictions being placed on such payments so long as the people who actually need it, whether they are on the old-age assistance rolls or the Social Security rolls, are allowed to receive at least $75 per month.

Foremen's Rights

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. DINGELL. Mr. Speaker, in connection with a bill I introduced, H. R. 4766, to amend the National Labor Relations Act in order to permit supervisors to be considered as employees under the provisions of such act I would like to insert in the RECORD copies of two letters appearing in the Union and Echo which is published in Buffalo, N. Y.

The first is a letter from Joseph F. Murphy, a regional director of the Foreman's Association of America, and the second is a letter written by the Reverend William J. Smith, S. J., an outstanding churchman and student of labor law. I believe these letters show the necessity of having the amendment I propose become law at the earliest possible date.

The letters follow:

FOREMEN'S RIGHTS

DEAR EDITOR: In the struggle that the Foreman's Association of America is waging for the rights of the foremen, to have the T-H Labor Act amended so as to insure for the foremen the security they are entitled to in order to maintain their dignity as human beings, we have appealed to the leaders of the Catholic Church for the proper interpretation of the moral law as to our rights.

The enclosed copy is a reply I received from Rev. William Smith, S. J., of St. Peter's College, Jersey City, and I feel that it would be in the interest to many of the readers of your valuable paper.

Under the T-H Act we are denied the security and protection of the courts in our desire to associate with our fellow men.

Sincerely,

JOSEPH F. MURPHY.

DEAR MR. MURPHY: Your letter came to me in the midst of a very busy week and I have not had the chance to get even a few ideas on paper for you. This is a little note however which I am sending you so that you may at least have some reply from me.

Since the committee will have on its roster some of the southern members of Congress it might be a good idea to see if you could draw some kind of a parallel between foremen's right and states rights. When the Constitution was written the rights of the Federal Government were spelled out explicitly. Whatever is not down in black and white as a Federal power belongs to the States. This is the principle of self-government.

In modern industry you have a strong representation for management at the top. You have strong collective bargaining power for the rank and file worker at the bottom. In between are the foremen, often making up a large number of employees, who have no representation of any kind.

They are not seeking or asking to take over management of any industry. They are simply asking for the right, the legal right, to exercise a natural right of association.

In the old days the foremen really could be said to be in power. Today, for the most part, he merely channels the company policy to the ranks below him. He should not be in the rank and file collective bargaining unit. But as it is he is at the mercy of management and at least should have some means of self-defense. The principle of self-defense is recognized in every legal and religious circle of the world. It is as American as corn on the cob. Why should it be granted and legally protected for all types of citizens except foremen?

The United States of America was merely 13 Colonies subject to the oppression of a mother country. Not until they put into practice the natural right of association and built strong States and Commonwealths did they begin to take their proper place in the world.

Foremen are not asking for one overall nationwide association which would give them sufficient economic power to stand up to the accumulated industrial power of the corporations in the capitalistic setup. They are asking for proper representation within each of their industries. Under the present circumstances they are neither fish nor fowl. Nor do they want to be either. They just want to be human beings, as the Lord made them, to carry out the functions and responsibilities that management places upon them, but at the same time with enough unity of organization to process grievances and safeguard their working conditions just as other workingmen in America can do even though they don't carry the title of foremen or supervisor.

They are not living in the year of 1900 or even 1933. We are living in the year 1957. Our while industrial life has been changing gradually. The role of the foreman "Aint what it used to be." When the shops were small and the foremen were really looked upon and actually were men of some authority, they could talk to the boss as on a man-to-man basis. In a giant industry of today it is very difficult to find out who is the boss. The foremen are caught in the squeeze between a gigantic mechanized system, that can turn a man, and the human element, including the foreman, into a robot unless the fundamental and basic human principles, one of which is the right of association, are thoroughly respected and allowed to function.

Foremen are human beings. They need protection for their working conditions just as much as any ordinary workman. Top management can take care of itself. The labor union can take care of the rank and file worker. But neither by law nor by company policy is the proper protection afforded the foremen.

Sincerely yours,

REV. WILLIAM J. SMITH, S. J.

Veteran Plunges 17 Floors to Death

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. LONG. Mr. Speaker, the following AP dispatch appeared in the Washington (D. C.) Evening Star for March 29, 1957:

VETERAN PLUNGES 17 FLOORS TO DEATH

NEW YORK, March 29.—A destitute, 61-year-old, World War I veteran plunged 17 stories to his death today before the horrified eyes of hundreds of spectators. A patrolman pleaded with him in vain for 20 minutes.

"Nobody wants to help me," said the man, tentatively identified as Julio Contino. He said that he was broke, couldn't pay his room rent, and couldn't get help from the welfare authorities or the Veterans' Administration.

He told his troubles at length to Patrolman Harold Siegel as he perched on a parapet atop the Veterans' Administration Building at 252 Seventh Avenue in Manhattan.

The patrolman sought to assure him that help could be obtained. Police raced to the 16th floor to extend nets beneath the man. Other officers sought to ease up behind the parapet in order to grab him.

Suddenly the man shouted, "Leave me alone," leaped far outward from the building, missing the nets, and plunged to the street.

A VA official said records showed Mr. Contino served as a private in the 374th Infantry during the last 6 months of 1918, but did not serve enough time in service to qualify for VA benefits.

But, Mr. Speaker, this could not happen to Chiang Kai-shek's old disabled soldiers in Formosa. Why? Because the United States has provided pensions, hospitals, convalescent camps, and old soldiers' homes for them.

The People Must Speak

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following editorial from the Jackson (Mich.) Citizen Patriot of March 10, 1957:

THE PEOPLE MUST SPEAK

Not in many years has the talk of economy in the Federal Government been so prevalent as it is today.

The man in the street, Secretary of the Treasury Humphrey, former President Herbert Hoover, and the perennial advocates of economy such as Senator Byrd are pointing to the need for saving taxpayers' cash and the Nation's strength.

The Washington news analysts are using reams of paper to comment on the situation and the difficulties in trimming Federal spending.

President Eisenhower has ordered a restudy of the budget and, in effect, has invited Congress to see what it can do about cutting it down.

That is more logical than it seems on the surface. In many respects, the administration's spending blueprint merely reflects mandates of Congress. Substantial reductions can be made only when and if the legislative branch agrees that certain functions need to be curtailed or eliminated.

Many of the commentators on the Washington scene, as well as Members of Congress, agree that the people hold the key to really important reductions in expenditures.

If they make themselves heard, so the story goes, Congress can and will act.

But it is obvious that the groups and interests which want more spending have a way of raising their voices.

The farm bloc in Congress, for example, is calling for higher price supports on various crops. Localities which stand to benefit by Government power or reclamation or flood control or navigation projects are putting the heat on Congress.

The demands for Federal aid to education are loud enough to penetrate the Halls of Congress and the committee meeting rooms.

All these things add up to more spending—not less.

Meanwhile, the man in the line at the internal revenue collector's office is not being heard. No one speaks for him unless he opens his own mouth.

Perhaps it is time that he did so, or at least expressed his views in writing to his Senators and Representatives.

If he remains quiet the organized forces which are seeking money for this or that purpose will hold the ears of Congress.

And another year will go by with much talk about economy, but precious little action to bring it about.

Repeal the 3-Cent-Per-Pound Processing Tax on Coconut Oil

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. DINGELL. Mr. Speaker, under date of March 11, I introduced a bill, H. R. 5818, the purpose of which is to eliminate the 3-cent-per-pound tax collected on the first domestic processing of coconut oil as provided in section 4511 (a) of the Internal Revenue Code of 1954, leaving in effect the additional rate of 2 cents per pound provided for in section 4511 (b) and also leaving in effect the tariff duty of 1 cent per pound applicable to coconut oil in paragraph 54 of the Tariff Act of 1930. I desire at this time to submit certain statistical data relating to H. R. 5818.

Table 1 shows the United States exports and imports of oils and fats and the import or export balance as the case may be for the 9-year pre-World War II period 1930 to 1938. Table I also provides the same data for a 9-year postwar period beginning with the year 1948.

The 3-cents and 2-cents-per-pound processing taxes on coconut oil were levied on coconut oil on May 10, 1934. It will be noted in table 1 that during the year 1934 and the remaining years in the 9-year pre-World War II period that the United States oils and fats economy was on a deficit basis, i. e., there was an excess of imports over exports. During the 9-year postwar period shown in table 1 the United States has enjoyed a surplus of exports over imports of oils and fats. In the year 1956 it will be noted that the surplus of exports over imports reached the amazing total of 3,890 million pounds.

The purpose of these comparisons is to show that the entire fats and oils economy of the United States changed during World War II and subsequently thereto. From a net importer we have become the world's greatest exporter of fats and oils. Under these circumstances the price level of fats and oils is no longer the world market price plus import duties and processing taxes as was the case in 1934. The domestic price level is the world market price less freight and insurance costs in moving American oils and fats into the world market. Hence it cannot be argued that the removal of the 3-cent-per-pound processing tax on coconut oil will result in the depreciation of the market price of our American oils and fats in the domestic market. The price level of our domestic oils and fats is established in world markets rather than the American market.

TABLE 1.—*United States imports and exports of fats and oils*

[In million pounds]

Year	Exports	Imports	Excess exports over imports
1930	923	1,660	−737
1931	831	1,506	−675
1932	798	1,201	−403
1933	816	1,678	−862
1934	614	1,362	−748
1935	191	2,135	−1,944
1936	217	2,009	−1,792
1937	223	2,599	−2,376
1938	297	1,756	−1,459
1948	924	1,175	−251
1949	2,257	1,031	1,226
1950	2,036	1,237	799
1951	2,435	1,094	1,341
1952	2,274	869	1,405
1953	2,595	913	1,682
1954	3,874	914	2,960
1955	4,514	512	4,002
1956	4,909	1,019	3,890

Source: Agricultural Marketing Service, U. S. Department of Agriculture.

Table No. 2 shows the world exports of fats and oils and the United States exports as percent of world exports. It will be noted from table 2 that beginning with the year 1954 the United States exports of fats and oils represented more than one-fourth of the total world exports. In 1956 the proportion of exports originating in the United States was one-third of the total.

The purpose of table 2 is to further establish that the prices of domestic fats and oils are established in world markets. It also shows that the hindrance of the entry of coconut oil into the domestic market by means of the 3-cent processing tax does not mean that domestic oils and fats avoid competitive impact with coconut oil. If coconut oil has the ability to compete with American oils and fats such competition is all the more pronounced in world markets because of the tendency of the processing tax on coconut oil to depreciate the price of Philippine coconut oil in world markets, a circumstance which is discussed in more detail below:

TABLE 2.—*United States exports as percent of world fats and oils exports* [1]

Calendar year	World exports (billion pounds)	United States as percent of world
1935–39 average	13.1	2.2
1945–49 average	8.1	14.8
1950	12.3	15.5
1951	12.8	18.0
1952	11.7	17.9
1953	12.7	19.3
1954	14.5	26.2
1955	14.5	27.6
1956 [2]	15.5	33.5

[1] Includes the oil equivalent of oilseeds exported.
[2] Partly estimated.

Source: Agricultural Marketing Service, U. S. Department of Agriculture.

Table 3 lists the principal oils and fats exported from the United States in the calendar year 1956. Domestic production, exports and percent of production represented by exports are shown. Table 3 shows that while inedible tallow and grease is the largest single item of export, viz 1,486,000,000 pounds, the aggregate of lard, cottonseed oil and soybean oil exports is 1,963,300,000 pounds which exceeds by almost 500 million pounds the volume of inedible tallow and grease exports. Since the total export of all oils and fats from the United States in 1956 was 4,909,000,000 pounds, exports of these 2 edible oils and lard constituted 40 percent of the total.

Coconut oil is used principally in Europe in edible products. Bureau of the Census records show that its principal usage in the United States is by industries which produce inedible products such as the soap, fatty acid, and protective-coatings industries. The confectionery and baking industries account for the only important edible usage of coconut oil in the United States. It is used in these industries for purposes where it cannot be replaced by domestic oils and fats as evidenced by the fact that prices paid for coconut oil exceed by several cents per pound the prices of domestic fats and oils. Coconut oil imparts far longer shelf life, that is, resistance to rancidity, to confections and crackers than can be secured without its use.

In Europe coconut oil is a major ingredient of margarine whereas the Bureau of the Census records show that it has not been so employed in the United States since the year 1950. Lack of mechanical refrigeration in private homes accounts for much of the preference of European margarine manufacturers for coconut oil as a margarine ingredient.

Table 3 shows that the American lard and soybean oil producers must encounter the competition of Philippine coconut oil in edible products in world markets on approximately one-fourth of their production. Cottonseed oil producers must encounter its competition, in world markets, on approximately one-third of their production. It would seem to be to the advantage of these producers to permit the consumption of larger quantities of Philippine coconut oil through repeal of the 3-cent processing tax in the United States in noncompetitive outlets, for example, inedible products such as soap and fatty acids and the types of edible usage in specialty products wherein our confectioners and bakers employ it solely for purposes for which domestic oils and fats are not suitable. Under present conditions our exports of lard, cottonseed and soybean oils encounter the competition of Philippine coconut oil in world markets at price levels depreciated by the 3-cent processing tax which the United States, the largest single consumer of Philippine coconut oil levies upon that product. H. R. 5818 seeks to rectify that situation.

TABLE 3.—*United States production and exports of principal fats and oils, year 1956*

[In million pounds]

Commodity	Production	Exports	Percent exported
Lard	2,565	611	23.8
Tallow and grease, inedible	3,118	1,486	47.7
Cottonseed oil	1,826	[1] 628	34.4
Soybean oil	3,200	[1] 724	22.6
Fish oils	197	141	71.5

[1] Crude basis.

Source: Bureau of the Census.

I now wish to show that passage of H. R. 5818 would be to the best interests of the domestic producers of inedible tallow and grease. Table 4 shows that the domestic factory consumption of inedible tallow and grease is principally accounted for by its consumption in soap manufacture. However table 4 shows that this domestic outlet for inedible tallow and grease has been steadily declining since 1948, the first year in which synthetic detergents reached important proportions in the United States. Synthetic substitutes for soap obtained a distribution of 1 pound per capita in World War II years when the supplies of coconut oil were limited. In 1946 the consumption reached 2 pounds per capita and in 1948 the consumption was at the rate of 4 pounds per capita. Table 4 shows that in 1948 the consumption of inedible tallow and grease in soap accounted for 81.5 percent of the United States factory consumption of these products. Table 4 registers from 1948 to 1956 a steady decline in the percentage of inedible tallow and grease in soap as relates to total factory consumption of these two items. A decline of 30 percent use in domestic soap making is registered in the 9-year period shown.

During the 9-year period covered by table 4 the domestic tallow rendering industry has been confronted, due to competition of synthetic detergents, with the necessity of exporting an increasingly larger proportion of its production. It is obvious that it would be desirable to sell a larger proportion of this tallow for domestic consumption as the exports must bear the costs of transportation, insurance, and other incidental costs encountered in reaching the foreign market. The passage of H. R. 5818 will help the tallow renderers regain a substantial part of the domestic market which they have lost.

Domestic soap is made from tallow and coconut oil. Tallow which is the main increment supplies the body or the lasting quality of the soap and the coconut oil furnishes the lathering quality. The two products obviously supplement one another in the making of a satisfactory soap as despite the fact that the price of coconut oil plus the 3-cent per pound processing tax is commonly twice the domestic price of tallow the soapmaker must include coconut oil in his formula. No domestic oil or fat will supply the free-lathering qualities resident in coconut oil. This is due to the low molecular weight of its component fatty acids—chiefly lauric acid—and their high saponification value.

The current price of "extra" tallow is 7⅜ cents per pound delivered, New York. The cost of coconut oil, excise tax paid, in the New York area is in the vicinity of 15 cents per pound. The ratio of tallow to coconut oil in good free lathering soap should be at least 4 parts of tallow to 1 of coconut oil. Synthetic detergents are made chiefly from benzene—largely a product of the coke oven—and sulfuric acid. Both of these chemicals are cheaper than tallow and coconut oil but some headway could be made by the soap maker in competing with synthetics if he was relieved of the burden of processing tax.

Processing tax-free coconut oil is the best antidote for the surplus of tallow and grease position. Wash water in most areas of the United States possesses a considerable degree of hardness. It is the opinion of the Western States Meat Packers Association and the Pacific Coast Renderers Association that if soap makers have the opportunity to make a freer lathering soap through employing more coconut oil, as a result of the elimination of the 3-cent processing tax, more inedible tallow and grease will be carried into domestic consumption in the soap kettle.

In a press release issued on March 30, 1953, the Department of Agriculture stated that the new role of inedible tallow and greases in the export market, as a result of the development of synthetic detergents, must be taken into account in appraising export demand for edible vegetable oils. The release pointed out that tallow and grease exports from the United States have released other materials from soap-making in Europe. These materials such as palm oil are therefore more freely available for the manufacturers of margarine and cooking fats. In the light of this observation by the Department of Agriculture it seems evident that a larger consumption of inedible tallow and grease in soap making in the United States would be of assistance in enlarging the European export market for lard and edible vegetable oils for United States producers.

TABLE 4.—*Factory consumption of inedible tallow and grease in soap*

[In thousand pounds]

Year	Total factory consumption	Used in soap	Percent of total used in soap
1948	1,781,942	1,451,454	81.5
1949	1,706,634	1,345,597	78.8
1950	1,830,953	1,374,845	75.1
1951	1,719,372	1,194,815	69.5
1952	1,566,970	1,084,225	69.2
1953	1,595,289	1,025,845	64.3
1954	1,576,389	907,143	57.5
1955	1,592,493	864,821	54.3
1956	1,580,693	812,720	51.4

Source: Bureau of the Census, facts for industry.

Table 5 shows the consumption of oils and fats in margarine from 1930 to 1934. It will be noted that the percentage of coconut oil used in margarine manufacture in this period varied from 62 to 75 percent of total oils used. This circumstance was the principal reason for the levying of the 3-cent processing tax on coconut oil on May 10, 1934. Margarine manufacturers continued to use coconut oil until World War II when the War Food Administration prohibited the use of coconut oil in the manufacture of margarine in order to conserve the available supply for strategic uses similar to those for which coconut oil is currently stockpiled by the Office of Defense Mobilization. During this period margarine manufacturers in the United States developed new manufacturing techniques whereby the use of coconut oil could be dispensed with in favor of cottonseed and soybean oils. The latter half of table 5 shows that since the year 1950 no coconut oil has been employed in the manufacture of margarine. Coconut oil is therefore entirely eliminated from the only field of usage in which it offered any material competition to oils and fats produced from American crops.

TABLE 5.—*Fats and oils used in manufacture of margarine, 1930–34 and 1950–56*

[In thousand pounds]

Year	Total oils and fats used in margarine	Coconut oil used	Percent of total oils used
1930	297,809	185,066	62
1931	234,366	155,954	67
1932	178,116	127,967	72
1933	178,755	134,430	75
1934	199,028	140,083	70
1950	765,177	None	None
1951	850,750	None	None
1952	1,046,010	None	None
1953	1,048,617	None	None
1954	1,105,915	None	None
1955	1,074,408	None	None
1956	1,107,866	None	None

COMMERCE BETWEEN THE UNITED STATES AND THE PHILIPPINES

In the year 1955 the Philippines imported from the United States merchandise valued at 703,853,000 pesos—$351,926,500. Of this total 221,344,000 pesos—$110,672,000—represented items of agricultural origin or products thereof as follows: Cotton and manufactures, 119,981,000 pesos—$59,990,500—grains and preparations, 24,986,000 pesos—$12,493,000—dairy products, 37,231,000 pesos—$18,615,000—tobacco and manufactures, 28,646,000 pesos—$14,323,000—inedible animal products, tallow, et cetera, 10,500,000 pesos—$5,250,000.

The Philippines exported to the United States in the year 1955 merchandise valued at 506,490,000 pesos—$253,245,000. Thus the balance of trade favored the United States to the extent of about $99 million.

Copra imports into the United States from the Philippines in 1955 amounted to 297,000 long tons, valued at $45,167,555. Coconut oil imports amounted to 145 million pounds, valued at $16,296,878. Copra is the chief cash crop which the Philippines must sell to the United States to acquire dollars with which to pay for imports purchased from this country. The Philippines are the most important export customer of the United States in southeast Asia. This important market can be enlarged if the adverse trade balance with the United States can be reduced.

The processing tax of 3 cents per pound collected on the first domestic processing of coconut oil when expressed in terms of a long ton of copra amounts

to a tariff duty of $42, which is equivalent to over 30 percent ad valorem. Such a duty would, under ordinary circumstances, be considered cruelly unjust to a friendly country, particularly on a commodity not produced in the United States. The long overdue rectification of this injustice can be accomplished by the passage of H. R. 5818.

Exports of copra and coconut oil, expressed in terms of copra, from the Philippines in the 5-year period ending with 1956 averaged 878,180 long tons per annum. In the 5-year period average importations by the United States, in terms of copra, were 403,927 long tons, or 46 percent of the total. The balance was sold in world markets, chiefly Europe.

The total factory consumption of all oils and fats in the United States in 1955, according to the Bureau of the Census, was 17.3 billion pounds. Factory consumption of coconut oil was 557 million pounds, or 3.2 percent of the total.

Trial by Jury

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I call attention to an editorial appearing in the Nashville, Tenn., Banner of March 26, 1957. It is related to the basic right of trial by jury.

It refers to the fact that the most infamous criminals in the land—from murderers to kidnapers, running the gamut of the whole underworld—are entitled to trial by jury.

Our own distinguished representative from the fair State of Georgia, the Honorable JOHN J. FLYNT, JR., has introduced H. R. 3768, dealing with the right of trial by jury in certain contempt cases in United States courts.

The editorial is timely, and I commend its reading to my colleagues in the House. It follows:

WHAT MORE BASIC RIGHT THAN TRIAL BY JURY?

Sections 3691 and 3692 of title 18 of the United States Code are those cited as abridging the right to trial by jury. They relate to contempt cases, and have been brought to the fore by realistic study of the so-called civil-rights legislation. For it is under this formula that a jurist may constitute himself judge, prosecutor, and jury.

Far more than a mere legalistic anomaly, there is a glaring contradiction in the view that 1 set of civil rights justifies abrogation of a basic right 3 times spelled out in the Constitution. Advocates of the proposed new law—from the NAACP to Attorney General Herbert Brownell, and miscellaneous liberals in between—have yet to explain just why their injunctive process should sidestep the Constitution on this point. Why do they oppose a jury trial?

The Federal Code, incidentally, says that in contempt cases the defendant, on demand, shall be entitled to trial by jury, but "this section shall not apply in any suit or action brought in the name of, or in behalf of, the United States." Further, the proposed civil-rights law says that injunction proceedings shall be instituted, not in the name of the real plaintiff who thinks he has been prevented from voting or exercising some other right, but in the name of the United States.

Georgia Senator HERMAN E. TALMADGE has introduced a bill to clarify the right to trial by jury. It provides that all persons cited for contempt of a Federal court for any acts other than ones committed in the presence of the court "shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the contempt shall have been committed." Further it would provide that no person can be bound by an injunction unless he is a party to the proceeding; is named in and served with a true copy of the injunction; or has read and had explained in his presence by a judge in open court the provisions of the injunction.

This is, of course, a Government of laws—not a Government arbitrarily of men or of injunctions. It rests upon the Constitution—in pursuance of which (and not otherwise) laws are enacted and enforced.

The most infamous criminals in the land—from murders to kidnapers, running the gamut of the whole underworld—are entitled to trial by jury. Is not a citizen so entitled who might happen, quite circumstantially even—to be caught under a blanket injunction?

The United States Constitution is recommended reading just now for every citizen, and particularly those in Washington charged with enacting and interpreting and enforcing the law.

Michigan Legislators Support H. R. 5460, Giving States and Local Government Agencies Right To Purchase Federal Surplus Property

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks, I wish to present a petition, signed by 29 members of the Michigan House of Representatives, urging enactment of a bill I have introduced, H. R. 5460, which would give States and political subdivisions thereof the privilege of purchasing Federal surplus property not used in the donable program before such property is released for general public sale.

This petition, signed by representatives from various sections of Michigan, indicates strong and widespread support for this proposal. The local communities are not asking the Federal Government to give them surplus property. They are ready to pay for it. But they would like the opportunity to purchase materials they need at a reasonable price without heavy additional payments to middlemen. I believe a system could be effected to this end which would still permit expeditious and economical movement of surplus property to local government agencies where it is needed. I might add that this is only one of many communications supporting H. R. 5460 which I have received not only from Michigan, but also from city officials in distant sections of the country.

The petition and signers follow:

HOUSE OF REPRESENTATIVES,
Lansing, Mich., March 7, 1957.

We, the undersigned, urge that H. R. 5460 of the 85th Congress be adopted to amend section 203 (j) of the Federal Property and Administrative Services Act of 1949 to provide that surplus property which is not used in the donable program shall be offered for sale to States and political subdivisions thereof.

Representative George A. Gillespie, Gaines, Mich.; Representative Clayton T. Morrison, Pickford, Mich.; Representative Allison Green, Kingston, Mich.; Representative Edson V. Root, Jr., Bangor, Mich.; Representative Fred O. Olsen, Sheridan, Mich.; Representative Louis C. Crampton, Lapeer, Mich.; Representative Hans C. Rasmussen, Ludington, Mich.; Representative Homer Arnett, Kalamazoo, Mich.; Representative George Wahr Sallade, Ann Arbor, Mich.; Representative Holly Hubbell, route 5, Saginaw, Mich.; Representative John W. Fletcher, Centreville, Mich.; Representative Russell H. Strange, Jr., route 1, Clare, Mich.; Representative Raymond C. Wurzel, North Street, Mich.; Representative Harry T. Emmons, Byron Center, Mich.; Representative James N. Folks, Horton, Mich.; Representative Andrew W. Cobb, Elsie, Mich.; Representative Sterling Eaton, Kalamazoo, Mich.; Representative Adolph Blanchard, Bay City, Mich.; Representative James F. Warner, Ypsilanti, Mich.; Representative Walter G. Nakkula, Gladwin, Mich.; Representative Frederic Marshall, Hillsdale, Mich.; Representative Lloyd Gibbs, Portland, Mich.; Representative Thomas Whinery, Grand Rapids, Mich.; Representative Emil A. Peitz, Rogers City, Mich.; Representative Cyril H. Root, Kalamazoo, Mich.; Representative Lester J. Allen, Ithaca, Mich.; Representative Ben E. Lohman, Hamilton, Mich.; Representative Roy H. Brigham, Battle Creek, Mich.; Representative James P. Mielock, Whittemore, Mich.

Job Well Done

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. HILLINGS. Mr. Speaker, recently Mr. L. Richard Guylay retired as public-relations director for the Republican National Committee. He has rendered outstanding service to the President and the Republican Party and I join with my many colleagues in congratulating him on a job well done and extending best wishes for continued success.

I am enclosing an editorial from the Los Angeles Times dated February 26, 1957, which points up Mr. Guylay's fine work:

A Job Well Done

A public-relations director of a major political party organization may easily find his problems too great for him, or by a degree of self-promotion he may gain credit for accomplishments to which he is not entitled. But L. Richard Guylay, retiring public-relations director for the Republican National Committee, fits into neither category.

Guylay, who took on the job 2 years ago, leaves an outstanding record. He demonstrated unusual qualities as an administrator and won warm appreciation from the press, radio and television for his efficient handling of news and his impartial treatment of all concerned.

He leaves his post with the GOP National Committee to head a public-relations firm in Washington, but will remain available as a consultant when needed by the Republican leadership.

In the chorus of praise given his work the common note sounded by former National Chairman Hall, the current National Chairman Alcorn, Vice President Nixon and others emphasizes Guylay's tact, resourcefulness, perceptive qualities and political know-how.

In a profession where the demands are great and where only the most accomplished attain distinction, L. Richard Guylay has earned recognition as one of the best.

Highway Trust Fund Raid Bared

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. HARRISON of Virginia. Mr. Speaker, it will be recalled that, when we were considering legislation to carry forward the huge Federal highway program, extensive attention was given to the problem of insuring that money collected from highway users for the purpose of building roads actually would be used for building roads.

A tremendous amount of money is involved, so it was to be expected, perhaps, that the bureaucrats would set about trying to find means of circumventing the trust-fund aspect of the Federal highway program.

It now appears that the Department of Labor, which does not build any roads, is trying to put its hand in the highway trust-fund till for a $365,000 grab. Naturally, the Department of Labor wants to hire some more bureaucrats, and it sees in the highway trust fund a chance to get $365,000 without justifying it in the regular budget. As you know, Mr. Speaker, the highway trust fund is set up outside the Federal budget, so any money another bureau can siphon out of this fund will not show up as an increase in the budget totals.

Under leave to extend my remarks in the Appendix, I include a news report by Jack Steele of the Scripps-Howard newspapers, and an editorial, both of which appear today in the Washington Daily News. They refer to the disclosure of this maneuver made to the House by the distinguished and alert gentleman from Louisiana [Mr. BOGGS].

The news article and editorial follow:

LABOR WOULD DIVERT $365,000 TO OWN USE—HIGHWAY TRUST FUND RAID BARED

(By Jack Steele)

A brazen raid on the trust fund of the interstate highway system has been uncovered by Congress.

Unless the raid is stopped, it will open the way to divert many millions of dollars from the highway trust fund to pay for the ordinary expenses of the Government. The fund is not counted as part of the Federal budget.

The attempt to divert these highway funds has been brought to light by Representative HALE BOGGS, Democrat, of Louisiana, who authored the tax section of last year's highway bill which set up the trust fund.

PURPOSE

One purpose of the fund was to insure that highway user taxes paid by motorists and truckers would not be diverted for purposes other than building roads.

The Labor Department is responsible for the current raid on the trust fund—under the guise of using the money to enforce wage standards for labor employed in building the road network.

The Department's 1958 appropriation bill, now pending in the House, includes $365,000 for its solicitor's office to be diverted from the highway trust fund.

The money ostensibly is to be used to determine prevailing wage rates which must be paid by road contractors under the so-called Davis-Bacon provision of the highway act.

APPLICABLE TO MANY

This Davis-Bacon Act, since it was first passed by Congress back in the mid-1930's, has been made applicable to most Federal public works projects.

But never before has the money for administering the act been charged to the funds for such projects. The Labor Department has made the wage determinations necessary under the act as part of its job of protecting labor standards.

Representative BOGGS called the attention of the House last Friday to the Labor Department's departure from this practice to raid the highway fund.

He charged that the move completely and totally violates every concept of the highway trust fund. He noted that the highway act provides that the trust fund may be used only for actual road building and for the administrative expenses of the Bureau of Public Roads.

SOLICITOR'S RULING

Yet the Labor Department's solicitor has ruled that by implication the highway funds also may be used for his office, he said.

By the same reasoning, Representative BOGGS warned, the Treasury Department might charge the highway trust fund for the cost of collecting taxes and the Justice and Defense Departments for any expenses they incur, however vaguely connected with the road program.

"We have here a precedent which, if we are not careful, will open the highway trust fund to every agency of the Government which can conceivably make the assertion that it has some function to perform incidental to the construction of roads," he said.

"If we are not careful we will place ourselves in a position where the bulk of the trust fund will be utilized for other purposes than the construction of roads."

STOP THE SNITCHING

When Congress last year voted to impose a series of special taxes—on motor vehicles, tires and fuels—it was made clear that all the revenue from these taxes would go for one purpose—to build highways.

Now, it turns out, the Labor Department is out to grab $365,000 out of this trust fund to pay for some incidental work it is supposed to do in connection with the program.

Once this type of business gets started, every department will be trying to tap this fund for real or fancied expenses it claims because it has an indirect hand in the program. It is one way to get spending money without having it toted up in the budget.

Representative HALE BOGGS, of Louisiana, who uncovered this scheme, tried to knock it out in the House, but was blocked. He says he will take his fight to the Senate. Good boy.

And he says, let this thing get started and we'll wind up with more of the money going for bureaucracy than for roads. It's tricky budgeting and a violation of the whole pay-as-we-go theme of the Federal highway program. Mr. BOGGS deserves a lot of help from the Senate.

Bureaucrats

EXTENSION OF REMARKS

OF

HON. EMMET F. BYRNE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. BYRNE of Illinois. Mr. Speaker, my attention has been directed to a splendid editorial I read today in the Fact Finder. It is most timely, and I would like permission to insert it in the RECORD:

"The lessons of paternalism ought to be unlearned and the better lesson taught, that while the people should patriotically and cheerfully support their Government, its functions do not include the support of the people."

Did you ever see a dog covered with ticks? These parasites dig their heads beneath his skin and draw his lifeblood out to swell themselves up. If allowed to remain, they multiply until the poor dog is covered with them. Then, if nothing is done, it is only a matter of time before the ticks bleed the dog to death. That is what is happening to us Americans today. The bloodsuckers are the bureaucrats who bleed us of our earnings by unreasonable taxation so that they can swell with power through their inflationary spending.

These bureaucrats were not elected by the people. Years ago, politicians appointed them to office in the Federal bureaus. Today they are protected in their jobs by civil-service laws. Administration after administration, they live on our earnings that are taxed away to support their Socialist schemes—programs they claim are for our welfare but which are actually destroying our financial independence and security. These social planners employed in the Government bureaus are the bloodsuckers of American progress.

They destroy, they rob, they take away, they kill our chances to better ourselves, our hopes for financial independence, our plans for our own business, our dreams of a college education for our children, our goal of happiness and travel in later years. Who?—the bureaucrats.

How is it they can rob us of our hopes and ambitions for the future? By the huge Federal budgets they plan, they drain us of our economic independence. They tax us beyond our ability to pay and still take care of ourselves.

But, you say, taxes are necessary to support the Government.

Yes, but who determines how much of the Government's spending is necessary? Nonelected people in the executive departments of our Government—like Health, Education, and Welfare—the bureaucrats.

Who plans the budget of the Government's colossal spending program that calls for such high taxes? Our representatives in Congress? No; they merely vote for or against the tax bills to cover the budget prepared by these planners in the Federal bureaus The budget is so involved that our Congressmen know little or nothing about it. So the social planners hold the upper hand. They have gained power for themselves by spending billions through their bureaus year after year. They tax away our earnings to spend them on our so-called welfare. (As if these bigots know more than we do about our own welfare.) They return very little of our money after their costs and giveaways, their salaries, and other waste. These people who call themselves "liberals."

Let's tell our Congressmen that we've had enough. The Constitution plainly states that only Congress has the power to tax. Congress, the representatives of the people, must regain control of our Government. They must starve out these social welfare state bureaucrats before they bleed us to death. Where must Congress start?

If Congress will cut the Federal aid programs in the budget, they can cut our taxes greatly.

But shifty politicians tell us that in voting for Federal aid they are only doing what the people demand. What people? Do the people themselves demand these give-away programs, or is it the leaders of the pressure groups who demand them? And do they speak for the American people?

Many people are led to believe that our record peacetime Federal budget is all necessary to defense. This is not true. U. S. News & World Report points out that $14 billion a year in the current budget is for welfare, as against just a little over $3 billion 10 years ago. And that doesn't include programs for farmers and ailing veterans, which come to $10½ billion without hurting anyone but the Socialists and the Communists. (You remember that both Lenin and Stalin said they would cause us to spend ourselves into bankruptcy.)

It was the scheme of Karl Marx to use the graduated income tax "to soak the rich and share the wealth." Just how does that tax work in America today? Who pays the bulk of our taxes now? We do, the great American middle class. The people who work for a living and should be saving for our old age.

Congressman LAWRENCE SMITH, of Wisconsin, shows that of the $29.4 billion collected by the individual income tax, only 16 percent comes from the surtax, which starts after the first $2,000 of taxable income. Over 84 percent of the total individual income tax revenue comes from the basic 20 percent tax rate which we all pay. The income tax today not only soaks the rich, it soaks everyone. And the more service you render the higher is your tax. This discourages ambition as it kills incentive. That means another loss to us because it limits the amount of goods and services produced. And a further loss, as it results in higher costs and higher prices. You can see how, slowly but surely, the Communist tax system of Karl Marx is destroying American free enterprise, prosperity, and progress as it kills individual incentive and initiative.

This means we are not only losing our American opportunity system, but we're also being robbed of our savings for our children's education, for independence in our own business, for our old age retirement and for our peace of mind and pleasure in future years. We are being robbed of all this today by socialist planners in our Federal Government who don't believe in private education, personal savings, individual investment or free enterprise. They think they know what's best for everyone—and that they have the right to take our money, making us go to them in the future for the things we want and need and deserve because we earned them throughout our working years.

These socialists in the Federal bureaus will become our masters, even though we never elected them as our representatives, unless we act now to get them out of power. We can do this only through our Representatives in Congress. We must write our Congressmen now, if we value our independence, and demand a tax reduction that will cut the Federal spenders' power to spend our money. Then with our own money, we can fulfill our own responsibilities, as God intended we should, about our future years, our children's education, our charity, our investments, and our service to mankind. If we don't stand up now and demand our rights, we'll deserve what we get.

Fuming at Budget Cuts, Ike Forgets a Challenge

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of the House a most timely editorial appearing in the Nashville (Tenn.) Tennessean, of March 29, 1957. It is particularly impressive just at this time when we are considering the President's budget.

The editorial follows:

FUMING AT BUDGET CUTS, IKE FORGETS A CHALLENGE

Seldom, if ever, has President Eisenhower been less logical or convincing than when he sought to defend his record-breaking peacetime budget from the cuts being effected by an economy-minded Congress.

Though the Chief Executive passed the buck to Congress on this issue, he has at the same time delineated the fields in which reduction would, in his opinion, be dangerous to the national economy. The assumption was that he would welcome other slashes which were, in the lawmakers' opinion, appropriate.

Yet now he parrots the poet who wrote, "Woodman, spare that tree! Touch not a single bough!"

More than anything else, he appears to be incensed because Congress has accepted his challenge and proceeded to pare down the budget on a piecemeal basis. There have even been cuts in funds sought for operation of the White House.

This is not what the President bargained for, and it frustrates him no end.

Neither Republicans nor Democrats in Congress are impressed with his argument that if massive budget reductions cannot be made it is "fatuous" to make small ones, even though they will add up to a considerable sum in the end. Mr. Eisenhower simply cannot have it both ways.

In this connection, a significant comment has been made by Representative JOHN TABER, Republican, of New York, leader of the GOP fiscal conservatives in the House. "Piecemeal cuts might be called fatuous," he said.

"But," he continued, "when you don't have any other kind available to you, you have to take what you can get."

In their present mood, the lawmakers will continue to lop off the boughs so dear to the President's heart, and in doing so will show far more understanding of the public mood than the Chief Executive who overlooked the growing opposition to lavish spending in a time of high prosperity.

"Spend and spend, and tax and tax," was a phrase coined when the New Deal was acting to pull the Nation out of a depression. But those who thought the principle involved might be useful in selling the so-called New Republicanism were guilty of a colossal mistake.

Mr. Eisenhower was wrong when, in submitting his $71.8 billion budget, he asserted that this was what the people demanded. Treasury Secretary Humphrey did not concur in this viewpoint and had the courage to break with his Chief on the policy of deficit spending. Because he knows a good deal more about budgetary matters than the President, Mr. Humphrey's declaration that the totals could be cut has been taken at face value.

And now that official Washington, at both ends of Pennsylvania Avenue, has heard from those who pay the bills, it is shown that Mr. Humphrey was far cannier than his boss.

There has indeed been some frivolous criticism of the budget, but that does not affect the general feeling that it should be dealt with in consideration of the public's ability to pay, and with the thought of easing the taxload instead of increasing it. There is no mood for supporting the New Republicanism in the manner its founders believe to be helpful. And it is on this basis that many Members of Mr. Eisenhower's own party in Congress have turned against him.

We do not wonder, in such circumstances, that the President's confidence has been badly shaken, but his present dilemma is something which might have been anticipated when he sought to wash his hands of the whole matter while challenging Congress to do its best, or worst.

While slashing the estimates, Congress can be heartened by the evidence that any favors along this line—even the smallest ones—will be gratefully received by the taxpayers.

Mideast Payoff

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. MULTER. Mr. Speaker, if democracy is to survive, we must keep faith with all democracies of the world. The present administration is now wrestling with the problem of whether it should let one of them down. In this connection, I commend to the attention of our colleagues the following editorial which appeared in the New York Journal-American of March 22, 1957:

MIDEAST PAYOFF

These are showdown days in the Middle East.

Between truce and war, the answer lies in places thousands of miles apart.

It lies in the meetings of Dag Hammarskjold, Secretary General of the United Nations, with President Nasser of Egypt and Premier Ben-Gurion of Israel; in the talks between President Eisenhower and Prime Minister Macmillan in Bermuda.

Chiefly the answer rests with the determination of the Eisenhower administration to keep its moral commitments.

They are moral commitments, no matter in what words they were clothed, to use the influence of this Nation to prevent resumption of border raids from the Gaza strip; to assure Israel freedom of passage in the Gulf of Aqaba and the Suez Canal.

These are the payoff chips. Let us hope the administration is prepared to back its hand.

A Plan for German Unity

EXTENSION OF REMARKS
OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1957

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article in the current issue of the New Leader, by Hugh Gaitskell, leader of the British Labor Party, entitled "A Plan for German Unity":

Reunification is a subject upon which most Germans feel very deeply. But this desire for reunification is not shared to the same extent by the peoples of other European countries, particularly those who have suffered in the past from German invasion. Some of them feel that perhaps it is as well that Germany should remain weak and divided.

Nevertheless, nobody can really say that the German problem is in a satisfactory condition at present. Despite the decisions on rearmament and her membership in NATO, Germany is even now not really fully integrated into the West. She has a natural reluctance to involve herself in the burden of rearmament, which to some people may even seem praiseworthy in view of her past history. She sees that membership in NATO and the decision to rearm have not apparently brought reunification any nearer, although this was the claim always made by the German Chancellor. She sees that NATO itself is not so powerful as at one time was expected. She knows well that the NATO contingents, even with her limited forces, will be little more than a trip-wire. She is not convinced that German soil is going to be defended to the end. She feels, on the contrary, that, as things are, it is likely to be abandoned in the early stages of any conflict with Russia. It is hardly surprising, in these circumstances, that the German people from time to time turn to the possibility of some agreement which Germany might make on her own with Russia.

Happily, however, if the West has its problems and troubles, so also has the Soviet Union. We have to thank the incredible heroism of the Hungarians, and the firm courage of the Poles, for bringing this home to us in the last few months. They have thrown a most vivid light, now apparent to the rest of the world, upon the real feelings of the peoples of the satellite countries, and have shown that the rule of the Communist puppet governments is only kept in being by the tanks and artillery of the Soviet Army. And how exhilarating to find that in the very section of the community most completely exposed to the Communist monopoly of education and propaganda—the younger generation—opposition to the regime and to Communist values is strongest.

The plain fact is that, in our defense planning and its political framework, we did not envisage such a situation. Our flash points were such events as the blockade of Berlin, the threat to Yugoslavia, and always the possibility of Russian troops advancing directly into West Germany. But for us to take the initiative in breaking through the Iron Curtain to help people on the other side of it was a prospect for which we had never really provided.

On the whole, I think it most likely that the movement of opinion within both the satellite states and Russia will continue to create an unstable and fluid situation. On that assumption, what kind of policy should we try to follow in Europe?

First of all, as regards Germany, it is surely clear that the present situation cannot be allowed to continue indefinitely. In West Germany, there is every prospect that after the next election there will be a change of government in some form and that the new government will be expected either to persuade its Western allies to put forward new initiatives or itself to instigate direct talks with Russia on the problem of reunification.

But, secondly, as has recently been pointed out by the German Foreign Minister, there is the question of what will happen if a rising takes place in East Germany. In 1953, West Germany had no armed forces. But it will soon have some. It will not be easy to prevent their going to the help of their compatriots in East Germany if anything like a Hungarian rising occurs there. Yet if this were to happen, all Europe might be faced with a highly dangerous situation; for it is most unlikely that the Russians would be prepared to stand aside. If they intervened, then exactly what would be the attitude of Germany's allies in NATO?

The aims of the West in this situation are obvious: We wish to see the satellite states regain their freedom without war or any serious consequential risk of a future war.

But what of the Russian outlook? A peaceful solution must ultimately depend on the willingness of Russia to make terms with us. There is little doubt that Russia would be glad to avoid the dangerous position created by a rising in East Germany and that it will try to prevent this by keeping a very tight hand on the Communist Party and the puppet government there. But the Russians may not find it so easy. In general, they face a very grave dilemma in their policy toward the satellite states. If they insist on rigid control over the local Communist Parties, they may create exactly the situations which have already developed in Poland and Hungary. If, on the other hand, they are content to give up their control, then they have no reliable instrument with which to assert themselves except the Soviet Army. Therefore, for them as well as for the West a continuation of the present situation is not going to be at all easy.

What change would they be prepared to contemplate, and at what price? The key surely is security. They are probably not so worried about this as they were a few years ago. The development of nuclear weapons must have given them a great deal of confidence about any possible land attack from the West. For we may fairly assume that they will be much less inhibited in the use of such weapons in defense than the West would be.

If, then, they face the prospect of grave political trouble in the satellite states, if in any event they have to yield many of the economic advantages they have gained from exploitation in recent years, if the strategic value of these territories has declined, if in addition they could obtain some further concessions on security, is it not just conceivable that the Russians might be willing on their side to withdraw their forces from the satellite states?

It seems to me that the prospect is at least worth exploring. The path to be followed seems to me an extension of the Eden plan put forward in 1955. It was at that time proposed that there should be a withdrawal of forces from the frontiers between East and West Germany, leaving within Germany itself a zone in which there were no foreign troops. Would it not be possible to extend the area of such a zone until it covered, say, the whole of Germany, Poland, Czechoslovakia, and Hungary—and, if possible, Rumania and Bulgaria?

The withdrawal could be a gradual one, taking place over a period of time. It would have to be subject to control, as would also the size and character of whatever national forces it was agreed that the countries in question should possess. But here the latest proposals of the Russians themselves for a zone in which there would be both aerial and ground controls might be appropriately introduced. Indeed, one could envisage the whole plan as forming part of a wider move toward a comprehensive disarmament agreement between the great powers.

In the early stages it might be advisable to leave the alliances unchanged. To begin with, both NATO and the Warsaw Pact might continue. But if foreign troops withdrew, it is doubtful whether this situation could last long. Indeed, the Russians might refuse to contemplate the plan without neutralization on both sides from the start. They would assume, no doubt, that the satellite countries would prefer to be neutral, and they would therefore wish to insure that Germany was neutral as well. I believe that this is a risk which we ought to take.

I was myself never favorable to the idea of a neutralized Germany as the sole condition for reunification. I believed that if a reunified Germany were neutralized and outside NATO, there was a real danger that in time the Russians would come to dominate her. One envisaged the Russian tanks suddenly moving across the frontiers, and before long the whole of the territory under Soviet control. And there was the other danger of the Communists staging a coup d'etat internally while the West looked on impotent. I had little faith that the democracies would move quickly enough to prevent this. There was also the different, but equally sinister, possibility—that Russia would make a deal with Germany at the expense of Poland.

But none of these dangers would be serious in a plan involving a much wider neutral bloc and the withdrawal of the Red army to Russia. The weakening of the Communist Party in eastern and central Europe would greatly reduce any risks of this kind. And, together with the permanent controls on arms in these territories, there should be a multilateral European security plan, in which the various states in the neutral zone would have their territories guaranteed by the great powers as well as by each other.

One other matter would have to be cleared up, the settlement of the frontiers of Germany and Poland. It seems most unlikely that any substantial change can be made in the existing frontiers. The populations have moved and settled down, and I do not believe that either the Poles or the Russians would agree to drastic revision. Both Dr. Carlo Schmid and Heinrich von Brentano deserve much credit for their courage in facing this issue in recent speeches. I hope that the Germans themselves would feel that the renunciation of claims to the pre-1945 territories would be a worthwhile price for reunification and the freedom of the satellite countries.

Finally, I must underline that in any plan of this kind American troops should stay in Europe—in the Low Countries, France, and Britain. In short, NATO should not retreat farther back than the frontiers of Germany.

I should be the first to recognize that any such plan could only be brought about as a result of very long negotiations and subject

to a great deal of modification. The first stage would be for the Western Powers to try to reach agreement on it themselves. But it seems to me, apart from anything else, that we owe it to the peoples of the satellite countries, at least, to examine what can be done to win freedom for them by diplomatic means.

By Helicopter to Burning Tree?

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. MINSHALL. Mr. Speaker, I should like to call the attention of my colleagues to the following editorial that appeared in the Cleveland Plain Dealer of March 29. I believe that these remarks are most pertinent and present a side of this issue that we should all bear in mind.

The editorial follows:

BY HELICOPTER TO BURNING TREE

President Eisenhower was visibly annoyed when a reporter asked him at his news conference Wednesday whether he would consider, as an economy measure, doing without "that pair of helicopters that have been proposed for getting you out to the golf course a little faster than you can make it in a car."

It was a smart-aleck question, not designed to elicit information but to put the President on the spot, and we don't blame Mr. Eisenhower for being burned up. As a matter of fact, though, the President exercised considerable restraint when he merely said: "Well, I don't think much of the question, because no helicopters have been procured for me to go to the golf course—thank you, that is all."

This incident raises an issue, however, which is simply this: What's wrong with the President using a helicopter to go anywhere he pleases, including the Burning Tree golf course, if it will save him time and if weather permits?

Two helicopters are being obtained for the President's use between the National Airport and the White House grounds to avoid traffic delays, one for the President and his aids and the other for Secret Service men. When the question was asked whether they might also be used for trips to the Burning Tree Club, Presidential Secretary Jim Hagerty said he could not rule out that possibility but that there were no present plans for such trips.

We think there is no reason why they shouldn't be used for this purpose. The helicopters were proposed, not so much for the convenience of the President, whose motorcade gets the green light wherever it goes, but to prevent traffic tieups in Washington caused by the blocking of streets and the gathering of sightseers wherever the President goes.

Presumably traffic jams have occurred just as often when the President is motoring to and from the Burning Tree Club as they have when he is motoring to and from the airport.

Other Presidents have played golf and have engaged in other forms of recreation and have used the most up-to-date transportation available. Why shouldn't President Eisenhower travel by helicopter if he wants to? Or should he be required to walk to the Burning Tree Club when he feels the need to play a round of golf?

The United Nations and Public Understanding

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Monday, April 1, 1957

Mr. MARTIN of Iowa. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Francis O. Wilcox, Assistant Secretary of State, before the National Council of Jewish Women on March 19 on the subject The United Nations and Public Understanding.

I am informed by the Public Printer that the article will make 2½ pages of the RECORD, at a cost of $192.50.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE UNITED NATIONS AND PUBLIC UNDERSTANDING

(Address by the Honorable Francis O. Wilcox, Assistant Secretary of State for International Organization Affairs, Before the National Council of Jewish Women at the Shoreham Hotel, Washington, D. C., Tuesday, March 19, 1957)

I am happy to take part in your public affairs panel this morning. The National Council of Jewish Women has a long and distinguished record of fostering enlightened understanding of national and international problems.

Your organization reflects an important segment of American opinion. Your help and your understanding will continue to be needed very much as we seek to establish through the United Nations the basis for a just and lasting peace in the Middle East.

I am glad to have the opportunity to be here to discuss some aspects of critical issues before the United Nations. The intense glare of publicity that has attended every step of the negotiations on Hungary and on the Middle East has not always been illuminating. It has at times perhaps highlighted the unessential, even the nonexistent, and at other times cast into deep shadow the main lines of policy and action. I should like to try to set in focus the role of the United States in the United Nations and the role of the United Nations in dealing with world problems, especially aggression and threats to the peace.

Set in its simplest terms it is United States policy to support the United Nations and to work through it to establish and maintain peace and well-being among nations. We believe it holds the best hope for the security and well-being of the American people.

We attempt to conduct our relations with other nations in conformity with the purposes and the principles of the United Nations Charter. We avoid the use of force as a means of settling disputes between ourselves and other states. If a problem arises which properly belongs in the United Nations, we use our influence to bring it there. If, in our opinion, it is not a United Nations matter, we urge its settlement by other means.

The United Nations is a political organization which has its proper uses and its limitations. It is not a remedy for all the world's ills. Misunderstanding on this score is, I think, the basis of most criticism of both the United States role in the United Nations and the role of the United Nations when attempting to deal with world crises.

LIMITATIONS OF THE UNITED NATIONS

This past year has been a year of grave tests for the United Nations and a time of peril for world peace. The situations that arose in Egypt and in Hungary provided both the peril to mankind and the tests for the efficacy of the United Nations. These issues have in common the fact that military force was used by one nation against another. This is the ultimate issue the United Nations was designed to meet and solve. The degree of success achieved by the United Nations to date in restoring peace with justice is a gage of its capabilities and its limitations as a peace-enforcing institution. Even more important, in my opinion, it is a measure of the extent to which member states will permit it to perform its peace-making functions.

The criticism has been leveled at the United Nations that it has proved weak and ineffective. This was charged not only in the case of Hungary because of the Assembly's inability to get the Soviet Union to withdraw its forces, but also in the Middle East when compliance with the recommendations of the General Assembly lagged.

We must face the fact that with great power disunity reflected in the Security Council, the United Nations, for the time being, is handicapped in preventing breaches of the peace and bringing about restoration of peace. The role of the General Assembly is largely one of discussion and recommendation.

This does not mean, however, that the United Nations is without power to influence the conduct of nations. In some ways it may be likened to the role of the policeman in a community. In a well ordered community he is a symbol of law and order, an arbiter, created by the community for its own protection. Called in on a dispute, he is not set upon by the mob. He is permitted to exercise a power which he does not in himself posses. But this means that the community must be back of him.

The world, unfortunately, is not yet wholly made up of such communities. The General Assembly must still play a limited role based largely on the constructive power of world public opinion.

This state of affairs has not been fully appreciated in the two great issues with which the United Nations is still seized.

The United States, because of the leading role it has played in this historical session of the General Assembly, has shared to a considerable degree both the public approval of the United Nations successes and the criticisms of its failures.

In this connection, may I remind you that the United Nations can only do what its members want and permit it to do. We should not make the mistake, therefore, of blaming the organization for the doubts, the uncertainties, and shortcomings displayed by its members.

THE CRISIS IN EGYPT AND HUNGARY

The problems presented to the United Nations by the crises in Egypt and Hungary are well known. There was a fundamental difference in the nature of these problems, however. In Hungary Soviet troops, ostensibly there to protect Hungarian territory from outside aggression, turned their guns inward against the defenseless Hungarian people whose only crime was to seek peaceably a government of their choice. In Egypt, on the other hand, the clash was between the armed forces of the states involved.

Moreover, the Israeli attack occurred as a result of a long series of serious provocations and violations of the Armistice Agreement. There was no such conceivable excuse in the case of the Soviet use of armed force against Hungary.

Events so turned out that the United States found itself taking the lead in United Nations action in the case of both Egypt and

Hungary. In neither instance did we really have any choice of the role we were to play. Both were instances of the use of force against the territorial integrity of another state.

In the former case, it was our grievous task to bring the charge of violation of the United Nations Charter against our friends and allies; in the latter, against a government and a system which is the implacable foe of freedom.

We pride ourselves on being a nation of laws, not of men. The U. N. Charter likewise provides that nations conduct their relations on the basis of international law and justice.

We had to say to ourselves that if we ever hope to get anywhere with the peaceful settlement of disputes we must constantly take a stand against recourse to military force, as a matter of principle, and in the interest of our own nation as well as world peace. Speaking to the Nation on the Middle East situation on February 20, President Eisenhower said: "It is an issue which can be solved if only we will apply the principles of the United Nations."

Our reason for going to the United Nations, then, was to defend this fundamental principle—not because we were pro-Arab or pro-Israel or anti-Russian, or because we were for or against any state or group of states.

I think there was no lack of public understanding and support in this country for the decisions taken by the United Nations on both areas of conflict. Certainly there was wide and strong backing from the membership of the United Nations. There was, however great public impatience with the delay in the Middle East and the flat refusal in Hungary to comply with the terms of the resolutions adopted by the General Assembly aimed at restoring peace. It was quickly forgotten that in both cases what the United Nations was doing, or trying to do, was dependent on the voluntary cooperation of the offending states and the states offended against. The reason for this, of course, is that only the Security Council may make decisions of a compulsory character in such instances. With the power of the Security Council weakened by the veto, the United Nations has had to fall back on the General Assembly which has only the power to recommend.

Given these circumstances, I believe we should be encouraged by what the United Nations has so far accomplished in the Middle East. It has shown that the conscience and the moral consensus of the vast majority of United Nations members, when the chips are down, favors peaceful settlement of disputes and adherence to commitments assumed under the charter, even when such course seems to run counter to individual national interests.

In the case of Hungary, the United Nations inability to secure compliance with its urgent and repeated recommendations has caused deep concern not only to the American people and Government, but to free peoples throughout the world. In the circumstances, it has been, perhaps, only natural for segments of public opinion to oversimplify the problem in seeking to place the blame. It has been charged that the United Nations is weak and futile; it has been urged that Hungary and the Soviet Union be thrown out of the United Nations for their defiance; it has been argued that the United Nations and the United States have applied a double standard, one for the weak and one for the strong.

I would like to attempt some clarification of this latter point. In his broadcast to the American people the night of October 31 on the critical situations in Hungary and the Middle East, President Eisenhower said: "There can be no peace without law. And there can be no law—if we were to invoke one code of international conduct for those who oppose us—and another for our friends."

Though he was speaking about the attack on Egypt at the time, the record shows that the United States and the United Nations consistently adhered to this principle. The standard applied to the use of force in Egypt was likewise applied to the use of force in Hungary. The essential difference was that the countries directly concerned in the Middle East crisis responded to offers of United Nations assistance to bring about a peaceful settlement. In Hungary, such assistance was flatly refused. Had the response been the reverse there would now be no United Nations emergency force in the Middle East with a deterioration of the situation there which I leave to your imagination.

THE HUNGARIAN SITUATION

The crux of the problem of Hungary was what can the United Nations do when one of the major powers refuses to cooperate with the peacemaking efforts of the General Assembly?

The answers are fairly simple but not very satisfactory. We could attempt to terminate its United Nations membership. This is obviously not a very practical solution since the concurrence of the permanent members of the Security Council is required.

The General Assembly could recommend certain political measures such as breaking diplomatic relations. Unless it could persuade a large proportion of United Nations members to do likewise, this would not be a very effective sanction and in the case of the United States, would cut us off from a useful diplomatic contact.

The General Assembly could also recommend economic sanctions. Again, unless a large number of nations could be persuaded to join in such sanctions, the pressure thus exerted would be relatively slight. This is especially the case with the U. S. S. R. and its satellites whose total resources are great and where trade and economic relations with the West are already on a very small scale.

There is, of course, the possibility of attempting to introduce United Nations observer personnel, but their entrance would require the consent of the state concerned.

The final recourse would be to recommend the use of military forces. There is not the remotest likelihood, with the dangers involved in the atomic age, that the United Nations would vote for the latter action.

Depressing as this picture may be, it reflects the situation in which the world finds itself at the present time. This does not mean, however, that because outlaws exist in the world community, that the rule of law should not be applied wherever possible.

May I add just a word here about the so-called double standard? This is nothing new. In effect, the double standard was built into the United Nations Charter when the veto provision was inserted at San Francisco. This gave the great powers a privileged position in the organization.

But I think that we seriously misread recent history if we believe United Nations resolutions on Hungary failed to have an impact on the Soviet Union and its satellite system. These resolutions put the Soviet Union's barbarous misdeeds squarely under the white light of world opinion. They did more to expose the implacable and diabolical nature of international communism than anything that has happened since World War II. Perhaps more important, the inherent weakness of a system that has to rely on force alone to impose its will on the majority was shockingly revealed.

The Secretary of State at Canberra last week said, "Throughout the satellite area, there is a revulsion against the brutal colonialism and exploitation of Soviet imperialism." It is my opinion that this revulsion, as a result of the facts revealed in General Assembly debate, has extended to the corners of the free world.

THE MIDDLE EAST

There was a great deal of public controversy over the possibility of the United Nations imposing sanctions against Israel. Now it is true that at one time it appeared that a majority of United Nations members might have felt themselves compelled to impose sanctions if other methods had failed to bring about Israel troop withdrawal from Egypt and the Gaza strip. As a member of the United Nations, the United States would have had to take its stand on such an issue should it have arisen.

We believed it essential that Israel should withdraw in its own best interests. This we felt was a necessary prelude to a solution of other problems in the Middle East.

I think it significant that the use of traditional bilateral diplomacy to supplement United Nations action with regard to the Middle East problem was of major importance in preventing the matter of sanctions becoming a divisive issue in the United Nations. In this connection, I would like to quote a statement of the delegate of Ceylon to the General Assembly after Israel had announced its intention to withdraw: "I, as a humble representative of a small nation, would like to pay my tribute to the Government of the United States of America for creating a set of circumstances which enabled the withdrawal of Israel troops. It is, in my opinion, a very useful act in the solution of the troubles before us."

UNITED STATES POSITION ON GAZA AND SHARM-EL-SHEIKH

The United States position on the Middle East problem has been made clear in various public documents beginning with the February 11 aide-memoire. During the long weeks in which the General Assembly has been occupied with the grave situation in the Middle East, the United States has sought a solution which would be based on justice and which would take account of the legitimate interests of all parties. On March 1 Israel announced in the General Assembly that it had decided to make full and prompt withdrawal behind the armistice lines in accordance with the General Assembly's resolution of February 2, 1957.

In the course of this announcement, the Foreign Minister of Israel made certain declarations which, for the most part, constituted restatements of what had been said in the General Assembly or by the Secretary General in his reports, or hopes and expectations which seemed to the United States not unreasonable in the light of prior actions of the Assembly.

On March 1, Ambassador Lodge, speaking for the United States in the General Assembly, took note of the statement of the Secretary General of February 22 in which he reported Egypt's readiness and willingness to make special and helpful arrangements in Gaza with the United Nations and some of its auxiliary bodies. In this connection, Ambassador Lodge said: "Obviously these matters are not for the United States alone to decide, but the United States can, I think, properly entertain the hope that such a useful role for the United Nations and its appropriate subsidiary bodies as the Secretary General has described could usefully continue until there is a definitive settlement respecting the Gaza strip or some final general agreement between the parties."

With respect to the situation in the area along the Gulf of Aqaba and the Strait of Tiran the United States position remains as stated in Ambassador Lodge's General Assembly speech of March 1: "It is essential that units of the United Nations Emergency Force be stationed at the Strait of Tiran in order to achieve there the separation of Egyptian and Israeli land and sea forces. This separation is essential until it is clear that the nonexercise of any claimed belligerent rights has established in practice the peaceful conditions which must govern navigation in waters having such an international interest. All of this would, of course, be without prejudice to any ultimate determination which may be made of any legal question concerning the Gulf of Aqaba."

Since then developments in Gaza have moved rapidly. We have kept in close touch with U. N. Secretary General Hammarskjold and with various members of the United Nations. Just yesterday Mrs. Meir, Foreign Minister of Israel, called at the Department of State to "express her deep concern at the return of Egypt to Gaza, the reestablishment of its control therein and the reduction of responsibilities of the United Nations in the Gaza area." Mrs. Meir pointed out that Israel viewed this situation as contrary to the assumptions and expectations expressed by her and others in the United Nations on March 1 and subsequently. She also expressed her anxiety at reports and statements envisaging restrictions against Israeli shipping in the Suez Canal and the Gulf of Aqaba, and the maintenance of belligerency by Egypt.

Secretary Dulles reaffirmed that the United States policy continued to be as publicly expressed in the speech of Ambassador Lodge in the United Nations General Assembly on March 1 and in the President's letter of March 2 to Prime Minister Ben-Gurion. This Secretary reaffirmed "that the United States would continue to use its influence in seeking the objectives of peace and tranquility and the avoidance of any situation which would negate the great efforts which had been made by the world community to settle the current disputes in accordance with the principles of the United Nations Charter." The United States stands firmly by the hopes and expectations it had expressed with regard to the situation which should prevail in the area with respect to the exercise of the responsibility of the United Nations in Gaza, the free and innocent passage of the Straits of Tiran by the ships of all nations in accordance with international law, and the settlement of the Suez Canal problem in accordance with the six principles adopted by the Security Council and accepted by Egypt.

This Government will use its influence in every appropriate way to assist the Secretary General and the parties concerned to carry out the recommendations of the General Assembly and to create peaceful conditions in the area.

Very critical times remain with us. We have made progress along the road toward our objectives in the Middle East but the road ahead is long and difficult.

Our objectives have not changed. Through the United Nations there has been accomplished a cease-fire, the withdrawal of forces and the clearance of the Suez Canal has almost been completed. Immediately before us is the necessity for agreeing on interim arrangements for use of the Canal and moving on to solution of the basic problems which gave rise to the present crisis. It is not sufficient to put out the fire, we must prevent it from breaking out again.

Getting at and removing the root causes is a formidable task. It is more than enough to challenge the patience of a job and the wisdom of a Solomon. But can anyone seriously believe that a lasting peace will be possible so long as the boundaries between Israel and her neighbors remain unsettled and a feeling of insecurity pervades the entire area? Can we hope to avoid serious difficulties in the future unless real progress is made toward the solution of the refugee problem and the development of the area's natural resources?

The solutions to these problems are as difficult as they are necessary. To find them, the United States is determined to continue to use every appropriate means both within and without the United Nations. In the process, we shall be serving the cause of peace with justice everywhere.

ENLARGED UNITED NATIONS MEMBERSHIP

I would like now to turn briefly to a development in the United Nations of great importance and, of late, of great public interest. That is the recent rapid increase in the size of United Nations membership—especially from Asia, Africa, and the Middle East. This reflects 1 of the great phenomena of the postwar period. In 12 years some 600 million people from this area have gained self-government or independence.

The United Nations is open for membership to all peace-loving countries able and willing to carry out the obligations of the charter. The United States favors, within this definition, a United Nations as broadly representative as possible.

A United Nations that has grown in less than 2 years from 60 to 81 members and in which the Afro-Asian States now constitute more than a third of the total presents new problems and, I think, new opportunities. I do not think that it is necessarily cause for alarm.

Those who are concerned point to the fact that the General Assembly, rather than the Security Council, has become the voice of the United Nations and its most influential body. The relative strength of the Latin American States has been reduced. The conflict over so-called colonial problems has been sharpened. With the recent increase in membership the Afro-Asian nations alone, if they stood together, could, no doubt, prevent the passage of any important resolution.

This situation requires careful consideration. In actuality, aside from the U. S. S. R. and its satellites, these blocs do not often vote as an entity. We think of Afro-Asian as a unit. In fact, it is extremely diverse and contains subblocs of an ethnic, religious, or political nature.

On certain fundamental issues the Afro-Asian nations do stand very solidly together. I refer particularly to colonialism and economic development. On these they are often joined by the so-called Latin American bloc.

The fact is that the people of the world, regardless of their military or economic strength, want an increasing voice in world affairs. In the United Nations, and especially in the General Assembly, they find this voice. The traditionally great powers of the West whose greater economic and military strength give them a preponderance of authority and responsibility must heed this voice if they desire wide support for their policies and actions. They do not have to heed it, of course, and the General Assembly cannot enforce its recommendations on other members.

In my opinion, what is required of United Nations members in the enlarged General Assembly, where each state has one vote, is a special sense of responsibility. The smaller and undeveloped countries do have a collective power far out of proportion to their economic, military, and political strength. If they abuse this power, the General Assembly can become a center of contention and deadlock. On the other hand, the great powers, if their cause is just, should not lack the support of the majority of the General Assembly on important issues.

I believe, if we examine the record, that the performance of the 11th General Assembly reflected in general this sense of responsibility of which I speak.

On the Algerian question, for example, two Asian states, Japan and Thailand, played a leading role in developing a procedural-type resolution which avoided exacerbating the situation. This was an excellent example of Assembly moderation and restraint. On the Cyprus question, the General Assembly similarly avoided prejudging any substantive solution by adopting a simple resolution which has helped maintain an atmosphere reasonably conducive to future negotiations. Here, too, an Asian state, India, was able to work out a compromise resolution generally acceptable to those principally concerned.

CONCLUSION

In conclusion, I should like to quote from an editorial in a recent issue of your magazine, Council Woman: "One thing is certain. The United Nations is the one solid hope of humanity for a peaceful and better world; and the United States can and must be its strongest supporter."

If the nations of the world had been compelled to live the past 12 years without a common meeting place; without basic rules by which they should conduct themselves; without machinery for the peaceful settlement of international differences; without a place to air disputes and seek agreements; then it is my opinion that the world might not have survived those 12 years. The stresses and strains have been so great; the ideological conflict so sharp, and the destructive power of the weapons available so immense, that without the unifying power of the United Nations we could have by this time, destroyed ourselves.

If the United Nations is indeed the one best hope we have for peace with justice, it is only common sense to use it as the cornerstone for a sound, creative foreign policy. This does not mean that the United Nations dictates foreign policy to us or any other country. But enlightened self-interest dictates that we bend every effort to make the United Nations serve with increasing effectiveness the common and fundamental desires of mankind for a world in which "life, liberty, and the pursuit of happiness" are not only possible but attainable.

Our National Heritage

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. UTT. Mr. Speaker, as today marks the opening of the Jamestown festival marking the 350th anniversary of the founding of Jamestown, it is my pleasure to insert into the CONGRESSIONAL RECORD a talk given by Dr. Ernest S. Griffith, Director of our Legislative Reference Service in the Library of Congress, entitled "Our National Heritage." This talk was given in February before our prayer breakfast group and has been since delivered on other occasions. it is one of the finest statements of our national heritage that I have had the privilege to hear, and I am placing it in the RECORD that others may take advantage of the same privilege:

OUR NATIONAL HERITAGE

This year marks the 350th anniversary of the founding of Jamestown. All over these United States the thoughts of men are devoted to the memory of our heritage, and the prayers of men are lifted that we may be faithful to this heritage. It is therefore fitting in this month of February, the month which is marked by the anniversaries of so many of the great men who have cherished this heritage, that in this Nation's Capital and in this group which acknowledges the God of our fathers, we should pause a while and examine the heritage itself.

There are so many things that might be said. We could talk about our language and literature. We could extol the great common law. We could dwell upon the theory of natural law which acknowledges the primacy of God in the laws of man. All of these themes would be appropriate.

Out of the many, many elements in our heritage which deserve honor, I would today single out 3 or 4 strands which are pecu-

larly appropriate to this prayer group. I regard them as peculiarly appropriate because it seems to me that each of the first three I shall mention has been greatly influenced by the fourth—which is our religious tradition. These three are constitutionalism, private enterprise, and the value we place on activity. May we consider each in turn?

For lawmakers the first and most obvious element in our national heritage is its tradition of constitutionalism. This tradition is not necessarily a tradition of democracy. That which came down to us from Magna Carta and from England was rather a belief that the sovereign was responsible under the law, that there were limitations to power—not that power must be widely shared. The earlier charters of Virginia, aristocratic as they were in their provisions, were miniature constitutions describing powers and duties of the governors and the governed. The Tudors of England were obligarchs, but they were oligarchs who acknowledged responsibility under the law to the welfare of England. It cost their successors, the Stuarts, a head and a throne for the English to prove to them that the divine right of kings had no place under English law.

A long history lay between the earlier aristocracies and oligarchies of most of the American Colonies and our democratic Republic of the present day. The strand that binds the old and the new together is not a broadly based popular suffrage—this came later—but a sense that governor and governed alike should be moral beings operating constitutionally. The frontier in due time was to hasten the spread of popular government. The fourth tradition, of which I spoke, itself played a part in setting the course of our government. Its religious expression took the form of the dignity and sacredness of the individual—that the individual had a soul, that he was a child of God. This is the authentic voice of the Declaration of Independence: That man is endowed by his Creator with certain unalienable rights. The American Revolution was based upon the twin ideas of the dignity of man and constitutionality in government. This tradition of constitutionalism declares war equally upon the tyranny of the dictator and the irresponsible tyranny of a majority rule which would violate the basic rights of man.

A second great element in this heritage of ours is the tradition of private enterprise, of the capitalist system. The people who came to Jamestown and those who sent them for the most part wanted to make money. There were exceptions among the early settlers of the United States of which the Pilgrims were perhaps the chief, but with varying degrees most of these early settlers came to better their economic conditions. They were enterprisers or they came as the result of enterprisers, individual and corporate. They were businessmen, and workers, and farmers looking for a living, not ashamed of the profit system. Britain, and for that matter all of western Europe, had broken loose from the shackles of feudalism. Left behind were the quietness and the dignity of the Middle Ages. Humanity was on the march, a march partly driven by greed, partly by adventure, but always in search of new ways of making a living. This capitalist, profit-seeking motive was and is part of our heritage, and of this we, too, need not be ashamed.

The tradition of our faith played its role in determining the course of this tradition of private enterprise. It would have been easy for capitalism to have become completely exploitive and ruthless. We did go through our era of "the public be damned." British capitalism in particular had its period of child labor and the long hours of women working in the mines, of degredation and poverty. It was in this period of capitalism in Britain that Karl Marx framed that philosophy out of his experience which time was to prove the great and terrible alternative to our own faith and way of life.

Why are we proud of capitalism today? Chiefly, it is because basically our religious faith added the dimension of conscience to the making of money. We in the United States have shown how the creative dynamic of business can unite with the basically religious sense of obligation to the community. Not that business is less successful thereby, but that business at its best becomes an instrument for raising the standard of living of people to a height that humanity has never before known. In the light of this tradition we have declared war on poverty and on the class struggle. Steadily, consistently, the tradition of our religious faith focused the spotlight of its principles upon one flaw after another in the capitalist system. It focused on slavery and slavery wilted under it. It focused on child labor and long hours of work in the mines, and they disappeared under it. It focused on the predatory practices of the capitalism of the 19th century and they too have been thrown back and disciplined in the common good. Today still there are, and probably always will be, frontiers for the fusion of these two traditions, the tradition of business and the tradition of conscience. In this meeting of the two, the tradition of conscience must win, not by the crushing of business but by its consecration, by making business into a profession, so that it may best make its contribution to our national welfare.

A third element in our great history is the tradition of restless activity, the tradition of energy and adventure. This is the tradition of those from Europe who could not bear the conventionalities of their day and age, who wanted nothing of a stratified, dormant society, who had within them that which sent them ever westward. We in the United States have drawn more than our share of the restless, active peoples of the world. Activity, often for its own sake, has marked our national career. Lest we fool ourselves into thinking that this tradition is necessarily a good one, we have only to think of the Germany of Hitler in which, under his leadership, action was made an end in itself, acknowledging no obligations outside the obligation to the greatness of Germany as defined by a madman.

Here too our religious tradition has determined the channels into which this tradition of activity has largely run. It is in this connection that the Puritan element in our heritage has been decisive. It has become fashionable to scoff at the Puritan, and the adjective "puritanical" is today a term of reproach. What a travesty on our national history. It is true that the Puritans went to certain extremes. We know that it was said of them that they were against bearbaiting, not because it gave pain to the bear but because it gave pleasure to the spectators. The pleasures of their day and age were for the most part debilitating and sensual. There are enough such pleasures abroad in our land today for us to understand something even of this point of view. It is not, however, of this which I would speak, nor is this at the heart of the Puritan creed. The Puritan tradition was first of all a tradition of individual responsibility, a responsibility which expressed itself in self-discipline. It was also a tradition of truth. It was a tradition of progress. It fused with the tradition of action and this fusion basically accounts for the great value which we in America today put upon constructive achievement. In this setting, it made its contribution to the stern strand of an individual's responsibility before his God for his conduct—a strand which has not yet, thank God, wholly left us.

Finally, I would speak of the Hebrew-christian religious tradition itself. We have seen how it fused with the other three already mentioned: how it fused with constitutionalism and aided it on its march to popular sovereignty; how it fused with the profit motive and consecrated it; how it fused with action and gave it moral content. These great faiths were of a God altogether righteous. These were faiths that called for belief to translate itself into conduct. We are accustomed to thinking of this heritage as somehow or other peculiarly associated with the Puritans and Pilgrims. But consider John Smith of Virginia. Among the things to which he was commissioned, was to preach to the Indians and save their souls. Whether we talk about the Catholic Calvert in Maryland or Roger Williams in Rhode Island, or the Dutch Calvinists of New Amsterdam, the Quakers of Pennsylvania, the Pilgrims of Plymouth, or the Puritans of Massachusetts Bay, the Presbyterians of the Great Valley, and many another group, here is the element in our tradition which has been the saving grace of our country. This it is which has taken these other traditions and made them into ideas and ideals at the very forefront of the governing principles of our everyday life.

How then shall we honor this heritage of ours? Our traditions are threatened from many sides. They are threatened by materialism; they are threatened by sensuality—and that was what I was thinking of when I stressed the importance of the Puritan element and the importance of fighting to the limit those forces that are threatening it. I am thinking also of threats more subtle than sensualism or materialism. There is the threat of communism. I know that the capitalism which Karl Marx experienced was worthy of much of the censure that he vented on it. But Karl Marx missed this fourth, the religious element in the tradition to which has belonged the victory. And this it is which we oppose to a Communist world, which does not have such faith in the sacredness of the individual. We are threatened also by an existentialism which centers the individual in himself and is doubtful about all else; and which in the end is doubtful about the individual, too. Man is more than a stream of consciousness. We are even threatened by too much exclusive reliance upon knowledge. Did it ever occur to you that millions, hundreds of millions of people today are being taught to read? Did it ever occur to you to question the wisdom of such instruction, if all they then read are Communist tracts or tabloids from the garbage? Education and knowedge are not enough. Ethics to stir the imperative of conscience are still needed.

But how do we best honor our heritage? Not merely by fighting its enemies; but by a great and affirmative dedication. Our tradition is a positive tradition, going forward, not as the Communists go forward, crushing the things that are in their path. Ours is an affirmative tradition, one which says to each and every individual of the world without reference to creed or color, stand on your feet as a man with the dignity of a Child of God.

"Oh beautiful for patriot dream that sees, beyond the years,
Thine alabaster cities gleam, undimmed by human tears!
America! America! God mend thine every flaw.
Confirm thy soul in self-control, thy liberty in law."

Alaska Statehood

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, April 1, 1957

Mr. KUCHEL. Mr. President, the Subcommittee on Territories and Insular Affairs of the Senate Committee on Interior and Insular Affairs is now holding hearings on the question of Alaskan statehood. Statehood for Alaska has the endorsement both of the party to which the distinguished Presiding Officer [Mr. DOUGLAS] belongs, and of the Republican Party.

I ask unanimous consent that an excellent statement by the Secretary of the Interior in favor of Alaskan statehood be made a part of the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

It is indeed a pleasure to appear here today to present this statement, which Secretary Seaton has approved, on the subject of statehood for Alaska. As many of you know, Secretary Seaton has for a number of years been a staunch advocate of immediate statehood for Alaska and Hawaii.

Secretary Seaton is still confined to Walter Reed Hospital for treatment for a back injury which flared up during his recent inspecial trip to Hawaii. He asked me to inform you that he volunteers to meet, if you should so wish, with your committee or representatives of it, at Walter Reed to discuss further at your convenience the statement I am presenting here today for him.

Before we proceed any further, let me make this clear: The administration's position is that all of the Territory of Alaska should become the State of Alaska. Because of the unique position of Alaska, however, we ask the Congress and the people of Alaska to grant to the President, the Commander in Chief of our Armed Forces, special powers with respect to defense in this area.

Alaska became a part of this country 90 years ago. Its institutions and its economy are characteristically American. The people of Alaska have a vigor and self-reliance such as we ascribe to the men and women of our western frontier a few decades back.

Alaskans have courageously attacked the natural obstacles of their Territory's climate and terrain; they have built houses with modern conveniences, cities with modern facilities. To many thousands of Americans Alaska is home. It is for them a place to live, not a place to exploit and leave.

In 1867, when the United States purchased this vast area for $7,200,000, some called the purchase Seward's folly. The wisdom of this acquisition has now become clear to everybody. For evidence, one needs only to consider Alaska's strategic value to the people of the free world.

For a prolonged period Alaska developed slowly but steadily. In recent years its population and economy have grown rapidly. From 1950 to 1956 Alaska's civilian population increased from 108,000 to 161,000—48.6 percent. This Territory, with an area more than twice the size of Texas, is now reported by C. W. Snedden, publisher of America's farthest north newspaper, to be inhabited by about 212,500 people, including approximately 50,000 military personnel.

For many years fishing has been by far the Territory's greatest industry. Even in 1955, a relatively poor year, the aggregate wholesale value of this industry's output amounted to almost $70 million; 24,619 persons were at work in the Territory's commercial fisheries; of these, 6,745 were Indians, Eskimos and Aleuts. In 1955 employment in these commercial fisheries increased by 1,540 persons over 1954, an increase of 7 percent. The 1956 preliminary figures indicate that the salmon catch has increased about 25 percent.

Even more significant is the fact that new industries, based on such Alaskan products as pulp and timber, are being established. In all of these new operations, Alaska's timber will be managed on a sustained yield basis, with adequate provision for replenishment of the forest reserve during the cutting cycle. The first major pulp plant in Alaska, the Ketchikan Pulp Co., which began operations in 1954, is one of the most modern in the United States.

Representing an investment of more than $56 million, the plant was built as a joint enterprise of the American Viscose Corp. and the Pudget Sound Pulp & Timber Co. The plant uses modern methods which provide efficient production of pulp and, incidentally, do not cause pollution damage.

Other significant pulp and timber developments are expected at Sitka and Juneau. At Sitka the Forest Service of the United States Department of Agriculture has contracted with the Alaska Lumber & Pulp Co. for the sale of 5.25 billion board-feet of timber. This company proposes the construction of a pulp plant with a capacity of approximately 300 tons per day.

In the Juneau area the Georgia-Pacific-Alaska Co. proposes another large pulp plant based on 7.5 billion board-feet of timber from the Tongass National Forest. At Wrangell a preliminary award of 3 billion board-feet has also been made to the Pacific Northern Timber Co.

These developments are being made by large, substantial investors. The facilities will be permanent. They represent faith in the future of Alaska, its resources, and the American way of life. Such economic development will, I am confident, be accelerated at even a greater pace when Alaska becomes a State.

The outlook is similarly encouraging when we consider Alaskan mining.

Although most of it is now being done for gold, coal and sand and gravel, other minerals are receiving attention.

Investigations of the Klukwan iron-ore deposits in the vicinity of Haines in southeastern Alaska are being made. The Klukwan site contains several billion tons of rock with about 13 percent magnetite iron.

Other iron deposits in southeastern Alaska have been studied by Government agencies and private concerns. The Utah Company of America is leasing deposits on Prince of Wales Island.

The past few years have witnessed renewed interest in copper deposits in the Cordova and Valdez areas on the Gulf of Alaska. Another promising copper prospect is located on the Kobuk River in the second judicial division.

Work is also being done on nickel deposits. The mercury occurrences in the Kuskokwim-Bristol Bay area are described as among the most promising in the country.

The widespread interest in oil and gas is well known. About 5 million acres of Alaska are now under oil and gas leases.

These facts, and many others, are evidence that, as America's last frontier, Alaska is a land of opportunity. Her great forests, her tremendous and as yet barely tapped natural resources will, I believe, continue to assure her economic growth for generations to come.

Alaska, as Hawaii, bears its full share of the burden of Federal taxation. In fiscal 1955 Federal internal revenue collections from Hawaii amounted to $126 million; from Alaska, they were $44.5 million. The per capita income-tax collections in Alaska for 1955 were higher than the per capita collections in 6 States. Tax collections do not, however, adequately reflect Alaska's current industrial activity; many large taxpayers doing business in Alaska file their Federal tax returns elsewhere.

In January of this year, I visited the major population centers of Alaska, discussing statehood with many people. Although some sincerely opposed Alaska's admission as a State, I became firmly convinced that the majority of Alaskan residents favor statehood. This was demonstrated in 1946, when by referendum the residents of Alaska favored statehood by a vote of 9,630 to 6,822, approximately 3 to 2.

The arguments against admitting Alaska are not new. When statehood was sought for my home State of Nebraska in 1867, the same year that Alaska became a Territory, objections were made that the population was not sufficient and that the burden of State government was being forced upon the residents of the Territory against their will. The great Daniel Webster thought even California should not be let into the Union. Objections such as we hear today about Alaska have been heard many times before in our history—objections to the admission of States that now hold up their share of the national effort and contribute actively to the well-being and strength of the entire Union.

These objections have brought forth forceful and cogent replies. One of the most forceful and cogent was made by Senator William H. Seward, of New York (who later, as Secretary of State, arranged for the purchase of Alaska), when he urged, in 1858, the admission of Oregon as a State. While a Member of the United States Senate, speaking in favor of statehood for Alaska, I quoted from one of Senator Seward's speeches in support of the admission of Oregon. Senator Seward's words, pertinent today, are these:

"In coming to this conclusion (to support the admission of Oregon as a State), I am determined by the fact that, geographically and politically, the region of country which is occupied by the present Territory of Oregon is indispensable to the completion and rounding off of this Republic. Every man sees it, and every man knows it. * * * There is no Member of the Senate or of the House of Representatives, and, probably, no man in the United States who would be willing to see it lopped off, fall into the Pacific or into the possession of Russia or under the control of any other power; but every man, woman, and child knows that it is just as essential to the completion of this Republic as is the State of New York, or is the State of Louisiana, on the Mississippi. It cost us too much to get it, we have nursed and cherished it too long, not to know and feel that it is an essential part. * * *

"Well, then, she is to be admitted at some time, and inasmuch as she is to be admitted at all events, and is to be admitted at some time, it is only a question of time whether you will admit her today, or admit her 6 months hence, or admit her a year or 7 years hence. What objection is there to her being admitted now? You say she has not 100,000 people. What of that? She will have 100,000 people in a very short time. * * *

"For one, sir, I think that the sooner a Territory emerges from its provincial condition the better; the sooner the people are left to manage their own affairs, and are admitted to participation in the responsibilities of this Government, the stronger and

the more vigorous the States which those people form will be."

With this background in mind, I should like to consider the legislation now before you. As you remember, the President, in his budget message of 1957, said:

"I also recommend the enactment of legislation admitting Hawaii into the Union as a State, and that, subject to area limitations and other safeguards for the conduct of defense activities so vitally necessary to our national security, statehood also be conferred upon Alaska."

Our report to this committee contains amendments which have been prepared to implement the President's statement. These amendments will permit the President to create special national-defense withdrawals over which the Federal Government may exercise exclusive jurisdiction in the area north and west of the geographic line described in our proposed section. However, even within these areas, when withdrawals are established, residents will continue to have the right to vote in all Federal, State, and local elections; the functions of the few municipalities and school districts will continue to be performed by those subdivisions. The right to serve civil or criminal processes within such areas will also be reserved to the State.

Upon the issuance of an Executive order or proclamation exclusive jurisdiction will be establishde in the United States. This will vest in the Federal Government all legislative, executive ,and judicial powers over the area within the special national-defense withdrawal. The laws of the State of Alaska would be adopted and enforced as Federal laws. The State would retain all powers necessary to prescribe voting requirements and procedures and the right to enforce its voting laws within the special withdrawals. Our intent in this regard is to assure that the State and local elections be entirely free from any Federal interference.

The exclusive Federal jurisdiction, until Congress provides otherwise, will be exercised in accordance with the provisions of our proposed section 10 (d). Briefly, this section is intended to accomplish the following: (1) General laws applicable in the area when a special withdrawal is made will be adopted as Federal laws, and during the period of special withdrawal the President will designate who will administer these laws; (2) laws pertaining to local political subdivisions will remain in effect and, by virtue of our amendments, the municipalities and school districts will continue to be administered by local authorities. Again our intent is to make certain that local political subdivisions will function under local laws despite any withdrawal that may be made, subject only to the requirement that any law or ordinance of, or pertaining to, such local political subdivision which is inconsistent with the full use and operation of any special national-defense withdrawal shall be inoperative during the period of such withdrawal.

The Federal district court for Alaska will be given exclusive jurisdiction over all civil and criminal actions arising within any wthdrawal made pursuant to section 10.

We think it is significant that the chamber of commerce of the city of Nome, the largest city north of the section 10 line, has publicly announced that the proposal outlined here today is endorsed by Nome residents.

With the consent of the people of Alaska, as provided in section 8 of the bills before you, these amendments will give to the President authority similar to that now available to the Federal Government in 25 States, pursuant to either the Constitutions or statutes of those States. In effect, the people of the new State will agree to exclusive Federal jurisdiction over the designated areas, if such withdrawals are made. Renumbered section 11 provides protection for defense areas established heretofore.

One of the questions I have often been asked concerning our suggested amendments is: What will be the status of Alaska's natural resources, including commercial fisheries, if this proposal is adopted by Congress? Alaska's jurisdiction, prior to any withdrawal, will extend not only to the whole of Alaska, but also to the three-mile limit in the tidal areas. If a withdrawal encompassing tidal areas is made, the laws of the State applicable thereto will be adopted and enforced as Federal laws.

We assume that these amendments will, therefore, give Alaska full opportunity to assert such State control as Alaskans deem necessary over this segment of their economy. Should a withdrawal be made prior to formal admission of Alaska as a State, Congress will have the power to adjust existing laws within such withdrawal to those of the State, if such action is necessary. In any event, after statehood Alaskan laws will govern. Only the enforcement of such laws will be the responsibility of the Federal Government in areas within a special national defense withdrawal when made.

The portion of Alaska subject to possible future Federal withdrawals contains approximately 276,000 square miles. It has a present population of about 24,000 people. About 5,000 of these are in military service, or are in the civilian employ of the Department of Defense; approximately 15,000 are Indians, Eskimos, and Aleuts. The Bureau of Indian Affairs of the Department of the Interior will continue its trusteeship for these natives after statehood. Because of the relative isolation of this part of Alaska, we feel that this remote area may be dependent upon the Federal Government for many services for some time to come. For instance, two-thirds of the schools in this area are now maintained by the Alaska Native Service. Even in the Territorial schools there, the ANS supports over 1,100 native schoolchildren—almost one-third of the total enrollment.

There are vast mineral resources in this area which are necessary for the full development of the population centers already established in Alaska. The Gubic gas field, located east of Naval Petroleum Reserve No. 4, and within Public Land Order 82, is a good example. Estimated to contain 300 billion cubic feet of gas, the portion of this structure outside Naval Petroleum Reserve No. 4 covers about 20,000 acres. The Department of the Interior has been informed that plans are being considered which would provide private financing (about $45 million) to develop this field and transport the gas by pipeline to the nearest market center in the rail belt area, encompassing the major cities of Fairbanks and Anchorage as well as four major military installations.

Members of the Senate and the House of Representatives deserve unqualified commendation for the long hours, the energy, and the careful thought which they devote to the problems of the Nation's Territories and island possessions. I have been particularly impressed by the attention given legislation affecting these areas, because I recognize that the peculiar problems of the Territories are somewhat remote from the everyday interests of most Senators and Congressmen and of their constituents.

To confirm my own impression of that point, I had a check made as to the volume of Territorial legislation considered by Congress recently. No less than 59 separate bills handled by this Territories Subcommittee were enacted into law during the last Congress; 30 of those laws (just over half) related solely to Alaska. Among them were very important legislative items. For example, the Alaska Mental Health Act, a long-overdue reform which enables Alaska to care for her mentally ill in the Territory, was enacted in the face of widespread public misunderstanding of its purposes.

Other legislation permitted Alaska to incur bonded indebtedness, dealt with the Alaska constitutional convention, provided for a system of public recreation facilities in Alaska, authorized a survey program on water resources, gave Alaska the same share of receipts from her national forests that States receive, permitted advances to the Territory under the Federal Unemployment Act, and cleared up several troublesome land problems. Each and all of these bills had the approval of the Department of the Interior. The record of action on Alaskan matters in recent years has been fruitful.

We believe, however, that statehood will for the first time not only give Alaskans a full opportunity to their rightful heritage as full-fledged citizens of the United States but also will enable them to develop Alaska's natural riches and thereby enlarge their contribution to the economic good of all America. The transition period and the early years of statehood may, of course, pose serious problems for the new State. For that reason we have recommended adoption of the relatively generous provisions of recent statehood bills for land grants and financial assistance.

The Bureau of the Budget has cleared S. 49, provided that the safeguards discussed in the budget message are included; and the Bureau has added the following recommendations:

"Alaska was recently brought under the Federal-Aid Road Act by section 107 of the Federal-Aid Highway Act of 1956 (Public Law 627, 84th Cong.). It is recommended, therefore, that section 20 of S. 49 be eliminated, and that any special provisions needed for Alaska to participate as a State in highway apportionments be determined when the Congress considers future highway acts."

The Department of the Interior will expedite the presentation of an appropriate highway program for Alaska in order that Congress may consider whether the formula for Alaskan participation in the highway program should be revised. This program will include recommendations concerning transfer of title to public roads and trails to Alaska, and concerning financial assistance to Alaska for road maintenance during the transition period. Of course, this proposal will have to be cleared with the Bureau of the Budget.

My statement does not attempt to analyze in detail every individual item in the various statehood bills before you. As this committee well knows, final drafting of statehood legislation requires careful study of a multitude of details relating to land, to financial relationships, to procedures required for the change of status, and the like.

The officials of the Department of the Interior are, of course, at the disposal of this committee for any information you may desire or any other service you may want.

The Moral Issue That Confronts Labor

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. UDALL. Mr. Speaker, this is a time of trouble for organized labor in our country. Recent disclosures have raised a cloud of suspicion over some elements in labor.

Last Wednesday I expressed the opinion that teamster officials Beck and

Brewster were morally unfit to serve as officers of any union, and I urged teamster locals in Arizona to lead the way in ousting these men. Two days later the executive council of the AFL–CIO suspended Beck as vice president and council member because his actions had brought the labor movement into disrepute.

The swiftness with which the executive council moved was an encouraging sign. The labor movement faces a moral crisis, and its responsible leaders have good reason to fear that the cause of unionism will be seriously undermined unless wrongdoers are dealt with summarily.

Yesterday the Sunday magazine of the New York Times carried a timely and forceful article on the present labor crisis. It is written by A. H. Raskin who for more than 25 years has specialized in labor reporting for the Times. I present this article herewith:

THE MORAL ISSUE THAT CONFRONTS LABOR

(By A. H. Raskin)

They came to tell Andrew Furuseth, the tall, gaunt Norseman who founded the Sailors Union of the Pacific, that he might have to go to jail for violating a no-strike injunction. He looked around the roach-ridden hall bedroom that was his home.

"You can put me in jail," he said. "But you cannot give me narrower quarters than as a seaman I have always had. You cannot give me coarser food than I have always eaten. You cannot make me lonelier than I have always been."

Now the Lincoln of the sea is 19 years dead, and the headlines reek with the exploits of a new generation of labor leaders to whom austerity is a long-discarded companion. Each day of the Senate inquiry into the high command of the International Brotherhood of Teamsters adds a twisted chapter to the American dream—mansions, hand-tailored suits, costly automobiles, racing stables, and a host of other luxuries arrogated to themselves by officials who saw no real line between the union's money and their own.

The recital of financial manipulations by the heads of the country's biggest and strongest labor organization that make Charles Ponzi sound like a candidate for the Securities and Exchange Commission presents a moral challenge as fundamental as that raised by robber barons of industry a half century ago.

While the rest of the labor movement has pledged itself to live by a rigorous code of ethical practices, leaders in a few strategic sections have absorbed the ethics of the market place at the lowest level. Men whose estimate of humanity is summed up in the phrase, "there is nothing and nobody you can't buy," have turned their unions into caricatures of business.

This immolation of ideals is not new in labor any more than it is new in industry or politics. As long ago as 1900 Samuel Gompers felt it necessary to warn the infant American Federation of Labor that "self-seekers, political hucksters, and financial charlatans" were seeking to fasten their fangs in unions. Thirty years later Al Capone took command of Chicago labor and Louis (Lepke) Buchalter and Jacob (Gurrah) Shapiro established dominion over New York. Both gangs hired out impartially to management or labor, and their take ran into the millions each year.

What makes the problem more urgent now is not that there are more crooks wearing union buttons but that the vast growth of union treasuries and welfare funds has made the stakes much bigger. Concentrations of union power on regional and national lines have brought a matching federation of the underworld forces preying on labor. For the first time there are signs of an interlocking directorate of crime operating in a variety of unions, with the teamsters as the hub of racket penetration.

Even this evades the heart of the problem. The real question transcends the crooks and transcends the teamsters. It is whether in our full-employment, high-wage economy, the single word "more" is an adequate ideological basis for organized labor or any other group. The confidence of Dave Beck and his associates that their 1,400,000 members will forgive anything so long as their pay envelopes keep getting fatter and their working conditions less burdensome in the external expression of a basic ethical problem.

The speed with which unions have raced from penury to power has aggravated for them a problem industry had a much longer time to get used to. A short quarter century ago 13 million workers were jobless not because of strikes but because there was no work. Unions that today have tens of millions of dollars in their custody had to withhold stenographers' pay and wheedle a few dollars from loan sharks to get their lights turned back on.

In those days "more" had a meaning that could quicken men's spirits as well as fill their bellies. Philip Murray translated it best in the early days of the Congress of Industrial Organizations.

"Organization fundamentally means but one thing," he said, "and that is clothing and bread and butter and pictures on the wall and carpets on the floor and music in the home and enlarged opportunities for children to receive the benefits of better education. The work of organizing rises so far above men and so far above triviality that men who are interested in kids, men whose souls and hearts and minds beat in unison with the aspirations of little children and toiling men and women will loan their bodies and their souls and their brains and everything that God has given them in this work of organizing."

It was not unusual in that turbulent period for union constitutions to specify that the president was to earn no more than the highest-paid mechanic. The pay ceiling had the double purpose of enabling him to understand first hand what his members needed and to remind him that he might one day find himself having to earn his livelihood at a machine again.

But as unions became big business the popularity of the hairshirt receded. The emergence of national bargaining and the increasing complexity of union affairs inevitably carried even the most zealous leader away from intimate contact with his rank and file. He became a manager of labor in the same way that the executives who sat opposite him at the bargaining table were managers of industry.

He tended more and more to make himself over in their image—his salary went up, he pressed for an opulent union headquarters, he stayed at the best hotels and complained if his suite was not pretentious enough, he rode in a Cadillac, he joined a country club. And every time he took another step toward the scale of living that is common in the upper echelons of industry, he made it that much harder ever to contemplate going back to the shop as a rank and filer.

He took good care of his members. He saw to it that they got substantial wage increases and benefits that compared favorably with those anyone else was getting. He had no new worlds to conquer on the organizational front; strikes were increasingly infrequent; long-term contracts eased the bargaining task. The management of money—his own and the union's—became his ruling interest.

Obviously, this is not a picture of all labor leaders or even of most labor leaders. But it is true enough of them to make a Walter Reuther exceptional when he insists on keeping his salary within hailing distance of his members' income, on taking his family to the AFL–CIO midwinter meeting at Miami Beach in a coach plane, and on squeezing his morning orange juice in his hotel room to save the price of breakfast. And to cause a general coolness when leaders in such lightly unionized fields as textiles or agriculture press too energetically for organizational assistance from their more affluent brothers.

One union leader devotes his entire morning to reading the stock exchange prices and the racing form and to placing his investments in both areas. Another draws on union funds to dabble in securities for his personal account. He splits his profits with the union, 50–50. No one is quite sure what happens when his stocks go down. Still another leader, now dead, used to deposit the union's dues receipts a week late. In the interim he would speculate in grains. "The union never lost a penny," was his boast.

One union held its executive board meeting in Las Vegas with the explicit understanding that any member would be sent home if he brought his wife. The teamsters were more considerate of the distaff side. When they held a 2-day board meeting in Honolulu last year Beck instructed all the vice presidents and functionaries to bring their wives at the union's expense. Most of the group traveled both ways by ship and took a leisurely tour of the islands to round out their journey. Portal to portal, the union heads were away from their offices a solid month.

One may accept Jimmy Hoffa's assertion that a union leader doesn't have to wear baggy pants or drive a beat-up jalopy to prove his devotion to the rank and file, and still feel that mammon has pushed idealism out the window in many unions. This is said with full recognition that unionists have a long way to go before they catch up to the top level of industrial salaries, and that there is no real likelihood they will even try.

The highest pay any unionist gets is $60,000 a year—a bush-league salary by corporate standards, and there are no stock options or deferred wages to swell the total. And, even with all the ingenuity some unionists have been exhibiting in organizing world tours at union expense, those who operate legitimately have yet to achieve the kind of expense accounts, yachts, planes, and other perquisites the Government approves for business executives.

But the labor movement is not a business organized for profit. It is a vehicle for the advancement of human dignity, and one might expect those who embark on careers of union responsibility to embrace a concept somewhat divorced from the measuring rods of the market place.

When union salaries started going up, one justification was that leaders would be less susceptible to bribes and other forms of corruption if their paychecks were big enough to keep them and their families in comfort. However, the greed displayed by some teamster executives in helping themselves to unrecorded, interest-free "loans" from the union treasury and in billing the organization for everything from toothpaste to wall-to-wall carpeting indicates that a faithless leader will not be made less so by a high basic salary or a generous expense allowance.

The miscarriages of the entrepreneurial spirit uncovered in the Senate investigation make it clear that the heads of this key union are as intent on diversification as any corporation seeking a larger yield through the development of new product lines. Any

investment from gambling to real estate is all right if it promises a profit.

George Meany, president of the united labor movement, has left no doubt of his own indignation at the blithe manner in which the teamster chiefs dipped into the funds they were supposedly holding in trust for their members. There is in this big, blunt man, brought up in the mare's nest of the New York building trades of 30 or 40 years ago, a basic incorruptibility that is even more impressive than the moral fervor of the crusaders who learned unionism in the crucible of the mass production industries in the great depression.

It was no accident that he reminded the country a few days ago that Gompers was not thinking only of dollars and cents when he made his classic statement that what labor wanted was more. This was Gompers' testament, as Meany chose to recall it:

"I do not value the labor movement only for its ability to give better wages, better clothes, and better homes. Its ultimate goal is to be found in the progressively evolving life possibilities in the life of each man and woman. My inspiration comes in opening opportunities that all alike may be free to live life to the fullest."

All this may sound a little amorphous as an antidote to the crass realities of the teamster situation. Meany is not counting on it to bring religon to the Becks, the Brewsters, and the Hoffas. For their benefit the federation has drawn up an exhaustive list of don'ts intended to outlaw every form of chicanery and conflict of interest.

Three smaller unions already have been put on notice of expulsion from the mainstream of labor if they fail to clean house in conformity with this ethical code. (When the ultimatum was handed to leaders of the three unions in Miami Beach last month, all three headed for Hoffa with the directness of homing pigeons.)

The teamsters will get no tenderer treatment unless they show a greater readiness to reform than they have exhibited up to now. Indeed, some AFL–CIO executive council members predict that Beck will wish he were back before Senator McCLELLAN by the time Meany finishes with him at the next council meeting.

It is already plain that the labor merger of 16 months ago vastly strengthened the clean-union forces and checked the spread of pollution from the teamsters into the rest of labor. But whether the infection count can be kept down and, more important, whether the teamsters' own stable can be cleansed depends on the vigor of the allies the AFL–CIO high command can find outside its own ranks.

The federation recognizes that no lasting social good would be accomplished by cutting the 1,400,000 teamsters adrift under their present leadership. It tried that course 4 years ago with the crime-steeped International Longshoremen's Association, but the combined onslaught of all the forces of labor and of Federal, State, and local government failed to break the ILA stranglehold on the port of New York or to dislodge its corrupt rulers.

The federation's hope in the teamster mess is that the McClellan committee's revelations, coupled with the moral force labor intends to generate against the Beck-Brewster-Hoffa clique, will bring forth a new leadership with enough appeal to the rank and file to allow a housecleaning from within. If any of the present chiefs go to jail, that will simplify the task. But the results will be nil if a shadow administration to take their places is elected at the union's convention in Miami Beach this September.

To prepare the ground for a genuine cleanup will require a new willingness on the part of employers in the trucking industry to stand for decency. When the Senate committee turns its attention to New York in the next few weeks, it will add to the abundant record of collusion between employers and union leaders. In some branches of trucking, as on the waterfront, piratical elements on both sides have entered into mutually advantageous deals, with the public paying the freight.

On the national scene, the picture is one of utmost cordiality between the biggest of the trucking bosses and the biggest of the union bosses. The employers swear by all of the big three on the union side as men who know the trucking business and never renege on their word. Their testimony would be more impressive if the record of other inquiries were not full of similar testimonials to the Joe Fays and Joe Ryans.

The rank and file, long used to docility, will have to find its voice. It is doubtless true that many workers are held back by fear of physical violence or of blacklisting for jobs. The same goes for many subordinate leaders and local officials of faultless integrity. But often the membership is not even inclined to rebel. They are content with good wages and steady work.

"So long as we get ours, let them get theirs," is the philosophy of many teamsters. And it is precisely that philosophy that the men in the driver's cab count on to carry them through the present unpleasantness.

Here again the history of rackets in other industries in other years offers little solace to those who hope for a great avenging wave from below. Betrayers like Sam Parks, "Tootsie" Herbert and "Socks" Lanza retained the support of their followers long after their sellouts had resulted in court convictions and jail sentences for themselves.

If the teamsters are cynical, the fault lies not alone with them. They are convinced that rackets are everywhere from the cop on the beat to the legislators in Congress, the State legislature and city hall. They think industry gets away with murder while labor always gets it in the neck. These are atavistic notions perhaps, but they help explain why a man like Jimmy Hoffa, who comes closer to the hank-and-file teamster than any of his colleagues, might feel he needed his own FBI to counter the FBI the Government sent after him.

Undoubtedly, part of the remedy for the conditions shown in the McClellan investigation lies in tighter enforcement of present laws and in the development of new legislative safeguards. There is an obvious need, for example, for additional controls over union funds, even to the point of imposing the legal obligations of trustees on the custodians of union money. But care must be taken not to handcuff unions in the financing of strikes or organizing campaigns.

Basically, however, what we suffer from seems to be not a shortage of laws but a shortage of dedicated men in positions of authority in every field that impinges on our industrial system. If there are men who want to cut corners on union obligations or to make under-the-table profits for themselves or loot their union treasuries, they will find their way around any law.

There are books full of statutes about prostitution and gambling, but it is doubtful that any significant part of the Portland vice story would have come out if one of the chief architects of the racket empire had not felt he was being doublecrossed. For every abuse the Senators find in the whole field of labor-management relations, they will almost certainly leave a dozen unexplored or unknown. And even those they bring under their searchlight may go right on flourishing with the willing cooperation of both sides, once the heat is off.

The only hope for a real reformation lies in the painfully slow process of winning a basic acceptance among employers and unionists that there is something more important than a fast buck or a peace bought at the expense of the worker, the stability of the industry or the welfare of the community.

The merged labor federation is making a heroic and intelligent effort to infuse a healthier moral climate into the union side of industrial relations. It is going to the membership of all its unions with the message that the best protection against corruption in health and welfare or any other union activity lies in a "vigilant, informed and active membership, jealous of their rights and interests." It already has kicked out the chief of one directly affiliated local that had held no membership meeting in 5 years.

It intends to make democracy in unions something more than a mumbo-jumbo of constitutional forms. The huge United Automobile Workers Union is about to follow the lead of the tiny Upholsterers International Union in establishing an outside appeals court of distinguished citizens to pass on complaints by members who feel they have not had fair treatment from the union's own disciplinary machinery. There is room in between for other unions interested in convincing the rank and file that they can challenge the men at the top without being railroaded out of the union by a packed court.

Labor has no delusions about its ability to do the whole job alone. It recognizes the debt the cause of clean unionism owes to such anti-racket campaigns as those run by Thomas E. Dewey in his days as special prosecutor in this city, the State crime commission and Senator PAUL H. DOUGLAS' subcommittee on welfare funds. It hopes for similarly constructive results from the present inquiry.

But its task will not be made easier if those who have always hated unions try to capitalize on the teamsters' troubles to undermine labor's bargaining and organizing strength. The only result of such an effort would be to force the honest men to make common cause with the crooks against the forces in industry and the Government who should be their stanchest friends.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

The Allegheny River Reservoir Project

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. GAVIN. Mr. Speaker, in view of the fact that I have had many inquiries relative to the Allegheny River Reservoir project, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a speech by Col. H. E. Sprague, Corps of Engineers, district engineer, Pittsburgh, Pa., before the board of trade of Salamanca, N. Y., at their annual dinner meeting held Monday evening, April 1. Also, to include a statement by Colonel Sprague on the relationship between the Allegheny River Reservoir project and the Allegheny-Seneca Reservations:

THE ALLEGHENY RESERVOIR

(Remarks by Col. H. E. Sprague, district engineer, Pittsburgh district, Corps of Engineers, United States Army, at annual dinner, board of trade, Salamanca, N. Y., April 1, 1957)

From reading news releases, editorials, and letters to the editor, I have the distinct impression that you people have been subjected to considerable propaganda, some true and some untrue concerning the Allegheny River Reservoir. This may be due in part to lack of factual information, but some of the statements made are undoubtedly the result of freewheeling imagination.

A project such as the Allegheny Reservoir would not come into being solely by recommendation of the Corps of Engineers. Such projects are initiated by the people in affected areas. Under our democratic procedures the Corps of Engineers by congressional directive investigates and reports. Favorable reports may result in authorization of the project by Congress. The Allegheny Reservoir project was authorized by the Flood Control Acts of June 22, 1936, June 28, 1938, and August 18, 1941. Perhaps at this time some pertinent data on the reservoir would be helpful.

ALLEGHENY RESERVOIR

Cost estimate, $101 million.
Drainage area, 2,190 square miles.
Maximum storage, 1,125,000 acre-feet.
Elevation crest, flood spillway, 1,365 feet.
Elevation, stream bed, 1,200 feet.
Elevation, winter pool, 1,292 feet (January 1).
Winter conservation storage, 215,000 acre-feet.
Winter flood storage, 910,000 acre-feet (7.8 inches runoff).
Elevation, summer pool, 1,328 feet (June 1).
Summer conservation storage 540,000 acre-feet.
Summer flood storage, 585,000 acre-feet (5.0 inches runoff).
Elevation reached annually, 1,330 feet.
Elevation reached 2-year frequency, 1,335 feet.
Elevation reached 5-year frequency, 1,340 feet.
Elevation reached 10-year frequency, 1,344 feet.
Elevation reached 25-year frequency, 1,350 feet.
Minimum flow recorded at Kinzua gaging station, September 15, 1936, 123 cubic feet per second (1935-date), September 23, 1955, 188 cubic feet per second.

Such low flows would be augmented by reservoir releases of at least 2,000 cubic feet per second. During periods of higher natural streamflow reservoir releases would be reduced but not to less than 500 cubic feet per second. Warren would thus be assured of a minimum flow in the Allegheny River of the latter volume.

Design flood (spillway), 222,000 cubic feet per second.

Flood stage, Warren, Pa., 14 feet (45,000 c. f. s.). Damages begin at 12 feet equals 36,000 cubic feet per second (March 1956; 18.4 feet equals 75,000 c. f. s.; $4,500,000 damage).

SMALL DAMS VERSUS LARGE DAMS

Some conservationists will claim that a panacea can be found in soil-conservation measures and the construction of myriads of very small dams located up to the highest reaches of the headwaters. Now do not misinterpret what I am saying, the Corps of Engineers is wholeheartedly in favor of soil-erosion control and all sound means of accomplishing it, but has its limitations for flood control as was recognized by the Soil Conservation Service when it wisely sponsored a program of small dam construction to supplement soil-conservation practices. These small dams have little, if any, effect upon soil conservation, which generally must be accomplished upstream of the dams, but they may have flood control and water-storage benefits. The Corps of Engineers recognizes the merits in small dams, as well as medium and large dams, and believes that in studying a basin the combination of dams of all sizes, along with other measures which will best accomplish the development sought is the solution that should be adopted. We realize, of course, that small dams, by their very nature, flood more land than large dams of the same aggregate capacity. For instance, a reservoir with an average depth of 80 feet will flood out only one-eighth the land that will be flooded by a number of smaller reservoirs with an average depth of 10 feet. Another important factor is that a large dam intercepting runoff from a large area need be designed to accommodate only a few inches of rainfall, for even in the greatest storms the average precipitation over the whole watershed will not be extreme. On the other hand, in order to provide an equal degree of safety and flood protection, each small dam must be designed to handle the heavy downpour of the heart of a storm, all of which may be dumped in its small watershed. A third factor, also requiring greater aggregate storage in small dams than in large ones, is the fact that small dams generally do not have controlled outlets whereas large ones do, and thus can safely release water in controlled amounts so as to more effectively utilize the capacity available. Small dams also waste vast quantities of water by exposing it to evaporation in many shallow sheets. Nevertheless, small dams are the proper engineering and economic solution to the flood-control problem in some areas, and we favor their construction where such is the case. In fact, we urge your support of the upper watershed-treatment program sponsored by the Soil Conservation Service of the Department of Agriculture.

The broad valleys of the upper Allegheny River system are favorable physically in many reaches for the development of storage reservoirs. However, the preemption of the valleys by railroad and highways, other extensive developments, and length of dams required, would result in high cost of storage capacity. Storage, if provided, in the least developed valleys would have small tributary drainage only which if controlled would have little effect on stages at Warren and downstream areas.

The area which would be occupied by the proposed Allegheny Reservoir between the dam site and Salamanca is relatively undeveloped in comparison to the area above Salamanca.

The principal tributaries of the Allegheny Reservoir above the dam site together with their drainage areas follow:

Creek:	*Drainage area, square miles*
Kinzua	182
Great Valley	142
Tunungwant	169
Olean	208
Oswayo	248
Potato-Marvin	221
Total of principal tributaries	1,170

The total drainage area which would be controlled by the Allegheny Reservoir is 2,190 square miles, or almost twice that which could be controlled by reservoirs on all of the principal tributaries even if it were practicable to control the entire drainage areas of all of them by means of dams constructed at their mouths. To anyone familiar with the topography and development within the principal tributaries it is obvious that any such system of reservoirs is not feasible. Kinzua Creek Valley offers the only favorable opportunity for reservoir development. The drainage area of Kinzua Creek is, however, only 182 square miles at its mouth.

The principal tributaries entering the Allegheny in the reach between Salamanca and Olean are Great Valley and Tunungwant Creeks, the former at Salamanca and the latter a few miles upstream. Neither tributary lends itself to economic and effective reservoir development. Great Valley Creek is extensively developed. Tunungwant Creek is subject to backwater flooding from the Allegheny River to approximately the New York-Pennsylvania line. Reservoir storage in the lower Tunungwant Valley would result in flooding the city of Bradford, where local flood protection by means of channel improvement to relieve a serious existing flood problem is now in progress. Protection of Bradford by channel improvement was undertaken after extensive studies of the various means for providing flood protection disclosed that there was no reasonable possibility of obtaining the required protection by reservoirs above the city.

The next major tributary of the Allegheny is Olean Creek, which enters the Allegheny River at Olean, N. Y. Extensive flood-protection works have been constructed by the Corps of Engineers at Olean and at Portville upstream therefrom and are authorized for Allegany, N. Y., all as a consequence of congressional authorization and appropriation following study and report. The tributary

area above Olean is 1,164 square miles, including Olean Creek, which enters the Allegheny River at Olean and Oswayo Creek, which enters at Portville. Our studies at these communities did not disclose any reasonable opportunity for economic development of significant reservoir storage.

This office also made detailed investigations of the flood problem at Coudersport near the head of the Allegheny River, resulting in a plan of channel improvement similar to that which was later constructed by the Commonwealth of Pennsylvania. The drainage area at the junction of the Allegheny River and Mill Creek in Coudersport is 80 square miles, of which 48 square miles are in the Allegheny River and 32 in Mill Creek. The possibility of reservoir protection as a solution to the flood problem at Coudersport was investigated and discarded as impracticable.

From the foregoing it should be evident that in the studies that led to the authorization of the Allegheny Reservoir and again in various studies of the flood problem at localities lying upstream from the reservoir this office has investigated the reservoir possibilities of the tributaries in the basin in sufficient detail to indicate clearly that the purposes of the Allegheny Reservoir cannot be served in any significant degree by substitution of a system of small reservoirs on tributary streams.

DIVERSION

A study was made in 1928 by the Corps of Engineers for diversion of flood flows from the Allegheny to Lake Erie. This diversion would begin at Cold Springs and pass through the divide to the Conewango Valley. The Conewango Valley would have a dam at the lower end of the valley and provide storage for hydropower generation on the discharge slope north into Lake Erie. This storage and diversion plan would not be economically feasible for flood protection and was a borderline economic proposition for power generation.

During the public hearing held at Warren in 1946 in connection with the canalization of the Allegheny River to Olean, N. Y., an advocate of diversion presented a variation of the Corps of Engineers' plan for consideration. He proposed a diversion from the Allegheny to the Conewango and then by a dug canal up the Conewango through the divide into the Cattaraugus and down to Lake Erie. This plan was recently revived in newspaper articles. According to the newspapers the diversion canal would be approximately 30 miles long, 10 feet deep, 273 feet wide at the top, 240 feet wide at the bottom, and have a capacity of 10,000 cubic feet per second. According to the newspaper report it would involve the excavation of approximately 80 million cubic yards of glacial deposits. My analysis indicated that the cut from the Allegheny through to the Conewango would be 110 feet deep and 680 feet wide at the top. The depth of cut up the Conewango Valley would vary from 15 feet to 40 feet deep. The cut from the Conewango to the Cattaraugus would be approximately 100 feet deep.

A project whether for flood control, water supply, or any other purpose, must justify itself in the sense that its benefits must outweigh its costs. Keeping this in mind, let us examine the proposed diversion plan to determine economic justification. To make it simple and conclusive, we will exclude the costs of dams, control facilities, real estate, relocation of utilities, railroads, highways, and bridges, and consider only the cost of excavating the channel up the Conewango Valley.

The unit cost for excavation of this type of material under the ground-water conditions which would be encountered is estimated at 75 cents per cubic yard. Eighty million cubic yards would cost $60 million. Now I want to emphasize, this is only the cost of excavation.

When we consider the flood flows of record compared to the amount of diversion, it becomes apparent that the flood-control benefits of the proposed diversion are insignificant. The maximum discharge of the Allegheny in Pittsburgh in March of 1936 was 557,000 cubic feet per second. The proposed diversion would have reduced this by 10,000 cubic feet per second, or less than 2 percent of the total flow.

At Warren the discharge in the Allegheny in March of 1956 reached a stage of 18.4 feet, or 75,000 cubic feet per second; 10,000 cubic feet per second diversion would still have permitted 65,000 cubic feet per second to flow through Warren and 45,000 cubic feet per second at 14 feet on the staff gage is considered flood stage. The damage from the flood was estimated at $4½ million. The Allegheny Reservoir would have reduced the flood stage in the Allegheny River at Warren by 9½ feet to a stage of 8.9 feet. The Allegheny River would have reduced the stage of the flood of March 1956 at other cities as follows: Oil City, 4.6 feet; Franklin, 4.6 feet; Kittanning, 2.8 feet; Pittsburgh, 2.5 feet. At Wheeling, W. Va., where the range in flood stage is greater than at Pittsburgh a reduction of 3 feet would have been effective.

This reservoir, as I previously have stated, would control 2,190 square miles or 18.6 percent of the total drainage area of the Allegheny River above the point in Pittsburgh.

When we consider the relatively insignificant flood-control benefits that would accrue from the diversion project as compared to the benefits from the Allgeheny Reservoir and the comparative costs of the two, it is obvious that economic justification for the diversion does not exist.

The findings of our 1928 report and subsequent studies can be stated as follows:

1. Diversion for flood-control purposes is not economically justified.

2. Diversion for waterpower development would be a borderline proposition economically.

3. The Alleghany Reservoir would be superior economically to any plan of diversion.

4. A major reservoir on the Allegheny River would be required in connection with any effective plan of diversion for flood control or power generation.

5. The Allegheny Reservoir would not preclude the construction of any diversion found to be economically justified at a later date.

SILTATION

There have been articles written that would lead you to believe that our reservoirs are being filled with silt at the alarming rate of 3 or 4 feet per year. The Corps of Engineers has made siltation surveys on 8 of 10 existing reservoirs in the Pittsburgh district.

Two of the reservoirs are located in Ohio, one in West Virginia, four in Pennsylvania, and one partly in Pennsylvania and partly in Maryland. The siltation surveys to date cover an average period of 7 years and 9 months since the reservoirs were completed and put into operation. The life of the reservoirs based on measured siltation to date range from a minimum of 250 years up to 5,000 years with an average life of 1,698 years.

At Tionesta Reservoir, a few miles below the Allegheny Reservoir, siltation tests indicate a minimum life of 1,320 years. It is my opinion that the rate of siltation will be shown to be even less in future surveys.

I think we can safely conclude that in this area siltation in reservoirs is not a serious problem, especially when you consider that the economic justification of the structure is based on an economic life of only 50 years.

I suggest that some of you sportsmen visit nearby Tionesta and East Branch Reservoirs in Pennsylvania to observe conditions of these areas to convince yourselves as to their suitability for reproduction of fish and other wildlife.

TREATY RIGHTS

As I mentioned previously the Allegheny River Reservoir was authorized by the Flood Control Acts of 1936, 1938, and 1941. It was authorized after studies were made by the Corps of Engineers, and were reviewed by the Board of Engineers for Rivers and Harbors, and after Congress gave due consideration to the matter.

The 1936 Flood Control Act contained a declaration of the policy of Congress that destructive floods causing loss of life and property and obstruction of commerce constitute a menace to national welfare and that improvements of waterways for flood-control purposes are in the interest of the general welfare.

When the question of the treaty rights of the Seneca Nation is examined in the light of the Constitution and judicial and legislative precedent, it is evident that the national policy which I have just stated can be satisfied consistent with good faith to the Senecas.

Congress in the exercise of its constitutional powers to regulate commerce has the authority to regulate navigation and to provide flood protection and watershed development. If the United States has determined its need for certain land for a public use that is within the sovereign powers, it must have the right to appropriate that land, for otherwise an owner who refused to sell at all or only at an unreasonable price could subordinate the constitutional powers of Congress to his own will. Accordingly, the courts have held that lands, whether owned by private parties, States, municipalities, or Indians, can be appropriated by the Federal Government for public use within its delegated powers. In the appropriation of lands the United States is liable under the fifth amendment to make just compensation. Since the United States cannot be sued without its consent, the "moral" obligation of Congress is to assure that the courts are open for recovery of just compensation if agreement cannot be reached.

Congress no longer makes treaties with Indians (act of March 3, 1871). Coexistence of separate sovereignties within the same geographical boundaries is considered basically untenable. Congress has long regulated Indian affairs by exercise of its legislative power. The effect of the 1794 treaty with the Seneca Nation is the recognition by the United States that the Nation has a vested property right. But this property right, like property rights held by any other party, is subject to the inherent right of the Government to appropriate property for public use in the exercise of the powers granted Congress by the Constitution.

The integration of Indians into our civilization has been and is the policy of Congress. The Citizenship Act of June 2, 1924, declared all noncitizen Indians born within the territorial limits of the United States to be citizens. Prior to the act about two-thirds of the Indians of the United States had already acquired citizenship. The Indians of New York are among the most advanced in the country as evidenced by recent legislation and legislative history pertaining thereto. The legislation to which I refer is Public Law 785, approved September 13, 1950, which conferred juridiction on the courts of the State of New York with respect to civil actions between Indians or to which Indians are parties, and Public Law 690, approved August 14, 1950, which authorized the Seneca Nation to lease lands within the Cattaraugus, Allegany and Oil Springs Reservations (outside the limits of certain villages, where the Seneca Nation already had leasing power) and to collect and disburse moneys realized from leases. The legislative history for Public Law 785 (U. S. Code

Congressional Service, 81st Cong., 2d sess., 1950, vol. 2, pp. 3731, 3732) states:

"The Indians of New York have been classified by the Indian Bureau as among the most advanced in the Nation, and the Bureau has stated that they are in no further need of governmental supervision or control. * * * The enactment of this legislation into law would certainly be in line with the established policy of the Public Lands Committee in its dealings with the Indians; i. e., this committee is especially interested in passing legislation which will lead to the gradual assimilation of the Indian population into the American way of life, and the gradual but final complete removal of governmental supervision and control." And the legislative history for Public Law 690 (U. S. Code Congressional Service, 81st Cong., 2d sess., 1950, vol. 2, pp. 2978, 2982) states:

"It is the judgment of your committee that these Indians (i. e. members of the Seneca Nation) are competent to manage their own affairs and to assume the responsibilities which will be placed upon them by the provisions of this bill, as proposed to be amended. The enactment of this bill will make it possible for the United States to withdraw from certain operations which it is now carrying on in respect to these New York Indians, and will enable the Bureau of Indian Affairs to close its Salamanca Agency."

It is proposed to acquire a flowage easement on the Allegany Reservation. The reservoir would have a summer storage pool of 3,667 acres in this reservation. The other required 5,347 acres of this reservation would be used only occasionally for temporary impoundment of floods. The Alleghany Reservation contains 30,469 acres. Only about 12 percent of this will be subject to protracted flooding.

The Indians would receive just compensation for such acquisition as would be made by the United States, and reasonable costs of resettlement of persons and effects. The Allegany Reservation would continue to remain in possession of the Seneca Nation. The taking for the reservoir would thus be in the nature of a flowage easement only. Except for habitation, the Indians would still have the use of the area involved by the reservoir for fishing, hunting, and some types of agriculture. In this respect, the Seneca Nation has already granted rights in their lands, to Salamanca, N. Y., as a site for the city; to the Pennsylvania and Erie Railroad Cos. for rail lines; to public agencies for highways and roads; to public utilities for electric and telephone lines; to industries for pipelines; to private interests for farms and buildings, and to oil and gas interests for leaseholds.

The Pittsburgh district, Corps of Engineers, has constructed 10 flood-control reservoirs. Four thousand five hundred people have been displaced by these flood-control facilities; all received just compensation.

The Corps of Engineers in doing its job has had several contacts with the Seneca Nation. It is our sincere desire to continue negotiations with the nation on an amicable basis to the end that a fair and equitable settlement of all problems may be attained.

RECREATION

I have seen letters that stated that the recession of flood impoundments would leave a swamp filled with mud, sewage, industrial waste, vermin, and disease-breeding germs; land unfit for use by wildlife, fish, or human beings. The irresponsibility of this statement should be apparent, and ample evidence to that effect is available to those interested by means of visitation to any or all of the existing 10 reservoirs. Over 3 million people availed themselves of the opportunity to participate in recreational activities in those 10 reservoirs last year. The statement in respect to fish is not supported by experience in the existing reservoirs. Over 136,000 pounds of fish were caught by sport fishermen last year in these 10 reservoirs. There are 26,772 acres of managed public hunting grounds and 2,585 acres of managed refuge areas in these 10 reservoirs. As to waterfowl, it is to be noted that as a consequence of work by game management agencies of the various States involved for game management of the reservoir areas under license with this office, substantial strides have been made in the development of waterfowl nesting areas where none existed prior to the reservoir.

These recreational benefits are not accidental; they were planned in cooperation with State and Federal agencies. The Corps of Engineers advocates reforestation, improved land use, and any other good conservation practices which benefit our economy and protect our natural resources.

We are currently cooperating with Mr. Bacon, of the Allegheny National Forest in Pennsylvania, and with Mr. Batterson, of the Allegany State Park in New York State, and with the respective State highway officials to insure access for maximum participation by the public in the recreational activities to be created by the Allegheny Reservoir.

CONCLUSIONS

Many of the statements that have appeared in publication pertaining to the Allegheny Reservoir reflect upon the integrity and professional competence of the sources of such information.

I am sure that if you were in need of medical advice you would consult with a physician; if you were in need of legal assistance, you would consult with a lawyer. If your problem is engineering, then you should seek the advice of a professional engineer.

Prior to the Flood Control Acts of June 22, 1936, June 28, 1938, and August 18, 1941, which authorized the Allegheny Reservoir, the Corps of Engineers gave comprehensive consideration to all reasonable alternate means for achieving the desired objective—flood protection and associated water resources development for the upper Ohio River Basin—and concluded that the Allegheny Reservoir provided the best and most economically favorable means for controlling and utilizing the water resources of the upper Allegheny River.

STATEMENT ON THE RELATIONSHIP BETWEEN THE ALLEGHENY RESERVOIR PROJECT AND THE ALLEGANY INDIAN RESERVATION

The Allegheny Reservoir project will affect a portion of the Allegany Indian Reservation of the Seneca Nation of Indians. Consideration has been given to the viewpoint of some persons that the project should not be prosecuted because of the rights of the Seneca Nation under a treaty with the United States (treaty of November 11, 1794, 7 U. S. Statutes at Large 44).

The Allegheny Reservoir project was authorized by the Flood Control Acts of 1936, 1938, and 1941. It was authorized after studies were made by the Corps of Engineers and were reviewed by the Board of Engineers for Rivers and Harbors, and after Congress gave due consideration to the matter.

The 1936 Flood Control Act contained a declaration of the policy of Congress that destructive floods causing loss of life and property and obstruction of commerce constitute a menace to national welfare and that improvements of waterways for flood control purposes are in the interest of the general welfare. The Allegheny Reservoir project is one of such improvements, and has been determined to be economically sound. The location of projects is necessarily based on physical conditions and engineering determinations. Based on many years of exhaustive studies, it has been determined that physical and economic factors make it impracticable to have this project in a location other than that selected. Various alternate plans including a system of small dams and diversion schemes have been investigated and found to be entirely lacking in economic justification and ineffective in accomplishing the flood control and flow regulation purposes for which the Allegheny Reservoir is designed.

When the question of the treaty rights of the Seneca Nation is examined in the light of the Constitution and judicial and legislative precedent, it is evident that the above mentioned national policy can be satisfied consistently with good faith to the Indians. In fact, this has been the case in recent reservoir projects prosecuted in the western part of the country where tribal lands were involved.

Congress in the exercise of its constitutional powers to regulate commerce has the authority to regulate navigation and to provide flood protection and watershed development. If the United States has determined its need for certain land for a public use that is within its sovereign powers, it must have the right to appropriate that land, for otherwise an owner who refused to sell at all or only at an unreasonable price could subordinate the constitutional powers of Congress to his own will. Accordingly, the courts have held that lands, whether owned by private parties, States, municipalities, or Indians, can be appropriated by the Federal Government for public use within its delegated powers. In the appropriation of lands the United States is liable under the fifth amendment to make just compensation. Since the United States cannot be sued without its consent, the moral obligation of Congress is to assure that the courts are open for recovery of just compensation if agreement cannot be reached.

Congress no longer makes treaties with Indians (act of March 3, 1871). Coexistence of separate sovereignties within the same geographical boundaries is considered basically untenable. Congress has long regulated Indian affairs by exercise of its legislative power. The effect of the 1794 treaty with the Seneca Nation is the recognition by the United States that the nation has a vested property right. But this property right, like property rights held by any other party, is as mentioned above, subject to the inherent right of the Government to appropriate property for public use in the exercise of the powers granted Congress by the Constitution.

The integration of Indians into our civilization has been and is the policy of Congress. The Citizenship Act of June 2, 1924, declared all noncitizen Indians born within the territorial limits of the United States to be citizens. Prior to the act about two-thirds of the Indians of the United States had already acquired citizenship. The Indians of New York are among the most advanced in the country as evidenced by recent legislation and legislative history pertaining thereto. The legislation is Public Law 785, approved September 13, 1950, which conferred jurisdiction on the courts of the State of New York with respect to civil actions between Indians or to which Indians are parties, and Public Law 690, approved August 14, 1950, which authorized the Seneca Nation to lease lands within the Cattaraugus, Allegany and Oil Springs Reservations (outside the limits of certain villages, where the Seneca Nation already had leasing power) and to collect and disburse moneys realized from leases. The legislative history for Public Law 785 (U. S. Code Congressional Service, 81st Cong., 2d sess., 1950, vol. 2, pp. 3731, 3732) states: "The Indians of New York have been classified by the Indian Bureau as among the most advanced in the Nation, and the Bureau has stated that they are in no further need of governmental supervision or control. * * * The enactment of this legislation into law would certainly be in line with the established policy of the Public Lands Committee in its dealings with the Indians; i. e., this committee

is especially interested in passing legislation which will lead to the gradual assimilation of the Indian population into the American way of life, and the gradual but final complete removal of governmental supervision and control." The legislative history for Public Law 690 (U. S. Code Congressional Service, 81st Cong., 2d sess., 1950, vol. 2, pp. 2978, 2982) states: "It is the judgment of your committee that these Indians (i. e., members of the Seneca Nation) are competent to manage their own affairs and to assume the responsibilities which will be placed upon them by the provisions of this bill, as proposed to be amended. The enactment of this bill will make it possible for the United States to withdraw from certain operations which it is now carrying on in respect to these New York Indians, and will enable the Bureau of Indian Affairs to close its Salamanca Agency."

It should be understood that this project does not mean the end of the Allegany Indian Reservation. The effect of the project on the Indian reservation is indicated in the following table:

Allegany Indian Reservation, Cattaraugus County, N. Y.

This reservation may be generally described as a strip of land about 1.6 miles in width, bordering on each side of the Allegheny River, upstream from the New York-Pennsylvania State line for a distance of about 29 miles and containing 30,469 acres.

	Acres
Total area of reservation	30,469
Area below reservoir-full, elevation 1,365	9,014
Area below maximum summer pool, elevation 1,328	3,667
Area between elevations 1,365 and 1,328	[1] 5,347
Residual area	21,455

[1] This area, being subject to intermittent flooding only, would be utilizable for crops, grazing, hunting, trapping, and access to water areas. No habitations or floatable structures would be permitted.

The population of the Allegany Indian Reservation in 1950 was 1,131. The number of Seneca Indians in the portion of the Indian reservation affected by the project has not yet been determined but is estimated from 250 to 500.

In the prosecution of the project, highways which service the Indian reservation will be adjusted to furnish equivalent service, and cemeteries will be relocated in a suitable location in the vicinity not subject to flooding and to which convenient access would be afforded. The views of the Seneca Nation on the relocations of highways and cemeteries would, of course, be solicited, and earnest endeavor would be made to reach a mutually agreeable solution.

This office considers feasible a plan whereby the Government would acquire only easements over the affected portion of the Indian reservation for flooding and clearing on account of the operation of the Allegheny Reservoir project. By acquisition of easements only the reservation would remain intact and in Indian ownership, so that the nation would have for enjoyment not only the area of its reservation not affected by the project but also the affected area to the extent compatible with the operation of the project. Further, this project has a significant recreational potential worthy of consideration by the Seneca Nation.

This office will make every effort to reach an agreement with the Seneca Nation which will provide just compensation for the interests in the portion of the Indian lands required for the Allegheny Reservoir project. If agreement cannot be reached and acquisition must be by other means, just compensation will in any event be provided.

This office has gone to some detail in this statement in an effort to make clear that the rights of the Seneca Nation have been considered and that good faith will be observed not only in the matter of just compensation but also in that thorough consideration has been and continues to be given to a plan which will, to the extent possible, make the Indian reservation and the reservoir project compatible.

The Retirement of Edgar A. Plummer, of Wilkes-Barre, After 50 Years in the Publishing Field

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsstory which appeared in the Wilkes-Barre Times Leader Evening News of March 29, 1957, calling attention to the retirement of Edgar A. Plummer after a career spanning 50 years in the newspaper field in the capacity of printer:

A veteran Wilkes-Barre Publishing Co. printer today wrote "30-all" to a newspaper career extending over nearly half a century.

"I am looking forward to my retirement with mixed emotion," said Edgar A. Plummer as he completed his last shift in the Publishing Company composing room this afternoon. "It will be hard severing a lot of friendships, some of which began close to 50 year ago. On the other hand I will be thankful for the leisure especially since my future is well provided for," referring to Wilkes-Barre Publishing Co. and Typographical Union pensions and social-security benefits he will receive.

Mr. Plummer, who resides at 350 North Main Street, prominent in church and Boy Scout activities, has been a composing room employee since becoming an apprentice at the old Times-Leader plant in 1908. He became a printer 5 years later and then transferred to the Wilkes-Barre Record composing room. He returned to the Times-Leader in 1920 where he remained until formation of the Wilkes-Barre Publishing Co., when he also moved to the North Main Street plant where his duties lately were those of a proofreader as well as linotype operator.

BORN IN ENGLAND

Mr. Plummer was born in Nottingham, England, April 10, 1891, a son of the late Edward and Mary Plummer. After the death of his mother, Mr. Plummer's father, a lace worker, came to this city and secured employment at the old Wilkes-Barre Lace plant on Courtright Avenue. The son, Edgar, did not come to this country until the age of 14. Incidentally, the compositor has never revisited the land of his birth but plans to do so in May when he will look up old friends and see if any relatives are still to be found there.

His Boy Scout activities began many years ago when a friend, Robert Williams, began a troop at Calvary Episcopal Church, North Main Street. Mr. Plummer helped out with the boys and relates that "when the time came for one of us to be scoutmaster, Mr. Williams tossed a coin and I won the toss to become head of the troop." He held the scoutmastership for more than 17 years, was field director for 9 years and activities chairman of north district, Wyoming Valley Council, for about 5 years. He is a vigil member of the Order of the Arrow, a select scouting fraternity and is the recipient of one of scouting's highest awards, a Silver Beaver, for outstanding work in the field of Boy Scout work. He is still a member of the committee of Calvary Troop. He has been active in the affairs of Calvary Episcopal Church where he is a member of the vestry group and participated in the activities of various church organizations.

GOES OVERSEAS IN MAY

Mr. Plummer is a member of local 187, International Typographical Union, and the 40-Plus Club of Wilkes-Barre Publishing Co., having been made a member of the latter organization in December 1951.

"My garden will keep me busy in the spring and summer but I am a little at loss as to what to do in the winter," he confessed. "I will be willing to serve the Red Cross or other agencies on a day-a-week basis and of course hope to continue my interest in scouting," he added. He expects to leave on his overseas jaunt on May 6 and return about the middle of July. He is eagerly looking forward to meeting up with his old scouting associate, Mr. Williams, who has been living in Wales for the past several years. A visit to Paris, France, is also included in his itinerary.

Mr. Plummer's wife, now deceased, was the former Anna M. Hughes. He has 2 sons, Edgar C., with the Arlington Hotel, Binghamton, N. Y., and William, with Corning Glass Works, Corning, N. Y., who is to be married on April 20. A daughter, Elsie H. Plummer, who resides at home, is employed at Hotel Sterling. He has 2 granddaughters, Karen and Barbara Plummer, Binghamton, N. Y.

Midstate District Needs Second Federal Judge

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1957

Mr. LOSER. Mr. Speaker, the judicial responsibility and the need for an additional United States district judge in the middle district of Tennessee were never greater than today. The regrettable incapacity of Federal Judge William E. Miller and the passing of the late Federal Judge Elmer D. Davies, Sr., earlier in the year, and the volume of urgent matters before the district court, emphasizes the immediate need of congressional authorization for an additional judgeship in the middle district of Tennessee. Under leave to extend my remarks, I am including in the RECORD the following timely editorial from the Nashville Banner of April 1, 1957:

BURDEN TOO GREAT FOR ONE—MIDSTATE DISTRICT NEEDS SECOND FEDERAL JUDGE

The absolute need of a second permanent Federal judge for the middle district of Tennessee has been evident now for a long time. The unfortunate illness of Judge William E. Miller underscores that matter today. Vital business is before the court; and orderly provision for this heavy judicial assignment is the immediate responsibility of Congress.

The United States Judicial Conference deciding against this step of relief was far off

base. It was a glaring discrimination which recommended an extra judge each for east Tennessee and west Tennessee, but none for the midstate district.

It long has been obvious that the judicial burden of a great Federal district is more than one man can bear alone. Middle Tennessee well remembers that it contributed to the heart condition befalling the late Judge Elmer Davies long before the step of needed relief was taken, finally, in the appointment of Judge Miller to share that load. How many times must such occur before the facts of the case, and for justice to all concerned, register on official minds?

With Judge Davies' death the whole burden again passed into a single pair of hands—Judge Miller's. Isn't it time to act as reason decrees?

The decision is up to Congress, vested with powers to create these tribunals as circumstances warrant. The Judicial Conference is advisory only—and as the middle Tennessee delegation repeatedly has emphasized, circumstances do warrant this decision now.

Constituents look to the Federal Government to provide adequately for the judicial business increasingly before it.

Judge Miller's illness occasions deep regret. It does demonstrate again, beyond argument, the validity of middle Tennessee's appeal for facilities to keep the judicial processes in operation whatever emergencies might ensue.

Let Congress look immediately to this matter of imperative need.

United States Shortchanges Los Angeles in Smog Fight

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. HILLINGS. Mr. Speaker, I call to the attention of the House the second in a series of articles by Mr. Magner White which appeared in the Los Angeles Examiner of April 1, 1957. The article follows:

UNITED STATES SHORTCHANGES LOS ANGELES IN SMOG FIGHT

(By Magner White)

To smog-wise Los Angeles County citizens it may seem that many Federal smog projects, which will cost $4,100,000 in 1957–58 if the budget stands, either duplicate or overlap research already done here.

Others of these projects may seem unimportant anyway so far as doing anything for smog control is concerned.

It is undoubtedly of scientific interest, and of importance too, to study "effects of air pollution on the pathology (broadly meaning health effects) of small animals." Presumably this includes domestic cats and dogs—information requested on projects did not specify.

The United States Public Health Service has assigned an expert to do this small-animal study in the California Health Department's bureau of chronic diseases.

Along with the Federal smog projects program, one finds the philosophy, once very familiar in these parts, that "before we can do anything about smog we need to know what it is, and what it does to people."

When these facts are learned, it seems indicated that more emphasis can be put on smog control, which is the thing Smog-Control Chief Smith Griswold, our California Congressmen, and experts in private industry feel should be done now.

And they want it done without waiting for the outcome of long-range medical research, however valuable that undoubtedly will prove to be.

In other words, there seems to be a waiting for results of some of this medical research, financed by the Federal smog program.

Well, if any further indictment of smog is needed to emphasize the need for fast developments in smog controls, we've had it right here in Los Angeles, from a scientist whose smog research is one of these Federal projects.

On March 11, Dr. Paul Kotin, University of Southern California pathologist, told a Yale Medical School group that smog can cause 2½ times as many lung cancers in mice breathing polluted air as compared with other mice living in washed air in a laboratory.

This is of mice; how about of men?

Dr. Kotin said highly complex mixtures of irritants in the atmosphere produced lung cancers in experimental animals, but that by and large it is unlikely any single agent produces lung cancer in men.

SIGNIFICANT

But then he added this—and after you read it you will understand why our California Congressmen and Griswold are insisting the Federal Government also do something to rush control of smog. Dr. Kotin said:

"Thus we feel that our laboratory experimental data is applicable to man to a remarkable degree. When laboratory findings parallel human epidemic figures, greater significance can be given to both. Medical history is filled with examples in which laboratory findings have proved ultimately to have their counterpart in human experience.

"There have been few exceptions."

In one study, results of 100 human autopsies bore out the effects of smog on human lungs.

Besides medical research, the Federal program includes work by other agencies than the Public Health Service. These are the Bureau of Mines, Bureau of Standards, Weather Bureau, Library of Congress, and Department of Agriculture.

They have an allocation of $502,000 for their research.

The Bureau of Mines' list includes—and these will sound familiar to you southern Californians:

"Incineration of combustible wastes."

"Automobile exhausts evaluation."

(You know, of course, that studies here have caused the banning as of next October 1 of 1,500,000 single-chamber backyard incinerators—we know they're smogmakers, so why any more research?—and that the APCD and the Detroit automotive industry have been evaluating motor vehicle exhausts for 2 years.)

The Bureau of Standards has:

"Study of reactions among atmospheric pollutants."

"Rapid field methods of sampling and analysis for determination of individual substances * * *."

The Weather Bureau has meteorological studies of dispersal of community air pollution."

A nationwide air-sampling program is underway, with sampling stations in every State in the Union, and including nearly all major cities.

Besides the practical values, one purpose of this survey was said to be to educate the people to the need for research on air pollution, as well as to ascertain the variety of air pollutions in the United States, and to check on radioactivity.

The Library of Congress is keeping up lists of things being done in smog research—abstracts of technical papers, and so on. It mails out 3- by 5-inch cards with summaries of these papers, and this is solemnly listed as a smog project.

Many of these papers are by staff men of the air pollution control district.

The Department of Agriculture, among others things, is working on studies "related to use of plants as air pollution indicators"—and this has proved a useful project; plants don't lie when they show effects of smog.

PROJECTS' ORIGIN

How are the Federal smog medical research projects originated?

If you are qualified, you can apply for a research grant.

Dr. Kotin, University of Southern California, and James Quinnigan, Jr., got $20,579 in 1956, are scheduled for $16,184 this year, and $14,950 next year for their studies on effect of air pollutants on living virus-free tissue as compared with infected tissue.

At the University of California, Berkeley, Dr. Fred A. Bryan and Charles M. Carpenter got $30,000 in 1956, and $25,000 this year to study whether exposure to smog causes the lungs to become more susceptible to infections.

Dr. Hurley Motley, University of Southern California, was granted $36,784 in 1956, $20,470 in 1957, and $20,497 for next year.

These are typical of 58 community air pollution grant research projects over the United States, totaling $530,000 of the current $2,740,000 Federal smog program.

OBJECTIVE

Eleven grants, totaling $170,613, are in California.

Contrast this $170,613 for long-range research with the sum of only $37,000 allocated by the Federal Government toward our most immediate and pressing problem—which is trying to stop as fast as possible the smog at its sources.

The Government's objective, it is said, is to promote the highest quality of research without interference.

What happens when a project is completed?

The results are formally reported to the National Health Institutes, and the researchers publish their findings in scientific journals or report them in speeches before scientific groups.

You hear about them usually when a researcher makes one of these speeches and the newspapers report it.

Smog officials do not quarrel with this medical research.

But they do say they want more aid in finding controls for smog. With these, they say, it might be possible to shut off the effects of smog on humans which makes so much medical research necessary.

That's why they want $1 million out of the Federal smog budget proposed for next year, for application to the job of stopping smog right here in Los Angeles County.

Next article: Where the Federal Government Can Help on the Southern California Smog Problem—What Local Smog Officials Are Asking of Congress.

Hammarskjold's Frustrations

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the following interesting and interpretative article written by Con-

stantine Brown and appearing in the Washington Star of April 1, 1957:

HAMMARSKJOLD'S FRUSTRATIONS—U. N. LEADER DIDN'T SUCCEED IN CHINA, NOR HAS HE TRIUMPHED OVER NASSER

Two major tremors—the rebellion of the Hungarian people and the Suez Canal affair—which could have brought the Communist world and its camp followers into a hopeless situation vis-a-vis the free world—have been settled in favor of the Reds.

The terror which the U. S. S. R. inflicted on the Hungarians last fall aroused the indignation of people around the world. There was a clamor for action against the Red legions which used tanks and artillery against men, women, and children who wanted to lead a free life.

In keeping with the free world's new diplomatic concept, the matter was handed over to the United Nations—that supreme international tribunal which we now consider the only arbiter of the wrongs of its members. But after a number of meaningless resolutions, which had no more effect than a flea biting an elephant, the U. N. did nothing.

The U. N.'s investigative mission, sent to Vienna long after the shooting had ended in the streets of Budapest, closed shop last week. It will present a report on its findings in due course of time. The report will be carefully filed away.

In the meantime the Kadar puppet government has been given the Soviet accolade at much-publicized receptions and festivities in Moscow and Leningrad. Small nations were strongly warned at the same time by the men in the Kremlin not to try anything which might offend the goals of Communist imperialism lest they suffer the same fate as the Hungarians.

The same weak United Nations was given the responsibility of settling the conflict between the Soviet and Indian dominated Egypt and the western powers. The invasion of Egypt by the British-French-Israeli forces had already been settled by the strong hand of the United States.

The job entrusted to Dag Hammarskjold, the Secretary General of the U. N., was to establish a just settlement, in keeping with international law, of the Suez Canal dispute which originated last June when President Nasser arbitrarily took over the Suez Canal Co. and decided that he alone will collect the tolls.

Mr. Hammarskjold is an unlucky negotiator. When the principal U. N. official was entrusted by Washington with the mission of freeing the American soldiers officially known to be in Chinese Communist jails he went to Peiping where he was lavishly wined and dined. But he returned empty handed.

On his return from Peiping, he told our Government the prisoners would be liberated if America withdrew its opposition to admission of Communist China into the U. N. But Washington refused to pay ransom for the captives. They are still languishing in jail almost forgotten by those who sent them to fight in Korea under the flags of the United States and the U. N.

In his handling of the Egyptian situation, Mr. Hammarskjold was able to get positive results—more positive for the Egyptian dictator than for the free nations. In fact the few responsible diplomats who happened to be in possession of all the terms—those given to the public and those still kept under wraps—say that the settlement negotiated by the international diplomat means a complete victory for the Egyptian dictator.

All the fair proposals and suggestions, including the users' association, made by Secretary of State Dulles last summer when he intervened in London, backed by the full power of the United States, have been discarded in the Hammarskjold-Nasser agreement.

The Egyptian dictator's gentlemen's agreement for a standstill in the Gulf of Aqaba and in the Gaza strip means little. So long as Israel has a military strength superior to that of the modern Pharaoh that standstill will continue.

Impartial American and western observers who believe that the West will swallow the settlement as it has swallowed so many other humiliations in the past at the hands of the Communists and neutralists are an unhappy lot about the results of the intervention by the U. N.'s top official. They are convinced that it is not Nasser who is emerging as the victor in the eyes of the Afro-Asian leaders but the Nehru-Krishna Menon team.

These observers note that Krishna Menon was closeted with Nasser for 6 hours the day before Mr. Hammarskjold arrived in Cairo. They say that judging from previous statement by Mr. Nehru's troubleshooter, the settlement reached in Cairo represents exactly the views of Mr. Menon.

What many observers in Washington regard as another U. N. surrender to the Communist objectives will work in favor of the Indian leaders at the free world's expense.

Modern Republicanism

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fairmont Daily Sentinel, of Fairmont, Minn., of Saturday, March 30, 1957, entitled "Modern Republicanism":

MODERN REPUBLICANISM

The term "modern Republicanism" is probably new; but the place it has carved out for itself in modern politics is anything but new. And so the term "modern Republicanism" is a misnomer, on two counts. It is not modern, and it cannot, by any stretch of the imagination, be regarded as Republicanism.

Modern Republicanism dates back to the New Deal, when opportunists and professional politicians in the Republican Party saw the way to get elected was to adopt the tactics of the internationalists and the give-away artists; the do-gooders. It dates back to the shameful period in our history when the intellectuals in the New and Fair Deal looked down their noses at anyone so old hat and crass that he dared champion the cause of the United States of America first, last, and always.

Modern Republicanism dates back to the day when party stalwarts in the Republican Party were, one by one, taken to the mountain top of political expediency; away from their sphere of influence, and stuck away in nice, fat, Federal jobs, good for a lifetime.

Modern Republicanism is that indefinable something which countenances the practice of the Truman administration to heap billions of dollars on foreign lands while we do nothing—that is visible to the naked eye—toward getting American citizens out of the clutches of Communist brigands in Asian concentration camps.

Modern Republicanism continues the headlong lunge toward again crashing through our national debt ceiling. It nurtures and coddles the idea that success must be penalized, that individual initiative must be stifled; that bureaucrats and their directives must chart our course.

It contemplates now to add another 40,000 persons to the Federal payroll; to create still more alphabetical agencies, bureaus, and bureaucrats, to still further increase our tax burden instead of easing it; to still further deflate the value of the American dollar.

Modern Republicanism continues the practice inaugurated under the New Deal, perpetuated and accelerated under Harry Truman, of sending striped-pantsed diplomats flitting hither and yon to the four corners of the earth, while our forgotten men rot in Communist prison camps.

Analysis of the aims, principles, and purposes of our two major political parties points, unmistakably, that neither is Republican or Democrat; that both are committed and headed, irrevocably and unalterably to achieving the welfare state. And the sad part of it is that neither party appears to have a substantial candidate who has not been saturated to a greater or lesser degree with the doctrine that has plunged us into debt, jeopardized our security, alienated our friends, and burdened us with taxes.

The picture looks dark, but there is hope. It lies in the 22 million men who have worn the uniform of our country in the past futile wars. They, and the members of their families who know the sacrifices, the heartbreaks, the suffering incident to war could, were they to unite, provide the leadership that will restore and rejuvenate the spirit of true Americanism.

Mr. and Mrs. Reuben Levy, of Kingston, Pa., Honored

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of March 29, 1957, commenting on the new honor bestowed upon Mr. and Mrs. Reuben Levy, of Kingston, Pa.:

NEW HONOR FOR LEVYS

Many distinctions have been conferred on Mr. and Mrs. Reuben Levy, of Kingston, during the past quarter century, but none perhaps more gratifying than the one to be accorded them tonight when the chapel of Temple Israel will be dedicated to them. This is indeed a signal honor as well as recognition of their service.

Mr. Levy, who has received awards from many organizations, is a past president and vice president of Temple Israel as well as one of the most active members of the Jewish community, having headed various campaigns and humanitarian movements.

Mrs. Levy, in addition to sharing her husband's interests, has carved out an impressive record of service on her own initiative. She has been identified with the Sisterhood of Temple Israel, Hadassah, Jewish Community Center, and the United Jewish Appeal, to mention a few of her activities. In 1955, Hadassah proclaimed her its "Woman of the Year."

Mr. and Mrs. Levy constitute an unusual team. Unquestionably, the reason they have received so much from life is that they put so much into it.

The Tariff Commission

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. LANHAM. Mr. Speaker, increasing concern is being expressed in many quarters over the President's treatment of the Tariff Commission. In recent months the President has turned down every recommendation forwarded to him by the Commission. Among these were unanimous recommendations.

The Tariff Commission is a bipartisan body composed of three members from each party. The President himself has appointed 5 of the 6 members. It seems odd, to say the least, that he should exhibit so little confidence in an agency of Congress whose members are selected for their competence in the field of tariffs and trade. All members were confirmed by the Senate.

The accompanying statement offers an explanation of the manner in which the Tariff Commission is being disregarded in its field of expert knowledge. Only the past weekend the President administered three rebuffs to the Commission. This is a new record.

I suggest that the Congress look into this situation especially in view of the forthcoming request of the President that Congress approve United States membership in the Organization for Trade Cooperation—OTC. The President in side tracking the Tariff Commission may be revealing what would happen under the OTC. It is far from reassuring.

PRESIDENT HUMBLES TARIFF COMMISSION

(Statement of O. R. Strackbein, chairman, the Nationwide Committee of Industry, Agriculture, and Labor, on Import-Export Policy)

The President has again overruled the Tariff Commission, this time in two separate cases, and has again in a third case shown a lack of confidence in the Tariff Commission. Five of the six Commissioners are Eisenhower appointees.

In overruling the Tariff Commission in the Straight Pins case the President set aside the 4-2 finding that imports threaten serious injury to the domestic industry. In so doing the President ostensibly substituted his judgment for that of the Tariff Commission. Actually, he accepted the judgment of executive department personnel over that of the Tariff Commission which is an expert agency, set up by the Congress to help it regulate the foreign commerce of this country.

Here we have one more case in the long list in which the President has upset the Tariff Commission findings to make room for the higher judgment of executive underlings who do the bidding of the State Department or who are steeped in the same international brew. With these high priests of the internationalist cult domestic industry has no standing, just as the voice of Congress as expressed through the Tariff Commission finds no echo in them.

In the second case the President rejected a 3 to 2 recommendation of the Tariff Commission involving violins and violas. He expressed sympathy with the problems of the lone domestic manufacturer left in the field who is hard pressed by imports.

Again the President slaps the Tariff Commission in the face, saying he is not persuaded the case satisfies the statutory test. Then he introduced considerations extraneous to the law by speculating that an increase in the tariff, as recommended by the Commission, would raise the cost of music instruction for young people throughout the country.

Obviously the President has lost track of the distinction between policy determination, a congressional function in escape clause cases, and administrative discretion. In these cases the President acts solely on delegated authority. This fact could never be concluded from a reading of his letters to the Finance Committee of the Senate and the Committee on Ways and Means of the House. He has set himself up as the overlord, not as a delegate, in carrying out State Department as distinguished from congressional policy.

In the third case, namely, safety pins, the President sent the case back to the Tariff Commission for further data. This action again reflects a lack of confidence in the Commission. Yet these are the same Commissioners of whom the President appointed five and who were duly confirmed by the Senate.

The whole executive attitude in these cases as in numerous others reflects a determination to push Congress and its agency, the Tariff Commission, aside and to bring the regulation of our foreign commerce under the firm control of the executive.

In a nutshell it represents the vesting of veto powers in the hands of the State Department over questions of the domestic economy.

The President has 60 days in which to accept or reject the Commission's recommendations. During the first 30 days of this period comments of foreign governments are received. Obviously the voices from these sources easily carry the day at the White House.

In this roundabout way foreign governments are in effect rewriting our administrative tariff laws. The President follows up by tweaking the nose of Congress. This cannot go on much longer.

Gripes About Taxes

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include an editorial by Verl Manwarren, a student in the Sterling High School and sports editor of the Sterling High School Sun Dial, on the subject of taxes. This editorial appeared in the Hutchinson Herald dated March 29, 1957:

"Taxes! Taxes! Taxes! It seems like that's where all of my money goes." Are you one of those people, too? How many people gripe about taxes every day.

Yet, just what would happen if we didn't have taxes? For example, if we had no taxes there would be no schools, no teachers if we did have schools, no roads, no repairs for them if we did have roads, no post offices or public buildings, no Government officials, no President, nor even any Government. If we lose all or any of these things we lose all of the advantages of democracy in the land.

Taxes build the schools and pay the teachers' salaries. Therefore, if there were no taxes only the rich people would have an education. The poor would have absolutely no chance for an education.

Taxes build the roads that we drive on and keep them in repair. These same taxes put our Congress in office, provide for the President and his Cabinet and all of the other Government officials.

Taxes have just built a new postoffice for us here in Sterling, and many other public buildings are built in other places by taxes.

Of course no one likes to pay taxes, but when you do pay them, instead of griping just remember these things—schools, post offices, public officials, and the total of all democracy are provided by these taxes.

Ill-Advised Budget Cuts

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. ROOSEVELT. Mr. Speaker, I have recently received a letter from the Sacramento, Calif., office of the National Postal Transport Association which is illustrative of the lack of wisdom in approaching the problem of Government economy.

Many Members of Congress have been voting for wholesale cuts in Government services under the cloak of fear of inflation. It is argued that private spending is preferable to Government spending because it leads to greater productivity. But it is evident that certain types of Government spending, such as for needed services in health, education, and postal services also increase production, perhaps even in greater measure. I want to emphasize that there are many ways to combat inflation—a cut in Government spending is only one approach and often not the wisest one.

When a cut in Government spending is effected at the expense of already underpaid employees and reduces postal service to individuals and businesses alike, then it is time that we consider specific needs rather than fall prey to the general slogan of "cut Government spending and stop inflation."

Mr. Speaker, it is my hope that some of these ill-advised cuts will be restored by the House so that services can be kept up, particularly in the Far West where our economy is expanding rapidly and, therefore, where there are increasing needs for Government services in many fields.

Under leave to extend my remarks, I include a part of the letter from the western division of the National Postal Transport Association:

NATIONAL POSTAL TRANSPORT ASSOCIATION,
Sacramento, Calif., March 25, 1957.
Hon. JAMES ROOSEVELT,
House of Representatives,
Washington, D. C.

DEAR MR. ROOSEVELT: With reference to the current action of the Congress relative to the proposed budget of the United States for the next fiscal year and the steps now being taken to reduce the amount as submitted by

the President, my attention has been drawn to the action taken by the House in reducing the requested amounts for postal operations by 29 millions and for postal transportation allocations by over 9 millions.

Last week employees of the postal transportation service in the San Francisco area were recipients of policy orders which appear to have a direct relation to the above mentioned action. A copy of the order is enclosed, and I have no doubt that similar action likewise will have been taken in other areas.

Certainly economy is indeed a virtue and when waste is being eliminated it should be commended. However, when that economy is effected only at the expense of junior employees who are already underpaid, and further by rendering a poorer service to the postal patrons, then I question whether it is an economy that should be practiced. Perhaps, therefore, it would be proper to briefly analyze the steps which this order proposes will be taken.

First: Vacancies will not be filled by appointment but will be covered by substitutes. Our apprentice employees who are classified as substitutes have a starting salary rate of $3,880 per annum, payable only for service actually performed. They may progress by annual steps to step 4 at $4,630 per annum. In addition, they do not receive the benefit of time and one-half for overtime work (that in excess of an average of 40 hours per week) as do regular employees. Hence, this order will restrict these men from receiving promotions to the higher steps and from receiving the benefit of the overtime law, although they will be performing service on a regular basis exactly as other clerks who have previously been accorded appointment to similar positions.

Second, helper assignments will be blanked whenever possible, principally on week ends and holidays. This means that when a regular clerk in a helper assignment requests a trip off duty his assignment will not be filled by the assignment of a substitute, especially on week ends and holidays. It is true that on certain days of the week the work load in our mobile units (RPO's and HPO's) is somewhat lighter than on other days. However, this is generally offset by the fact that in the organization of the line, the help on those days is either reduced or the hours of advance work are curtailed. The net result of this proposal will be that the remaining members of the crew must struggle to absorb the distribution which would have been performed by the clerk dropping out. Inasmuch as the normal work duties have been quite carefully allocated to the various regular members of the crew and hours of duty have been set accordingly, this cannot but result in a physical hardship on the remaining members of the crew on many occasions.

The third paragraph indicates that it is expected that it will be impossible to perform all customary distribution on such occasions and hence the supervisor will have to designate certain distribution to be eliminated when necessary on such trips. This can only have the effect of delay to some mail.

I would make it clear that I feel the office of the District Transportation Manager has no alternative to adopting this practice. When his working budget is reduced he has to cut expenses somewhere, regardless of what it does to the employees and the mails involved. May I further add that employees should be willing to practice economies and I am sure the majority will be agreeable to doing so wherever it can be properly done.

As to the solution, my opinion is that nothing less than the amount requested in the budget as submitted should be considered. As first a clerk for 29 years, and for the last 15 years a supervisor, I have watched the budget requests for operation of the postal transportation service and I have invariably found the asking to be very moderate. In fact, if satisfactory service is to be rendered the postal patrons, the asking should frequently have been larger. My personal observation regarding the present budget is that it makes little provision for improved service; and especially in these Western States where our population and general economy is increasing so rapidly, the budget allows for no possibilities for increased service to care for the natural increasing needs.

With kindest regards, I am,

Very sincerely,

HAROLD G. MCKELLIPS,
Vice Chairman, Legislative Committee.

High Excise Taxes May Become a Habit That's Hard To Break

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "High Excise Taxes May Become a Habit That's Hard To Break," which appeared in the March 30, 1957, issue of the Courier-Journal, of Louisville, Ky.:

HIGH EXCISE TAXES MAY BECOME A HABIT THAT'S HARD TO BREAK

The wartime (Korea) high rates of Federal excise taxes, which were to expire Monday, are renewed for 15 months, just in the nick of time. A promise made more than 4 years ago is once again deferred. Everybody in Washington, including the tax cutters and the budget slashers, is wringing his hands—but voting to defer.

They agonize and protest even as they vote. They insist that there is an emergency even as they make whacking gestures at the President's $72 billion budget. They promise that it will never happen again, though they said the same thing in 1954.

What we are afraid of is that it will not only happen again but that the prolonged deferment and the ease with which it is worked means that it will be frozen into our tax system.

Each deferment seems to us to weaken resistance to the old idea that excises could be perfected and made general and become a permanent feature under their right name—a Federal sales tax.

IT'S PART OF A PICTURE

The alacrity, the sense of inevitability, with which Congress hastens to renew the war rates year after year must be judged in the framework of the whole tax picture. Nobody can have missed the new life which has gone into movements to limit the personal income tax by law or even by constitutional amendment. Nobody can help hearing the stout political assurances that there'll be cuts in the income-tax rates before next election, with a great scramble between Republicans and Democrats to get the credit.

Learned studies are springing up this season, like the jonquils, to prove with graphs and tables that the excise tax (or call it a manufacturer's sales tax) would be a fine thing to take up the slack in Federal revenue. We can't help being suspicious of the way the higher tax hangs on.

There is always the claim of emergency. It was like that in the early days of the Nation. Alexander Hamilton was strong for the excise tax and the first one was dated 1791. It was levied on whisky and gave rise to an armed rebellion. It also brought extinction to the Federalist Party and helped along the rise of Jefferson and his general ideas.

It came back in a genuine emergency, the War of 1812. Then popular feeling stopped it in 1817 and it didn't show up again until the Civil War with its great costs. It waxed and waned since then, rates rising and falling as needs or interests demanded, items going on the list and coming off.

Restive under even the low income taxes of those days, supporters of Harding and Coolidge pressed for a general Federal sales tax. Herbert Hoover in 1932 was strong for a 2.25 percent manufacturer's sales tax, which was a way of generalizing the selective excise taxes.

The present rates, born of the Korean emergency, went up sharply in 1951. Congress put into the law a commitment to bring back the major items—liquor, tobacco, transportation, luxuries—on April 1, 1954. But to do this now would mean a reduction of $3.7 billion a year for the Treasury. And as budgets had grown progressively larger, the reduction was put off, the high rates were extended, year after year. This came always in the fading hours of March, always with a plea of haste and emergency to explain why public hearings (and their pressures) were not feasible.

A FEW CONCESSIONS IN 1954

To be sure, there were a few concessions in 1954. The Government takes only 10 percent of a mink coat's sale price now, where the rate had been 20 percent. The same readjustment was made on jewelry, toilet articles, and certain clothing. Other rates stay high.

You pay the tax on an odd assortment and in a discriminatory selection of goods and services. You pay on ballpoint pens (or the manufacturers does), on club dues, dog-race admissions, refrigerators, and electric-light bulbs, just to name a few taxable items. You pay on pinball machines and playing cards.

Liquor and tobacco still bring almost half of the total of some $9.5 billion which the excises total every year. Uncle Sam gets more from every package of cigarettes than does the farmer who grows the tobacco. Liquor and tobacco, plus transportation, bring in 81 percent of total excise receipts. All this is not intended as an argument against proper taxes. It is, however, a reflection of worry lest the Federal Government's clinging to excise taxes as an institution, the practically automatic renewal of the higher rates year after year, foretell a captivation with the old idea of a general Federal sales tax or manufacturers' tax and thus a further cramping of the area which State and local services must look to.

One Hundredth Anniversary of the Stegmaier Brewing Co., of Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Sunday Independent of March 31, 1957, commenting on the 100th anniversary of the Stegmaier

Brewing Co. and its growth and progress over the past century:

STEGMAIER'S MARKS ITS 100TH YEAR

Just 100 years ago Charles Stegmaier, then only 35 but known as a brilliant brewmaster since he was 25, founded the Stegmaier Brewing Co.

He had a working force of 5 men and delivered his product personally, 1 barrel at a time, in an express wagon drawn by a goat.

That was, of course, in 1857.

Now, in 1957, and just when Wyoming Valley needs it so badly, the modern, internationally known Stegmaier Brewing Co. employs 500.

And, always a user of our anthracite, the firm that once used 10 tons a month now burns 200 tons a week.

No higher praise could be earned by any firm—or its product—in these days of fierce competition than by its ability merely to last 100 years.

Stegmaier's not only has done this but has been able also to show steady, continuous, and healthy growth.

We trust the second 100 years will be as good.

The Terrific Cost of Accidents

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "The Terrific Cost of Accidents," which appeared in the March 29, 1957, issue of the Breckinridge County Herald-News, of Irvington, Ky.:

THE TERRIFIC COST OF ACCIDENTS

It is most depressing to read that the dollar cost of accidents in this country is rising. One reliable estimate puts last year's total cost at the staggering figure of $10 billion.

This total includes damages, benefit payments, loss of pay, loss of production, doctor and hospital bills, with perhaps half of the total being chargable to highway mishaps. With the heavy travel season just now getting underway for 1957, there are those who are fearful of what this year's accident toll will be.

While some safety officials pin their hopes for reducing the motor-vehicle toll to the new national highway building program, others fear that the increase in the driver population and the number of motor vehicles on the highways will cause the accident figures to climb even higher.

Motor-vehicle fatalities in 1956 brought a record 45,000 life-insurance death claims, with payments amounting to approximately $97 million. This was 3,000 more claims and $7 million more in benefits than was paid in the preceding year.

But, however high the economic and human loss from injuries and death from motor-vehicle accidents, the loss from other types of accidents has also risen. On-the-job accidents cost industry and workers about $3,500,000,000 last year, according to figures released by the Institute for Safer Living of the American Mutual Liability Insurance Comany of Boston. Off-the-job accidents cost much more—nearly $7,500,000,000 with highway accidents being included in both categories.

Increased leisure time and higher incomes enable more people to travel these days—all too often into danger. The fact that so many workers seem to sustain more accidents causing time and production loss while away from their jobs than while at work has caused a number of companies to set up safety clauses, urging precautions at recreation, around the home, and on the road.

It is both interesting, and alarming, to note how the institute's estimate of $10 billion accident cost, which is termed "a total economic loss," compares with the outlook for Federal and State highway construction this year, which is expected to cost taxpayers $11 billion, but not a "total" cost.

Compulsory Inspection of Poultry

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mrs. SULLIVAN. Mr. Speaker, many of us in the House of Representatives feel that a mandatory poultry inspection law will not adequately protect consumers and poultry workers unless it provides for some form of mandatory ante mortem or before-slaughter inspection.

We do not seek a bird-by-bird ante mortem inspection. In fact, we believe the manner, method and form of such an inspection be left to the discretion of the Secretary of Agriculture. All we desire is that the ante mortem inspection be made mandatory to assure that the Secretary will put some form of it into effect.

I would suggest an observation of each flock, coop, or batch at the processing plant before slaughter to take out the suspect birds. The inspector can look at these suspects more closely at a later opportune time. But, as I have said, the manner of carrying out ante mortem inspection should be left to the discretion of the Secretary.

Ante mortem inspection will safeguard the consumer against eating poultry which suffers from a number of diseases, especially respiratory ones. These diseases are difficult to detect after slaughter. And it will cut down the human toll among poultry workers by minimizing industrial hazards which have given the poultry-processing industry the third highest industrial illness rate among American manufacturing industries.

We were gratified when every single one of the public health witnesses appearing before the Poultry and Egg Subcommittee of the Agriculture Committee recently testified in favor of mandatory ante mortem inspection. This included the Deputy Commissioner of the Food and Drug Administration and the veterinarian in charge of the Department of Agriculture's voluntary poultry-inspection program.

The latter witness, Dr. Roy E. Willie, chief of the inspection branch, Poultry Division, Agricultural Marketing Service, Department of Agriculture, testified after some public health groups twitted the Department at Senate Agriculture Committee hearings for not bringing its technical personnel before the committee. The public health witnesses said the technical staff, the men who knew from experience what was necessary for public protection, would testify differently than the political appointees. And so it was.

Probably the best account of these developments is contained in the leading trade paper of the poultry industry, the Poultryman. I believe Dr. Willie's testimony should leave no doubt in anyone's mind that mandatory ante mortem inspection is absolutely essential for an effective and meaningful poultry-inspection program.

Under unanimous consent, I include in the Appendix of today's RECORD the news story from the Poultryman of Friday, March 15, 1957:

ANTE MORTEM INSPECTION ISSUE GETS SPOTLIGHT AT HEARING IN HOUSE; ENFORCEMENT IS SIFTED

WASHINGTON.—Dr. Roy E. Willie, Chief of United States Agriculture Department's voluntary poultry inspection program, under questioning became a star witness for a tighter law than his boss wants on compulsory poultry inspection.

It happened last week at hearings before the poultry and egg subcommittee of the House Agriculture Committee.

Assistant Secretary Earl Butz had just testified that USDA wants a law which will permit, but not require, the Department to make ante mortem inspection. Butz opposed demands of public health, labor, and some consumer groups that the law make some kind of ante mortem examination mandatory, permitting the Secretary to define it.

Pressed on this controversial point by Representative JOHN C. WATTS, Democrat, of Kentucky, subcommittee chairman, Dr. Willie testified:

"I should say that under a mandatory program we should perform some kind of ante mortem inspection on all birds brought into the plant."

For an effective program, said the inspection chieftain, it's necessary to know about poultry's health condition before slaughter.

Dr. Willie emphasized that he was not recommending a live bird-by-bird inspection (nor would any pending bill require this).

The law should not spell out the extent, type, or method of ante mortem inspection, he said, but should permit the Secretary to decide these details. (The Department has plans for a research project in cooperation with veterinary schools and poultry departments in several States, to determine such questions.)

Under questioning, Dr. Willie said live inspection at the farm probably would yield the greatest advantage, but insisted an ante mortem check at the plant would be effective. He cautioned that the procedure must take into account operating conditions at the plant.

Labor and public health spokesmen—who had chided USDA for the fact that no USDA veterinarian had testified at the earlier Senate hearings—seized Dr. Willie's endorsement of ante mortem inspection for all birds as ammunition for their arsenal.

INDUSTRY WITNESSES SPEAK

Industry witnesses though, got in the next blow. They chose a direct frontal attack. In large numbers, they pressed for less stringent inspection provisions than USDA endorses.

Give us, several industry spokesmen urged Congress, a bill which will not tie the Secretary's hands. Do not spell out in law any requirement for either ante or post mortem

inspection, they said. Science may render obsolete and costly the post mortem examination of each carcass which USDA now thinks should be mandatory, they argued, and one should trust the Secretary to require whatever inspection is needed to guard wholesomeness.

Dr. Cliff Carpenter, Chicago, president of the Institute of American Poultry Industries and a veterinarian, took note of Dr. Willie's inspection statement:

"The impression may have been gained by this committee," said Dr. Carpenter, "that it would be necessary to have some form of ante mortem inspection at all times. We do not believe there is a valid basis for such a position * * * there is not even agreement on what ante mortem inspection would include."

WILLIE TESTIMONY CITED

Hermon I. Miller, director of USDA's Poultry Division, which administers the voluntary inspection program, said he thought compulsory ante mortem inspection would require an additional inspector at each plant, though research would have to decide this.

When their turn came, labor, public health, and consumer groups cited Dr. Willie's stand to support their position, and the Food and Drug Administration reiterated its belief that mandatory ante mortem inspection was essential to fully protect the consumer.

Questions of several committee members, however, indicated they were not sold on the idea of "directing the Secretary to do something we haven't even defined," as one of them put it.

The House hearings developed other points of dispute similar to those which had arisen before the Senate Agriculture Committee.

Examples:

1. Definition of inspector: Let the Secretary authorize any person as an inspector, said all but one industry witness and official USDA spokesmen.

To handle seasonal needs, etc., USDA should be authorized to make use of State employees, they argued.

No, said labor and public health groups. Require inspectors to be Federal employees to assure freedom from local pressures and prevent employment of a processing firm worker as that firm's inspector. Follow the example of the red meat inspection program, which allows only Federal workers to imprint the Federal inspection stamp, they urged.

STRONG OPPOSITION NOTED

FDA Deputy Commissioner John Harvey said he originally had planned to endorse the idea of permitting USDA to use State or local governmental employees with no financial interest in the processing firm. However, he said, he had been surprised to discover that this plan was strongly opposed by a number of State officials (who had doubts about accepting imported poultry so inspected from other States).

Representative CLIFFORD MCINTIRE, Republican, of Maine, sponsor of 1 of the 12 poultry inspection bills in the House, indicated that he wanted the law to provide for continuation of such Federal-State poultry inspection agreements as now prevail in Maine and North Dakota.

2. New York dressed poultry: A spokesman for the National Association of State Public Health Veterinarians urged Congress to prohibit the unsavory practice of permitting interstate movement of New York dressed poultry. Dr. Oscar Sussman, Trenton, N. J., said he objected to having the Federal inspection stamp on poultry "which has had fecal and other material dribble over it." Public health spokesmen said most FDA seizures of unfit poultry involved the New York dressed product.

Industry groups, however, pleaded for regulated interstate movement (between official plants) of such poultry. They said it takes large volume of poultry to pay for evisceration equipment and that it's most efficient to have a central eviscerating plant to serve several small dressing plants.

USDA testified that an outright ban on uneviscerated poultry shipments would impose an unnecessary hardship on the industry.

TERMINOLOGY CONFUSES WITNESS

One committee member listened with shock to public health attacks on the filthy condition of New York dressed poultry.

After pondering the testimony he finally spoke up.

"Now, what can we do about the awful condition of New York poultry?" he wanted to know.

Gently, his colleagues explained that "New York dressed" means uneviscerated poultry and has nothing to do with New York City or State.

3. Enforcement agency: Industry generally took the view that the Agriculture Secretary should be permitted to decide what USDA agency should enforce the program. Witnesses let it be known, though, that they hoped he would choose the Agricultural Market Service, which runs the present program. Inspection and grading should be handled by the same agency as complementary functions, many said. Labor, public health, and some consumer spokesmen urged that Congress put the inspection program in the Agricultural Research Service, which handles the present red meat inspection program.

Only one group, National Farmers Union, supported the idea of making the Poultry Inspection Branch a subordinate part of the Red Meat Inspection Division. This idea, popular with labor groups last year, has no known Senate support this year and very little House backing. Almost everyone now embraces the idea of a Poultry Inspection Division, fully equal in status to the Red Meat Inspection Division.

AT REQUEST OF LOCALITY

4. Regulation of intrastate poultry shipments: Industry generally urged that USDA be empowered to move into a major consuming center upon request of the local poultry industry.

Labor and public health spokesmen generally pleaded that local governmental authorities have the right to keep compulsory United States Department of Agriculture inspection out of their intrastate areas.

Chairman Watts said United States Department of Agriculture's designation of cities for compulsory inspection would enable small processors with intrastate shipments to receive Government-financed inspection, which they might need to compete with big processors.

5. Timing of the law: The Southeastern Poultry and Egg Association, of whose members only about one-fourth participate in the voluntary inspection program, won support from other industry witnesses in its campaign to delay the law's effective date.

The Institute of American Poultry Industries, which said nothing about the matter to the Senate committee, urged the House committee not to permit any processor to receive Government-financed inspection before January 1, 1958, a proposal advanced by southern industry witnesses.

EFFECTIVE DATE SIFTED

Many bills would instead provide immediate permissive coverage and mandatory coverage on July 1, 1958.

Southern industry witnesses argued that this would put plants without mandatory Federal inspection (either because they failed to meet sanitation standards or because the United States Department of Agriculture didn't have enough inspectors) at a serious disadvantage for too long a period, assuming the law is enacted this year.

The United States Department of Agriculture favors immediate permissive inspection and wants Congress to consider delaying mandatory coverage until July 1, 1959, a proposal that would extend the time lag between permissive and compulsory coverage even longer.

6. Punishment of violators: Industry repeated its pleas that violations be exempt from punishment unless knowingly committed. Public health, labor, FDA and the United States Department of Agriculture rejected this as making enforcement difficult—and contrary to established procedures under the Food and Drug Act.

Generally speaking, House proceedings confirmed the picture which emerged at the Senate hearings of the kind of law likely to result. (Editor's Note: See the March 8 issue of The Poultryman for detailed analysis.)

At House hearings the United States Department of Agriculture raised mild objections to granting to game birds the exemption sought by game breeders, placing this proposed exemption in more doubt than first appeared.

SOLONS AT WORK

As the Poultryman went to press this week, the Senate Agriculture Committee continued work on its draft of a poultry-inspection bill; and House committeemen planned to listen to views of other Congressmen on the subject. In addition to witnesses mentioned above, oral or written testimony was received by the House committee from many others, including:

Wallace Jerome, Wisconsin Turkey Federation, Barron; Chester Housh, National Turkey Federation, Elkton, Va.; Robert Parks, American Poultry & Hatchery Federation, Altoona, Pa.; Dr. Alfred Van Wagenen, Northeastern Poultry Producers Council, Trenton, N. J.; J. C. Kumpe, Southwestern Poultry & Egg Association, Bentonville, Ark.

Albert R. Gibson, Georgia Poultry Federation, Gainesville; Charles D. Hawks, Arkansas Poultry Federation, Little Rock; Paul G. Thomas, South Carolina Turkey Federation, Sumter; W. L. Walsh, Alabama Poultry Industries Association, Montgomery; L. R. Abbott, Kentucky Poultry Federation, Sterling; J. Paul Williams, Southeastern Poultry & Egg Association, Richmond, Va.

John A. Winfield, North Carolina Department of Agriculture, Raleigh; Clayton Osgood, department of agriculture, Augusta, Me.; Thomas J. Mullins, secretary, legislative poultry interim committee, Tallahassee, Fla.

Dr. Aaron Haskin, health officer, Newark, N. J.; Miss Ella Best, American Nurses Association, New York City; S. W. Barker, director, poultry department, Amalgamated Meat Cutters & Butcher Workmen (AFL–CIO); Dr. Max Hibbard, conference of public health veterinarians, Richmond, Va.; Henry E. Kingman, Jr., American Veterinary Medical Association, Chicago; George D. Riley, AFL–CIO legislative representative; Mrs. J. A. Booras, Housewives United, Washington, D. C.; Mrs. Genevieve Oslund, General Federation of Women's Clubs, Washington, D. C.

Matt Triggs, American Farm Bureau Federation; Reuben Johnson, National Farmers Union; Joseph O. Parker, National Grange; John J. Riggle, National Council of Farmer Cooperatives; and Martin L. Livney, American Poultry Farmers Association.

Food Surplus Will Not Be Long With Us

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I would like to include an editorial by Mr. Rolland Jacquart, publisher of the Haskell Monitor-Chief, Sublette, Kans., appearing in the March 25 issue of that paper:

Take a good look at our food surplus, because what with the soil bank, acreage reserve, subdivisions, shopping centers, military installations, it will be a long, long time before our agricultural ingenuity will overtake again our nourishment requirements. What was an economic handicap only a day or so ago has ceased to be a worry inspirer, and tomorrow might be the object of fond remembrance.

Permanent retirement of cropland alone is enough to make us wonder if technology can compensate for reduced acres. Each year an estimated 1.1 million acres of American land goes out of crop use and into suburbs, industrial sites, airports, highways, and the like. A building magazine, Architectural Forum, warns that population and food-producing land will come into delicate balance in the early 1960's at the present rate construction is dotting the countryside.

There probably will not come a time in our or the next generation when consideration will be given to increasing farmland by removing improvements, but such an opposite to our present food surplus is not a future fantasy. There is no prospect of a letup in the spreading of suburbs or of highway building. In the next few years a million presently farmed acres will be commandeered for highways.

Cities expand. Winds rake the high plains. Drought lingers. Population increases. Millions of crop-acres lie fallow. There is only one way for food surpluses to go, and that's away.

Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. WALTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
COMMITTEE ON UN-AMERICAN ACTIVITIES,
Washington, April 1, 1957.

Mr. JACK A. HAYES,
Secretary, the State Bar of California,
San Francisco, Calif.

DEAR MR. HAYES: I have your letter of March 25, 1957, concerning a hearing conducted by a subcommittee of the Committee on Un-American Activities at Los Angeles.

In stating your criticism of the manner in which the hearing was conducted, you overlook the fact that the hearing was not a trial. Every witness and his counsel are familiar with the rules of the committee. These rules are the rules governing the conduct of congressional committees.

In view of the fact that you have seen fit to go into the subject of the conduct of congressional investigations, I respectfully suggest that you give consideration to the advisability of disqualifying members of the bar who are also Communists from appearing as counsel for witnesses. Frequently these Communist lawyers prevail upon witnesses, who otherwise cooperate with our committee, to invoke the fifth amendment.

Incidentally, it is difficult for me to understand how you could have made an objective study of the hearings in Los Angeles without observing the insolent, contemptuous and reprehensible conduct of counsel, both while their clients were testifying and while waiting to be called. It is unfortunate that you did not get a full picture of what occurred before making your statement criticizing the subcommittee.

Very truly yours,
FRANCIS E. WALTER, *Chairman.*

A Question Still To Be Faced: Civilian Defense in Nuclear War

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial entitled "A Question Still To Be Faced: Civilian Defense in Nuclear War," which appeared in the March 31, 1957, issue of the Courier-Journal, of Louisville, Ky.:

A QUESTION STILL TO BE FACED: CIVILIAN DEFENSE IN NUCLEAR WAR

If an H-bomb warning sounded 5 minutes from now, what would you do—dive for the cellar, or dash out of town?

That simple question and the answers it evokes have plagued Washington for years. Under Democrats and Republicans alike, Washington alternately has frightened the wits out of most of us and reassured us that though the possibilities of nuclear attack are awesome, the military and a good civil defense program might save enough of us to carry on. The Eisenhower administration alone has poured some $300 million into civil defense since 1953. Last year Congress allowed $93.6 million for civil defense, and this year the administration asked for $130 million.

The House, however, whacked this budget request to only $39.3 millions. Administration critics said this was a nonconfidence vote in Val Peterson's Civil Defense Administration and its emphasis on the concept of evacuation as opposed to the bomb-shelter concept.

SHALL WE STOP TRYING?

Actually Mr. Peterson has endorsed both concepts. And certainly few can argue with his grim belief that the only sure way to survive nuclear attack is just not to be anywhere near when the bombs begin to fall. Mr. Peterson himself has been in the vanguard of those gloomily assuring us that we have made no adequate preparation for civil defense.

The House vote actually seems to endorse Peterson's own gloom and carry it one step further—to the conclusion that we might as well stop trying. This is a widespread idea among ordinary citizens who have witnessed the test proof of how impossible it is to evacuate large cities on short notice and who can't be bothered with building bomb shelters when the Atomic Energy Commission assures them that one H-bomb can bring death to an area the size of New Jersey.

But it is hardly the way for legislators to run away from a monumental problem. It is a problem confounded, as the New York Times observed 2 years ago, by confusion, lack of leadership, inadequate information, and public apathy. But none of these can obscure the fact that some day the very survival of the Nation may depend on the effectiveness of its civil-defense program.

What we do know is that evacuation will work in some areas to some degree, that well-equipped bomb shelters will save some lives, that first aid promptly rendered will save more, that special preparations can minimize all aspects of nuclear disaster save death itself, that a huge organization and billions of dollars are needed to develop these things for the Nation as long as the threat of nuclear warfare hangs over us.

The Civil Defense Act of 1950 and its amendments haven't much more than begun on this problem. For one thing, the act places primary responsibility for civil defense on States and localities and requires them to match Federal funds—and the financial burden, unlightened by adequate leadership in Washington, has given us not so much a program as one huge yawn of fatalistic apathy.

DEATH WOULD BE CHEAPER

Death would indeed be cheaper for us all. Mass shelters of the type talked about by the Eisenhower administration might cost as much as $40 billion. An H-bomb warning system alone—for civil-defense purposes—would cost some $700 million. Mass evacuation test and training, much less the real thing, could use up billions more. Meantime the bombs get bigger and better, and by 1960, our own scientists reassure us, intercontinental missiles will be whizzing across whole oceans in a matter of minutes.

That's what we know from what they tell us in Washington. But what we aren't getting from Washington is any firm answer to this question: Is the Federal Government ever going to face this problem realistically? Or is it going to shrug it off with a token program, such as the House endorses, and continue to justify the public yawn?

Somewhere between the White House and the Atomic Energy Commission and the National Security Council someone ought to have the convincing answers, one way or the other. If they're never given, few voters can blame the House for thinking that spending money on an admittedly ineffective program is hardly worth quibbling about.

The Talented Miss Annette Evans of Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following feature article written by Libby Brennan, society editor, Wilkes-Barre Sunday Independent of March 31, 1957, in which she outlines the talents of Miss Annette Evans and the contributions which she has made to the cultural and educational life of the Greater Wilkes-Barre area:

The first time we saw Miss Annette Evans was in the living room of her home on West River Street in the summer of 1941. The picture of the woman was indelibly burned into our memory and to this day it is closely associated with her. It was early afternoon when we met her sitting poised and gracious on a settee. She wore a lavender dress and had a matching scarf tied around her gray hair.

My father and I had made the visit to discuss with her my college education. As a teenager, I was completely fascinated by her appearance and manner. She talked in a beautifully modulated voice and seemed

to understand all the perplexing problems that were taxing the mind of a child trying to make a monumental decision.

After she had thoroughly explained and answered the barrage of questions we put to her, she began to tell us of her background and interest.

RELATED MANY TALES

As we sat there, she explained to us that her ancestors had been among the early Connecticut citizens who settled the valley. She told us wonderful tales of how the gallant frontier women lived and struggled in this turbulent territory during the Indian seige. The tales seemed to flow and included many stories that her grandmother had told her. It was a wonderful afternoon and inculcated in us a tremendous desire to know more of the fabulous history of the community in which we live.

Now, quite a few years later, we have learned that Miss Evans will share her lifetime of research and study with many when she lectures at the last of the series of frontier history gatherings at the Wyoming Historical Society tomorrow night at 8.

Today, just as lovely and interesting as she was on that warm June afternoon a number of years ago, she still enjoys discussing local history.

"No one made any great effort to keep accounts of the part women played in local history during the 18th century," she said. "However, there are some excellent accounts of particular women who played a vital role during and prior to the days of the American Revolution.

"Tomorrow night we will talk of these pioneer women and attempt to convey their strength, courage, and stamina under the hazardous condition in which they lived," Miss Evans said.

DEVOTED TO THE ARTS

She will accomplish that aim we are certain. For Annette Evans has done more to nurture and develop historical and cultural interests in Wyoming Valley than any other woman.

Her life has been devoted to the arts. Her early education was secured at the Wilkes-Barre Institute, after which she was graduated from Byrn Mawr College. She is one of the founders of the Little Theater of Wilkes-Barre and the Wyoming Valley Philharmonic. She is a trustee of Wilkes College and the Wyoming Valley Community Concert Association. It was she who initiated the Fine Arts Festival for the Sesquicentennial and brought the Catlin Art Exhibit of Indian paintings for Wilkes College. She is currently chairman of the Wyoming Valley United Nations Committee.

In her dedication to foster culture interests, she lectures to various groups, giving the nominal lecture fee to the Wilkes College scholarship fund. She is a devoted trustee of Wilkes College and enthusiastic about every advancement and stride made by the local coeducational institution.

FITTING CLIMAX

When Richmond Williams, director of the Wyoming Historical Society, announced that Miss Evans would lecture, he said: "We feel at the society, that the appearance of Miss Evans to lecture on Frontier Women is a fitting climax for a very successful series. To date, we have had over 500 persons attend the first 5 lectures and even the response to the drive for members for the society has met with more than anticipated success. We have 37 new memberships already."

After hearing Miss Evans lecture tomorrow we are sure that number will be at least doubled.

Every youngster has one person she considers her ideal. Ours was Miss Annette Evans and we have never been disappointed in our choice.

Fair Labor Standards Act

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article entitled "Fair Labor Standards," written by the Right Reverend Monsignor George G. Higgins, director of the social action department of the National Catholic Welfare Conference. The article appeared in the Messenger, official publication of the Catholic diocese of Belleville, Ill., March 27, 1957.

The article follows:

FAIR LABOR STANDARDS

(By Msgr. George G. Higgins, director, social action department, National Catholic Welfare Conference)

Congress is now considering extension of the coverage of the Fair Labor Standards Act. Hearings are in progress in the Senate on S. 1267, introduced by Senators MORSE, MURRAY, NEELY, and MCNAMARA, and in the House on a similar bill, H. R. 4575, introduced by Congressman AUGUSTINE KELLEY of Pennsylvania. In addition, Secretary of Labor Mitchell has presented an administration-backed proposal. These bills and the Secretary's proposals all seek to bring the benefits of the wage-and-hour law to more employees.

The FLSA, enacted in 1938, has remained virtually unchanged except for periodic adjustments in the minimum wage to conform with the cost-of-living index. It provided a minimum wage and time and one-half for hours over 40 in a workweek. However, at that time Congress believed that conditions then present justified covering only a portion of employees who needed protection. As a result, the full powers of Congress over interstate commerce were not exercised. Furthermore, many exemptions were placed in the act, removing additional large numbers of employees from the act's protection because, it was claimed, they were employed in so-called sick industries.

The present act covers about 25 million employees. An almost equal number remains outside of its protection. Thus, the original act fell far short of the policy declared in section 2—to eliminate the existence in industry * * * of labor conditions detrimental to the maintenance of the minimum standard of living necessary for health, efficiency, and general well-being of workers. It is of significance that, for the most part, those remaining outside of the act are receiving low wages and working long hours.

The problem then is whether under today's conditions there is any longer any economical or practical need for denying minimum wage and hour standards to the several millions of employees not covered under the terms of the existing law. In our opinion, there is not. For that reason, we strongly favor the enactment of the Morse-Kelley bill.

The Morse-Kelley bill tackles the problem in two ways: (1) By amending the coverage provisions to include activities which affect commerce; (2) by limiting or entirely eliminating certain of the exemptions. It is estimated that the Morse-Kelley bill would bring wage and overtime benefits to approximately 9 million employees.

Those who oppose the Morse-Kelley bill argue that changes in the act to provide minimum wage and hour standards to any number of new employees would be inflationary, interfere with States rights, cause business to go bankrupt, curtail employment, be difficult to enforce.

In answer to this, the proponents of expanded coverage point out that all of these arguments were made at the time the law was originally enacted, but that none of the dire consequences resulted. It is suggested that if industry could conform in 1938, it could easily do so in 1956.

As a matter of fact, the major part of industry is already conforming either because of the Fair Labor Standards Act, or because they voluntarily adopted fair standards, or because they operate under collective bargaining agreements. The vast bulk of employers in the United States now pay $1 per hour and recognize the 40-hour week. So, except for some unusual circumstance, it would seem that the maintenance of such minimum standards would not constitute a crippling burden.

Finally, the argument in favor of having the States handle this type of legislation is meaningless for all practical purposes. Despite discussions of minimum wage and maximum hour legislation over the past 40 years State action has been incomplete and inadequate.

Nineteen States have no minimum wage legislation. Only eight States have minimum wages for men. Only 1 State has as much as $1 an hour as a statutory wage. It is obvious then that meaningful legislation must come at the Federal level.

A Realistic No-Strike Policy

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. ROOSEVELT. Mr. Speaker, on Friday, March 29, 1957, I introduced H. R. 6468, to amend the National Labor Relations Act which would remove the exemption now enjoyed by nonprofit hospitals from the provisions of the law. The following editorial and article reprinted from the American Journal of Nursing present adequate justification for this amendment. I respectfully urge the careful and sympathetic attention of my colleagues to these statements.

The editorial and article follow:

[From the American Journal of Nursing of September 1951]

A REALISTIC NO-STRIKE POLICY

The rising emergency of national defense and the unfilled needs of the country for nursing service are creating a multiplicity of problems for both the employers of nurses and the nurses themselves. In this tense situation, the American Nurses' Association receives from time to time reports of strikes among professional nurses. Needless to say, there is always great consternation among all concerned when nurses resort to such extreme action in a critical period, and fear and bitterness result.

The argument here will be neither for nor against such action except to state one inescapable fact. For the nurse, there exists when has been called by other groups the "doctrine of personal responsibility." This means that any deliberate action on her part which places the life of a patient in danger can never be condoned by placing the blame

elsewhere. This is a cardinal principle on which the welfare of the entire profession depends and on which the so-called no-strike policy of the American Nurses' Association is based.

What, then, drives nurses into threatening to use the strike weapon? This is an inviting question for study because nurses are generally considered to be a very conservative group of people. There is no mystery about it, however. In most instances the nurses are meeting an uncompromising, militant attitude on the part of the employer by adopting similar militant attitudes after all other methods available to them for solving their problems have failed.

In the emotional atmosphere which prevails there is confusion and conflict and a wide variety of opinions so that the real problems are often obscured to the casual observer. It is a matter of common knowledge, however, that these critical issues have arisen among groups of nurses where personnel administration is inadequate, where needs for security, status, and recognition are not being met, and where nurses have come to feel that their professional future is uncertain. In this present troubled world of ours, conflict in employment situations is doubtless inevitable and we cannot always hope for an ideal solution. But conflict can be constructive. It is through the clash of ideas that new understandings and new principles for action eventually emerge. The road to agreement is through the deliberation and discussion of differences in a democratic climate in which the controlling purpose is to seek the truth and to reach a solution acceptable to all concerned. In the employment situation an indispensable element in this process is the existence of sound employer-employee relationships. Such relationships are conspicuously absent in those situations in which nurses threaten to strike.

The no-strike policy of the American Nurses' Association, formally adopted by the 1950 house of delegates at the San Francisco convention, reads:

"In recognition of the fact that the nursing profession and employers of nurses share responsibility for provision of adequate nursing service to the public, the American Nurses' Association, in conducting its economic security program (1) reaffirms professional nurses voluntary relinquishment of the exercise of the right to strike and of the use of any other measures wherever they may be inconsistent with the professional nurses' responsibilities to patients; and (2) reaffirms its conviction that this voluntary relinquishment of measures ordinarily available to employees in their efforts to improve working conditions imposes on employers an increased obligation to recognize and deal justly with nurses through their authorized representatives in all matters affecting their employment conditions."

This no-strike policy was never intended to be just a fine sounding phrase existing in a vacuum. It carries a moral obligation for both State nurses associations and employers, which is frequently misunderstood or forgotten. First, this policy imposes the obligation on State nurses associations to pursue vigorously the establishment of economic security programs by which satisfactory working conditions can be gained for their members. Second, and equally important, it imposes the obligation on employers to recognize and negotiate, in good faith, with nurses through their authorized representatives regarding the terms of their employment conditions, if this is the procedure which the nurses desire. The very concept of the constructive use of conflict, as mentioned here, implies that the employers and the nurses meet on a basis of equality to insure joint consideration and settlement of the issues involved. If this condition is to be fulfilled, nurses must have available to them the necessary machinery, including personnel, financial resources, and expert counsel.

The economic-security program of the American Nurses' Association needs the ethical strength of the no-strike policy. But we must be realistic—without an active, dynamic program that policy is meaningless. Society will not automatically and without thought move ahead to provide the means which will insure adequate employment standards for nurses. Organized nursing must keep constantly at the job of working out the principles and the methods for attaining the desired goal. If we fail and if the present strike movement gains momentum, then, indeed, will all members of the nursing profession understand only too well these famous words of John Donne:

"And therefore never send to know for whom the bell tolls; it tolls for thee." (Mrs. Elizabeth K. Porter, R. N., president, American Nurses' Association.)

[From the American Journal of Nursing of December 1956]

THE TAFT-HARTLEY ACT AND THE NURSE

(By William C. Scott and Donald W. Smith)

On July 5, 1935, the President signed into law a bill which became known unofficially as the Wagner Act and officially as the National Labor Relations Act. This was the first comprehensive labor-relations act adopted by Congress, although a great deal of labor legislation had been previously placed on the statute books from time to time.[1] The precursor of the Wagner Act was section 7 (a) of the National Industrial Recovery Act (NIRA), which had been adopted to combat the depression of the early thirties.[2]

In order to understand clearly the basis on which Federal labor legislation rests, we must refer to the Constitution. The Federal Government, at least in theory, is a government of limited powers, authority for which must be found within the four corners of the Constitution, or be reasonably implied therefrom. The power to regulate labor relations (employer-employee relations) is found in the so-called commerce clause[3] which reads:

"The Congress shall have power * * * to regulate commerce with foreign nations, and among the several States, and with the Indian Tribes" (art. I, sec. 8).

This apparently simple clause has probably resulted in more litigation and has spawned more judicial decisions than all the rest of the Constitution put together. Suffice it to say, however, that the power of Congress over commerce which is interstate in nature has been broadened considerably since the early decisions, and a lawyer would be bold, indeed, if he attempted to be categorical. Congress has been held to have the power to regulate not only interstate commerce but matters affecting such commerce. In our complex economic society it can readily be seen to what extent the power may be expanded. However, there are limits, even to the powers conferred under the commerce clause, and there are still categories of employers and employees not touched by these congressional powers.

THE WAGNER ACT

The underlying theory of the Wagner Act was that industrial disputes were caused or prolonged (and interstate commerce adversely affected) by the refusal of employers to bargain with unions or other organizations representing their employees. The act, therefore, required employers to bargain collectively with duly constituted representatives of their employees; made a refusal to do so an unfair labor practice; and set up machinery for the conduct of elections by employees for the purpose of choosing their bargaining representative. It also created a National Labor Relations Board to investigate charges of unfair labor practices and to compel the discontinuance of such practices, as well as to conduct elections in cases concerning representation and to certify the organization which represented the majority of the employees in a bargaining unit.

One of the principal objectives behind the prohibition of unfair labor practices was to protect employees in their right to organize and to negotiate, and to assure this, discrimination by employers against employees who sought to exercise these rights was banned. This meant that employers could not wrongfully discharge or discipline such employees or otherwise prevent their activities. No exemptions were granted in the Wagner Act to nonprofit hospitals, as such, nor were profesisonal employees given any special consideration with respect to the choice of their representatives.

Various explanations can be advanced for the deficiencies of the original Wagner Act. One is that it was designed to do a particular thing only, and that it was not intended to be a complete industrial code. Some of its supporters insisted that it should stop there, whereas those who supported its amendment saw no reason why it could not be modified and expanded. Another explanation is that it was the first piece of legislation in the field, and that its faults were revealed by subsequent experience. Some critics found fault primarily with the administration of the law. Of course, there were also many who felt that the Wagner Act was perfectly satisfactory just as it was.

TAFT-HARTLEY, THE LAW TODAY

In 1947 the 80th Congress passed the Labor-Management Relations Act of 1947, popularly known as the Taft-Hartley Act. This act remains the law today. Prior to its enactment, extended hearings were held, and many professional organizations, including the American Nurses' Association, submitted testimony.

A large part of the Taft-Hartley Act is devoted to amending the old Wagner Act. These amendments may be divided into three categories: (1) Labor organizations as well as employers were required to bargain in good faith and were forbidden to commit unfair labor practices, thus making the act a two-way street; (2) various details of the old act or its administration which were considered inequitable were changed, such as the practice of runoff elections, which were required to be held between the two highest choices in the original election; (3) and new types of elections were authorized, such as elections to authorize union shops (later repealed) and decertification elections where unions had lost their majorities among the employees. The act also prohibited closed-shop agreements, permitted the States to outlaw union-shop agreements, removed supervisory employees from the coverage of both the Federal and State labor-relations laws, and made many other changes too numerous to mention.

The foregoing summary indicates some of the large economic and political issues involved in the enactment of the Wagner Act, its administration, and its amendments by the Taft-Hartley Act. It also indicates how easy it would be to lose in the shuffle the interests of a relatively small professional group, such as nurses, who are not industrial employees in the ordinary sense at all. Particularly under the Wagner Act, any effect upon the nursing profession must be regarded as a byproduct and not as one of the goals desired or even envisaged by the Members of Congress in 1935. In the case of the Taft-Hartley Act, the applicable language is more specific, but, even so, the impact of the act upon nurses cannot be considered one of the principal objects in the minds of those who debated or voted upon the measure in

---

Footnotes at end of speech.

1947. It is not surprising, therefore, that the Taft-Hartley Act emerged with one provision unfavorable to nurses and one provision favorable to the profession.

THE EXEMPTION OF NONPROFIT HOSPITALS

As stated earlier, Congress passed the original Wagner Act in exercising its authority over commerce between the States and within the District of Columbia. No specific exemption was given to nonprofit hospitals, and insofar as they were concerned, the important question was whether they were engaged in such commerce. In 1944, the United States Circuit Court of Appeals for the District of Columbia held that a charitable hospital in Washington, D. C., was engaged in commerce within the District.[4] The Supreme Court refused to review this decision, thus letting it stand. It can, therefore, be argued that since such a hospital is in commerce, it may, if the particular facts of a case warrant, be said to be in interstate commerce, or at least may be said to affect such commerce. The fact that Congress specifically exempted nonprofit hospitals may be regarded as some legislative recognition that such hospitals would be within the provisions of the act but for such exemption.

It is significant to note that the Taft-Hartley Act, as originally introduced into Congress, contained no reference to nonprofit hospitals. Nowhere in the extended hearings before the House and Senate committees was reference made to the subject. During debate in the Senate, however, an amendment was offered from the floor and adopted with practically no debate, which revised the definition of covered employers to exclude any corporation or association operating a hospital, if no part of the net earnings inures to the benefit of any private shareholder or individual. The effect of this language was to overrule the decision of the Circuit Court of Appeals and to place nonprofit hospitals in a separate category from all other private employers, whether profit-making or nonprofit.[5]

It is impossible to justify this discriminatory amendment. Congress cannot have seriously believed that no disputes ever arise in nonprofit hospitals. Salaries, hours, overtime, and such are certainly as great a problem there as in industrial establishments—perhaps more so, because of outdated practices and attitudes.

If, then, such disputes exist, can Congress be deemed to have considered it unimportant that they be resolved in an orderly fashion? The necessity of continued operation of the hospitals belies any such argument. It may be urged that Congress felt that collective bargaining in nonprofit hospitals would lead to strikes, picketing, and violence. But such a conclusion would be contrary to the whole theory of the act that orderly collective bargaining reduces the number and duration of strikes. Moreover, collective bargaining and strikes do not necessarily go together, as the nursing profession has shown by endorsing the former and renouncing the latter. Besides, Congress could have forbidden the undesirable conduct, or denied rights under the act to employees who engaged in such conduct. Finally, what conceivable reason was there for singling out nonprofit hospitals from all other nonprofit employers, who presumably belong under the act?

One is reluctantly driven to attribute to Congress an uninformed unwillingness to think of hospitals in connection with labor disputes, as if a legislature were so horrified at the thought of children contracting polio that it would exclude them from a bill for the distribution of serum, instead of granting them priority under the inoculation program.

ANA EFFORTS FOR REPEAL

As soon as this exemption was placed on the statute books, the ANA began its efforts to secure its repeal. In virtually every Congress since, amendments to this end have been introduced. However, except in 1949, when a bill passed the Senate, no such amendment has reached a vote. The nurses represent only a small segment of the employees covered by the Taft-Hartley Act, and until it comes up for comprehensive amendments it is difficult to make headway.

It is interesting to note, however, that in the one serious move which Congress made to amend the act, the ANA was successful. In 1949, S. 249 was introduced by Senator THOMAS of Utah. The Senate Committee on Labor and Public Welfare reported out two bills—a majority, Democratic, bill and a minority, Republican, bill. Interestingly, the minority report was presented by Senator Taft himself. In keeping with its constant efforts to strike the discriminatory exemption from the act, the ANA presented testimony before the committee, and its representatives personally interviewed many influential Senators of both parties. This very considerable amount of time and effort spent by the ANA brought gratifying results. Both bills, as well as the bill that finally passed the Senate, would have repealed the exemption of nonprofit hospitals—they would have brought such hospitals under the National Labor Relations Act, as amended. But unfortunately the House of Representatives failed to take action, and the entire bill died with the adjournment of the 81st Congress.

Both before and after the enactment of the Taft-Hartley Act—but especially since that date—the National Labor Relations Board, through its own rules, has limited the exercise of its jurisdiction by refusing to consider cases in which the impact of the industrial dispute was considered too slight to warrant the burden upon the limited funds and personnel of the Board. In recent years the Board has laid down definite criteria in terms of dollar volume of interstate purchases or sales which will subject an employer to the exercise of the Board's jurisdiction. Also, in a number of cases such as universities, the Board has refused to take jurisdiction of nonprofit organizations as such.

The question may sometimes be asked whether the statutory exemption of nonprofit hospitals is important to nurses, since the Board probably would not exercise its jurisdiction over them even if the law were amended to remove the exemption. In our opinion, the amendment of the existing law is still vitally important for the following reasons:

1. The exemption remains as a pattern for State legislation, which is often modeled on acts of Congress.

2. The exemption has been cited by State courts as a declaration of desirable public policy in interpreting State laws which did not specifically include or exclude nonprofit hospitals.

3. Hospitals have cited the exemption as an excuse for refusing to deal with their employees' representatives. Sometimes the hospitals refer to the exemption as a declaration of policy that such hospitals should not engage in collective bargaining, a theory which was expressly denied when it was stated on the floor of the Senate that the objective of the amendment was merely to relieve them from the necessity of appearing before the Labor Relations Board and from the danger of strikes. At other times hospitals seem to regard the exemption as the equivalent of an outright prohibition of collective bargaining. Of course, it is no such thing. Voluntary collective agreements between nonprofit hospitals and their employees are, and have always been, permissible and, when made, enforceable.

4. The present limitation on the exercise of the board's jurisdiction over nonprofit organizations in general is a voluntary administrative act on the part of the board. At some future time, the board may and possibly will change its policy. If and when that occurs, nurses in nonprofit hospitals should receive the benefits of the act immediately and should not have to incur a further delay until the statutory exemption can be repealed.

5. The exemption is an affront to the nursing profession and an unwarranted discrimination against them. It takes from the great majority of nurses the employees' rights that are given to practically every other employee group. It should and must be removed.

REPRESENTATION OF PROFESSIONAL EMPLOYEES

Although nonprofit hospitals employ a substantial majority of practicing nurses, they by no means employ all of them. Nurses who work for proprietary hospitals, in industry, or in other covered employment still receive the benefits of the National Labor Relations Act. They should, therefore, be familiar with the nature and significance of the provisions of section 9 (b) of the act relating to professional employees.

Under the original Wagner Act, the position of professional employes before the board was extremely precarious. In the first place, such employees had no statutory status; their treatment depended entirely upon the discretion of the board. In the second place, while the board sometimes placed professional employees in separate units, it frequently lumped them together with nonprofessional employees so that they were outnumbered and outvoted, with the result that they were represented by nonprofessional organizations.

The Taft-Hartley Act amended the National Labor Relations Act to correct this situation. Acting on the testimony of the American Nurses' Association and the national organizations of other professions, Congress wrote into section 9 (b) the proviso that—

"The Board shall not decide that any unit is appropriate * * * if such unit includes both professional employees and employees who are not professional employees unless a majority of such professional employees vote for inclusion in such unit."

This provision, in effect, recognized that one of the functions of a professional organization is to represent its membership in dealing with employers, and granted to such employees the right to choose their own organization as their representative. Its importance for professional employees can scarcely be exaggerated.

In 1949 the Senate was considering the proposed repeal of this provision. Senator Taft, in his minority report, urged the retention of the provision, as follows:

"An amendment securing the right of professional employees to separate representation from rank and file employees was requested at the 1947 hearings by nearly all the professional engineering societies and also by the national organization of nurses. All of them testified to having had their members included by the Board in units of production or routine officeworkers with whom they had little in common, the standards of performance and work output being completely different. They testified that, once having been included in such units, their members often found it impossible to persuade the Board to grant them separate bargaining units.

"The Labor-Management Relations Act, 1947, defined professional employees and directed the Board, whenever a group of professional employees requested it, to give them a separate election and not include professional employees in a bargaining unit which included nonprofessional employees unless a majority of the professional employees affected vote to be so included. The definition generally follows one developed by the Board itself as a result of considerable controversy in this

Footnotes at end of speech.

field. It is designed to cover engineers, doctors, lawyers, draftsmen, nurses, and so forth.

"Testimony in the 1949 hearing, for the most part, was favorable to the provision. The Board's Chairman, Paul Herzog, stated that he had no objection to the provision on professional employees, although the definition was somewhat difficult to apply (p. 321). General Counsel Denham testified that there had been a fair number of cases in which professional employees had sought and obtained separate units (p. 2006).

"E. Lawrence Chandler, assistant secretary of the American Society of Civil Engineers and speaking for a panel of engineering societies and the American Chemical Society, with 160,000 members in all, strongly supported sections 2 (12) and 9 (b) (1) of the Taft-Hartley Act, which assure professional employees a chance to vote on whether they want a separate bargaining unit or not (pp. 2835–2836 and 2840–2841). He said the provision has solved a very complicated problem and has worked well. He described a case at Westinghouse in Bloomfield, N. J., where engineers were denied a separate unit by the Board in 1946 but obtained one under the Taft-Hartley Act of 1948 (pp. 2844–2845). In explanation of the need for separate representation he stated that engineers have different interest and standards than production workers, often work long and irregular hours, even work at home, with no easy way of measuring quantitatively or qualitatively their output."

The provision was retained in the bill as passed by the Senate. The danger that the provision may be repealed in any wholesale overhauling of the Taft-Hartley Act makes it imperative that the nursing profession continue to follow the progress of proposed legislation on the subject and present its views whenever it appears desirable.

The administration of the provision by the Board has left something to be desired. The Board has not always been astute to identify groups of professional employees and to place them in separate units unless the employees themselves appeared and requested such action. Moreover, it has construed the provision narrowly so as to deny decertification to professional groups once they had been included in larger groups, at least if there were no professional organization claiming to represent them.

The board seems to fail to recognize the real reason for the necessity of separate grouping: namely, the difference between professions and trades or occupations, and the need for professional autonomy if professional standards and attitudes are to be maintained.

Such considerations are far more important than the question whether the professional employees work slightly different hours or are paid monthly instead of weekly. Moreover, each profession requires its own autonomy and cannot consent to be grouped even with employees practicing other professions. An active economic security program by a professional organization is the best assurance that the separation guaranteed by the act will be carried out.

The Taft-Hartley Act, and before it the Wagner Act, were designed primarily to protect employees in their right to organize, to choose their own representatives, and to negotiate or bargain collectively. The impact of this legislation on the nursing profession has been blunted by the nonprofit hospital exemption and by self-imposed limitations on the Labor Board's jurisdiction. Nevertheless, the law remains vital and the efforts to secure its amendment and more liberal application should not be relaxed.

[1] An example would be the so-called Railway Labor Act (act of May 20, 1926, C. 347, 44 Stat. 577, 45 U. S. C. sec. 151).

[2] Act of June 16, 1933, C. 90, 48 Stat. 195, 15 U. S. C., sec. 701.

[3] To some extent, mainly with respect to wages and hours, regulation is accomplished in another way, to wit, requirements affecting persons who enter into contracts with the Federal Government (see the so-called Walsh-Healey Act of June 30, 1936, C. 881, 49 Stat. 2036, 41 U. S. C., sec. 35). However, this is not important here.

[4] *National Labor Relations Board* v. *Central D. & E. Hospital* (145 F. (2d) 852).

[5] Railroads were also excluded, but only because they are subject to similar regulation under the Railway Labor Act. Federal, State, and municipal employees are also excluded.

Incidentally

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. COAD. Mr. Speaker, in the March 14, 1957, issue of the Montezuma Republican, of Montezuma, Iowa, appears an editorial entitled "Incidentally." As this editorial expresses many of the thoughts which I have expressed in the past few weeks I should like to present it here so that we will all know of the true sentiment of an Iowa editor regarding the activities of this administration and its policies.

The editorial follows:

INCIDENTALLY

Emergency tire repair. We heard A. G. Fett tell about fixing the tires on his 1904 1-cylinder Cadillac with flax seed. Wonder if that'll work on today's so-called tubeless tires.

It is hard to imagine the ill will that this man Benson has against him in this area. At most every farm meeting his name comes up in some uncomplimentary manner. Perhaps the Eisenhower administration will go down as one of the least interested in the farmer in the history of this country because of the Secretary of Agriculture's seeming indifference.

To whom belongs the blame we don't know. But a point remains very clear. In the cities, and among many in Government there is the feeling that the farmer is on a huge giveaway wagon. This is pointed out in national news magazines often. Like the last Time. In an article discussing the farm outlook they mentioned parity. In a footnote at the bottom parity was briefly described then another sentence said that this is the only segment of the economy that is so protected. And there is the example.

On the next page of the same magazine it mentioned, in another article, the minimum wage law, and ceiling on hours of work. We'd feel that one of the most important things to a solution of the farm problem might be a step in the direction of presenting the facts to the city people, legislatures and manufacturers.

Economy in Government is being talked of by the administration. Looks as if Ike could set a good example by cutting down his private air force. A news story telling about his new helicopter, to get from the White House to the airport without a traffic jam, sounds reasonable. An extra on hand sounds maybe a little too much. But, what really got us to thinking was the mention of the fact that a larger one might be purchased to haul him to his farm. Then what happens to the small two-engined plane that was bought for that purpose a few months ago?

Guess that we never fully understand how lucky we are to be citizens of rural area towns, or on the farms themselves. This union trouble on the west coast is a prime example. What a mess that must be. There is probably no dictator in the history of the world who has had the power that the head of the teamers union does. That makes us wonder what we have a Department of Labor in our Government for if this can crop up, and get as strong as it has. Maybe the Department of Labor is just to compile statistics on how many work. Talk about economy in Government, perhaps we should get some service for the tax money spent.

Less Heat and More Light on Milk-Marketing Problems

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mrs. ST. GEORGE. Mr. Speaker, the following editorial by Mr. E. R. Eastman appears in the American Agriculturalist of April 6.

The article is temperate and factual and expresses the ideas and ideals of many of the dairy farmers of my district and others in the Northeast.

Conditions are improving, Mr. Speaker, but not enough, and the farmers of the Northeast have good cause to be mad and to worry.

At the close of the article Mr. Eastman states:

The point is that there is marked improvement. It can be much better if we get a good order operating again. So let's hold the line steady and look forward with more hope to the future.

This we believe, and also that we must have in this and in all our other legislative problems less heat and more light:

LESS HEAT AND MORE LIGHT ON MILK MARKETING PROBLEMS

(By E. R. Eastman)

In this statement I shall put down some facts and some opinions on the present milk marketing situation. The facts were secured from a large correspondence with dairymen and from almost a lifetime experience with and study of milk marketing, and also after much reading and many personal talks with farmers and leaders on the present situation.

The facts are as accurate as we can make them. The opinions are mine and those of Hugh Cosline and Jim Hall, the other editors of American Agriculturist. Some of you will not like either some of the facts or some of the opinions. But I ask you to be openminded about them, for I have come to the conclusion that it is high time someone got up on his hind legs and called a spade a spade. The interests of dairymen will be best served that way.

EMOTIONS VERSUS REASON

In the first place, there is altogether too much heat and too little light whenever any consideration is given to present milk marketing problems. Too many of us are thinking with our emotions instead of our reason. Many dairymen are just plain mad. They have reason to be. Some of the causes are the too low prices of milk, the failure of

cooperative leaders to agree, the never-ending milk hearings, and the long delay in doing much to raise milk prices.

I don't blame farmers for being angry, but a man cannot think straight when he is mad, and too many of us have not been thinking straight lately. Some good dairymen, because of the low milk prices and the failure to correct them, have been listening to and following unsound leaders, who were "all talky and no doey."

WHY THE STRIKE FAILED

The recent milk strike is an example of what I mean. Don't misunderstand me. Farmers have a right to strike. They also have an equal right not to strike. The strike was called—and what happened? The leader had no dairy himself, and he had little or no milk marketing experience. He had no marketing or other plan except just to strike. Threats and violence were used. Those who had struck had little bargaining power for one reason because there are now many kinds of instant milk powder available, so that no consumer has to go without if whole milk is withheld from the market.

Realizing these facts, and not trusting the strike leadership, only a relatively few dairymen withheld their milk, and many of those did so because of threats and violence, not because they were in sympathy with the strike. No strike can succeed unless supported by a large majority of dairymen.

The attempt to withhold milk from the market probably cost dairymen at least a million dollars. But it should be emphasized that if farmers lose faith in their old organizations, they of course have perfect right to form new ones. In so doing, however, care should be taken not to go out of the frying pan into the fire. Your money and your support have for many years gone into building the larger, older milk cooperatives. They have accumulated valuable marketing experience, have trained personnel, and in spite of shortcomings, of which there are plenty, across the years they have done a reasonably good job. They would have done better if many more of you had given them more support.

It seems to me, therefore, that before deserting these older, experienced cooperatives, dairymen should make more effort to correct their mistakes. Why not make your own wishes better and more emphatically known to your leaders instead of starting with something new and with untried leadership which, the chances are, will not do even as well as is now being done.

There is plenty of reason for dairymen to be mad. For many years they have had in operation in the various milk sheds milk marketing agreements or orders. On the whole these have done a good job for farmers, for they brought order out of chaos, and in spite of their faults have resulted in orderly marketing and in better prices than could possibly be secured without them.

But the New York milk marketing order does have to be amended or revised.

Realizing the need of revising the New York order, the United States Department of Agriculture started holding hearings to get yours and your leaders' opinions on how the order should be amended. These hearings have dragged on month after month, consuming 96 actual days of sessions. The stenographic report covers 14,000 pages and weighs 120 pounds. The testimony for and against a separate New Jersey order covered 12,500 of these 14,000 pages. No one can say that the proposal for a separate New Jersey order has not had a fair hearing. The fact that these costly hearings, financed with your money, have been running so long, with constant arguments among the leaders of the milk marketing organizations and, until recently, getting nowhere, is a disgrace.

TOO MUCH FIDDLING

While the arguments and the fiddling went on Rome burned. Because of the delay dairymen of the New York milkshed have lost millions of dollars.

Perhaps there is no point in emphasizing who is to blame except to make sure that the same mistakes do not occur again. The blame for the delay in amending and improving the milk marketing order must be shared by the cooperative leaders, by the USDA, and by you, the dairymen. Too much time was spent looking for unanimous agreement.

That was impossible and should have been realized. If all progress was dependent upon unanimous agreement none would ever be made. All we can ever expect in any kind of a controversy is a majority agreement. There has been a majority agreement for some time both among the cooperative leaders and particularly among the dairymen on what should be done.

FOR A SINGLE OR COMPREHENSIVE ORDER

Now we come to the most controversial subject in reaching an agreement on amending the New York milkshed order. For months a row has raged over whether there should be a comprehensive order covering the entire milkshed, including northern New Jersey, or separate orders, one for New Jersey and one for the rest of the milkshed. A majority of dairymen in New York and Pennsylvania, and I think this is now true with dairymen in northern New Jersey, are for a single comprehensive order.

We of American Agriculturist are sure that a single order covering the entire milkshed will materially increase the dairymen's income not only in New York but also in New Jersey. I realize that there are many New Jersey dairymen who don't agree with this. It could be true that some of them, with a special local market, would not profit as much, at least for a time, under a single order. But a majority of New Jersey dairymen will profit from the start, in our opinion, and in the long run a single order will be best for everybody.

YOU CANNOT BUILD MILKSHED FENCES

An argument made by some of those favoring a separate order for New Jersey is that it will keep New York milk out of New Jersey markets. Whatever may have been in the past it is true now that you can no longer build fences around any milk market. New York milk has always been sold in New Jersey. I can understand why New Jersey dairymen resent this and want to keep it out. But it will always be sold there, and it is much better to have it under control, as it is more likely to be under a single milk marketing order, than as it is at present or would be under separate orders.

There certainly should be, and I understand that agreements have been reached and compromises made, to protect New Jersey and other dairymen near the large markets by proper and fair differentials. It is pretty generally agreed that in operation a single order will bring to dairymen of the entire milkshed at least $18 million more a year, or from 18 to 25 cents more per hundredweight. These are conservative figures. There are many who believe that a single order will add from 40 to 50 cents a hundredweight. I would prefer to put the estimates lower, then any gains beyond these figures will be to the good. Dairymen have had enough unfulfilled promises in this milk business.

At long last the hearings at this writing are about to end. It is now up to Secretary Ezra Benson, of the USDA, and his associates to review the evidence and put the proposition up to vote by the dairymen of the New York milkshed. If the Secretary acts fast enough the order should be in force by July 1. It is no temporary expedient, but a long-time plan for maintaining orderly milk marketing to give the dairymen of the milkshed all the income that the market justifies. My prediction is that a single marketing order, safeguarding the rights and privileges of the dairymen in all parts of the milkshed, will be carried by an overwhelming majority.

DAIRYMEN MUST ADJUST

Those of you who read American Agriculturist know how sympathetic and concerned our staff and I are with the problems of the small farmer. It is a sad fact that it is getting increasingly difficult for him to operate. But neither the small farmer nor the large one can continue to succeed in these difficult times unless they recognize the changes that come about, and adjust their business and their lives to meet them. I have come almost to hate the word "efficiency" as it applies to farmers, for I think as a class on the whole farmers are far more efficient than most other businessmen. But it is a fact that farming is rapidly changing, and your success and happiness, whether you are a large or small farmer, depends upon the efficiency of your business, and especially on keeping your costs of production down.

So far as milk marketing is concerned, that means careful thought and judgment without emotion. It means taking part in your local meetings and letting your leaders know how you feel on these problems.

Especially and immediately your future success as a dairyman in my opinion depends to a considerable extent on a single marketing order covering the entire milkshed.

In all of these problems, whether you are a dairyman or in any other line of farming, success must come from your own work and the efforts of your cooperatives and farm organizations.

IN CONCLUSION

It is good to be able to be a little optimistic. Due to better marketing conditions, milk prices are materially improving. The pool or blend price both for December 1956 and for January 1957, was 50 cents a hundred higher than the corresponding prices the year before. The price for February was 49 cents a hundred more. The estimated price for the first 6 months for 1957 averages 39 cents a hundred pounds higher than for the first 6 months of 1956.

One thing is for sure, no order or other plan will permanently raise prices beyond what the market justifies. Too high prices will result in surpluses, plunging the market down again. Speaking at Cornell's farm and home week, economist Prof. Robert Story blamed too much milk for the drop in milk prices in the New York milkshed in recent years. Professor Story pointed to a 45-percent increase in milk deliveries in recent years contrasted with only a 6-percent increase in sales.

"Higher fluid-milk prices," he said, "will not permanently solve the problem of excess supply, and in the long run will not help New York dairymen." But he added an optimistic note: "The trend in milk supplies," he said, "has reversed in recent months so that milk prices have increased."

The economist further added that proposed changes in the present milk-marketing program "should yield lasting solutions to some very difficult and longstanding problems. Nearly all of the production area for northern New Jersey and the secondary area markets in upstate New York fall within the present production area for the New York market."

If we can get a single order into operation soon, milk prices will be much better. But, of course, they will never be high enough to please everybody.

The point is that there is marked improvement. It can be much better if we get a good order operating again. So let's hold the line steady and look forward with more hope to the future.

Editorial Protests Stand by Judge in Wheat Quota Cases

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am enclosing two articles appearing in papers in Ohio which were sent to me by Mr. Elmer Cornell, who is one of the officers of the National Federation of Independent Farm Organizations. I join with my farmers, Mr. Speaker, in insisting the legislation that has been passed in this Congress certainly does not take care of the small farmer or the group that we might classify as rotation crop farmers.

I am sure all of us, Mr. Speaker, are familiar with what the "New Dealers" of this Congress did a few weeks ago in an honest attempt by some friends of the farmers to get legislation that would be benefit to the rotation or small farmers. I am certain people will remember just who are friends of the farm group.

However, forgetting what bitterness we might have as a result of the action that took place a few weeks ago, I sincerely hope the Agriculture Committee will forget partisan politics and whether or not they represent the big farmer or little farmer and present to us some legislation which will be of benefit to the majority of the farm group.

EDITORIAL PROTESTS STAND BY JUDGE IN WHEAT QUOTA CASES

A recent editorial in the Norwalk Reflector-Herald was submitted for publication by local opponents of some practices taking place in Federal wheat quota matters.

It was pointed out there are instances where farmers are denied trial by jury when accused of Federal regulation violations. The editorial in the Norwalk paper states:

THE LAW OF THE LAND

"It is the job, perhaps the most important job, of any judge to uphold jealously the Constitution of the United States. We were quite shocked to read a recent article in the Toledo Blade concerning wheat quota violations and United States District Judge Frank L. Kloeb's statements made in conjunction with a case he was hearing.

"In this particular case Walter and James Carpenter, of Defiance, Ohio, and George Miller, of Fayette, Ohio, were before Judge Kloeb on a contempt charge. The case was all too familiar to many farmers.

"The Carpenters and Miller had refused to allow Federal agents access to their lands to measure wheat planted. The story is getting to be 'old hat' as more and more farmers are finding themselves faced with similar charges. Our purpose here is not to argue the case of trespass or a farmer's right to plant what he wants. Our stand on that issue is rather well known.

"At the moment we are more concerned with statements made by Judge Kloeb while hearing the case and immediately after the session.

"He warned that he would begin handing out stiff sentences to farmers who violated the provisions of the law establishing wheat quotas. To quote a paragraph from the Blade's story, 'these hearings are preposterous,' Judge Kloeb remarked, adding he intended to uphold the law of the land and refused absolutely to go into the question of constitutionality.

"That is a very revealing paragraph. We question the advisability of any judge issuing warnings on cases not yet heard just on a matter of common sense. We thoroughly question and disagree with the contradictory remarks of Judge Kloeb about upholding the law of the land and in the same breath refusing to go into the constitutionality of the case.

"What higher law of the land is there than the Constitution? How can any judge refuse to refer to the Constitution when hearing a case? Let it be understood that these cases are not being tried by jury but by a single judge.

"It is a pretty sorry situation when a judge can make irresponsible statements, such as those attributed to Judge Kloeb, and still try other cases concerning wheat violations.

"The farmers of the Nation, especially the small farmers, have a tough fight on their hands. The only way that they can lick the problem in a practical manner is by public opinion. It will be a hard job but slowly the movement is gaining momentum. Statements like those made by Judge Kloeb give all citizens a good idea with what the farmer is faced."

SMITHVILLE POULTRYMAN SAYS SOIL BANK HURTING OHIOANS

SMITHVILLE.—The Federal Government's soil-bank program is backfiring to the detriment of Ohio poultry farmers, it was charged here this week by Loyal Hostetler, State industry leader.

Hostetler, an official for the Northeastern Poultry Producers Council, charged that Corn Belt farmers are signing up for soil-bank payments, then switching their buildings into the production of eggs and broilers.

To halt the move, which is expected to add still further to current oversupplies of eggs and chickens, Hostetler has joined with NEPPCO officials in seeking remedial action from Congress.

"Ohio poultrymen are already battling a severe economic crisis," Hostetler warned. "If midwestern and southern farmers divert their farm buildings to poultry production, it is bound to have price repercussions in our markets."

He reported that the council is urging Congress to instruct soil-bank administrators to set up cross-compliance requirements. Under this plan, when signing up acreage for soil-bank payments, farmers would be required to lease farm buildings to the Government. This would guarantee that these facilities could not be used for poultry production.

NEPPCO is already receiving reports that newspaper ads in such States at Georgia and Kansas are being used to urge farmers into poultry production, Hostetler revealed. In some cases, the soil-bank program is being used as a springboard to expand sales of poultry foods and baby chicks.

The Northeastern Poultry Producers Council, with headquarters in Trenton, N. J., represents poultrymen in a 14-State area, ranging from Maine to Virginia and as far west as Ohio.

Strings on Foreign Aid

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Francisco Call-Bulletin of Thursday, March 28, 1957:

STRINGS ON FOREIGN AID

Congress has tied too many political and economic strings on our foreign aid program, and these restrictions "take a heavy toll of time and manpower" and deprive our administrators of flexibility of action.

Briefly, that's the theme of a report prepared for a special Senate committee studying the Eisenhower administration's $4.4 billion foreign help program.

The committee ordered the report, one of several on which it will depend to guide Senate thinking.

We hope this one does not do too much guiding.

Maybe it is true that red tape bogs down our spending abroad, but certainly it is essential that Congress should not surrender control of foreign aid entirely to the administration—any administration.

Here is an area in which some of the taxpayers' money may be saved. There are other parts of the budget about which Congress can do absolutely nothing.

For instance, interest on the national debt cannot be touched; it will amount to $7.3 billion.

Just to hold Federal spending at present levels (and thereby sidestep the peril of greater inflation) will require a $3 billion reduction in the record $71.8-billion budget.

One of the proposals of the Hoover Commission holds out hope for better spending controls by Congress.

It calls for a new type of budget based not on obligations but on accrued expenditures—"the charges incurred for goods and services received and other assets acquired. * * *"

Suppose the Navy gets authority to build a $150 million ship. At present, Congress would appropriate the entire amount in terms of obligational authority. But on an accrued expenditures basis only a fraction of the money would be appropriated in the first year, and Congress could review progress of the ship in light of actual cost experience.

An accrued expenditures budget was sponsored in the Senate last year by Senator JOHN F. KENNEDY, Democrat, of Massachusetts, and was passed. The House killed it. Now it's up again.

This time the House, having heard in clamorous tones from the folks back home, may not be so ready to spike a means that offers aid to the American people.

Sewage Treament Plant Construction Grants

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. JONES of Alabama. Mr. Speaker, last year when we passed H. R. 9540, the Blatnik Water Pollution Control Act, we served notice on the States, and especially those groups—public and private—interested in the control of water pollution that the Federal Government, for the first time, recognized the seriousness of the pollution problem and was ready to assume a responsible role in the solution of the problem and the abatement of the problem.

In the few months that the program has been in operation considerable prog-

ress has already been made. Passage of the Blatnik bill stirred the States to act more than ever before in the pollution control field. A majority of the States, for instance, just in the past 6 months have expanded and improved their own pollution control programs to take advantage of Federal assistance in the form of program grants and research funds.

The great interest which has been generated in water pollution control activities since the passage of Public Law 660 gives us great hope that the joint, cooperative all-out effort against this problem will be realized. Even at that Mr. Emil C. Jensen, chief of the division of engineering in the Washington State Department of Health and currently president of the Federation of Sewage and Industrial Wastes Associations terms Public Law 660 as nothing more than a key to the door and points out that it is up to the State authorities to make it work.

Writing in the February 1957 issue of Water and Sewage Works, Mr. Jensen, who is a leading expert in the field of sanitary engineering and pollution control, reviewed the problems, developments and trends of the past year regarding sewage and industrial wastes. Regarding Federal water pollution control legislation Mr. Jensen writes as follows:

FEDERAL LEGISLATION

The passage of the permanent and strengthened Federal Water Pollution Control Act, Public Law 660, by the 84th Congress should prove to be a milestone. The Honorable JOHN A. BLATNIK, chairman of the Subcommittee on Rivers and Harbors of the Committee on Public Works of the House of Representatives, is to be accorded the highest commendation for spearheading the movement of this bill through the Congress. His thorough understanding of the problems, and his ability to make a forthright presentation of the facts brought the support necessary to passage of the bill.

In the course of the hearings on the bill there was very encouraging evidence that water-pollution control is becoming more fully recognized as a vital part of the solution of this Nation's total water resources problem. This problem was stated as being: "Providing the right quantity of the right quality at places where it is needed." And pollution was identified as a waste of water.

State and interstate agency protests over direct intervention of the Surgeon General of the United States Public Health Service for enforcement, as provided in this initial draft of the bill, resulted in considerable change. The law now provides that State or interstate action to abate pollution shall not be displaced by Federal enforcement except pursuant to court order. However, the Surgeon General is authorized to formally notify State agencies of certain conditions, call conferences, make recommendations, call formal hearings, and initiate court action upon request or with the consent of the States involved.

The provisions relating to grants for construction stirred up controversy in the hearings. The proponents claimed that successful pollution control depended upon research and education, enforcement, and construction, and that the latter (construction) could not be fully realized without grants. They pointed to the fact that the only time in history that cities and towns have kept pace with the demands for sewage-treatment facilities was in the era of grants-in-aid for public-works programs in the 1930's. The opponents claimed that the limitations relating to the grant could result in a deterrent to the rate of construction. The law authorized grants for construction of municipal treatment plants in the amount of $500 million during a 10-year period, with an appropriation of $50 million for the first year. Some slowdown in construction has been reported, due to the time required to set up the machinery for making the grants and the tendency for communities to wait in line for their turn on the priority list. With the intensified efforts on pollution control through strengthened State programs, there will appear more and more situations of real inability for communities to handle the financing totally on their own. In this respect the availability of Federal aid may prove to be a key factor in getting the job done.

Considerable interest has developed and action taken toward asking Congress to increase the appropriation from $50 million to $100 million for construction grants in the coming year.

The authorization of $3 million per year for 5 years for allocation to the State and interstate agencies for pollution-control activities should prove to be a key feature of the law. Maximum strength in the program at this level of government is imperative to not only assume the most effective enforcement but to determine upon research needs and to promote necessary adjustments in State legislation.

It was discouraging to note that funds were not appropriated to implement a section relating to research and training. Additional research is the key to providing the resources, especially those for tackling the increasing complexity of the problem. The stage is set to move ahead most effectively—the law is very comprehensive and has considerable latitude with respect to arrangements for research and training, and there is evidence of much interest on the part of the groups who would participate. The next move is up to Congress.

The Federal law (Public Law 660), regardless of its notable features, should not be considered as more than a key to the door. The States now have been provided with some very important tools—financial assistance to their programs, construction grants to deserving municipalities, and a potential production line for research and training of manpower. It is up to the State authorities to make it work.

Congressional Failure

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. JOHNSON. Mr. Speaker, comments on the failure of the House to agree upon acceptable legislation on corn have begun to filter in from the rural communities which will be hit hardest by that failure. For quite some time in the postwar years it was considered the height of good humor to joke about farmers herding their cows with Cadillacs. Now it is time some people, including the Secretary of Agriculture, discovered what is so readily evident to the observant editor of the Spring Valley, Wis., Sun. He notes with the wisdom born of close personal contacts that farmers are in need of a long-range solution to their problems and that they are the "only segment of our national economy that has been on a downhill pull while the remainder of the Nation continues to ride the escalator of rising wages." The House may have one more opportunity to consider suitable legislation affecting corn, so I submit the following editorial for the consideration of my colleagues:

It seems likely that Congress has goofed again in their efforts to come up with a farm program before planting time.

Partisan politics that left the farmer in a back seat as far as the program is concerned seems to be the principal reason there will be no additional farm legislation this spring in time to be worth considering for the 1957 planting season.

The corn allotment will likely remain at about half of last year's when the soil bank gained at least a start in this area. Many of those that signed up this year probably did so in anticipation of an acreage increase before planting time so that a good percentage of those that have signed up for 1957 will not confirm to agreements for the simple reason that it will not be practical for them to do so on such a small corn base as provided in the present regulations.

The sad fact about the legislative picture is that both the Republicans and Democrats were agreed on the necessity of increasing the corn base but couldn't get together on the details with the farmer; as usual, the goat of their bickering.

The soil bank was a long way from a solution of the farm program but with adequate allotment it did offer local farmers a chance to participate on a small scale, at least—with the larger farms really gaining some tangible benefits.

As it is, however, both the large and small dairy farms are understandably reluctant to participate unless on the verge of retirement so that the small allotments look attractive to those that would rather not farm anyway. The average dairy farmer, however, is left out in the cold with the present allotments because it is impossible for him to feed a dairy herd and limit his corn acreage to the present corn base, let alone take any of his corn acres out of production by placing them in the soil bank.

Congress will have to take direct responsibility for their failure to remedy this situation as well as their failure to provide any substitute program that would offer an additional long-range solution to the only segment of our national economy that has been on a downhill pull while the remainder of the Nation continues to ride the escalator of rising wages and income along with rising prices that will be just that much harder for the farmer to pay in the months ahead.

Nasserism Is Hitlerism

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an address delivered by the national commander of the Jewish War Veterans of the United States of America, William Carmen, at a special meeting of the Kings County Council of Jewish War Veterans at the St. George Hotel in

Brooklyn, on Thursday, March 28, 1957.

This is a very fine and timely address. It deals primarily with the current situation regarding the Middle East and the moral obligations which our country has in connection with this situation.

Mr. Carmen maintains that Dictator Nasser is not very much different than was Dictator Hitler. Their attitudes are the same, their contempt for democracy is the same, their deeds are outrageous, and they are never satisfied. He expresses the fear that we may have committed the foulest diplomatic blunder against our allies Britain and France.

I associate myself completely with these thoughts as expressed in this address. It is for this reason that I am inerting it into the RECORD and call it to the attention of all my colleagues.

The text of the address follows:

Ladies and gentlemen, comrades and friends, it is particularly good to return to Brooklyn, N. Y., once again after almost a year's absence for here in the heart of New York is where so much of the important work of our organization gets its start.

I have been on many public platforms in many places in almost every State during the past few months, but when one is away from his own region of the country one necessarily is more guarded in his pronouncements.

Thus, if I may, I would like to utilize this opportunity to present some of my thinking with respect to the current situation which absorbs the attention of our organization and, indeed, the entire world.

We have heard a lot about the Middle East within the last few months. We have heard such things as moral obligations, assumptions, United Nations expeditionary forces, and other symbols that characterize an age where world opinion has become a factor heretofore never reckoned with, since previously it could never be mustered with any degree of power and effectiveness.

Today, world opinion is greater in power and intensity than even the most highly potent atomic weapons.

We have learned this lesson within the last few months. We must never forget it.

It is this lesson which I believe holds the key to world peace and world progress for it has undoubtedly been proven, to me at least, that world opinion invariably swings toward the side of morality, and if treated with the difference owed to it, I sincerely believe that it can be constantly corraled for the common good.

The real test, however, is still to come. Indeed, the eyes of the world are focused on the United States for from our country will come the decision that will either certify or cancel the real meaning behind the words "moral obligations."

There is no question in my mind that our Government either by implication or by stated purpose has indicated to the Government of Israel that it would not support a return of Egyptian civil or military rule in Gaza nor would it tolerate any obstruction of shipping in the Straits of Tiran.

There may have been some basis for our Government only to imply such obligations. If, however, this basis rested on the theory that Egypt and its strong man would fall in line, then based on recent events, I believe we were either terribly naive or badly mistaken.

There can be no such thing as an honorable dictator. This is a fundamental lesson for all of us, written in blood, notarized by pain, and filed by sacrifice.

A dictator lives only at the whim and fancy of the crowd mind, callous and inert at best, cruel and inhuman at worst.

It was a wise man who said back in the thirties that you can't do business with Hitler. The axiom of this age should be that you can't do business with Nasser.

The decision to place a civil governor in the Gaza strip is, beyond doubt, not only outrageous but a direct slap in the face of the United Nations, which bailed the Egyptian dictator out of his sinking ship in the first place. So here we find him today saved by the United Nations from the destiny which he brought directly upon his own head and still playing the old game of pitting the Communists against the Western democracies. In the Straits of Tiran the blockage is still threatened, deceit is the watchword of Dictator Nasser.

As for the Suez Canal, nothing has really changed. Let us not lose sight of the fact that nothing has really changed. It is my view that, if the Suez Canal situation continues to remain unchanged, our good friends, our allies overseas, the British and the French, will have been the victims of the foulest diplomatic blunder that the world has ever witnessed.

Remembering the lesson again—a dictator will invariably take what is not his to take. This taking eventually becomes a disease until he either has taken everything or has been destroyed. Remember Alsace-Lorraine, the Polish Corridor, Austria, Czechoslovakia. It is the same story of the generation just passed. The philosophy of Dictator Adolf Hitler is seen and heard again—promises today, broken tomorrow. And why not? Dictator Nasser's advisers are many of the very same men who advised Adolf Hitler.

The Russian arms are flowing once again—arms to support Egyptian plunder. The problem remains the same—unchanged—that of communism plus nazism plus Nasserism versus democracy.

There are measures that the United States can take if it wishes to help change the mind of Egypt. Where are the United States ships we promised to send through the Straits of Tiran? Let us talk again of sanctions, but sanctions against Egypt. There must be assurance that the fedayeen raids shall cease. The Government of Egypt should not get one single American dollar until it accedes completely to the demands and wishes of the United States and the United Nations.

If this is not enough to bring some semblance of sense into the mind of this corrupt dictator, then perhaps the United Nations might be forced to admit its failure and pull out its troops which will then be serving no useful purpose.

These may be harsh words, but these are angry times and I go along with the philosophy that you cannot let these bullies and petty potentates get away with anything.

There was an old platitude that might be appropriate at this time. Give them a hand and they will take the whole arm.

One of the principal programs of our organization is its brotherhood program. Brotherhood means the ability to live together in peace and honor. Brotherhood can best be described by actual happenings—things like the mayor of Dublin, a Jew granted his office through an electorate that is more than 95 percent Catholic. Things like Arab citizens of Israel sitting in the Israeli Parliament, the Knesset, with equal voice and equal vote with their fellow delegates.

It is my belief that once the miserable, downtrodden, poverty-stricken, and disease-ridden Arab masses are relieved of their psychotic leadership in the form of dictators and potentates, they, too, will be able to enjoy the fruits of prosperity and peace that can only come when the underlying theme of their lives is brotherhood, then, maybe then, their basic desire will be the same as ours and they, too, will wish to live in peace with their fellow man.

Consumer Study Needed

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. MULTER. Mr. Speaker, the following article by Sam Dawson, which appeared in the Evening Star of March 25 and other newspapers throughout the country, indicates the immediate need for a study of our economic conditions from the viewpoint of the consumer.

The article follows:

POCKETBOOK PINCH GROWS IN MIDST OF ABUNDANCE

(By Sam Dawson)

NEW YORK, March 25.—A pocketbook pinch in the midst of abundance. Consumers fretting over the rising cost of living. Whole industries worrying about rising stocks of unsold goods in spite of less than capacity production. Factory workers noting that after months of seeing average take-home pay rise faster than prices, they are now seeing the cost of goods and services mounting faster than the average paycheck.

That's the turn the economy is taking—however temporarily.

In a sense it's the typical pattern of inflation. First came the shortages in materials and labor. Industrial activity was expanding faster than the metal men, the building material firms, the machinery and tool makers, the home builders, the money lenders, the pool of skilled labor could supply the demand.

Prices of basic materials went up. Wages of labor went up. Cost of credit went up. Wholesale commodity prices in general went up.

INCREASES SLOWING

In the last 2 or 3 months these increases have largely slowed and in some cases gone into reverse.

But the delayed action explosions are now spreading through the retail prices of finished goods, and especially of services—transportation, medical care, the cost of eating out, of repairs and maintenance or installation of gadgets.

For 6 straight months the Bureau of Labor Statistics has been reporting a rise in the consumer price index. Each time, until now, it has also reported that the average take-home pay of the factory worker has advanced a little more, keeping him one jump ahead.

Its latest report for the cost of living and purchasing power of the factory worker, as sampled in mid-February, changes this. The cost of living climbed to another record, up 3.6 percent from a year ago, but the factory worker's paycheck, though up 17 cents a week, didn't keep pace.

Even so, he's better off than the increasing number of Americans who live on fixed incomes—pensions, annuities, savings, social security. Their incomes in most cases didn't increase at all.

Some economists hold out hope that the long rise in the cost of living may be coming to an end. They note that wholesale commodity prices as a whole have sloughed off since the first of the year.

CAPACITY MOUNTING

More industries are joining the list of those with more capacity to produce than current demand can keep fully busy. These include the primary ones like steel, copper, aluminum, paper, oil; and the consumer goods ones like autos, appliances, textiles.

The argument goes that this widens the field for competition and makes price rises harder to sustain and bargains more likely to come by.

Manufacturers have some counter arguments. They say that wage scales tend to rise still higher; that the cost of materials is still high; that the cost of the latest equipment and of repairs to old climbs.

It adds up to a squeeze on profits and makes price cuts on their goods hard to take.

Merchants add that their costs have risen, too, and their profit margins have been pared as far as they can stand.

It's an old debate that's made the rounds in prior inflationary years—with the consumer's willingness or ability to buy probably holding the deciding vote.

A Bill To Amend the Peanut Marketing Quota Provisions of the Agricultural Adjustment Act of 1938, as Amended, for the Purpose of Eliminating Green Peanuts Therefrom, and for Other Purposes

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. CRAMER. Mr. Speaker, I have today introduced into the House a bill to amend the peanut marketing quota provisions of the Agricultural Adjustment Act of 1938, as amended, for the purpose of eliminating green peanuts therefrom, and for other purposes.

This bill, if approved by this Congress, will mean the salvation of what is almost exclusively a southern agricultural occupation and a traditional food pleasure in that land. The green peanut—entirely different from the familiar roasted peanut the distinguished gentlemen all know—is considered a delicacy in the South and is boiled to be eaten between meals or is served as a vegetable with meals. This product, which does not compete with the regularly harvested and roasted peanut, is produced on small plots by individual farmers and reaped by hand. It is not a highly profitable crop and generally produced by family farm groups because of the labor involved.

In Hillsborough, Pasco, and Hernando Counties, main producers in the First District, under present regulations restricting all peanut acreage it is not possible to raise enough of the green peanuts to supply the local markets, and they suffer unjust restrictions and penalties under present law. To offer relief to this situation and to permit growing of a salable and desired product my bill would eliminate these restrictions. My constituents ask no subsidy in any way.

Since evidence has been presented to the Department of Agriculture that the operation of the present act was restrictive and unjustly placed a penalty on these farmrs producing green peanuts, my bill would also provide for return of penalties assessed against them during the years 1954, 1955, and 1956. This will amount to a return of only a small sum of money assessed as fines and wholly due to the presently recognized inequity.

I hope that the Members of Congress will agree with my efforts to offer relief to a small but important segment of the economy of my district. I further ask that this action be taken in order that we may preserve a traditional pleasure in the South. My bill is presented after full study at my request by the Department of Agriculture. It is proper and worthy legislation by which this Congress can be of service to the people of a great State.

What Labor Thinks

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. PRICE. Mr. Speaker, I ask permission to reprint two editorials from the AFL–CIO News, official weekly paper of the American Federation of Labor and Congress of Industrial Organizations.

These two editorials—one on disclosure of alleged crookedness by a few union officials, the second on the "not so modern" Republicans—go together well to suggest what the thinking of honest, reputable, responsible American labor is at this time. I commend the two editorials to the attention of my friends on both sides of the aisle.

The editorials follow:

UNPLEASANT STUFF

The transcript of the hearings of the McClellan committee does not make pleasant reading.

The record strongly suggests the absence of a real sense of trade-union responsibility or morality on the part of several leaders of the Teamsters Union.

From the testimony, from the repeated use of the fifth amendment against self-incrimination, from the documents and evidence introduced by the committee staff—from all of this, there emerges a strong indication that ethical, responsible practices were too often flouted.

The McClellan committee, needless to say, is not a court of law. On the other hand, it is not, on the record of the first few weeks, a witch-hunting group nor a group of irresponsibles. To date, it has performed a public service in bringing to light facts and figures which only a governmental agency could uncover.

Repeatedly the committee members and their counsel have pointed out that the practices which they have uncovered are not typical of the labor movement, and indeed that they run counter to the ethical standards developed by the AFL–CIO and the vast majority of its affiliated unions.

In other words, what has been harmful to labor during the first few weeks of the hearing has been not the committee but the practices and attitudes it has brought to light.

Perhaps, as the next few months unfold, antilabor forces will use these disclosures in an effort to hamstring the entire labor movement. Fair legislation will win support. But antilabor legislation will be resisted by the great majority of the labor movement—the multitude of honest, devoted members and leaders who have worked and sacrificed to build their unions and to make them honest, effective instruments for the public welfare.

The morality of the American labor movement has always been high—higher than those of profit-making corporations and the business community in general.

As AFL–CIO Secretary-Treasurer Schnitzler has said: "I don't give a damn what a corporation does—that doesn't justify a union representative taking a 3-cent stamp."

That attitude—and only that attitude—can maintain the wonderful record of integrity of the overwhelming majority in our trade union movement.

NOT-SO-MODERN REPUBLICANISM

The Republicans are back in business at the same old stand, giving the lie once and for all the President's modern Republicanism.

In a panicky mood over the administration's budget and spurred on by the economy drive touched off by the Chamber of Commerce and the National Association of Manufacturers, the House of Representatives kicked over the traces and ran wild on money bills needed to keep the Labor and Welfare Departments operating.

The Republicans, thumbing their noses at the White House and modern Republicanism, marched down the teller-vote aisles in the House side by side with the Dixiecrats.

The modern Republicans apparently were off somewhere in their helicopters rounding up a new crop of platitudes.

No Relief in Sight

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. GAVIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Titusville (Pa.) Herald of March 28, 1957:

NO RELIEF IN SIGHT

During the last Presidential campaign the Democrats hit hard at the Eisenhower administration for failing to provide tax relief for small-business corporations. The fact that this was a weak point in the administration record was readily apparent by the rapidity with which the Republican campaigners rushed forth with promises to ease the tax burden on small business.

With both Democrats and Republicans giving lip service to the welfare of the small corporation, it looked as if something definite would be done in the present session of Congress. Then President Eisenhower came up with his $72 billion budget and now all hope appears to be lost.

On Monday the Senate Finance Committee was unanimous in its opinion that small corporations should get some relief. However, this appears again to be only by the mouth. A proposal by Democrat Senator FULBRIGHT to cut the Federal corporation tax rate from 30 percent to 22 percent on earnings up to $25,000 and increase the rate from 22 percent to 31 percent on all earnings over that amount got only two votes in its favor—both by Democrats. This new tax rate would have definitely been an aid to small corporations. Large corporations would have been hit harder, but the $72

billion budget would not have permitted an overall loss in net tax revenue.

Yes, sentiment to give tax relief to small corporations still exists along the banks of the Potomac, but we're afraid that it is purely sentiment. And small-business men can expect more sentiment—and promises—from the Members of Congress from both parties, come the next election campaign in 1958.

Unfortunately, however, sentiment never met a payroll, expanded a plant, paid down a debt, or paid a Federal corporation income tax bill.

Mexico Wants Fair Treatment for all Foreign Investors

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. BLATNIK. Mr. Speaker, as a member of the Subcommittee on International Operations of the House Committee on Government Operations, I am extremely interested in and concerned about the state of our relations with other nations. Although news from the Middle East has dominated our thinking and newspaper headlines of late, there recently occurred a little publicized but very significant development in Mexico—our friend and neighbor to the south of us.

Investors of capital in Mexican enterprises, as well as American tourists, have been much heartened by the recent action of a Mexican court in returning to Jerome A. Utley, of Detroit, full possession of the Hotel Riviera Pacifico at Ensenada, some 60 miles south of the border from San Diego, Calif. This once famous hotel has run through what might almost be called musical comedy vicissitudes since it was built in 1929 by Jack Dempsey, former heavyweight champion, with the financial backing of Mr. Utley.

It was not until the tangled history of the resort hotel was brought to the attention of Ruiz Cortines, President of Mexico, that seeming injustices were investigated. Franco Sodi, as Attorney General of Mexico, was instructed by President Cortines to conduct a thorough inquiry into the facts of the situation, a situation which involved fantastic juggling with property rights of American investors.

Both the President and Mr. Sodi, who since has been elevated to the Presidency of the Supreme Court of Mexico—a position comparable to that of Chief Justice of the United States—had become impatient with occasional practices of fast and loose playing with foreign investors' affairs. They evinced every determination to follow the matter through until complete justice had been done.

It will be recalled that not long ago President Cortines had a meeting with President Eisenhower in the interests of Mexican-American relations and it has been obviously to the interest of both nations to establish the business affairs of their citizens on a foundation of just dealing.

Mr. Utley is a contractor who has large real estate interests. For the purpose of constructing the hotel at Ensenada, he created a Mexican corporation and, of course, operated under Mexican law.

For 5 years, under the Dempsey management, the hotel operated successfully, attracting especially large numbers of celebrities from the California motion picture colonies. Taking advantage of intricacies of Mexican law, efforts were made to deprive the absentee American owner, Mr. Utley, of his rights. Agreements and counteragreements were signed, following a pattern that would make a movie scenario in itself.

Mr. Utley's difficulties were not brought into the open until, through the instrumentality of Cardenas & Gomez Mont, the leading law firm of Mexico City, an action was brought in the Supreme Court of Lower California.

Both President Cortines and Attorney General Franco Sodi followed the case with the utmost interest, feeling that the reputation of Mexico for fair dealing toward foreign investors was at stake. The court, after hearing all sides, ruled that "deceitful means" had been employed in the challenge to Mr. Utley's property rights and Judge Celestino Perz y Perez now has signed the order which finally restores the property to Mr. Utley.

The 200-room hotel, beautifully located on the beach plaza at Ensenada, will resume operation under the name of the Riviera Pacifico. Ensenada was selected as one of the especially desirable sites on the Lower California coast about 400 years ago when a mission was established there. This was part of the chain of missions extending from San Jose del Cabo at the very toe of the long peninsula of Lower California all the way northward along El Camino Rial. San Diego, San Bernardino, San Capistrano and other long famous missions were part of the chain, the northernmost being San Francisco.

For the property of an American citizen at so desirable and famous a place to become involved in what appeared to be unfair legalistic practices, was displeasing to President Cortines and the Mexican administration. The outcome is regarded as a guaranty of continuing fair treatment of all foreign investors.

Postal Rates

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. MULTER. Mr. Speaker, my statement today before the Subcommittee on Postal Policy of the Senate Committee on Post Office and Civil Service, which is presently conducting hearings on postal policy, is as follows:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, NEW YORK, BEFORE THE SUBCOMMITTEE ON POSTAL POLICY OF THE SENATE COMMITTEE ON POST OFFICE AND CIVIL SERVICE, TUESDAY, APRIL 2, 1957

Mr. Chairman and distinguished members of the committee, I appreciate this opportunity you have given me to present my views to you.

I am strongly opposed to increasing postal rates. The Post Office is a public service. It is not a business enterprise.

In the early days of our history the post office was operated by private enterprise for private profit. It was taken away from private business and made a Government monopoly solely on the theory that it was a governmental function to guarantee to our citizens a speedy and efficient means of communication.

If every department of Government, legislative, judicial, and executive, were charged for the cost of carrying their mail and the Post Office Department credited with that cost (solely as a bookkeeping item) the Post Office Department's deficit would disappear, in large part if not completely.

The postal system has contributed to the public welfare immeasurably, far beyond the aggregate total deficit of the Department.

The postal service must be continuously improved and the postal workers employed and promoted on a basis of merit, and their compensation fixed in accordance with the value of their services and prevailing economic conditions. At no time should wage scales be tied to revenues in the post office.

The only possible exception to what I have said is that portion of the Post Office Department which renders a business service to private enterprise. In that area we might properly consider increasing the postal rate, but not otherwise.

Thank you, Mr. Chairman.

The Cordiner Committee: Military Personnel and Pay

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. KEOGH. Mr. Speaker, the Defense Advisory Committee on Professional and Technical Compensation which was organized by the Secretary of Defense and of which Mr. Ralph J. Cordiner, president of the General Electric Co., was appointed Chairman on May 10, 1956, with Carter L. Burgess, Assistant Secretary of Defense as Vice Chairman, has submitted its report.

The work of the Committee was divided into three major study areas: Dr. John A. Hannah, president of Michigan State University and former Assistant Secretary of Defense for Manpower and Personnel, directed the study of officer personnel; Mr. Charles R. Hook, chairman of the board, Armco Steel Corp., and formerly Chairman of the Committee on Business Organization of the Department of Defense, directed the study of civilian personnel; and Mr. H. Lee White, a member of the law firm of Cadwalader, Wickersham & Taft, of New York, and former Assistant Secretary of the Air Force Per-

sonnel, directed the study of enlisted personnel.

The Department of Defense has made available to the Members of Congress the highlights of the report. In addition thereto, the Chairman, Mr. Cordiner, issued a statement under date of March 26, 1957. I deem that statement of such importance to insert it in the RECORD so that the record of the objective work of the Committee may be complete. In addition thereto, I am inserting an editorial which appeared in the New York World Telegram on March 29, 1957. The statement and editorial are as follows:

STATEMENT BY RALPH J. CORDINER, CHAIRMAN OF THE DEFENSE ADVISORY COMMITTEE ON PROFESSIONAL AND TECHNICAL COMPENSATION, MARCH 26, 1957

This country has a major opportunity to begin cutting the cost of defense, the largest single item in the Federal budget, by instituting a modern system of manpower management and compensation in the Armed Forces.

It is the opinion of this committee, based on both industrial experience and on studies prepared by the Department of Defense, that savings and gains up to $5 billion a year can be achieved within 5 years or less. The same measures which can produce these savings for taxpayers could also increase the combat effectiveness of the Armed Forces by about 15 percent at present costs.

These are the conclusions which have been reached by the Defense Advisory Committee on Professional and Technical Compensation, on which I have had the honor of serving as chairman.

Reports on the work of the Committee have already appeared in the press, and most of these reports were reasonably accurate as of the date that they were published. However, these reports were published before the Committee had completed its studies of the cost-and-gains effect on its recommendations. Therefore, because of inadequate information, many people have been led to believe that the Committee's recommendations are nothing more than a general pay raise for military personnel, adding still more to the oppressive costs of national defense and to the current forces of inflation. Nothing could be further from the truth, and nothing could be further from the objectives of the Committee. Our recommendation contemplates savings and deflationary influence.

If our recommendations are accepted, some of the men and women in the armed services would receive immediate pay increases, to correct obvious inequities. Moreover, the general levels of compensation in the armed services would rise in the coming years, as people qualify for the new and higher pay that will be available for outstanding performance. But these increases for deserving people would be more than offset by the resultant savings in material, operating and training costs, and personnel required to achieve a given level of national security.

Very early in our study, which began last May, we became aware that modern management of the manpower in the armed services could simultaneously reduce the cost and increase the effectiveness of the national defense. To achieve such results, however, the committee warned the Secretary of Defense that it could not content itself with simply applying a few patches to an antiquated structure of military compensation which has been inflated but not substantially changed since it was originally adapted from the British Navy in the year 1812. The committee indicated that a fundamental modernization would be required to solve the military manpower problem and make real savings and gains. The effects of such a deep structural change would not be a temporary flash in the pan, nor could results be achieved overnight. But the improvements would be far reaching and long lasting, and they would bring in greater savings and gains with each passing year as the new system took hold.

Secretary of Defense Wilson's business background enabled him to recognize the values of this long-term investment approach. The Secretary of Defense has backed the committee all the way, demonstrating the same courageous objectivity that has enabled him to reduce the defense budget from $47 billion in fiscal 1953, when he became Secretary of Defense, to $38 billion in fiscal 1958. It is worth noting that Mr. Wilson has achieved these reductions in a period when military equipment has been becoming increasingly complex and expensive, and when our commitments overseas have necessarily increased. If other departments of the Government exhibited the same realistic concern for economy, as well as improved service, the burden on the taxpayer would not be nearly as heavy as it is.

The main outlines of our proposals for military personnel have already been published in the press, and Commander Carrison has brought you up to date with a presentation on our findings and recommendations for the uniformed services. Essentially, you will recall, the committee recommends a two-part program: A modern pay plan and a manpower management plan. The pay plan won't work without the manpower management plan, and the manpower management plan won't work without the pay plan.

The pay plan proposes to pay people what their services are actually worth, instead of paying people on the basis of longevity of service. In this way, the pay system will encourage and reward outstanding performance and advanced skills, with greater incentives to work for promotion and to develop the difficult skills needed for a technologically advanced system of defense. It will enable the armed services to keep their best men and build up the experienced, professional force that can produce the highest combat effectiveness at the least cost in money and lives.

Such a pay plan will only reach full effectiveness if it is properly administered, and this is the second part of the plan. The manpower management plan is designed to give the Armed Forces greater flexibility and control over the distribution of skills and experience in the services. With this plan, the services can build up their supply of those skills that are critically short, and reduce their supply of those skills that are in excess of requirements. They can give greater emphasis to quality rather than quantity in their manpower considerations. They can also assure greater justice for each individual, so that he has the maximum incentive to stay in the Armed Forces and advance to positions of higher responsibility.

I will not take your time here to repeat the details of the plan, but would like to give you the new information—namely, the results of our studies as to the effects of our recommendations on the cost and effectiveness of the national defense.

Here, in brief, are the five major results that can be achieved by means of the committee's proposals:

1. About a 15-percent improvement in the combat capability of the United States Armed Forces, without a significant change in the budget. Or,

2. Savings and gains up to $5 billion a year by 1962, or sooner, in the cost of national defense.

3. Sharp reductions in training accidents now, and in military and civilian losses in the event of war.

4. Reduction in the number of military personnel required to produce a given level of national security.

5. A long-term solution to the basic manpower problems of the armed services.

Now, let me comment on each of the desired results.

First, as to the potential 15 percent improvement in the combat capability of the United States Armed Forces, without a significant change in the budget. Here we assume that the armed services will maintain their present levels of manpower, materiel, and maintenance. They would have about the same number of people and hardware, but because of the increased levels of skill achieved by the recommended system of manpower management and compensation, the manpower would make much better use of their equipment and take better care of it. Fewer people would be tied up in training activities. This would increase the combat capability of the Armed Forces by about 15 percent, based on calculations by each of the services.

Combat readiness is a qualitative thing, difficult to measure statistically. Nevertheless, there are some figures that give us a measure of the possibilities.

For example, the Navy, for testing purposes, selectively staffed one carrier antisubmarine squadron with experienced personnel. Compared with similar squadrons, which had the normal mixture of men at various levels of training and efficiency, the fully trained squadron turned in a performance that was rated 30 percent better. The level of aircraft availability, utilization, and air-crew efficiency was outstanding. This squadron had no aircraft accidents during its deployment to the Mediterranean as contrasted to nine accidents resulting in complete losses suffered by other squadrons of this type during the same period.

In the Strategic Air Command, the retention of skilled manpower now being lost would increase aircraft in-commission rates to produce an increased capability equivalent to 6½ combat-ready B–47 wings—an increase in effectiveness of 20 percent.

Statistics such as these are behind the estimates of the various services as to the improvements they could achieve if they were able to retain and develop the men they need in the critical leadership and technical positions.

Now, how much would such improvements cost? The surprising thing is that this remarkable improvement would require an investment of only about $300 million a year for 2 years, and then the net gains would begin to offset the costs, and by fiscal 1962 the savings would amount to $367 million. As to the costs for fiscal year 1958, I have been advised that the Secretary of Defense has the agreement of the Secretaries for Air, Army, and Navy that these costs can and will be absorbed in their presently requested budgets. They do not require an increase in the budgets in order to put the committee's recommendations into effect. If implementing legislation were enacted by the Congress, it would become effective in the latter half of fiscal 1958—that is, beginning in January 1958.

Here is a chart summarizing these budget costs and gains. It appears that the program would have a net cost of $249 million in fiscal 1958 and $316 million in fiscal 1959. This, I emphasize, could be accommodated without any increase in the presently requested budgets. In fiscal 1960, the gains would overtake the costs, for a net gain of $132 million, and in fiscal 1962 the gains would rise to $367 million.

Now, these hard-dollar costs and gains would require no changes in the present levels of manpower and hardware; they would simply make the present manpower and materiel 15 percent more effective.

But suppose the responsible authorities felt that it would be possible to maintain the national security with the present level of combat capability, or with something less than a 15-percent increase in combat capabil-

ity. This is a policy question which is beyond the purview of our Advisory Committee on Compensation. But as the recommended system of manpower management takes hold, it would be possible for the policymakers to decide whether they want to take the gains in the form of increased combat capability or in the form of savings for the taxpayer.

These potential savings have been calculated, and they rise from a level of $313 million in 1958 to $5 billon in fiscal 1962—that is, beginning July 1961.

Such savings are, of course, extremely difficult to calculate with any precision, and only represent those improvements to which a dollar value can be assigned. For example, the calculations include the reduction in losses due to aircraft and ship accidents, the increased availability and use of equipment when it is properly maintained, the reduction in fuel and operating costs when fewer training missions are required, and other measurable items—but do not include the increased number of on-target bomb-strikes or artillery hits achieved by experienced people for which it is impossible to produce a dollar savings estimate. The calculations show the following potential savings or gains:

Fiscal year:	
1958	$313,000,000
1959	1,591,000,000
1960	2,817,000,000
1961	4,146,000,000
1962	5,082,000,000

There are many who feel that the potential savings or gains will actually be greater than this, when you consider such intangibles as teamwork and morale, but there is no way to assign a dollar value to them. Personally, I believe that the $5 billion savings can be achieved well before fiscal 1962, if the program is vigorously carried out. It should be pointed out that while these savings were calculated on a realistic basis, they can only be achieved by intelligent administration of the new system of manpower management and compensation.

Nevertheless, savings of this magnitude in the national defense—the largest and most intractable element of the Federal budget—present a target worth going after. Practically every other item in the Federal budget seems to be part of a program in which costs are forecast to rise in the coming years. We must begin somewhere to halt and reverse the inflationary trend toward ever higher costs of Government, and here, for a small initial investment, is a very promising place to start.

The next result of the committee's proposals would be a sharp reduction in training accidents now and in military and civilian losses in the event of war.

There are many skills which are not only difficult but dangerous to learn. Flying a jet airplane is one example that everyone will understand. Accidents in training are inevitable, yet they cause a tragic loss of life as well as the loss of expensive equipment. The Air Force and Navy have calculated that accidents cost them nearly $2 million a day in fiscal 1956 in material alone.

These are the accidental losses in life and money that can be attributed to lack of experience in peacetime. In combat, when the margin of safety is sharply reduced, this inexperience could mean much greater destruction of life and property, not only in the military ranks but among the civilian population who look to the Armed Forces for a competent defense.

One of the main purposes of the recommendations of our committee is to keep experienced men with difficult skills, such as pilots, in the Armed Forces so that we can reduce the number of persons who must go through the dangerous and expensive work of learning these skills. Likewise, we are trying to help the armed services retain and develop the skilled technicians who can keep the airplanes and ordnance and other equipment in good condition so that it will not fail and cause these accidents.

Next, I indicated that the committee's recommendations would reduce the number of military personnel required to produce a given level of national security.

Roughly, 500,000 members of the Armed Forces are now involved in formal training activities, not to mention the very extensive on-the-job training which absorbs so much of the Armed Forces manpower in the operating units. The effective military defense of the United States is being supplied by the other 2,350,000 members of the Armed Forces who have achieved their basic competence.

The point is that with the destructively high turnover rates, particularly in the critical professional and technical skills, it is taking 500,000 trainees just to maintain an effective combat force and support service of 2.3 million. The more of those 2.3 million trained people we can induce to reenlist and develop toward even higher skills and responsibilities the fewer trainees we will need to maintain an effective force.

The recommendations of our committee are aimed squarely at building up the reenlistment rates of the men who have the skills that are most needed, or who have the aptitude to develop such skills. I must emphasize that these high-quality people cannot be retained without offering the genuine incentives to officers and enlisted personnel that the committee is recommending.

At present much of the manpower in the Armed Forces is either drafted or decisively influenced by the draft. If we can provide the right system of incentives, the Armed Forces will become so attractive as a career that most of its members will be there because they want to be. In my personal opinion, this will not only reduce the draft calls, but may someday make the draft unnecessary.

And, finally, I suggested that the committee's recommendations provide a long-term solution to the basic manpower problems of the Armed Forces. These are:

1. Excessive turnover and loss of key military personnel, particularly among officers and technicians.

2. Low incentives for outstanding performance and self-improvement.

3. Excessive amount of personnel, equipment, and money tied up in training at the expense of combat readiness.

4. Uncontrollable unbalance of skills, with too high a proportion of easy-to-learn skills and a perennial shortage of the more difficult leadership and technical skills.

5. Lowered morale in times of peace, or even in today's time of armed truce.

6. Inequities and pay inversions, where men get the same pay for easy or difficult work, and where thousands of officers and noncoms are getting less pay than the people who work under their supervision.

There are a number of other important problems related to the manpower problem, as the committee learned in its conversations with hundreds of soldiers, sailors, airmen, and marines—both officer and enlisted personnel. In its final report, the committee will include recommendations as to the problem of inadequate housing, the need for greater educational opportunities, the difficulties of prolonged absence from home, and other items not covered in this highlight report. The recommendations on the civilian members of the defense team will also be made later, as that portion of the report is completed. But the recommendations that we are discussing today, pertaining to the system of compensation and manpower management for military personnel, are of first importance and will yield the most significant savings and gains in the national defense.

There is no automatic solution to the military manpower problem, but the instruments and approaches that will make solutions possible are those that are being recommended by the Defense Advisory Committee. We urge that they receive earnest consideration by the public, the Congress, and the administration, because they represent an important opportunity to improve the national security, and at the same time to begin cutting down the cost of defense, the largest single item in the Federal budget.

[From the New York World Telegram of March 29, 1957]

THE $5 BILLION PROMISE

Under the chairmanship of Ralph J. Cordiner, president of the General Electric Co., a committee named by Defense Secretary Wilson has come up with a new pay-for-merit plan for the Armed Forces.

It is a complicated report, but the gist is that men in the services would get paid primarily on the basis of skills rather than how long they have been in uniform. It is designed to keep experienced men, avoiding constant, expensive turnover.

Mr. Cordiner says there would be a big savings in materials, operating and training costs. The plan would cut the rate of accidents, now estimated by the Air Force and Navy alone at $2 million a day. Eventually it would let the Armed Forces cut personnel by as much as 200,000 men without loss of combat effectiveness.

By 1962—5 years hence—he estimates this program could save as much as $5 billion a year in the cost of military operations.

We long since have grown suspicious of Government proposals to spend more now to save later. They usually work out in an opposite way.

But the Cordiner report, compiled by non-Government citizens, is so promising it deserves much more than the old pigeonhole treatment. We hope Secretary Wilson and Congress will give it the most thoughtful analysis.

Anything that offers a solid prospect of saving $5 billion—or even $1 billion—a year is worth a top priority in anybody's book. And we are thinking mainly of the taxpayer's pocketbook.

Monetary Policy

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. MULTER. Mr. Speaker, the following article by Sylvia Porter appeared in her syndicated column in many newspapers throughout the country on March 25, 1957. It indicates most strongly that only a congressional study of monetary policy can come up with any recommendations for action, if such action is called for. The study she refers to, like many others made by the Federal Reserve Board, is a good factual study. There are many others like that done by Government agencies and independent groups. A monetary commission such as suggested by the President would, in large part, re-do the same work. When the Commission got through, a congressional committee of the House and another of the Senate would then have to weigh all of those reports and make the legislative recommendations.

The only sensible thing to do is for the congressional committees to immediately

proceed with this work, giving due credit and weight to all of these studies. At the conclusion of the congressional committees' work, those committees will report to the Congress, with appropriate recommendations for the improvement and strengthening of applicable law.

I put my statement affirmatively because it is hard to believe that a law or body of law that has been on the statute books for any length of time cannot be improved as a result of our experience under it. On the other hand, I am sure that our congressional committees, if they find that the law needs no change, would so report. Either type of report will be good, psychologically, in continuing the respect and confidence the general public should have in our financial institutions.

Miss Porter's article is as follows:

YOUR MONEY'S WORTH

(By Sylvia Porter)

BUYING ON THE CUFF STUDIED

Last week to my desk in New York came a cardboard box from the Federal Reserve Board in Washington. When I opened it, I found 5 paper-bound volumes standing 4 inches high, weighing about 4 pounds and running to 1,619 pages.

And each one of those pages was about you and me.

For this is the monumental study of installment buying which President Eisenhower directed his Economic Council to request from the Federal Reserve Board on February 15, 1956. On the basis of this report, the President figured he could decide whether or not his administration should sponsor a return to direct controls over our buying on the cuff.

So what recommendations has the Federal Reserve Board's research staff come up with as a result of its staggeringly detailed study?

It hasn't come up with any.

All arguments presented

If you want to read all the arguments against direct controls over the down payment and repayment terms of our installment buying—a peacetime equivalent of wartime's "regulation W"— you'll find every one of them, big, small, and indifferent (vol. 5).

If you want to read every conceivable reason for standby controls on installment buying, you'll find these too (vol. 4).

If you're curious about the history of installment buying from Civil War days on—you can more than satisfy your curiosity here (vol. 1).

If you would like to know how many of us, at what income levels, owe how much, you need look no further (vol. 2).

But I doubt if many of you, if any, will ever attempt to wade through anything as massive as this, and incidentally, volume 6 is still to come.

Rather, if you were staring at these books as I am now, you probably would echo the cry of anguish of the Washington newspapermen when they learned there wasn't even a summary of the report available.

Of course, the Reserve Board's research division, headed by Ralph A. Young, would emphasize that even if the staff wanted to make recommendations, it shouldn't.

Comprehensive study

But I have a strong suspicion that just by presenting so comprehensive and searching a study, Mr. Young and his staff have done much to squelch any case for a return to installment-buying controls at any time in the foreseeable future.

The report, for instance, includes so dizzying an array of arguments against direct curbs over installment credit that many Congressmen surely would hesitate to approve the move barring an emergency.

And the staff carefully points out that the only experience this country has had with installment-credit controls, has been under war emergency or unusual postwar conditions; there has been no experience with such regulation under what might be called normal peacetime conditions.

The report concludes that the increase in installment credit in the future is likely to be at a slower pace than in past years and an increase of 5 to 6 percent a year is a logical projection.

From this, it is not hard to reach a decision that if the pace of the rise is moderating by itself, we need not slap on any detested Government regulations to force moderation.

Delays May Prove Costly

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1957

Mr. ZABLOCKI. Mr. Speaker, in our struggle with international communism, we have repeatedly pledged our friendship and cooperation to the peoples of central and eastern Europe in their efforts to shed the bonds of Communist domination, and to regain national independence.

We made those pledges knowing that by increasing the ranks of the free nations we would simultaneously reduce the comparative strength of the Communist block, and enhance the security of our own Nation and of the free world.

I am certain that I need not recall the emotional pitch which these promises reached during the Republican campaign of 1952. GOP candidates for national and local offices extravagantly pledged to liberate the nations of Eastern Europe—to free them from Communist chains, and to bring them back into the family of free nations. While many persons realized that some of these promises were only empty gestures, intended solely to assure political gains, others took them more seriously. I am certain that the promises of liberation, as well as the less extravagant pledges of assistance, have encouraged the people of eastern and central Europe to hope for United States assistance at the time when they would make their break from the Communists.

Several months ago, the Polish nation made a courageous and daring attempt to shed the shackles of Soviet bondage. They have gambled much in the hope that, with Western help, they would succeed in enlarging the area of their independence, and cut off many of their ties with the Kremlin. They have, it seems to me, counted on us to live up to our words.

Now there are two facts that we must consider at this point: The one is the fact that Poland today faces a desperate economic situation as a result of the war and of a decade of Soviet exploitation and colonial rule. The Polish nation needs assistance to get on its own feet. If it does not secure such aid from the West, it will have but one place to turn to: Gomulka's regime will probably fall, the new experiment in national limited independence will fail, and Poland will probably return—much against the wishes of her people, and possibly not without great bloodshed—into the closed orbit of Soviet domination.

The second fact which we should consider is this: In spite of the fine-sounding pledges to assist those who try to assert their national independence, the present administration has made no apparent move to date to aid the Polish nation in its grave predicament. Representatives of the Gomulka regime have been seeking help for a number of weeks, but apparently without much success.

Now, I am not suggesting that we grant the request for assistance submitted by the Polish Government. That request is quite considerable, and a decision on this matter should be arrived at carefully. The issues as to how much aid—and as to what kind of aid we should extend to Poland or to any other nation, should be decided, first, on the basis of our ability to aid others; and, second, on the basis of the relationship of such assistance to our own security and our best interests.

The fact remains that while the executive branch probably has good reasons for not granting the request of the Polish Government in its entirety, our executive officials should quit stalling and indicate to the people of Poland, and to the peoples of other nations, whether or not we intend to abide by our pledges: Whether or not we aim to assist them in extending and strengthening their independence from Soviet Russia.

Such a decision, and such an announcement, are long overdue. The details can be worked out gradually, with much care. But the decision to live up to our word—or to go back on our promise—should be made now.

Mr. Speaker, I am skeptical about the Gomulka regime, because I realize that, in spite of the recent election, it is a Communist regime. In that respect, it does not fulfill the hopes of the free world or, for that matter, the hopes of the Polish nation. We must recognize it for what it is, however, it is a national Communist regime which is trying to sever its ties with international, militant, totalitarian communism of Soviet Russia.

To the extent that the Gomulka regime will succeed in severing its relations with the Kremlin, and its dependence upon Soviet Russia, to that extent—it seems to me—its success will detract from the strength of the Soviet Union and from the threat which faces our Nation and the free world.

In other words, by strengthening the independence of Poland—and eventually, we hope, the independence of the other Communist-dominated nations—we are in effect strengthening our own cause. For whatever detracts from the strength of the Soviet Union, simultaneously adds to the relative strength of the free world. This, then, is one of the ways in which we can try to advance our cause; not by bearing arms, not by sending liberating armies to penetrate the Iron Curtain, but

by aiding those nations which have gained some measure of independence from the Kremlin in their own ways, and are now trying to extend that area of freedom with our help.

Mr. Speaker, I, for one, feel that the administration has delayed long enough on this issue. I earnestly hope that they will reach a decision in our national interest without further delay.

Under leave to extend my remarks in the RECORD, I wish to call to the attention of the membership of this body an article by Columnist Joseph Alsop, entitled "Gomulka Catches It on All Sides," which appeared in the March 31 edition of the Washington Post and Times-Herald, as well as a copy of a telegram sent by the American Order of General Pulaski, Inc., to the President and to the Secretary of State:

[From the Washington Post and Times Herald of March 31, 1957]

GOMULKA CATCHES IT ON ALL SIDES

(By Joseph Alsop)

PARIS.—Reliable reports from Warsaw suggest that American policymakers will be most unwise to take the new anti-Stalinist Polish Government too much for granted as a permanent feature of the central European scene.

From the very beginning of the Polish uprising against Soviet colonial rule, the task of the Polish National Communist leader, Wladyslaw Gomulka, has been very like the task of Elisa crossing the ice.

For example, it can now be revealed that when Nikita Khrushchev and his party made their famous surprise visit to Warsaw last November, their minds were nine-tenths made up to crush the Poles like flies—as Marshal Zhukov subsequently said in a tone of evident regret. The price that had to be paid to avert a Hungarian tragedy was Gomulka's promise of continuing Polish adherence to the Warsaw Pact, which meant continued stationing of Red army troops in Poland.

Gomulka's situation today is less immediately critical, but it is almost equally precarious for the long run. He would probably be in very deep trouble at this moment if he had not done so well in Poland's recent, curious, semifree election. The so-called Natolin group, the far from unimportant Stalinist faction in the Polish Communist Party, actually hoped the election would show a strongly anti-Communist result.

The Polish Stalinists correctly thought that such a result would eventually lead to the forcible reestablishment of full Soviet colonial rule in Poland. But Poland's wise and farsighted Cardinal Wyszynski understood the danger. He quietly threw the immense power of the Polish Catholic Church into the balance on Gomulka's side. And thus the Polish Nationalist leader won a triumph at the polls.

All the same, Gomulka's present problem looks very grim indeed. To the right of him, he has the restive Polish anti-Communists, which means the vast majority of the Polish people, who admire Gomulka but hate his party. To the left of him, he has the Stalinist faction in the Polish Communist Party, whose designs are strongly supported by the masters of the Kremlin.

Finally, squarely in front of him, Gomulka has the desperate economic situation to which Poland has been reduced by long years of Soviet colonial rule. Here lies his great chance and his great period. According to one highly authoritative estimate, Gomulka has no more than a year to give his people a sense of greatly increased well-being.

If he fails, he will go down to defeat in a conflict between the Stalinists and the anti-Communists. But this will mean, in fact, that Soviet colonial rule will be reestablished in Poland. For the Kremlin will surely seize the opportunity of a Polish time of trouble to help its Warsaw friends with the naked force of the Red army.

On the other hand, if Gomulka succeeds on the economic front, his leadership will cease to be challenged, either from right or left. He will at last gain the elbow room to deal with the Polish Stalinists. And the evolution of Poland can then proceed peacefully, not toward our kind of democracy, but at least in a direction that will be bearable for the Polish people and highly distasteful to the Kremlin.

At present, Gomulka is both being kept on leading strings and openly threatened by the Kremlin. With the economic problem overriding all other, the Soviet economic aid promised to Poland is being given in trickles, on a day-to-day basis. For instance, wheat deliveries, according to the same authority quoted above, have to be rushed to the flour mills and the flour has to be rushed to the bakeries, to prevent a bread shortage.

By pulling on the leading strings in this manner, the Kremlin has encouraged Gomulka's recent concessions to the Polish Stalinists, which alarmed the West. Washington, of course, has the opportunity to cut the Kremlin's leading strings. But judging from this distance, Washington seems to be disinclined to grant Gomulka the generous American economic aid he so badly needs.

Yet surely, a government that is good enough for Cardinal Wyzsynski ought to be good enough for Senator KNOWLAND. And surely, after all the grandiose talk about liberation, it is a bit odd to throw away the remaining chance offered by the deep unrest in Central Europe. For if Gomulka really succeeds in Poland, the position of the Stalinist regime in Czechoslovakia must finally become untenable. And even in the other Central European countries where Red army troops are stationed, Gomulka's success will create a permanently and explosively unstable situation.

The question, really, is whether Senator KNOWLAND and the administration policymakers he so often intimidates prefer making cheap and empty anti-Communist gestures against Gomulka or gaining a major point in the world struggle against the Kremlin's power.

MARCH 16, 1957.

President DWIGHT D. EISENHOWER,
The White House,
Washington, D. C.

Hon. JOHN FOSTER DULLES,
Secretary of State,
Washington, D. C.:

May we suggest a loan in the form of food, raw material, and machinery for the textile and building industries to the Poles our gallant but almost forgotten allies whose friendship for the United States dates back to the birth of our Nation. This aid should be distributed under strict control and supervision of an American governmental agency similar to the post-World War I Hoover Commisison, partially manned by Americans of Polish origin to facilitate language barriers and to acquaint the Polish populace with our own American ways of life and our free American institutions. At heart the Poles abhor the evil and godless forces of the Red Kremlin.

In weighing a decision in this vital manner, let us be mindful of Poland's tragedy partly brought about by our own neglect and lack of understanding and foresight at Yalta 12 years ago when we allowed Stalin to have his diabolical way, and when the Polish people were, without their consent, turned over to communism which meant death, famine, rape, and slavery to a freedom-loving nation.

May we respectfully add that according to newspaper reports Cardinal Stefan Wyszynski, primate of Poland, is expected to be in Rome at Easter. This humble servant of God, a martyr of communism, would be in a position to enlighten us as to the practicability and necessity of aid to the Polish people.

Respectfully,

AMERICAN ORDER OF GENERAL PULASKI,
K. STEFAN POMIERSKI,
President Emeritus.
GLEN COVE, N. Y.
CORNELIUS H. TUSZYNSKI,
President.
JOSEPH P. POLONSKI,
Counsel and General Secretary.

Moscow Steals United States Defense Secrets

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am offering at this point an important article indicating the extent of Soviet penetration into American industry. Mr. Lawrence Sullivan, Coordinator of Information, United States House of Representatives, has prepared an article for the March 1957 issue of National Republic. I commend it to those who are interested in this subject matter:

MOSCOW STEALS UNITED STATES DEFENSE SECRETS

(By Lawrence Sullivan)

America has no trade secrets any more. When Moscow hears of a new industrial process or production method, two gigantic engines of international communism—the Russian diplomatic apparatus, and the Kremlin's terroristic secret police—are mobilized for intensive in-plant espionage, until the blueprints and specifications of the latest discovery are delivered safely to Russian hands.

No American industrial concern, however large or small, is beyond the range of Communist espionage. The FBI disclosed recently that the innermost secrets of the atom bomb—the pivotal trigger mechanism—had been delivered to Moscow in complete blueprint detail a full month before our own first test explosion at Alamogordo, N. Mex., July 16, 1945. And testimony before the Senate Internal Security Subcommittee, published in November 1956, discloses that during and after World War II, every major technical advance in United States industry was filched quickly by Moscow's espionage network. Processes known to have been stolen in the years 1934–49, included such giants as Kodachrome, nylon, dry ice, magnesium flares, aerosol sprays, and buna-S synthetic rubber, to name but a few, now officially documented in the Senate hearings.

Only a few industries in the United States today are cognizant of Communist espionage methods. The real work of collecting vital military and industrial secrets always is handled in the plant by American citizens, never by Russians.

Harry Gold, now serving a sentence of 30 years in the Federal penitentiary at Lewisburg, Pa., for his part in the historic Rosenberg spy ring which delivered the atom-bomb secrets to Moscow in 1943–45, has re-

vealed the complete operational method of Communist industrial espionage in America. Under heavy armed guard on temporary leave from the penitentiary, Gold told his story in breath-taking intimacy and detail before the Senate Internal Security Subcommittee on April 26, 1956. The hearings were published last November. Senator JAMES O. EASTLAND, Democrat, of Mississippi, chairman of the subcommittee, observed in publishing this testimony that it offered a "good example of the subtle psychological recruiting employed by Communists to induce citizens of the United States to betray their country."

Born in Bern, Switzerland, December 12, 1912, Harry Gold came to America with his parents in 1914, became a citizen in 1922, attended public schools in Philadelphia, and completed 2 years in chemistry at the University of Pennsylvania in 1932. After working for a time, he studied chemistry for 2 more years at the Drexel Institute of Technology in Philadelphia, and later obtained his bachelor of science degree in chemistry at the University of Cincinnati in 1940.

Seeking employment in January 1933, Gold fell in with Thomas L. Black, who worked for Holbrook Manufacturing Co., Jersey City, N. J., a long-established and thriving soapmaker. Black offered to help Gold get a job. At their first meeting, Black told Gold, "You are a Socialist. I am a Communist, and I am going to make a Communist out of you."

Through Black's help, Gold obtained employment at Holbrook, and Black moved on to National Oil Products Co. at Harrison, N. J., at better pay. Gold began at $30 a week with Holbrook.

Outlining his relations with Black, Gold continued his story before the Senate committee: "He tried for several months, from January to September 1933, to get me to join the Communist Party. I attended several meetings of the party in Jersey City. He tried to propagandize me in a variety of ways, but I just kept stalling him. I had no interest in the matter whatsoever."

Returning to Philadelphia in September 1933, Gold took a new job with Pennsylvania Sugar Co., where he had formerly worked part time during college days.

"I was glad to get away from Black and his constant importuning that I join the Communist Party."

But he could not get away from Black. The two men met periodically in Jersey City, Philadelphia, and New York. Black soon introduced Gold to Vera Kane, an alleged pro-Communist lawyer with a good firm in Wall Street.

In April 1934 Black visited Gold in Philadelphia to tell him: "There is something you can do. There is something that would be very helpful to the Soviet Union, and something in which you can take pride. The Pennsylvania Sugar Co. has processes on industrial solvents. * * * The people of the Soviet Union need these processes. If you will obtain as many of them as you can in complete detail and give them to me, I will see that those processes are turned over to the Soviet Union, and that they will be utilized."

Gold related that for the in-plant espionage operative, Communist penetration throughout America develops in three successive steps—(1) industrial secrets, (2) military secrets, and (3) political operations. In the third phase of his own espionage career, extending over a period of 17 years, Gold was assigned to some work in connection with Leon Trotsky or followers of Leon Trotsky. He was emphatic that once a person allows himself to be caught up in the Communist espionage web, there can be no retreat—ever.

As operations of the Pennsylvania Sugar Co., expanded, Gold faced the problem of getting his filched materials back into the company files the next morning. The stolen papers and blueprints became increasingly voluminous—finally, more than he could transcribe in one night at home. Gold refused compensation for his espionage work.

"I was looting the files of the Pennsylvania Sugar Co., and the material had to be replaced, usually overnight * * *. I continued to do this for a period well over a year, up to about November 1935 * * *. Every couple of months I turned some material over to Tom Black."

When at length the volume of material became too heavy for overnight transcription, Black and Gold turned to Vera Kane for advice. Soon Black reported that all the photostating would be done at Hudson Blueprint Co., in the Wall Street area. Gold later was informed the bill would be picked up by Amtorg, the Soviet trading agency in New York.

During November 1935 Black reported jubilantly to Gold: "Harry, all our troubles are over. Now we can get all the information we want copied. I've got a wonderful setup. Furthermore, we've got some very good news about some of the processes you sent to the Soviet Union. * * * They've got them in operation. They are pleased with them. And there is a Russian who works for Amtorg who is very anxious to meet you. He is also the person who is going to arrange for photocopying any amount of material you want."

Pausing an instant for reflection upon his own bold narrative, Gold added: "And so I met my first Russian, Paul Smith."

But of course that was not the Russian's real name. Gold never learned Paul Smith's honest name, although he did learn later from frequent contacts that Paul Smith was the Amtorg man who set up the entire industrial espionage system in the United States of America (hearings, p. 1016).

At about this point Gold began to have occasional qualms of conscience. But he could not turn back. He was too deeply snared in the Communist network.

"I couldn't kid myself," he told the Senators. "I was stealing. And add to that, I was stealing from Dr. Gustav T. Reich, who was research director for the Pennsylvania Sugar Co.; and Doc Reich, so to speak, sort of raised me from a pup. I started to work in the lab, cleaning spitoons, and when I finally left Pennsylvania Sugar Co., I think I was a capable chemist. Reich taught me a lot, and made a lot available to me. He raised me from the very beginning. I was violating that man's confidence. I was going into his files. I had keys made so I could get into his files, and I especially requested night shift so that I could get into those files. I was stealing from a man who trusted me. And, believe me, I had qualms. I wasn't happy about it. But it seemed to me that the greater overall good of the objective justified the means I was using."

Gold delivered secrets to Paul Smith from November 1935 through August 1936, transmitting in that period every industrial process ever perfected and applied by Pennsylvania Sugar Co.

Gold next was turned over to Steve Schwartz—very well built, very handsome, and a bit of a dude; he even wore spats, but he was too big for anyone to tell him about it.

"But after a while we began to run out of information," Gold continued. "Pennsylvania Sugar had only so much, and I had been very diligent, as I said, and we looted them pretty completely. Steve Schwartz then began to suggest that possibly I find other work."

Early in 1938 Gold was turned over by Schwartz to another Amtorg agent whom he knew only as Fred.

"I have never been able to identify this man."

Fred insisted Gold get another job.

"He wanted the Philadelphia Navy Yard, or the Baldwin Locomotive Works, or any firm or organization that manufactured military materials."

As a stop-gap after leaving Pennsylvania Sugar, Gold took the assignment of "keeping tabs on certain people who were supposed to be adherents of Leon Trotsky."

"It was pretty obvious from what Black told me, that they were going to kill Trotsky, and they were trying to get set up to do it." (Hearings, page 1021.)

Fred next assigned Gold to the University of Cincinnati to get his degree in chemistry. In Ohio he was to cultivate Benjamin Smilg, then employed in the Wright Air Force Development Center, at Dayton. Smilg had been scholarshipped through MIT by Amtorg, and then assigned to Wright Air Force Base. But he had been found slow in coming through with military secrets from Dayton. Gold was ordered to hasten Smilg's secrets along (hearings, p. 1023).

Unsuccessful over a period of 2 years in Ohio, Gold was ordered back to Philadelphia and remained there on various in-and-out tasks until December 1943, when he was assigned to work with Klaus Fuchs, the German Communist then sent over by Britain to work with American, Italian, and Scandinavian scientists at Columbia University in development of the atom bomb—the historic Manhattan project. Amtorg knew all about it. Gold was assigned to Fuchs by Seman Markovich Semenov, also attached to Amtorg, New York.

"I remember at one time he told me of meeting" (a late oil magnet) "I believe, in Philadelphia, in connection with signing a contract for cracking equipment (oil refinery process) to be sent to the Soviet Union. That was in 1943 * * * Semenov was the one with whom I got along best, and the one whom I knew most intimately, and the one who eventually led to my introduction to Klaus Fuchs." (hearings, page 1024).

To pick up the Fuchs assignment, Gold abandoned his then embryonic plans to penetrate the Holtland Ordnance Works, Kingsport, Tenn., a highly secret wartime production subsidiary of Eastman Kodak Co.

"Forget them," Semenov told him. "Forget everything you ever knew about them. You are never to see them, or meet them, or have anything to do with them again."

Semenov told him the Fuchs assignment related "to a completely new and devastating type of weapon." Gold added: "It was when I met Klaus Fuchs that he explained to me just what the weapon was."

Gold's first meeting with Fuchs came late of an afternoon in mid-January, 1944, in the vicinity of the Henry Street Settlement on the East side of Manhattan.

"I was to carry an extra pair of gloves and a book," Gold recalled. "The man I was to meet was to carry a tennis ball."

After routine signals of mutual recognition the two men met, took dinner at Manny Wolff's, on 49th Street and Third Avenue, and arranged elaborately for their next secret meeting.

"After speaking with him, I realized that this man had been involved in espionage before * * *. He knew his way around. He could pick out flaws in my own technique * * *. He gave me the names of some of the people he was working with, prominent people * * *. I think he told me it went by the name of the Manhattan project.

"He gave me the general overall picture of the set-up, and told me that when he next met me he would give me a complete written account of the project, the general physical make-up, just how far it had progressed. As much as he could possibly obtain, he was going to put on paper * * *. And at this next meeting with him in New York City I did obtain this information." (Hearings, p. 1027.)

That is how the basic, essential secrets of the atom bomb, passed to Moscow, in January 1944—19 months before our own test explosion in New Mexico.

Gold worked exclusively on the A-bomb project from December 1943, through 1949.

"I turned that information over to a man whom I knew as John, a man I have since identified as Anatoli Antomovich Yakovlev, Soviet vice counsel in New York."

In July 1944 Fuchs was transferred from Columbia University to Los Alamos, N. Mex., where the A-bomb test site was being prepared. Gold did not see him again until December, when Fuchs visited his married sister, Mrs. Crystal Heinemann, at Cambridge, Mass., for the holidays.

"I received a huge bundle of information," Gold recalled of this meeting.

They met again in Santa Fe, N. Mex., in June 1945, about a month before the first test explosion. On this occasion Fuch gave Gold some 100 typewritten pages of material—"and it just covered everything, from what I could see by looking at it. It not only contained a tremendous amount of theoretical mathematics but it contained the practical setup * * *. I think Fuchs knew as much as any one man about the progress of the atom bomb, except possibly those at the very top of the project. Fuchs knew and was in position to give. Possibly he knew more than even those at the top, because he was in intimate contact with it—daily contact."

A second trip to Santa Fe in September 1945, brought forth from Fuchs the final cleanup material on the A-bomb—the scientific evaluation of the July test explosion, and the several critical steps in perfection of the Hiroshima warhead of August 6. All of this vital material was back in the hands of Amtorg and Soviet Consulate officials in New York by September 24, 1945. (Hearings, p. 1306.)

"That was my last act of espionage, in which I actually transmitted information," Gold said in concluding the Fuchs episode.

"He told me that relations between the British and Americans were becoming rather strained * * * and it was very apparent that sooner or later they would each go their own way on atomic energy."

Summoned before the Federal grand jury in New York during the summer of 1947, Gold proved himself a loyal servant of the Kremlin.

"Did you answer the questions" he was asked by the Senate Committee counsel, Robert Morris.

"Yes, I did," Gold responded.

"Did you tell the truth at that time?" Morris persisted.

"I lied, every bit of it," Gold replied blandly.

Meanwhile Fuchs had returned to England. He continued to supply secrets to the Kremlin until early 1949. Gold continued his operations in Philadelphia and New York, now under the supervision of Vladimir Sarytchev, attached to the Soviet delegation to the United Nations. But he came upon no more industrial secrets of any importance.

In May 1950, the FBI moved in on Gold in America, and Scotland Yard took charge of Fuchs in England. During the next 2 years, the international A-bomb ring was smashed to smithereens.

But the brutal methods and lawless routines of systematic industrial espionage perfected by Gold and his Russian mentors in the years 1935–50 still are with us.

Communist industrial espionage is worldwide, determined, rich in gold and local exchanges, far beyond all appeal to conscience or morality—an ever-present challenge to alert management everywhere. Witness Gold's testimony epitomizes the guiding industrial slogan of the Kremlin—"Never buy anything you can steal."

National Boys' Club Week

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Greenwich Time, of March 29, and also a proclamation issued by Walter A. Hayes, first selectman of the town of Greenwich, contained in a story printed in the Greenwich Life, of March 28, proclaiming this week as Boys' Club Week in Greenwich.

As an alumnus of the Greenwich Boys' Club, I wish to join in saluting an organization which has played a big part in my own personal development as it has for thousands and thousands of others throughout the Nation.

I am happy that the following editorial has accorded due credit to the outstanding work of several Greenwich citizens who are prime movers in the Boys' Club organization—Jack Gleason, national director, and former Greenwich police chief and administrator, who was a contemporary of mine in the old Greenwich Boys' Club; William S. Wilson, president of the Greenwich club for 25 years; the indefatiguable local executive director, Anthony Schinto, and Albert L. Cole, the national president of Boys' Clubs of America:

[From the Greenwich Times of March 29, 1957]

BOYS' CLUB WEEK

Clergymen, sociologists, teachers, police, and parents have no more pressing problem before them today than that of channeling the Nation's youth into wholesome activity and thus reduce the swelling list of those who have strayed from the majority who adhere to the rules of decency.

Juvenile delinquency is something that can be checked. But its tide is not going to be stemmed by half-hearted measures nor by attempts at strict discipline. It must be approached from a viewpoint of understanding, of appreciation of the difficulties faced by today's teenagers with which they are unable to cope, and with a sensible program for providing them with the help they need.

America's boys and girls cannot be modeled into automatons as the youth of totalitarian countries are. They are imbued, just as every other American of every age, with the spirit of freedom. But they must be taught the difference between liberty and license, that liberty is attained only through respect for law and order, through sincere consideration of the rights of others.

To such a task the Boys' Clubs of America are dedicated. These organizations, operating under a central headquarters, but entirely autonomous in their individual functions, are looming as a major influence in keeping teenagers from departing from the paths of decency and in showing them the rewards of following a wholesome life. Already they have developed interests and methods that have won many otherwise fractious youngsters from potential mischief by providing programs that permit them to engage their energies in constructive activity.

The clubs will participate in a countrywide observance of National Boys' Club Week from April 1 to April 7, during which time the full details of the organization's progress will be carried to the people. Impetus should be given during that week to carry it forward until the present number of 460 clubs throughout the Nation reach a point where there is one in every town and hamlet.

[From the Greenwich Times of March 29, 1957]

A WAY OF LIFE

As John M. Gleason, the national director, said in Greenwich recently, this is not a complete solution but it is an applied movement for good. Mr. Gleason, before his appointment to the post, served Greenwich as police chief and administrator. And he is not the only Greenwich resident vitally concerned with the boys clubs. Albert L. Cole, publisher, is national president, and the Greenwich Boys' Club is one of the outstanding of the organization's units. The devotion of William S. Wilson, who served as president here for 25 years, Anthony Schinto, the executive director, and others has borne good fruit.

The clubs, nonsectarian in nature, nevertheless do not overlook the need for spiritual values. They help to provide a check on the explosive energies of their youthful members and they provide understanding and, in some cases, individual service on conformity with their purpose. They have become, as Mr. Gleason put it, "a way of life."

These clubs represent no small factor. They own more than $100 million in plant and equipment. Their national budget for last year exceeded $14 million. They maintain 100 camps and are directed by a staff of 5,000 trained, dedicated staff members in addition to the 460 executive directors of each of the individual clubs.

The observance of National Boys' Club Week is aimed at inaugurating an expansion program that will extend the service, especially among the underprivileged, to give them an opportunity to experience for themselves the difference between the current materialist philosophy and a spiritual outlook in which everyone becomes his brother's keeper. They expect to concentrate on activities during what has become known as the danger hours, between the time the teenagers leave school and go home for their dinners. It has been established that it is during these hours that much of the mischief takes place.

The Boys' Club program is one that should appeal to every citizen, whether a parent or not, because upon the shaping of the characters of these youths of today will depend their steadfastness when they become citizens of tomorrow.

[From Greenwich Life of March 28, 1957]

BOYS' CLUB WEEK PROCLAIMED

Next week is National Boys' Club Week across the country. On the local level, the period from April 1 to 7 will be a busy one at the Horseneck Lane clubhouse, with special activities scheduled for each day.

This week, official recognition came from town hall in the form of the following proclamation by First Selectman Walter A. Hayes:

"All over the United States this coming week communities are pausing to pay tribute to the work of the Boys' Clubs. Beginning Monday, National Boys' Club Week is being observed throughout the country, with over 450,000 boys participating in programs of every type to demonstrate the vital part boys' clubs play in American life. Boys' club members carry on the activities they learn at the club, offering an admirable example of democracy in action, representing many nationalities, races, and creeds, proving that boys can work and play together in peace and harmony, regardless of race, creed, or nationality. The character building, constructive work of the boys' club in this town is training

them well for tomorrow. It makes me proud to know that our town is participating in National Boys' Club Week.

Therefore, I, Walter A. Hayes, first selectman of the town of Greenwich, proclaim April 1 to 7, 1957, as Boys' Club Week.

WALTER A. HAYES,
First Selectman.

Lives or Dollars

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. CANNON. Mr. Speaker, are we building our new highways for the safety and enjoyment of the public or for exploitation by private greed? Shall we make them safe and give the people an opportunity to see America first? Or shall we erect billboard canyons and ribbon slums, hemmed in with blatant advertisements of pink pills for pale people and 57 kinds of beer, interspersed with pinboard carnivals and hotdog stands?

The question involves not only the safety of the individual but the safety of the Nation. Rear Adm. Neill Phillips testified before a congressional committee that the restriction of billboards along our superhighways is necessary for national defense. He testified that—

I just don't believe that the voters of America can be made to believe that it is good for the national economy to squander millions of dollars to deface our wonderful country with a hideous rash of billboards along the great network of our new superhighways.

The St. Louis Post-Dispatch said editorially in its issue of March 29, 1957:

BEAUTY, NOT SAFETY, THE ISSUE

A great many people must respond favorably to the idea that the new interstate highways should be protected against the commercial exploitation that has turned many existing highways into rural slums.

We reach that conclusion because the outdoor advertising industry has begun to fight back. It sponsored a study at Iowa State College which concluded that billboards along highways have some slightly beneficial effects in that they keep drivers from succumbing to "highway hypnosis." Another paper based on research in Iowa and Michigan concludes that there is no significant relationship between outdoor advertising signs and highway accidents, and that the evidence, if any, is slightly in favor of signs as a safety measure.

These conclusions are tenuous enough to warrant being ignored, but we do not expect the billboard people to ignore them.

Actually the safety issue is not the basic one. The new highways should be protected from commercial exploitation because the motorist is entitled to see some natural beauty just for the fun of it—or the good of his soul. And there are other ways of combating "highway hypnosis" than obscuring the view with signs.

And the Washington Star on March 30, 1957, said:

ROADSIDE EYESORES

The movement to safeguard the proposed 41,000-mile interstate highway system from roadside eyesores of the type so familiar to travelers on United States Route 1 is worthy of public support—although the movement is a bit belated. It would have been better if some statement of policy, at the least, had been included in the 1956 Federal Highway Act which authorized the network. For it is evident that a strong fight will be waged by commercial signboard and other interests to make the most of the new roadside locations opened up by the huge highway program.

The law's deficiency was brought to public attention last December by Robert Moses, New York's park chief, in a Harper's article. He wrote that the new expressways would be "all left exposed to an indiscriminate mushroom growth of ugly filling stations, hotdog stands and all the other familiar roadside eyesores." He warned that "if the billions of public investment * * * are to be protected and the value of our scenery and natural assets is to be preserved, steps to prevent the onslaught of commercial advertising must be taken before construction gets underway." Since then several bills have been introduced calling for varying degress of Federal control of roadside defacement—either by the setting of standards voluntarily to be enforced by the States or by the withholding of Federal funds for noncompliance with the standards. Hearings on some of these proposals are being held this week.

We hope that some reasonable method of control can be worked out, so that the new vistas of natural scenery through which the new highways will run will not be desecrated as some of our older highways have been.

We have at the gates of Washington one of the most convincing demonstrations that could be made. Driving out of the city on Highway No. 1 we find an arterial highway so blinded by obscuring billboards—although it has not yet reached its ultimate nuisance potential—such a discordant riot of gaudy billboard excesses as to completely hide one of the most beautiful countrysides to be found in classic Virginia. On the other hand, entering the city from the same direction is the famed Shirley Highway from which the reckless dollar-crazed exploiters have been excluded and which is a delight to the eye of the tired city dweller who enjoys a Virginia landscape of surpassing beauty and uncontaminated and unspoiled by the blare and glare of vandal billboards.

Drive over these two highways and take your choice.

At Least There Is Some Hope in the Cyprus Problem

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of a statement which I issued on March 29 upon learning of arrangements for the release of Archbishop Makarios who had been imprisoned in the Seychelles Islands:

MARCH 29, 1957.—It is very gratifying to note that arrangements have been made for the release of Archbishop Makarios from his confinement in the Seychelles Islands and that the Government of the United Kingdom is prepared to adopt a more liberal and conciliatory policy toward the unfortunate people of Cyprus.

More than 2 years ago I introduced House Concurrent Resolution 26 in the House of Representatives which called for vigorous and expeditious action to insure the applicability of the policy of self-determination of peoples in the case of the Island of Cyprus and urged that the United Nations take the lead in dealing with the Cyprus problem. Had action along the lines called for by this resolution been taken by the United Nations at that time, I am sure that much bloodshed and suffering might have been avoided.

I am well aware that the release of Archbishop Makarios from confinement does not solve the Cyprus problem. The hatreds and bitterness which have been engendered during recent years will make any satisfactory solution difficult. Nevertheless, I am hopeful that a turning point has been reached, and I am sure that the United States stands ready to use its good offices and render assistance whenever an opportunity arises.

Italian-American World War Veterans of the United States, Inc.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the resolutions which were unanimously passed by the 21st National Convention of the Italian-American World War Veterans of the United States, Inc., held in Auburn, N. Y., on August 31–September 3, 1956, which resolutions mandated the national legislative chairman, Anthony V. Popolo, to pursue the objectives in said resolutions on a national scale:

Whereas the payment of death pension to otherwise eligible World War II widows on the same basis as this benefit is paid to World War I widows is a legislative issue which has not, as yet, been sanctioned by the Congress; and

Whereas the inequitable and discriminatory restrictive provisions which characterize existing laws pertaining to the eligibility requirements for this benefit are working an undue hardship upon the majority of World War II widows by excluding them entirely: Therefore be it

Resolved That the Italian-American World War Veterans of the United States, Inc., during its 21st annual national convention in Auburn, N. Y., on August 31–September 3, 1956, do urge the Congress of the United States to enact legislation which would equalize the payment of death pension to widows of World War II veterans; be it further

Resolved, That copies of this resolution be forwarded to the Honorable OLIN TEAGUE, chairman of the House Veterans' Affairs Committee; the Honorable JOHN W. MCCORMACK, majority leader of the House; the Honorable LYNDON JOHNSON, majority leader of the Senate; and to the Administrator of Veterans' Affairs.

ALBERT P. RUSSO,
National Rehabilitation Officer.

Attest:

JOHN LUPARIA,
National Commander.

Whereas a discrepancy exists in the benefits of widows of World War II and the Korean conflict and the benefits of World War I widows; and

Whereas a World War I widow is entitled to greater and more liberal benefits upon the death of her veteran-husband who died with at least 10 percent disability than a widow of World War II and the Korean conflict: Now, therefore, be it

Resolved by the delegates of the Department of Massachusetts, Italian-American World War Veterans of the United States, Inc., assembled at a convention in Springfield, Mass., on July 21 and 22, 1956, That this department go on record as being in favor of equalizing all widows' benefits of widows of World War I, World War II, and Korean conflict veterans, and that copies of this resolution be forwarded to appropriate officials of the Federal Government, to the National Congress, and to the national convention of the Italian-American World War Veterans of the United States, Inc., at its annual convention for consideration and adoption.

Adopted the 22d day of July 1956, by the 21st annual convention of the Department of Massachusetts, Italian-American World War Veterans of the United States, Inc., assembled in Springfield, Mass.

Whereas the provisions of Public Law 16 which makes possible vocational rehabilitation training for World War II veterans is, perhaps, the most vital benefit enacted by the Congress of the United States for the disabled veterans of World War II; and

Whereas one of the most unfortunate developments which has occurred with regard to the broad benefit program extended to World War II veterans is the failure of vast numbers of eligible World War II disabled veterans to take advantage of vocational rehabilitation training as provided for under Public Law 16; and

Whereas Public Law 16, a law which is so vital and crucial to the permanent rehabilitation of our disabled veterans of World War II shall expire on July 27, 1956; and

Whereas in the interest of the economy and the future well-being of our Nation and the large numbers of disabled veterans of World War II who for reasons many and varied have not, as yet, achieved final and total rehabilitation, it is both desirable and necessary that the provisions of Public Law 16 be continued: Now, therefore be it

Resolved, That the Italian-American World War Veterans of the United States, Inc., Department of Rhode Island, during its seventh annual department convention, in the city of Providence, R. I., do again unanimously endorse the proposal that legislation be introduced and vigorously pressed by the national legislation director of the ITAM Vets leading to the general extension of Public Law 16 for a period of 3 years beyond its expiration date; be it further

Resolved, That copies of this resolution be forwarded to the national adjutant with the request that it be introduced at the ITAM Vets national convention so that, if adopted during the 1956 national convention, the intent embodied herein shall become a convention mandate in the ITAM Vets national legislative program during 1956–57.

FRANK J. CENTAZZO,
Sergeant Anthony M. Cappucci Post, No. 1, ITAM Vets, Bristol, R. I.

Unanimously adopted by department on June 17, 1956.

Passed national convention 1956.

JOSEPH LEONETH,
Commander.

Whereas the soaring rise in standard of living costs has worked a considerable financial handicap upon our Nation's disabled veterans primarily because compensation benefits for their service-connected disabilities at the current rates have not been commensurately increased for some time; and

Whereas the American people, through the Congress of the United States, have, in endorsing the payment of compensation to disabled veterans for injuries, diseases, or wounds sustained in the service, recognized and acknowledged the fact that compensation benefits awarded to disabled veterans and to their widows constitute an obligation which shall be discharged in honor and without restraint as a continuing cost of war; and

Whereas the introduction in the House of Representatives by Representative OLIN TEAGUE, of Texas, of H. R. 11310 would, if enacted, result in an equitable increase in existing compensation rates governing the payment of compensation for service-connected disabilities: Therefore be it

Resolved, That the Italian-American World War Veterans of the United States, Inc., Department of Rhode Island, during its seventh annual department convention held in Providence, R. I., on June 15, 16, 17, 1956, do hereby unanimously endorse the passage of H. R. 11310 and, in so doing, do urge the Rhode Island delegation in the Congress to support this measure; be it further

Resolved, That copies of this resolution be forwarded to the members of the Rhode Island delegation in the Congress; to the chairman of the House Veterans' Affairs Committee; and to the national adjutant for introduction in the 1956 national convention of the Italian-American World War Veterans of the United States, Inc.

Resolution committee adopted by acclamation.

FRANK J. CENTAZZO,
Sergeant Anthony M. Cappucci Post, No. 1, ITAM Vets, Bristol, R. I.

Whereas the Veterans' Employment Service and the State employment service have the coordinated responsibility for providing an effective job counseling and employment placement service for veterans of all wars; and

Whereas special services are provided for disabled veterans in selective placement and job development in all local offices of the State employment service; and

Whereas any curtailment in these basic services in employment activities for veterans and disabled veterans will seriously affect their chances of obtaining job opportunities in gainful employment: Therefore be it

Resolved, That the ITAM Vets, Department of Rhode Island, in convention assembled in Providence, R. I., on June 15, 16, and 17, 1956, do hereby request and urge their national legislative committee to take such action in their appearance before the Appropriations Committee of the House of Representatives and the Senate as will develop an awareness of the practicability of appropriating sufficient funds to enable the Veterans' Employment Service and the State employment service to render to the fullest extent the essential services of job development, employment counseling, and selective placement for all veterans in their respective States and communities; be it further

Resolved, That copies of this resolution be forwarded to the United States Senators GREEN and PASTORE, and to Congressmen FORAND and FOGARTY, and the chairman of the national legislative committee of the ITAM Vets.

ITAM VETS,
DEPARTMENT OF RHODE ISLAND.

Whereas the Congress of the United States has received the report and attendant recommendations of the President's Commission on Veterans' Pensions, more commonly known as the Bradley Commission; and

Whereas a searching study of the Bradley Commission's report and recommendations leaves little doubt in the minds of the Nation's enlightened veterans that serious consideration by the Congress of the recommendations inserted in this report would lead inevitably to economic and moral catastrophe among the veterans of our land because of the callous, cruel, and indifferent philosophy manifested by this Commission in evaluating and studying our Nation's obligations to its wartime veterans in terms of compensation, pension, and insurance benefits: Therefore be it

Resolved, That the Italian-American World War Veterans of the United States, Department of Rhode Island, during its seventh annual department convention held in Providence, R. I., on June 15, 16, 17, 1956, do hereby urge the Congress of the United States to view with disfavor any legislation which may be introduced and which is designed to achieve the enactment into law of any of the Bradley Commission recommendations which would in any way sever, reduce, or endanger eixsting statutes pertaining to veterans' compensation, pension, or insurance benefits; be it further

Resolved, That copies of this resolution be sent to the Rhode Island delegation in the United States Congress, to the Speaker of the House, to the majority leader of the House, to the President of the Senate, to the majority leader of the Senate, to the President of the United States, to the chairman of the House Veterans' Affairs Committee, and to the national adjutant of the Italian-American World War Veterans for introduction of same into the 1956 National Convention of the Italian-American World War Veterans of the United States.

The resolutions committee recommends adoption.

Adopted by acclamation.

ALBERT P. RUSSO,
National Rehabilitation Officer, Italian-American World War Veterans of the United States.

Whereas the introduction in the Senate of the United States of Senate bill 3067 by Senator RUSSELL E. LONG, of Louisiana, will permit World War II veterans to reinstate their lapsed national service life insurance policies within a period of 1 year from the date of the enactment of such bill into law; and

Whereas the Italian-American World War Veterans, Department of Rhode Island, during three consecutive department conventions has endorsed the proposal that World War II veterans who have been denied the right to reinstate their lapsed NSLI policies be restored that privilege by the Congress: Therefore be it

Resolved, That the Italian-American World War Veterans, Department of Rhode Island, during its seventh annual department convention held in Providence, R. I., on June 15, 16, 17, 1956, do hereby endorse S. 3067 and, in so doing, urge the Senate of the United States, and particularly the Senate Finance Committee, to act favorably upon this legislation; be it further

Resolved, That copies of this resolution be sent to the Rhode Island delegation in the Congress; to the chairman of the Senate Finance Committee; and to the national adjutant for introduction of same in the 1956 national convention of ITAM Vets.

Resolution committee recommends adoption.

Adopted by acclamation.

L. J. CENTAZZO,
Commander, Sergeant Anthony M. Cappucci Post, No. 1, ITAM Vets, Bristol, R. I.

Whereas as the result of the experience derived from the national recognition bill, S. 7024, introduced by Senator JOHN O. PASTORE, of Rhode Island, it appears that the most effective procedure to be pursued in accomplishing this objective is the introduc-

tion in the Congress of the United States of legislation leading to the issuance of a congressional charter to the Italian-American Veterans of the United States, Inc.: Therefore be it

Resolved, That the incoming national commander be mandated to take steps leading to the introduction of such legislation by the national legislative officer during the ensuing session of Congress.

Unanimously adopted, 21st national convention, August 31, September 1, 2, 3, 1956.

Submitted by Department of Rhode Island and Department of New York.

Whereas Marshal Tito of Yugoslavia has embraced and accepted the doctrine, ideology, and philosophy of communistic Russia; and

Whereas the United States is unalterably opposed to this anti-God dogma form of government; and

Whereas the United States has furnished millions and millions of American dollars to Marshal Tito and present plan of the Government is to continue to furnish Marshal Tito with additional millions in foreign aid despite the public pronouncement of Marshal Tito's attachment and allegiance to Soviet Russia; and

Whereas according to press release from Washintgon, D. C., the United States proposes to release and deliver 300 F-86 Sabrejets to Marshal Tito and his government: Now, therefore, be it

Resolved by the delegates of the Department of Massachusetts, Italian-American World War Veterans of the United States, Inc., in convention assembled at Springfield, Mass., on July 21, 1956, That this Department of Massachusetts, Italian-American World War Veterans of the United States, Inc., as being against and unalterably opposed to the granting of any further foreign aid in any form and to further rescind the order for the delivery of Sabrejets to Marshal Tito and his government, and that copies of this resolution be forwarded to appropriate officials of the Federal Government, through the National Congress and to the national convention of the Italian-American World War Veterans of the United States, Inc., at its annual convention, for adoption and consideration.

Adopted the 22d day of July 1956, by the Department of Massachusetts, Italian-American World War Veterans of the United States, Inc., at their 21st annual convention, assembled in Springfield, Mass.

Whereas the McCarran-Walter Act is still in effect and is still the law of the United States; and

Wheras the McCarran-Walter Immigration Act has proved by service and experience to be unfair to many countries and particularly to Italy; and

Whereas the quota system as set forth in the McCarran-Walter Act is inadequate, antiquated, and discriminatory against certain races and peoples; and

Whereas the President of the United States has often indicated and recommended to the Congress of the United States that this act be revised and rewritten so as to eliminate such discrimination; and

Whereas the Congress of the United States is now considering the so-called Lehman bill, which will amend the present law and eliminate the discriminatory provisions; and

Whereas the said Lehman bill is now in, and for many months has been in, the Senate Judiciary subcommittee under the chairmanship of Senator EASTLAND, of Mississippi; and

Whereas Senator EASTLAND has apparently made no effort to report this bill either unfavorable or favorable, out of his subcommittee so that it might be discussed and voted on by the United States Senate: Be it therefore

Resolved, That the Italian-American World War Veterans of the United States, Inc., go on record as favoring the adoption of the Lehman bill; and

Resolved by the delegates of the Department of Massachusetts, Italian-American World War Veterans, in convention assembled at Springfield, Mass., on July 21, 1956, That this department of Massachusetts as being in favor, and it is the fervent hope of the delegates present, that the McCarran-Walter Act will be modified, revamped, and become more liberal so that the many inequities now contained in the act be removed; and be it further

Resolved, That a copy of this resolution be sent to each member of the Senate Judicial Subcommittee on Immigration and Naturalization with the recommendation that the said Lehman bill be voted out of the committee so that it may be discussed on the Senate floor and some action be taken on this bill.

Adopted the 22d day of July 1956 by the 21st annual convention of the Italian-American World War Veterans of the United States, Inc., assembled at Springfield, Mass.

NACA Statistics

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. GUBSER. Mr. Speaker, recently Congressman Moss and I introduced H. R. 2803 and 2804. The purpose of these two bills is to assist many Government agencies in solving their most serious problem; namely, the retention of qualified scientific and engineering personnel.

In the March 4, 1957 issue of Aviation Week a letter was printed from an ex-National Advisory Committee for Aeronautics Employee which clearly points up the need for either H. R. 2803 or 2804.

I invite the attention of my colleagues to this letter which I submit herewith:

NACA STATISTICS

As a statistic in some of the figures accompanying the article "NACA Says Loss of Scientists Threatens United States Lead" (Aviation Week February 11, pp. 86–87). I feel compelled to comment.

I am sure that many of us who have left the NACA have a recurrent sense of guilt about leaving one of the finest research organizations in the United States when we know that it desperately needs its personnel.

However, every man must determine to what extent he should ask his family to sacrifice the so-called niceties of life so that he may enjoy a more idealistic and technically rewarding career. Although the NACA supplements a man's income with increased technical advancement and a large measure of personal satisfaction, these abstract qualities unfortunately only provide a means of increasing the family living standard by the man leaving to work in industry.

I hope that the statistics continue to stimulate concern over the NACA personnel problems and illustrate the monetary sacrifice that is being made by those who have remained there.

Further, I hope that the statistics provide a tool to unsaddle the NACA from its present salary structure burden and allow it to compete with industry for outstanding college graduates and improve the economic status of those presently there. Those who have remained there certainly deserve more than a pat on the back.

EX-NACA EMPLOYEE.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers; but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

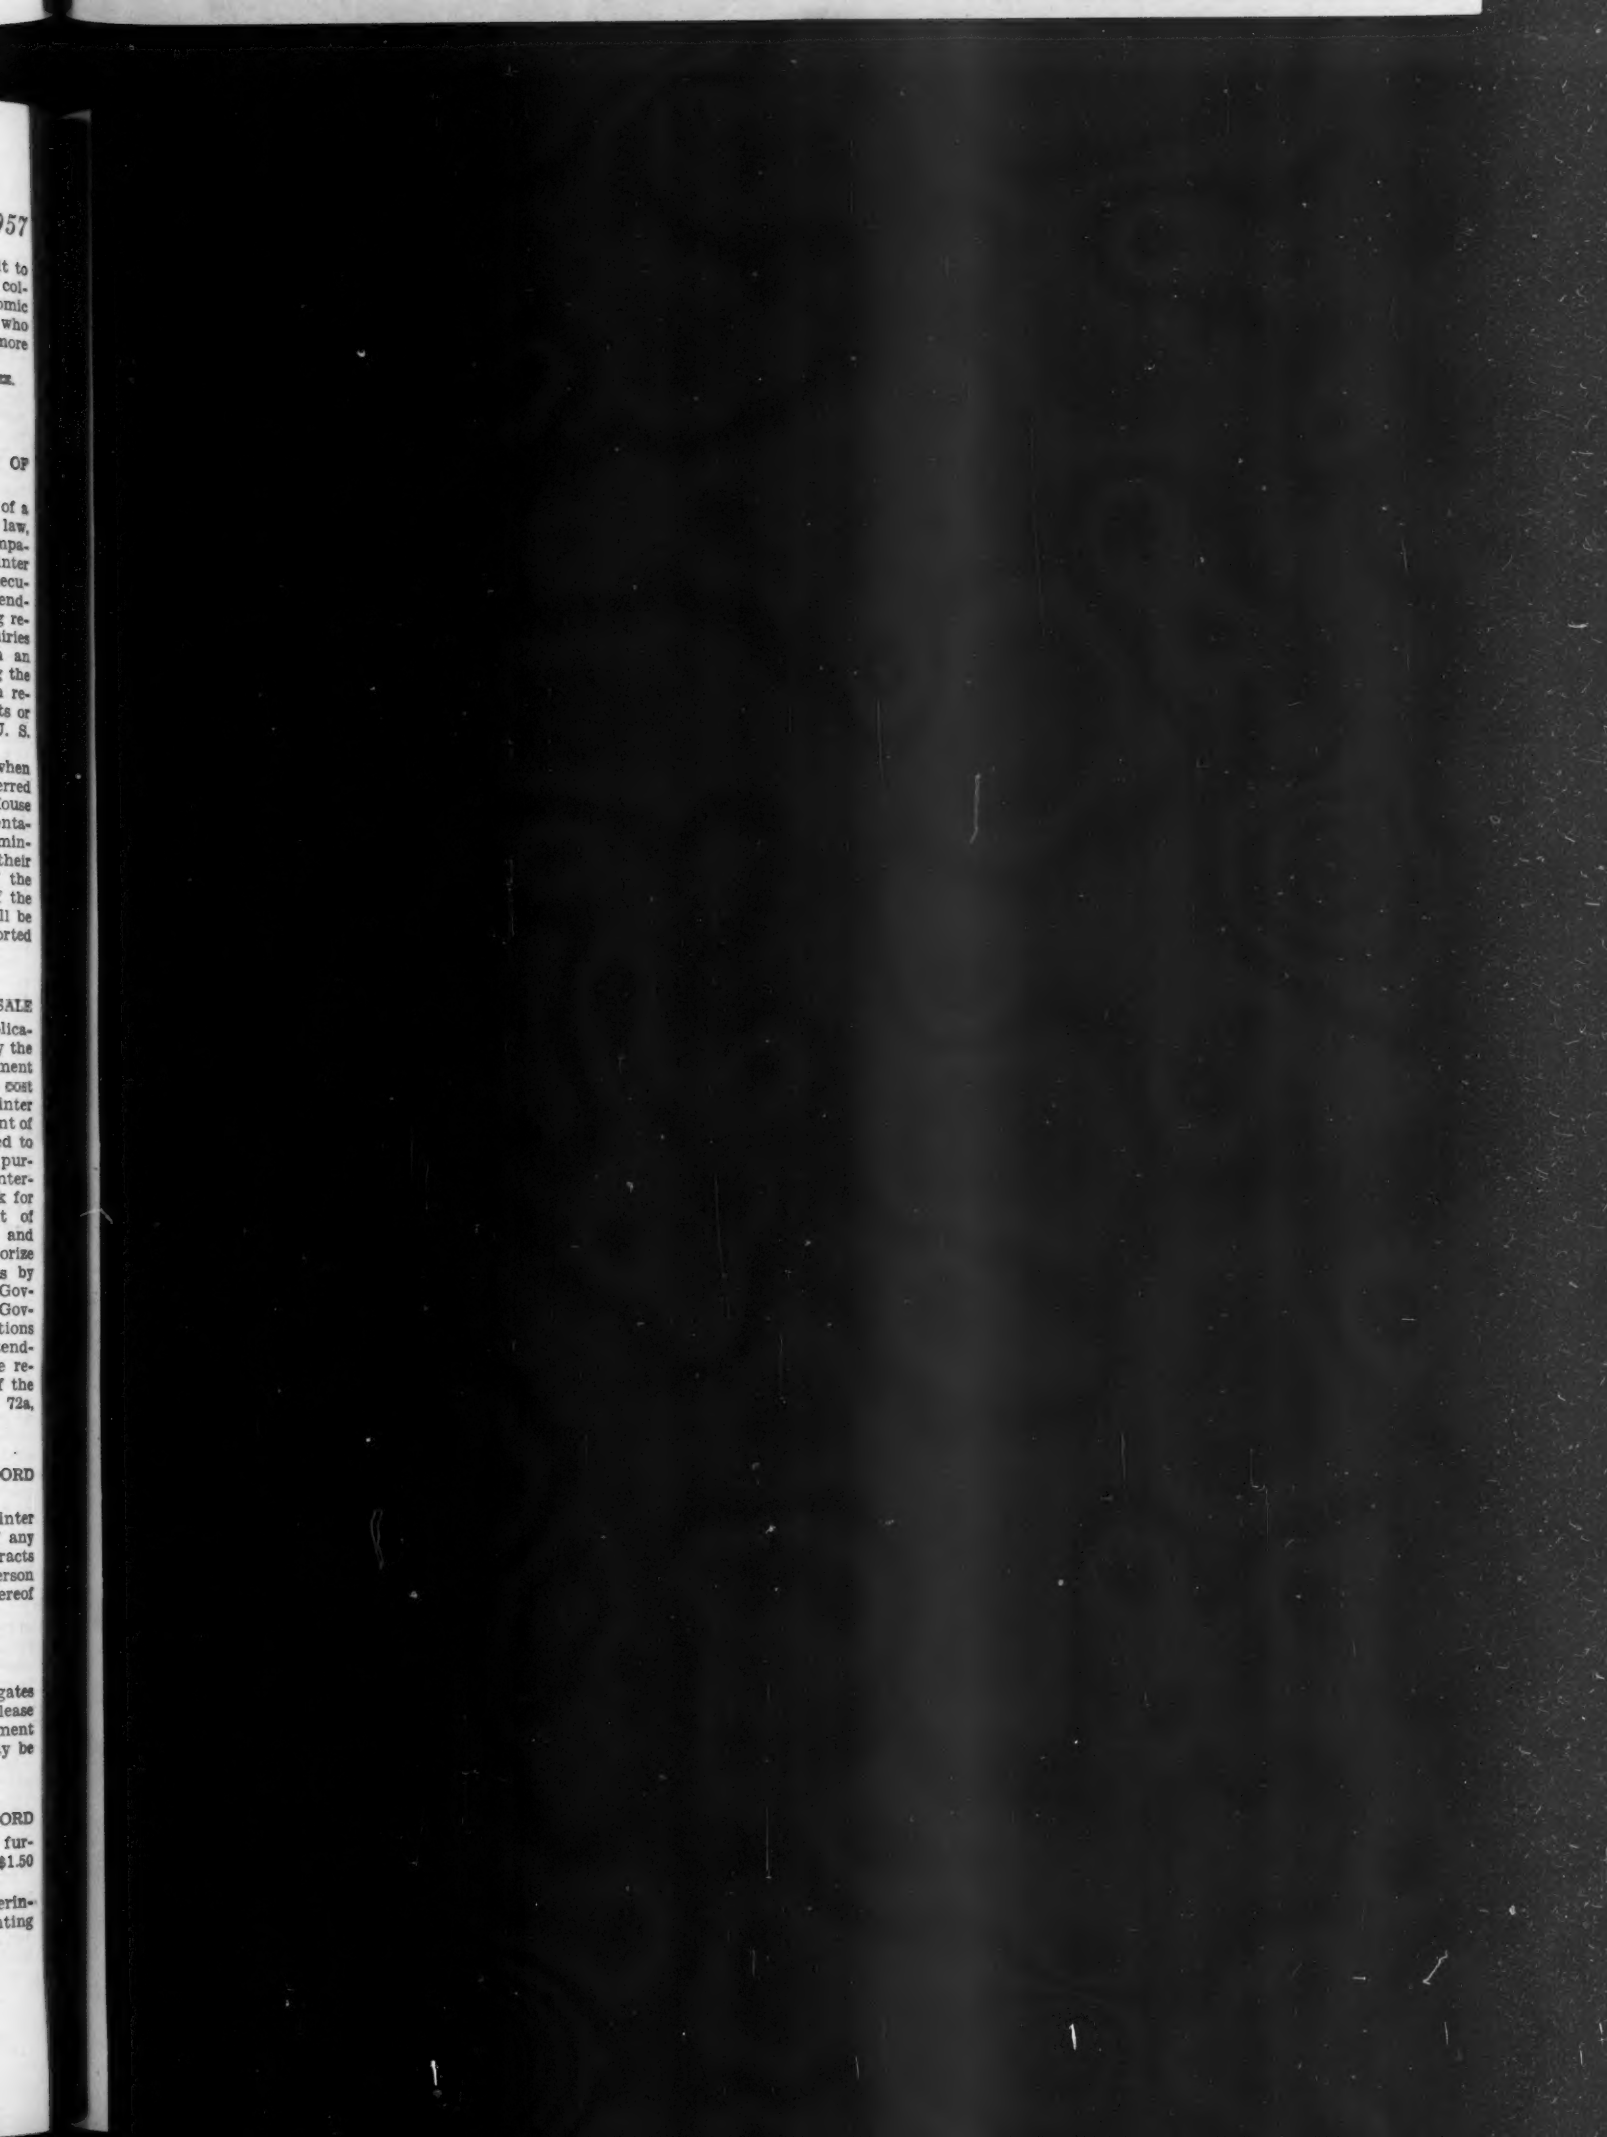
CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.



Appendix

Statesmanship of President Carlos P. Garcia, of the Philippines

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. MARTIN. Mr. Speaker, it is welcome news to us in the United States that the successor of the late President Magsaysay, His Excellency President Carlos P. Garcia, has come out openly rejecting the racist slogan: "Asia for the Asians." This is a mark of statesmanship on his part that commends itself to the attention of the American people.

In the Scond World War, the issue of Asia for Asians was raised. The racist implications of such a slogan contained the seeds for its own destruction and the peoples of Asia wisely rejected it. There was an attempt in the Philippines at the inception of the late President Magsaysay's administration to make such a slogan a factor in Philippine foreign policy. President Magsaysay vigorously opposed it and condemned it as unpatriotic and against the best interests of the Filipino people.

It is fortunate that we have in his successor, President Garcia, a man who has the courage to come out at the beginning of his administration openly and vigorously against such a pernicious doctrine. It is also gratifying to note that President Garcia has announced that he is against neutralism and that he will fight communism with the same determination that President Magsaysay did. President Garcia is certainly showing courage and statesmanship and it is my hope that he will continue to show undiminished strength in his avowed campaign against a godless ideology that is threatening to conquer the world.

The New York Times of March 30 published the following dispatch:

GARCIA REJECTS ASIA FOR ASIANS—STRESSES PHILIPPINE TIES TO UNITED STATES AND CLOSER RELATION WITH NEIGHBOR NATIONS

MANILA, March 29.—President Carlos P. Garcia rejected today the Japanese wartime slogan "Asia for the Asians" as an element of Philippine foreign policy.

Reiterating in his second weekly press conference that the Philippine attitude toward Asia would be a continuation of policies laid down by the late President Gamon Magsaysay, Mr. Garcia said they could not be expressed in any single slogan.

Previously he was reported in the press to be intending to revive "Asia for the Asians," which caused a furor here back in the early days of the Magsaysay administration. President Magsaysay was against it because he thought it would alienate United States friendship.

In response to a question concerning India, Mr. Garcia said he was against neutralism but that did not mean quarreling with neutralist countries. The Philippines would tolerate their view as they tolerated those of his country he said.

KEEPS ANTI-RED STAND

The President said the Philippines would continue her strong and definite stand against communism and he hoped this stand might eventually "win others among our neighbors in Asia over to our side."

The President spelled out what Philippine foreign policy stood for: First, friendly relations with the United States and, second, closer ties with the Asian nations.

In implementing the second branch of the policy he acknowledged it might follow something like an Asia-for-the Asians pattern but said that was the wrong phrase for it. He said it had been renamed the Philippine Asian policy. He said Asia for the Asians was understood as exclusivistic in nature against the west and the Philippines did not mean it that way. To clarify matters he issued a statement. It follows:

"Last October our late President said it was one of the objectives of our foreign policy to develop 'our political and cultural relations with the countries of the free world with particular emphasis on our relations with our Asian neighbors.' He mentioned this objective together with the paramount purpose of national security that we have achieved by collective defense arrangement with other free countries, particularly the United States of America."

WOULD SHARE FREEDOM EFFORTS

"Taken together, these two objectives mean that we seek the strengthening of freedom in Asia for two reasons: First, so that our fellow Asians may enjoy the fruits of real independence and, second, so that we may by being surrounded with communities of free Asia be all the more secure from subversion and attack.

"To this end it is our purpose within the limits of our capacities to share in efforts of giving substance to the freedom of Asians. This is our purpose in intensifying technical and cultural exchanges with such countries as Indonesia, Vietnam, Nationalist China, Malaya, and others of free Asia. This is why we recognized Vietnam and why we want to open diplomatic missions in more Asian capitals such as Rangoon. This is our policy in Asia. It can't be expressed in any single slogan."

The President in his conference said there would be no immediate changes in foreign service posts including the incumbency of Brig. Gen. Carlos P. Romulo in the Washington Embassy.

Mr. Speaker, in a dispatch of the New York Herald Tribune dated March 26, President Garcia praised the United States maneuvers taking place in the Philippines as showing the ability of the United States to help defend the Philippines against outside aggression and he also showed his determination to continue implementing the policies of the late President Magsaysay. The dispatch follows:

GARCIA IN MAGSAYSAY FOOTSTEPS—HE MINGLES WITH PEOPLE ON TRIP

MANILA, March 26.—President Carlos P. Garcia, who has pledged himself to carry on in the tradition of the late President Ramon Magsaysay, is losing no time in keeping his word.

A couple of hours after United States Marines began to storm ashore yesterday in the biggest amphibious operation in the Pacific since the Korean war, Mr. Garcia landed from the American cruiser *St. Paul*, on a northeastern Luzon beachhead facing the village of Dingalan. Temporarily ignoring the operations and his host, Vice Adm. Wallace M. Beakley, commander of the United States 7th Fleet, Mr. Garcia made straight across the sand and pebbles to a couple dozen of barefoot constituents arrayed in front of their thatch-roofed huts.

SHAKES HANDS WITH ALL

In the manner of Mr. Magsaysay, who died in a plane crash a week ago, President Garcia shook hands with every man and woman and patted the heads of delighted children. Such a performance was not entirely in character for Mr. Garcia, his confidants said—he generally is regarded as rather reserved.

Clad in an open-necked "barong Tagalog" of the kind that has become national costume, President Garcia then proceeded to watch naval landing craft disgorge men and machines for an attack inland against a hypothetical aggressor.

"Impressive, very impressive," he said. "Precision and timing, it is reassuring for the safety of our country."

Before a lunch at the nearby bungalow of a local lumber baron Mr. Garcia continued politicking. Again in the Magsaysay style he informally received a delegation of local officials and heard their pleas and complaints. An aid standing at his shoulder noted down requests for a buffalo of superior strain to improve the local breed, for a new artesian well, and for a post and telegraph office. "I'll do what I can for you," he promised.

The 60-year-old chief executive chatted with correspondents. Praising the mutual security treaty with the United States, he affirmed: "We want to continue to make relations between the Philippines and the United States as close as possible."

On the question of a treaty concerning use by the United States of military bases in this country, he said he anticipates that "we will be able to solve our differences."

He said he welcomes Charles E. Bohlen as the new American Ambassador to this country because "he will understand our view toward communism." President Garcia stated that he is steadfastly against admission of Communist China to the United Nations and against relaxation of curbs on trade with Red China.

About 60,000 American troops are involved in Operation Beacon Hill, which is to continue until April 8. There is generous use of helicopters to lift troops over rugged terrain. The exercise appears to be tailored to atomic warfare tactics, but this being a subject of great political sensitivity in Asia, the admirals and general have not said as much.

The Farm Problem

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. LECOMPTE. Mr. Speaker, in Iowa where the economy of the State is

largely dependent on the prosperity of agriculture we are increasingly concerned for the farm problem. The farmer's income has failed to keep pace with the high cost of living and every proposal looking toward an improvement in agricultural prospects deserves careful attention. With this in mind, under unanimous consent to extend my remarks in the RECORD, I include several ideas expressed by Mr. Sydney L. Gross, a prominent farmer of Osceola, Iowa, and a brother of our distinguished colleague, Hon. H. R. GROSS, Representative in Congress from the Third District of Iowa.

The statement follows:

This is not intended to be a revolutionary, cure-all program, but is an attempt to put together the best of several approaches to, and eliminate some of the features that have caused the failure of farm programs in the past.

BASIC FACTS

1. We must base our program on the thesis that the farmers' present economic troubles are based on overproduction. Of course, this is debatable, but as far as the farmer is concerned, it is too much of everything for the market.

2. Parity: The farmer is entitled to a parity price for the products of his labor. When he receives less than parity price, he must either mine his soil, himself, or his family. Agriculture will remain a sick and festering sore on the whole economy until its income is on a par with labor and industry.

3. Government's part: The farmer and the public as a whole want the Government as far out of any farm program as possible. Unfortunately a program that will do the farmer any good will not succeed without some regulatory force. The farmers by their very nature and numbers have never been able to organize themselves strongly enough to formulate and enforce an effective farm program. We have Federal laws designed to help and regulate both business and labor; therefore the Federal Government can do no less for agriculture. But let's keep direct help at a minimum and use the power of the Government more to formulate and enforce the rules of such a program.

EVEN NORMAL GRANARY

This is the terrible surplus the public hears so much about. Let us thank the Maker of all things that we have these terrible surpluses; for they are insurance that Americans will continue to be the best fed people on earth as far as the producers of the food are concerned. Instead of condemning and wanting to get rid of them, let us maintain and learn how to rotate and use them as a reserve against the calamities of both man and nature. These reserves are vital if we are to try and hold yearly feed-grain production in line with yearly needs.

STRICT ACREAGE CONTROLS

Feed-grain controls are the nub and necessity of any successful farm program. It is from the overproduction of these feed grains that the overproduction of our unstorable meat products comes. In the long run I think a bushel and pound basis according to the capabilities of the land is more desirable and fair than acreage control, but in the beginning it would be easier to institute controls based on past acreage history. The Secretary of Agriculture would be required to estimate the amount of feed grains required to maintain the above reserves and produce the amount of meat animals necessary to meet the requirements of the Nation. This shall be apportioned to the various States, counties, and farms in relation to its past history. The ceiling, or support, price of feed grains shall be at parity.

CROSS COMPLIANCE

This is also an absolute necessity if we are to control overproduction of feed grains. There is no reason to allow the taking of land out of one basic crop and putting it in another, thereby defeating the purpose of helping bring production of the first into line. All agriculture must prosper together, and not play one segment against the other, sinking both in the process. Past programs without strict acreage controls and cross compliance have raised the farmers' income slightly but have worked much more in the consumer's favor by giving him relatively cheap foods. Therefore I hold that past programs have in reality been consumers' programs.

PRODUCTION PAYMENTS

Production payments at 100 percent of parity on top grade and quality perishables is another must of a successful program. Production payments on perishables and meat animals would insure the conversion of feed grains into edible products, since a fair margin of profit is assured. The check on the overproduction of meat animals, with consequent high production payments, is the limit on the amount of feed grains grown.

SOIL BANK

The soil bank works very nicely into the above program for that is where the excess acres should go. This would help maintain the land by putting those acres in soil-building legumes and grasses. I do not hold with the theory that these acres must be put into grasses and left there for long periods of time with nothing harvested off them. The middle western farmer can take 1 acre of 80-bushel corn and with a little supplement, at a 12-to-1 ratio in the form of pork, produce about 700 pounds of edible meat products. Using the same kind of soil, it would take at least 3 acres of hay and pasture to produce a 450-pound calf. It is total perishable food units that must be taken into account. I do not have figures or statistics to prove the above theory but I would like very much and I feel it might be quite enlightening to see some figures worked out along the above lines. I believe that after the first few years that the soil-bank acres could be worked into a general rotation system of farming. There would be no soil-bank payments as now.

REFERENDUM

The above, or any other farm program, must be predicated on the wishes of the farmer. It must provide strict controls and therefore should be based on the wishes of the farmer to find if he is willing to accept such regulation in return for a price for his labors. Therefore a referendum should be held to determine if the majority of the farmers are willing to enter into such a program. If the vote is favorable, then it would be mandatory that all farmers would participate. If the vote is unfavorable, then all controls and help should be eliminated; for these halfway, part-in and part-out programs are what have put us where we are today. I cannot emphasize this point too strongly—it is time the rank-and-file farmer has the opportunity to say what he wants—not what is good for him by the so-called experts.

TWO-PRICE SYSTEM

This may be the answer to certain food crops such as wheat and rice. I think they have much merit along those lines, but I will leave that to someone more familiar with its workings. But if it is practical and can be incorporated into a general program for the benefit of the farming industry as a whole then by all means use it.

ADVERTISING

It seems to me that this scheme will benefit the advertising industry more than the farmer.

FOOD STAMP PLAN, EXPORTS, SCHOOL LUNCH, ETC.

These various channels should be worked at and pushed to help consume as much food products as possible. However, the amounts this can be increased is so small that without the above major plans we shall continue to produce more food fiber than the public will consume at a price that puts agriculture on a parity with the rest of the economy.

EDUCATION

Obviously, this is just an outline of the general course that to me should be incorporated into a farm bill. We need to do some educational work among the farmers themselves. The day of working 14 to 16 hours a day, weekdays and Sundays, to produce more unwanted food, is past. It is time the farmer learned the lesson that labor and industry learned long ago. By producing approximately 10 percent less food and fiber the farmer can have an income comparable to the rest of the economy. He would have both the time and the money to create a new look in agriculture.

There are many details to be worked out. However, it seems to me, when the desire to do something to lift agriculture out of the old rut, really enters into the minds and hearts of men; they will lay all petty theories and jealousies aside and incorporate all the good ideas into a program that will benefit agriculture and the Nation as a whole. No one of the above items will work alone. Let's put everything we have into a workable program, then as time tests it, discard that part that proves unworkable and add any new thinking that has merit. Let's go to work before it is too late and we have something far more drastic.

Nearly 40,000 Will Train at Gap Camp

EXTENSION OF REMARKS

OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1957

Mr. MUMMA. Mr. Speaker, the attached item from the March 28 issue of the Lebanon Daily News of Lebanon, Pa., is news that is especially well received in my congressional district. Indiantown Gap Military Reservation is again selected by Second Army as the training grounds for the National Guard units from surrounding States. The function too now includes the current enlisted Army Reserves. This is welcome news, as the people in the district are continually thinking that Indiantown should be permanently used in connection with the Reserve program. Now this is going to be done currently and we hope a year round use in the future.

These soldiers who are assigned to this camp are indeed lucky. The site is beautiful, along the foothills of our North Mountain Range, with thousands of acres for training and maneuvers. The quarters are excellent, and above all, we have here a traditionally "Pennsylvania Dutch" community which welcomes those who train here and makes them feel at home away from home.

The following news item is quite informative and shows the extensive program at the Gap for this summer:

NEARLY 40,000 WILL TRAIN AT GAP CAMP

Indiantown Gap Military Reservation will again assume its annual role as a training

site for Army reservists and National Guard men this spring and summer. Nearly 40,000 troops will train there according to the camp dates released today.

The post has been selected by Headquarters Second United States Army, Fort George G. Meade, Md., as one of the major training sites of the Second Army area for the 1957 field encampments.

Headquarters, United States Army Military District, Pennsylvania, commanded by Brig. Gen. A. W. Stuart, will provide training support facilities for the troops during their 2-week encampment periods, between May 19 and September 8.

The summer training program will open May 19 with the encampment of the 706th Army Reserve Transportation Group and attached units from Philadelphia.

MAJOR UNITS

Major units scheduled to train are: the 176th Regimental Combat Team of the Virginia National Guard, June 8–June 22; Pennsylvania's 79th Infantry Division (Army Reserve), June 15–June 29; 479th Field Artillery Group and attached units (Army Reserve) from Philadelphia, June 23–July 7; 80th Infantry Division (Army Reserve) from Virginia, District of Columbia and Maryland, July 1–July 21; 111th Regimental Combat Team, Pennsylvania National Guard, July 13–July 27; District of Columbia National Guard units, July 21–August 4; 29th Infantry Division (National Guard) from Maryland, Virginia and West Virginia, August 17–August 31; Pennsylvania National Guard 28th Infantry Division, August 3–August 17.

Closing the 1957 program will be reservists from various States comprising the civil affairs and military government school unit, August 25 to September 8.

Summer training is the high point of Reserve component training. It involves practical work in the field in the particular unit's Army speciality. In addition the training includes 2-hour training sessions each week in hometown Reserve centers and armories during the remainder of the year.

Emphasis of the summer program will be on developing combat skills in men who have not had active Army service, on sharpening techniques of those who have, and on developing unit effectiveness.

It is expected that this year's encampment will provide much of the hardcore training that will bolster the Reserve program throughout the remainder of the year.

Why Tax Us for England?

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. BELCHER. Mr. Speaker, under leave granted I wish to insert in the RECORD the following article from the Tulsa Tribune of March 16, 1957:

WHY TAX US FOR ENGLAND?
(By Richard Lloyd Jones)

After all, America still belongs to the people. We can neglect her and let our freedoms die. Or we can still rise to save our country. And it begins to look as though the people are waking up. A lot of us realize the terrific loss we will sustain if we allow these unrestrained tax raids on the people to continue.

When the people speak, the plundering politicians listen. The people are becoming articulate. The mail that is pouring into Washington has increased 37 percent since President Eisenhower delivered his second inaugural address.

The debt of our Federal Government is greater than the combined indebtedness of all other governments on earth, including all local and State governments in the United States. The Federal Government today pays more in interest on its national debt than it paid for all governmental expenditures in fiscal 1938—just 19 years ago.

The Federal Government has no wealth except that which it takes from the people. The people create the wealth, the Government seizes it. And every time the Federal Government gives aid to other countries it takes the wealth from the American people. An average American worker in the lower income tax brackets pays $3.75 in Federal taxes out of every $12 he earns. It is a political shell game and the people are getting mad about it. They should be.

Unlimited money means unlimited power. And unlimited power produces tyranny. It is the inescapable result of confiscating the people's earning power.

The defenders of this un-American raid scoff at those who protest it as being reactionary. What can they mean by reactionary? They are the extreme reactionaries.

The most progressive people in the history of the world were the American colonists who refuted the right of a tyrannical king to confiscate their wealth. George Washington was the leader of the progressives in his time and in ours. And we become progressive only so long as we invest our own earning powers in the improvement of our lives.

He makes a false use of words who calls confication through taxation a progressive action. It is so reactionary it is repudiation of America itself. The New Deals and the new republicanism are exactly alike in their repudiation of American principles. They both seek to establish a welfare state. They both seek to establish an unlimited power of a central dictatorship. Now, at last, the people are determined to stop this shell game before it becomes established as a substitute for the freedoms that have been our American way of life.

What did President Eisenhower mean when in his inaugural address he said, "We accept our own deep involvement in the destiny of men everywhere"? This is what Mr. Walter Lippmann calls, "the President's unlimitedness." The philosophy and purpose of our President today is to make the American people the Atlas that suports the world. And that is not America's mission. America's mission is to give every American the right to work. Give every man the right to possess the product of his labor. To give every community its right to build and maintain its own schools. To establish representative government in town hall, country courthouse and State capitol. It is the mission of America to show other countries what liberty and freemen can do to establish the rights of life, liberty, and the pursuit of happiness.

The War Cry is the militant, spiritual paper of the Salvation Army. It defines the American when it causes him to say:

"I do not choose to be a common man. It is my right to be uncommon if I can. I seek opportunity—not security. I do not wish to be a citizen, humbled and dulled by having the state look after me. I want to take the calculated risk, to dream and to build, to fail and to succeed.

"I prefer the challenge of life to the guaranteed existence; the thrill of fulfillment to the stale calm of utopia.

"I refuse to barter incentive for a dole. I will not trade freedom for beneficence nor my dignity for a handout.

"I will never cower before any master nor bend to any threat. It is my heritage to stand erect, proud and unafraid; to think and act for myself, to enjoy the benefit of my creations and to face the world boldly and say, 'This I have done.'"

That is the spirit of America. That is the robust soul that refused taxation without representation. That's the American at the Boston Tea Party, and who, at the rude bridge that arched the flood, fired the shot heard around the world.

That is the spirit that has been slumbering and which is now waking up to assert itself.

Other peoples can acquire the American way of life by emulating our freedoms, not by being beggars, forever holding out the tin cup and expecting some self-styled progressives to take the earning power of the American people and throw it recklessly around the world.

In the beginning of our country, England looked upon us as the wealth-producing people who labored for her benefit. But we showed England that we Americans were determined to live for America's benefit. Now, after almost two centuries, our progressive politicians have returned us to the status of taxing the American people to support England. That is reactionary. Way back reactionary. It is repudiating and reversing all the political operations made by self-reliant America.

Let the people speak again as they did when the people were the makers of this Republic. Then again we will come to the rational behavior that knows that there are limits to the family purse and budget, there are limits to what the town and State can do and what the Nation can do. The time has come when the much heralded business talent in the President's Cabinet assert the heritage of the American people and restore the republics of the sovereign States. Why should we Americans go backward 180 years and work again for England? The progressives have put us back where the American Revolution began.

Associated Industries of Massachusetts Opposed to Overall Increase in Freight Rates

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the verified statement of Mr. Kurtz M. Hanson, president of the Associated Industries of Massachusetts, Boston, Mass., which was given before the Interstate Commerce Commission in connection with proposed increase in freight rates.

The statement follows:

ASSOCIATED INDUSTRIES OF MASSACHUSETTS,
Boston, Mass., March 29, 1957.

To All Senators and Representatives:

The position of the Associated Industries of Massachusetts regarding the 22 percent overall increase in freight rates which the eastern and western railroads have proposed in Ex Parte 206 now before the Interstate Commerce Commission, is presented in the attached verified statement submitted by the Associated Industries of Massachusetts to the Commission.

You will note that AIM has asked that a regional hearing be held in Boston in order that an adequate opportunity be given for our industries to present their case against further increases of the flat, percentage type.

To obtain such a hearing is most difficult as the ICC does not generally look with favor upon such requests.

The flat percentage method of increasing transportation freight rates destroys the competitive relationships of our Massachusetts industries to those in other sections of the country by widening the differentials in freight rates. I am advised that percentage increases have totaled 168 percent since 1947. For example, in 1952, New England industries could ship 100 miles at the first-class rate for $1.14; today $1.14 will buy only 40 miles of rail transportation. Such increases in transportation costs push our industries further and further away from their markets.

Surveys conducted by the AIM transportation committee show the result of per-age increases is detrimental to Massachusetts industry. It is for the purpose of presenting this evidence to the ICC that a regional hearing has been requested.

Your assistance in this matter will be very much appreciated.

Sincerely yours,

KURTZ M. HANSON, *President.*

VERIFIED STATEMENT OF KURTZ M. HANSON, PRESIDENT, ASSOCIATED INDUSTRIES OF MASSACHUSETTS, BEFORE THE INTERSTATE COMMERCE COMMISSION, EX PARTE 206, INCREASED FREIGHT RATES, 1957

The verified statement is prepared and filed on behalf of the Associated Industries of Massachusetts, a voluntary association, representing more than 80 percent of the industrial payroll in Massachusetts. The Associated Industries of Massachusetts is vitally concerned with the continued economic development of Massachusetts industry, and in the preservation of a financially sound system of transportation. The responsibility for the development of AIM policies in the transportation field rests with the AIM transportation committee comprised of 9 industrial traffic managers and 9 industrial management executives.

Upon recommendation of its transportation committee the AIM takes the following position in the matter of *Ex parte 206:*

1. The Associated Industries of Massachusetts is opposed to the percentage method proposed in *Ex parte 206* for the implementation of railroad freight-rate increases therein proposed; and

2. Seeks the opportunity to bring important and valuable testimony before the Interstate Commerce Commission at a regional hearing which is hereby requested.

The above position is based on recent surveys conducted by the AIM through its transportation committee. Written replies to the questionnaires employed in this study of the effects of increased transportation cost on our Massachusetts industry indicate that a substantial number of well-established industrial concerns plan or contemplate the relocation of all or part of their production facilities outside of New England because of the burden of increased transportation costs to and from this area. This exodus of industry, illustrated by this substantial number of specific cases, is due primarily to the percentage increases in transportation costs which have widened the differentials in transportation costs and have thereby weakened the competitive position of industry located in this area.

Loss of industry means loss of employment opportunities as well as a substantial reduction in the business available to the New England railroads. We believe the proceeding in *Ex parte 206* is past the emergency stage, since the Commission has already allowed the 7-percent emergency increase to become effective. Now is the time, therefore, to give further study and serious consideration to the disastrous effects of percentage increases upon business in New England and upon the business of the carriers. Percentage increases in *Ex parte 162, 166, 168, 175, 196,* and *206* since January 1, 1947, total 168 percent. The carriers themselves in different sections of the country apparently do not agree with a flat, across-the-board percentage increase in rates as indicated by the variance in the amounts of increase which their individual petitions suggest.

The A. I. M. survey shows the effects of these percentage increases to be a loss of industry to this area, and an even greater loss of industry if future increases are applied on the same flat percentage basis. Our industry has accepted reluctantly the discriminating results of percentage increases for many years. It is our united position that the continuation of the percentage method as applied to pending and future increases will benefit neither the New England carriers nor our business enterprises.

In order to give thorough consideration to these effects, it is essential that a regional hearing in *Ex parte 206* be held at Boston to give witnesses in this area an adequate opportunity to present evidence. The serious extent to which percentage increases have hurt this region and the substantial number of witnesses which may be available justify a regional hearing in this area.

Respectfully submitted.

ASSOCIATED INDUSTRIES OF MASSACHUSETTS,
By KURTZ M. HANSON, *President.*
JARVIS HUNT,
General Counsel and Registered Practitioner.

VERIFICATION

COMMONWEALTH OF MASSACHUSETTS,
County of Suffolk, ss:

Kurtz M. Hanson and Jarvis Hunt, being first duly sworn, on oath depose and state that they are authorized to file this statement on behalf of the Associated Industries of Massachusetts and that the contents thereof are true except as to matters and things, if any, stated on information and belief, and that as to those matters and things, they believe them to be true.

JARVIS HUNT,
KURTZ M. HANSON,

Subscribed in my presence and sworn to before me by the affiants above named this 13th day of March 1957.

[SEAL] WALTER P. MUTHER,
Notary Public.

My commission expires September 30, 1961.

CERTIFICATE OF SERVICE

I hereby certify that I have this day served this foregoing document by depositing in the United States mail copies properly addressed to each person or office, with first-class postage prepaid, as follows:

Twenty-five copies upon Edward A. Kaier, 804 Transportation Building, Washington, D. C.

One copy upon Prime F. Osborn III, room 804, Transportation Building, Washington, D. C.

One copy upon each of the 13 active regional offices of the Interstate Commerce Commission named in the Commission's order of January 16, 1957.

A copy will be furnished to any interested party upon request.

JARVIS HUNT,
General Counsel.

The Prayer Room of the Capitol

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1957

Mr. LeCOMPTE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I ask unanimous consent to include a little poem, penned by Rev. G. S. Bruland, pastor of the First Methodist Church, of Centerville, Iowa. One of the highlights of Mr. Bruland's recent trip to Washington was his visit to the Prayer Room of the Capitol. His poem beautifully expresses his thoughts and reflections on meditation in the Chapel.

The poem follows:

CONGRESS MEDITATION CHAPEL

I knelt in the prayer-chapel
Where the peers of my Nation kneel;
In the shrine where they often grapple
With problems, to men concealed.

I know there were angels present—
God's guides to the men of state;
The spirits who patiently listen
To prayers of hope and faith.

The air seemed bathed by visions—
By prayers of love and might—
Was hallowed by tall decisions
Pronounced on the windswept height.

My soul in this shrine ascended
To realms unbounded by time—
My prayers went forth, and blended
With yours in the hallowed clime.

The Need for School Construction

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1957

Mr. PERKINS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter from a schoolteacher:

HURRICANE SCHOOL 95B,
March 27, 1957.

Hon. CARL D. PERKINS,
House of Congress.

DEAR CONGRESSMAN: I am a schoolteacher, and I want to tell you about my school. It would be better if you could see, but I'll do my best to describe.

My school is at the mouth of Hurricane on Knox Creek, in the eastern part of Pike County. We have no school building at all but are using one end of an abandoned store. Our space is about one-third the size of a normal classroom. We are constantly fighting bugs and rats and must keep a sharp lookout for the poisonous snakes which inhabit the area.

In the middle of our "room" is a pot-bellied stove, too hot for the children crowded close to it and inadequate for those in far corners. Such windows as we have are too small and are on the side next to the steep hill, where little light ever enters. We have recently obtained electricity and are tempted to burn our lights all day. We have to be careful though; the wiring is bad and we are in danger of being electrocuted.

I am trying to teach the children to wash their hands before lunch, but this is a difficult matter with the sort of water supply we have. Actually the school has no water at all. What we use must be carried in buckets quite a distance from a neighbor's hand-dug well, and we are hoping it won't go dry before the end of the term. The water is rather warm and dust covered by the time it reaches us, but we are not asking for luxury.

Children are still children and must be excused occasionally. For years we have had no toilets at all. We have visited a neighbor's toilet in the garden below us or have

gone to the woods. Now there is a railroad and graveled highway, and we really feel the need of protection. By superhuman effort we have at last secured one tiny outdoor toilet. It won't meet any health specifications, of course, but at least a child can hide in it. The boys are glad to wait in line and let the girls use it first. We are trying hard to learn and use good manners.

The railroad is on our side of the creek and only a few steps from our door.

Several times a day we see a powerful diesel locomotive rushing by with a long train of coal cars. The noise is too deafening for study, so we just wait until the train is gone. Some of us do take time to remind ourselves that we are living in a rich and powerful country, and we are grateful. We read in our books and hear on the radio that the United States continues to send huge sums of money to many foreign lands. We are glad to live in a generous country. There is no boy or girl among us who would hesitate to share his apple or his sandwich with a classmate or a visitor. We are glad to be Americans and there is pride among us each morning as we just our tattered old flag on a short pole and solemnly pledge allegiance.

But, Mr. Congressman, couldn't we have a schoolhouse of our own? And water and toilets? And a playground? (You see, we own nothing here and are in mortal danger from the diesel locomotive every time we go outside.) Our superintendent has worked day and night, but he says we can do no better unless we get money. We are tired and won't be able to write to you again. Won't you please remember us here at the mouth of the Hurricane? If you do, we feel sure you'll work a bit harder than ever in support of the President's bill for school construction.

Sincerely yours,

Mrs. MARGARETTE H. WOLFORD,
Teacher.

Still Service Men

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. HENDERSON. Mr. Speaker, I wish to call the attention of the House of Representatives to an excellent editorial which appeared in the Times Recorder, of Zanesville, Ohio, on March 27, pointing out the tremendous service which the American Legion has contributed to the Nation. On this 38th anniversary of the Legion, it is well to reflect how this organization continues to serve in peace, just as each of its members served our country in time of national peril. The editorial is as follows:

STILL SERVICE MEN

Nationwide celebration of the 38th birthday of the American Legion has doubtless reminded our readers that the largest veterans' organization in the world has become in 38 years a significant factor in the lives of all Americans. Looking back, we are impressed with the fact that what was started by a handful of doughboys (as they called them then) in muddy France in the first springtime of peace after World War I to memorialize and project the aims for which they had fought has grown to serve God and country on so many fronts.

In as many separate birthday parties in thousands of communities over the Nation our most illustrious citizens—civic, professional, business, military, and spiritual leaders—paid heart-warming tribute to the steadfastness with which Legionnaires have kept faith through the years and sustained the 1919 pledge of Paris: "For God and Country." And in addition to the great and the near-great attending the parties held variously over the March 15 weekend, congratulatory wires and letters poured in by the hundreds from notables in every walk of life—from Legionnaire Dwight D. Eisenhower, from General Alfred Gruenther, the new chief of the American Red Cross, and from Basil O'Connor, head of the National Foundation for Infantile Paralysis.

From the two latter gentlemen came not merely congratulations, but thanks for the millions of dollars the Nation's Legionnaires have raised for both the Red Cross and the March of Dimes. And it might be mentioned that these contributions were in addition to the $135 million the Legion has spent in its own children's aid program in the past 31 years—and the millions more required to sponsor 20,000 junior baseball teams, 4,128 scout troops, a national high-school oratorical contest, Boys' State and Boys' Nation.

This organization that originally met the challenge of protecting veterans' interests, that fought for a Federal Veterans' Administration and the GI Bill of Rights, is today a community leader—in almost every community. Its long-established and continuing campaigns for national security and Americanism provide inspired and tireless leadership in the fight against communism from without and subversion from within.

Long live the American Legion! It has made America a better nation, a stronger nation, a safer nation. And it has made itself a recognized and respected force for good in America.

Let Spain In

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent article on Spain which appeared in the Boston Daily Record of March 25, 1957:

LET SPAIN IN

The House of Representatives has given its approval to a resolution expressing the sentiment of the Congress that Spain should be made a member of the North Atlantic Treaty Organization, a proper step in the direction of correcting a long-standing mistake.

If the Senate should agree, the proposition would still lack the force of law.

But it would place the United States on record as recognizing that without Spain in its ranks NATO is depriving itself of the maximum strength it desperately needs for the fulfillment of its basic purpose.

The prevention of Communist aggression, if possible, and the defeat of it, if necessary, are the objectives of the organization the North Atlantic nations have formed for their own security.

As the first nation to stand up without compromise against communism, and as the nation longest and most effectively in that great struggle, Spain has the best of all title to NATO membership.

That it has been kept out all these years has been an act of injustice to the Spanish nation.

Spain is more than a veteran in the free world's fight against communism. It has made enormous contributions to the success of that fight in the past and is capable of infinitely greater contributions in the future.

The strategic position of Spain is such that its air, land, and naval bases in an alliance with the West might eventually be the difference between victory and defeat in a future war, and in the hands of our Communist enemies would tip the scales to their cause.

Spain belongs in the North Atlantic Treaty Organization, and its acceptance has already been too long delayed.

National Wildlife Week and Wilderness Wildlife

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. SAYLOR. Mr. Speaker, the first week of spring, March 17 through 23, is celebrated again this year as National Wildlife Week. It is a time when hundreds of leaders in our conservation, sportsmen, civic, and educational organizations carry out a campaign to focus public attention on the critical need for conservation of our natural resources.

Throughout the Nation, people in our schools, churches, and civic clubs took time to appraise our progress in learning to care for our soils, waters, forests, and wildlife.

The 1957 homes-for-wildlife theme of National Wildlife Week calls our attention to the requirement of wildlife for proper living places where food, cover, and protection from weather and enemies are provided in proper combinations. Without these our birds, fish, and mammals will perish.

In many instances, but especially with the more than 40 animals in the United States that are near extinction, man's destruction of these natural living places has left our wildlife in critical straits. This is particularly true in the case of those species which require wilderness conditions for their survival—grizzly bear, whooping crane, the California condor, and many others. These cannot survive intrusions of our modern civilization. The roads, commercial developments, and ordinary uses which man makes of their wilderness environments exceeds their abilities to adjust to change. Thus, in order to preserve them, we must provide primitive and natural living areas, undisturbed by man's activities.

The wilderness preservation system, proposed for establishment through the enactment of H. R. 500 and companion measures which have been introduced by me and others in this Congress, provides for the protection of key ranges of several of the endangered species within the national forests, national wildlife refuges, national parks, and Indian reservations. By inclusion of these vital ranges of animals which are making a last desperate fight for survival in this

wilderness system, we are insuring them against further intrusions. This can be accomplished under this legislation without interfering with the present administration of these lands by the agencies who are now responsible for them. But it will give protection against pressures to open these wild areas to development that would destroy their wilderness character and thus jeopardize these endangered forms.

Wilderness wildlife must be preserved so that it can be enjoyed by the thousands of people who seek the experience of being where man has not disturbed the pattern of nature. In order to save it, we must buttress our existing wilderness areas against future encroachments. This is the only way we can be assured that a place will be made for our animals that require wilderness in order to survive.

I join President Eisenhower in extending my congratulations to the Pennsylvania Federation of Sportsmen's Clubs, the sponsors of National Wildlife Week in Pennsylvania, and the members of the National Wildlife Federation's affiliates in other States who have taken the opportunity during National Wildlife Week to show the American people of the great need for the homes of our wildlife.

Excessive Secrecy by Government Agencies

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. MACDONALD. Mr. Speaker, for some time there has been a growing inclination toward secrecy on the part of the Department of Defense and other Government agencies. With all this secrecy they have been trying to find a way to stop leaks of classified material. In fact, last August, Defense Secretary Charles E. Wilson appointed Charles A. Coolidge, former Assistant Secretary of Defense, as head of a committee to study and draft recommendations to help protect classified material by stopping leaks to the public.

The Coolidge committee recommended penalties for persons who violate confidences and menace national security by disclosing classified information. Industry violators, they said, should be threatened with loss of their clearance and diversion of future business. For guilty members of the Defense Department, the committee urged stern disciplinary action. Also news reporters, they said, should be subject to summons before a grand jury to testify on the source of their information.

Mr. Speaker, I feel strongly that the trend toward excessive secrecy by our Government agencies should be brought to a halt. I have always felt that the inherent right of people to control their Government rests solidly on the foundation of information. The freedom of the press clause in the first amendment of our Constitution does more than grant newspapers a right to print stories. It is a specific right held by the people to find out the facts about their Government and to disseminate and discuss those facts. Therefore, I am sure that the Members of the House agree with me when I say that the Coolidge committee was in error when they recommended that a solution is to force reporters to reveal the sources of their information. It is axiomatic that a reporter is entitled to protect his sources as a part of his job and the relationship has much in common with that of lawyer-client.

The Special Government Information Subcommittee is presently studying this whole problem of executive restrictions on information. It seems to me that Congress should establish a uniform and universal rule on information practices. This rule should authorize and require full disclosure of information by Government agencies, except for specific exceptions defined by statute for security reasons.

Knowing the interest of my colleagues in this important matter, I am including in these remarks an excellent and very timely editorial entitled "Jail Is No Punishment?" This editorial appeared in the Melrose Free Press, one of the leading newspapers in my Eighth Congressional District, on March 28, 1957, and was written by the managing editor, one of the ablest women editors in our country, Dorothy M. Raymond. The editorial deserves the thoughtful attention of every Member of Congress.

The editorial follows:

JAIL IS NO PUNISHMENT?

The Pentagon, which is secrecy-happy to begin with, is trying to find a way to stop leaks of classified material. It has been unsuccessful in putting a thumb in its own censorship dike. It has been unable to discover the person or persons within its own ranks who occasionally have deliberately revealed classified information, or perhaps in advertently let it slip out in the wrong places. So now the Pentagon thinks the only way to solve the problem is make reporters reveal their sources and break their confidences.

The Coolidge committee is working on the subject but their reasoning is about as confused as it could be. In essence it goes like this: Grand jury actions to force newsmen to reveal news sources would not involve punishment for reporters except that they would face jail for contempt if they refuse. In other words, the only way in which no punishment is guaranteed is for reporters to comply.

It is correct, as Representative CLARE HOFFMAN says, that there is no law which extends privilege to a reporter's communications. But by practice and precedent it has been generally accepted that a reporter is entitled to protect his sources as a necessary part of his job. There should be laws guaranteeing this privilege.

If the Pentagon succeeds in establishing the precedent that reporters can be forced through grand jury action and the threat of penalties to tell all they know about whom they talk to in their work, then the veil of secrecy will become almost opaque over official Washington and probably in every other important news center.

Statement by the NPA Business Committee on the Need for Adequate Statistics for Appraising the Current Economic Situation

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1957

Mr. BOLLING. Mr. Speaker, it would appear that one of the casualties of the current drive to slash President Eisenhower's budget may be appropriations for more adequate economic statistics. No economy could be more clearly false economy than to economize on the statistics which furnish the basis for the economic decisions of business, labor, and agriculture as well as all levels of government.

The following statement by the business committee of the National Planning Association is signed by a number of our country's outstanding business leaders and deserves the attention of all those concerned about the economic strength of the United States:

STATEMENT BY THE NPA BUSINESS COMMITTEE ON THE NEED FOR ADEQUATE STATISTICS FOR APPRAISING THE CURRENT ECONOMIC SITUATION

The present economic situation poses problems which are a source of conflict and confusion for business and government alike. Government authorities have to decide whether action is needed to restrain economic activity and counter inflation, or whether to encourage demand and counter a slack in economic activity. In a free economy there will always be uncertainty and controversy about the economic outlook. It should be possible, however, to reduce conflict and confusion in the interpretation of the existing economic situation.

I

We do not intend to aline ourselves to one or the other of the various conflicting interpretations of current economic conditions. Rather, we intend in this statement to call to the attention of economists, businessmen, and government officials a major reason for the bewilderment regarding the economic situation. Various and in part contradictory theories are offered as plausible interpretations of the current economic conditions. However, the statistical evidence is often insufficient to validate the theoretical propositions and to determine appropriate policies.

Some economists interpret current economic developments in accord with a reference cycle derived from past experience. According to the reference cycle, the recent boom has placed a financial strain on monetary resources which, in turn, initiate a downswing in the cyclical movement. Continued credit stringency would in such a situation enhance the downturn and a policy of softening of credit terms would be indicated. Yet, the continuing upward pressure of prices generally does not appear to conform to this picture but suggests that the boom has not yet run its course. As monetary and credit policy is designed to aid in the stabilization of prices, this would not be the time to relax credit terms but rather to continue if not to intensify credit restrictions. Thus these two cyclical explanations lead to opposite policy conclusions.

Other economic observers believe that the structure of the American economy has changed so basically that conclusions derived from past cyclical experience may not be valid. They believe that current economic developments must be understood not as a cyclical but as a longer-run, secular phenomenon.

Even among those who believe that the conventional cyclical theory no longer applies, there are alternative and again to some extent conflicting long-term explanations offered for the present situation. The first suggests that the current price rise is explained by the longer-run relationship of wage and material costs to prices. The cause of the price rise is attributed by some to the ability in particular lines of business (e. g., steel or petroleum) to establish administered prices beyond what could be explained by rising costs; others attributed price increases to wage demands and wage settlements (including fringe benefits) which exceed actual or potential productivity increases and thereby force prices up. Some explain price changes as a combination of these two factors. These are different aspects of the cost-plus explanation of the price rise. If this explanation is valid, any attempt to curb such price increases by restrictive credit or fiscal policies would be either ineffective or would have to be so severe that price stability would be achieved at the cost of mass unemployment. Then the cure would be more harmful than the disease. Those who hold the cost-plus view recognize that at the moment the Government has no policy devices for curbing this kind of price rise, except by apepals to the self-discipline of business and labor, and by threats of wage and price controls.

A second long-term interpretation of the current situation is that a structural maladjustment exists in the economy. According to this view, an imbalance has developed in the relationship between the people's desire to spend their incomes currently and their willingness to finance, by their saving, technological advances and expansion. In essence, these observers maintain that the heavy demands of consumers and the continued high level of business investment put a strain on available resources. They believe that the oversaving theory of the thirties has to be replaced by an undersaving theory. The suggested solution to this problem would require adjustment in financial institutions and in the tax structure so as to increase the propensity to save—such as higher interest rates and tax incentives for investment. This theory is contested by those who claim that we still face a situation in which the increases in productive capacities may exceed, at least temporarily, the increases in actual consumer and business demand.

II

The fact that capable and sincere observers of economic developments can come to such utterly different interpretations to some extent reflects controversies which must be battled out on the plane of economic theory. However, theoretical arguments cannot be decided without recourse to facts. And the current state of confusion is in large measure attributable to the lack of factual statistical information.

For instance, any discussion about the alleged cost-raising effect of wage increases remains futile unless better statistical information becomes available about productivity gains. The most comprehensive measurement of productivity gains uses the relationship between the increase in total production expressed in constant dollars, to total man-hours worked. The price indices used for deflating current dollar estimates of total production are so deficient that this one possible source of error alone may invalidate any conclusions drawn from the productivity measurement. Business and labor do not now have the factual information needed for guiding a policy designed to provide the maximum feasible increase in purchasing power without inflationary price and cost rise.

Or, the controversy about saving is conducted entirely in a vacuum. Neither the oversaving theory of the thirties nor the undersaving theory now advocated can be validated by reference to facts. A task force, appointed by the Federal Reserve Board in response to a suggestion by the Joint Economic Committee, explored every available bit of information on saving and concluded, in June 1955 "that substantial improvements are necessary to make the statistics of saving an adequate tool of economic and business analysis." The Budget Bureau has designated the Board of Governors of the Federal Reserve as the focal agency for the development of improved saving statistics. Also, private research organizations are engaged in experimental work in this field. However, no surveys on saving have been undertaken or initiated on an adequate scale.

We recognize that the rising costs of defense make it doubly urgent to economize in every field of public endeavor. However, the costs of adequate statistical information should be seen in the light of the waste which can result from an erroneous interpretation of the economic situation and from public policies moving in the wrong direction or from failure to act in time because of uncertainties in the interpretation of the economic situation. The various task forces established by the Federal Reserve Board and the reexamination of other areas of statistics initiated by the Budget Bureau and the Joint Economic Committee have identified the most grievous gaps in our statistical knowledge. The time has come to move from study to action programs.

The business committee of the National Planning Association therefore recommends that the executive agencies and the Federal Reserve System develop a long-range statistical improvement program. Such a program should determine the relative priorities for filling existing gaps in information. It should also bring obsolete statistical series up to date. Every effort should be made to assure that this program be implemented as promptly as possible by the Federal Reserve system and the executive agencies concerned. The committee notices with satisfaction that the Joint Economic Committee of the Congress in its recent 1957 Joint Economic Report again recognizes the importance of additional economic statistics and urges congressional action to improve Federal statistical programs. The present situation demonstrates the high costs of ignorance and the need to fashion better measures of performance of the American economy.

MEMBERS OF THE NPA BUSINESS COMMITTEE SIGNING THE STATEMENT

Beardsley Ruml, chairman, New York City.

Frank Altschul, chairman of the board, General American Investors Co.

Morton J. Baum, executive vice president, Hickey-Freeman Co.

D. O. Bowman, Crown Zellerbach Corp.

Arde Bulova, chairman of the board, Bulova Watch Co.

G. W. Blunt White, vice president, Sonoco Products Co.

Clarence A. Wimpfheimer, chairman of the board, American Velvet Co.

James C. Worthy, vice president, Sears, Roebuck & Co.

Faith Is the Target

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a thought-provoking article which appeared in the Boston Daily Record of March 30, 1957:

FAITH IS THE TARGET

The Chinese Communists, having released another American missionary from captivity, now stand expectantly before the bar of world opinion, as if in line for credit for a praiseworthy act.

What the world remembers, however, is the unspeakable crime that has been committed against this unoffending man of God.

The Reverend Fulgence Gross, a Roman Catholic missionary from Omaha, Nebr., has survived 6 years of agony and humiliation in Communist custody. He has been subjected to the mental and physical tortures which are normal Communist practices. He has known the distress and the despair of the hopeless, sustained only by the inextinguishable faith which even Communists cannot blot out of the hearts and minds of dedicated men.

His only offense was that he sought to bring to the people of China the comfort and understanding of a way of life shaped to the moral and spiritual concepts of human brotherhood and dignity.

But this is what Communists are striving so desperately to wipe out of the world. They are afraid to have men taught and

inspired and encouraged to have faith in God.

The Communist religious persecutions are the greatest and gravest of their many crimes against humanity. They do not discriminate between religions or churches. The last churchman to walk out of Red China as a freeman before the release of Father Gross was a Lutheran clergyman, the Reverend Paul Mackensen, of Baltimore. The many who still remain behind, some of them unaccounted for and others undoubtedly dead, are of many faiths.

It is not one church or creed that the Communists fear and hate. It is the name of God, and the love of God, that they feel they must destroy.

There are worldwide and heartfelt prayers of thanksgiving for the return of Father Gross from the living hell in which he has been submerged by this Communist demonstration of man's capacity for inhumanity to other men.

The Federal Urban Redevelopment Program

EXTENSION OF REMARKS
OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1957

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I am inserting in the Appendix of the CONGRESSIONAL RECORD a resolution received by me from the Council of the City of Pittsburgh, urging the continuance of the Federal urban redevelopment program.

I am also including a letter from the Honorable George M. Leader, Governor of the Commonwealth of Pennsylvania, giving a list of the redevelopment authorities in our State.

I was a member of the Senate of Pennsylvania when the necessary legislation was passed by that State in setting up the redevelopment authorities, and defining the position of the State government in giving financial aid and complete State cooperation in the efforts made by the local municipalities to rebuild decaying communities.

The progress made in Pennsylvania has been outstanding.

To make America strong means that we must make our small communities a suitable place in which to live. Some of our communities are old and had very little planning when they came into existence. Now they must be made over in this age of automation in which we live.

The Federal Government cannot shirk its responsibility to help these communities. In some cases they must be virtually rebuilt. This is a moral obligation the Federal Government has to the States and local communities.

It is just as important to rebuild our old cities and towns as it is to rebuild the towns of Europe which have been destroyed by bombing.

I sincerely hope that the Members will read these inserts as I believe they explain thoroughly the position of the State of Pennsylvania as well as the city of Pittsburgh in their programs of building a new America for tomorrow:

Resolution 100

Whereas the Federal urban-renewal program can be looked upon as one of the great forces to encourage rehabilitation of communities, large and small, and to prevent slums and blight in the Nation's centers of population; and

Whereas the financial limitations contained in House bill 6047 and in Senate bill 1609 has forced the Housing and Home Finance Agency to institute a system of priorities which penalize communities which already have one urban-renewal project underway but which are financially able to, and have been actively planning to undertake more than one; and

Whereas this system of priorities will postpone indefinitely the planning of two projects in the East Liberty and North Side sections which enabled all communities to plan possibly making obsolete any of the preliminary work which has been accomplished thus far; and

Whereas the $175 million allocation contained in these 2 bills is for 1 year, thereby breaking a precedent of multiyear appropriations which enabled all communities to plan projects on an orderly schedule and with reasonable assurance that Federal funds would be available when needed; and

Whereas certain communities, including Pittsburgh, have adopted 5-year capital budgets, based on people's bond issues, with the purpose of an orderly expenditure of local sums, in the main, for public improvements in urban-renewal-project areas; and

Whereas the Commonwealth of Pennsylvania also is committed to aid urban-renewal projects as its share in the costs of local participation and, in fact, has scheduled funds for the East Liberty and North Side projects, and curtailment of the Federal funds may place State funds in an uncertain status; and

Whereas the orderly continuance of the urban-renewal program is noninflationary because it provides money to be invested in planning for projects which may be executed 3 to 6 years hence, and thus builds a backlog of neighborhood commercial and housing requirements for a time when the Federal economy may need support: Therefore be it

Resolved, That the council of the city of Pittsburgh urges that the Congress reconsider the allocations for the Federal urban-renewal program in the minimum terms of the President's original proposal of $250 million in each of the next 2 years. The urban-renewal program is a positive approach to guaranteeing the orderly growth of all of our centers of population, large and small; its benefits can be measured directly in that it provides decent housing and living conditions for all of our citizens;

Resolved, also, That copies of this resolution be forwarded by the clerk of the city of Pittsburgh to the President of the United States, to the two United States Senators from Pennsylvania, to all Representatives to Congress from Pennsylvania, and to other interested Government officials.

In council, March 25, 1957, read and adopted.

THOMAS J. GALLAGHER,
President of Council.

Attest:

GEORGE BOXHEIMER,
Clerk of Council.

Mayor's office, March 27, 1957.

Approved:

CHARLES D. MCCARTHY,
Deputy Mayor.

Attest:

STANLEY M. NOSZKA,
Mayor's Assistant Secretary.

Recorded in resolution book, volume 14, page 292, the 27th day of March 1957.

COMMONWEALTH OF PENNSYLVANIA,
Harrisburg, March 29, 1957.

Hon. ELMER J. HOLLAND,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: I most urgently request that you lend all possible support to the authorizations for urban redevelopment and renewal as originally recommended in the President's budget. These were $250 million for the fiscal 1958 and $250 million for the fiscal year 1959.

The suggestion of the Administrator of the Housing and Home Finance Agency that the total new authorization be reduced to $175 million for 1957 would do great injury, if adopted, to the strenuous effort of Pennsylvania cities to clear their slums and blighted areas and replace them with modern developments.

A survey of Pennsylvania redevelopment authorities shows $22 million of Federal assistance is required merely to supply additional needs of present programs and applications pending in HHFA offices. (Additional Federal applications expected from Pennsylvania's 39 redevelopment authorities prior to July 1958 total $73 million.) Applications for State assistance which provides one-half of local contribution toward the matching Federal assistance now total over $28 million, indicating long-range need for Federal grants over $112 million, based on $2 Federal assistance to each $1 local.

Many worthwhile programs will bog down or die half completed if assistance is not available, thus causing tremendous loss of money already expended. Other projects will have to go forward on a piecemeal basis at increased cost.

There is no anti-inflationary effect in reducing authorizations. Actual appropriations will not follow for a number of years, at which time the American economy may badly need the investment of private capital which comprehensive urban redevelopment can produce.

The reduction in authorizations can only result in a reduction in planning. Already, the Urban Renewal Agency has revised its standards for advancing planning funds and allocating capital grants to a disastrously narrow base.

Pennsylvania, as a State, has shared in the financing of urban redevelopment programs under legislation passed in the Duff administration and in this one. We are currently proposing to our legislature a policy which will advance the planning of future projects by the assurances it provides of State assistance equal to the local contribution.

It would seem that this productive area of Federal, State, and local cooperation should be encouraged, not cut back.

I am enclosing a list of the redevelopment authorities in Pennsylvania with active planning and action programs, so that you may judge the effect in each congressional district. But, however individual districts may be affected, I think we must all agree that the conservation and rebuilding of our urban areas is a cause in which every American should take a deep and compelling interest.

Your cooperation will be much appreciated.

Sincerely yours,

GEORGE M. LEADER.

Postal Rate Increase Urged

EXTENSION OF REMARKS
OF
HON. CECIL M. HARDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mrs. HARDEN. Mr. Speaker, the Post Office and Civil Service Committee is currently holding hearings on a proposal to increase United States postal rates and thereby reduce the tremendous annual deficit incurred in handling our mail. Commenting on the proposal in its issue of April 2, the Indianapolis Star editorially supported a realistic rate increase. Under permission to extend my remarks, I call the attention of the membership to the Star editorial which follows:

PAYING FOR MAIL SERVICE

The proposal of the Post Office Department for increases in postage rates has brought letters from a number of readers protesting the requested boost in letter rates. The belief has been expressed that first-class mail is already paying its own way, and that if additional revenue is to be sought to eliminate the Department's deficits it should come from other classes of mail. One reader suggests that Congress should simply recognize mail handling as a service rather than a business, and let it go at that. Seeking answers to readers' questions, we have gone over the Department's arguments and some of the others which have been presented to the House Post Office Committee.

The question of first-class mail revolves around bookkeeping. Present letter rates were said to cover the costs of first-class mail on the basis of figures accepted by the Department a few years ago, and still used as a basis of budget allocation. However, the Department now says that these older figures fail to take into account all of the handling systems and operations which are maintained to give preferred handling to first-class mail. A formula has been worked out for adjustment of budget allocations on the basis of later cost studies. When this formula has been applied, the costs of handling first-class letter mail is shown as considerably higher than the postage paid. A smaller factor which also enters the picture is that previous figures did not include such items as employee retirement, workmen's compensation, unemployment insurance, and others not segregated by departments in the general Federal budget. The Department argues that the appropriate portion of these costs should be charged against each class of mail. If these figures are acceptable, then the requested 1-cent raises are necessary to make letter mail pay its way.

The Department's rate raise proposal also seeks to make other classes of mail pay their own way, except where a service function is specifically approved by Congress. A substantial raise would be made in the rates for third-class advertising mail. This is what is sometimes labeled junk mail. The Department agrees that there should be no free riding for this kind of mail. According to its figures, if the requested raises are granted this class of mail will be paid for in full by its users.

The pricing of second-class mail, newspapers, magazines, and such, is not so easily simplified. Here there has been in the past a policy of operating on a service basis, particularly for smaller publications. The Department's plan assumes that it is desirable to continue providing mail service at less than cost for publications of less than 5,000 circulation, and for the publications of religious and other nonprofit organizations. These would be exempted from the proposed rate raises. The Department argues that other publications can and should pay rates adequate to cover the cost of the service. For them the Department proposes essentially a 60-percent increase, applied at the rate of 15 percent each year for 4 years, in the zone weight rates. With other small raises and with budget adjustment in line with that for first class mail, the deficit for this class of mail would be brought down to about $100 million a year. That is still a big loss. Only about 3 percent of it is for the special rates on religious, charitable and classroom publications and the like.

The Department's figures are challenged by some magazine publishers. They argue that the rates per piece should be raised, rather than the weight rates. This would put more burden on small, lightweight publications and less on heavier ones. They present figures to show that their plan would be more equitable. We don't know which is right, but it is clear that both sides are arguing for the same principle. If Congress wants to provide service at less than cost for certain types of publications, it should be done clearly and specifically. All others should pay their way. We fully agree with this principle.

There is a companion bill in Congress which would identify services to be provided at less than cost. The supplementary cost figure for these would be established, and money to cover it would be appropriated from the Treasury. This would make it clear that other mail users are not paying for these services. Government mail carried without postage now is covered by a similar appropriation.

The Post Office Department's proposal for a businesslike rate schedule is sound and sensible. If anyone can convince Congress that other sets of figures are more accurate with respect to specific types of mail, well and good. But legislation which follows the Department plan in principle ought to be enacted. Those segments of the operation which are intended to be a public service should be paid for with tax funds. As for the rest, each user of the mails should pay for the service he gets.

Murder of American Citizens in Iran

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. DORN of South Carolina. Mr. Speaker, the tragic murder of three fine American citizens in Iran should call for a restudy of our whole foreign-aid policy by the State Department and by the Congress. For many years I have questioned the advisability of sending technical assistance and point 4 aid into areas where the first need is for law and order. We must still crawl before we can walk. I am afraid we are trying to start at the top rather than to first build the foundation.

In some areas, civilization is the basic fundamental need. Savage peoples first must abandon cannibalism and start adopting some of the aspects of a civilized society such as wearing clothes, living in houses, and eating cooked food. Into such areas some of our idealists apparently think that technical assistance in the form of vast projects, television, and Cadillac automobiles is the first need of uncivilized peoples. Civilization is an evolutionary process that takes generations. It seems fallacious to me to try to impose technical assistance on countries where 80 or 90 percent of the people cannot read or write and where vast segments of the population are no more civilized than the American Indian before the coming of Columbus.

A realistic and practical approach to the problems of the world is now in order—a reappraisal based on the situation as it is and not as it ought to be.

This deplorable incident in Iran has caused a shakeup in the government of this key country. The resignation of the Prime Minister is a loss to the free world, as he is a friend of America. Iran is the key to the Middle East situation. It is the road to oil and to the untapped resources of the Near East and Africa. Commonsense is needed instead of theory and textbook blueprints. Civilization, law, and order must come before education, culture, and democratic principles. Iron points on their wooden plows are needed before libraries in the jungle. Improved seed and fertilizer should come before art displays and Hollywood movies.

The world is getting a bad impression of America from some of our theoretical representatives. Reports come to me from foreigners that they cannot possibly have railroads, highways, and dams like America for another 100 or 500 years. The real needs are for the basic fundamentals.

Hold the Fort

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial with a great deal of commonsense which appeared in the West Lynn Works News, Lynn, Mass., on March 29, 1957:

HOLD THE FORT—PART OF THE COMMUNIST DOCTRINE: TO INVEIGLE AMERICA INTO SPENDING HERSELF POOR

President Eisenhower has said that the big reason for the $3 billion Federal spending increase contemplated in the record peacetime budget of $71.8 billion is that the people want this spending—and that "people seem to think the Federal Treasury is a bottomless well."

Many of the proposed spending increases are due to demands for domestic welfare programs and local community projects. The

Government is only too ready to step in because as people delegate their obligations the Federal power is increased. Eventually, there will be a point of no return. Individual liberty and responsibility, State sovereignty, and freedom of enterprise will have been surrendered.

The logical and direct way to curb the growth of Federal power is to cut the budget. Various suggestions have been made for cuts ranging from one to eight billions of dollars. In domestic spending alone, it has been estimated that $4.1 billion could be saved by holding certain programs down to 1956 or 1957 spending, and by eliminating new programs set up in the 1958 budget.

Thus far only $660 million in cuts have been recommended to the House on appropriation bills totaling more than $10 billion. These have yet to be considered by the Senate.

It requires courage and initiative to work out our local problems for ourselves. But unless we do so—instead of looking to Washington for solutions of local problems—Federal power will continue to increase.

As individual citizens we must never lose sight of the fact that—here in America, at least—government is of the people, by the people, and for the people. It is our money, the taxpayers' money, which is used by the Federal Government to pay for the many projects which the people, and that means us, are supposedly demanding.

As individual citizens we know that our earnings, from which we pay our taxes, are not bottomless wells and that, with less taxes to pay we would have more money available to buy more comforts for our families, to provide additional education for our children, or to invest more for our later retirement.

One of the justifiable complaints which all legislators make, whether Federal, State, city, or town, is that they rarely, if ever, get verbal or written comments regarding pending legislation from the citizens whom they represent.

Thus, we have no one to blame for unnecessary Government expenditures but ourselves.

The cure? Simple. Write to our elected representatives and let them know how we feel, as individuals, about excessive Federal spending.

"Just Give the Facts," Larson Tells the USIA

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Sunday Star on March 31, 1957:

"JUST GIVE THE FACTS," LARSON TELLS THE USIA

(By Fred Theroux)

Arthur Larson, apostle of the Eisenhower new Republicanism, has just about completed his shakedown as head of the United States Information Agency. And he has ideas.

Soon after his appointment to his responsible post, Mr. Larson set out on a personal inspection of USIA posts throughout the world. Since his return last month he has been applying the fruits of his journey.

The USIA, including the Voice of America radio facilities, operates 200 posts in 80 countries, all of them outside the Iron Curtain. Seventy-eight radio transmitters and boosters put Voice broadcasts on the air in more than 45 languages. At overseas posts some 1,450 American personnel and 7,500 foreign nationals are working for the USIA program. And in the United States another 2,500 people gather, prepare, and transmit the materials for dissemination overseas.

NO SHAKEUP PLANNED

There will be no shakeup in USIA, Mr. Larson stresses. But there will be some shifts in emphasis. To start, this Rhodes scholar and former University of Pittsburgh Law School dean is bearing down hard on veracity and reputation—as opposed to spur-of-the-moment responses to Communist propaganda onslaughts.

"Propaganda," says Mr. Larson, "is not the mission of USIA. Our job is to inform the world with facts. If we do that consistently and clearly the agency will deserve and get the respect and attention of peoples everywhere."

It is the long haul, not the short, that appeals to Mr. Larson in American efforts to inform the world on the aims and intentions behind American policy. He leans to the documentary approach whenever developments, such as the Hungarian people's revolt last fall, put the Communist bloc in embarrassing positions. Exploit the situation, but do it with an avalanche of facts.

The Iron Curtain peoples, Mr. Larson is convinced, are already deeply suspicious of the crudities of the Communist propaganda machine. Tales of germ warfare in Korea, of capitalist barbarisms in colonial countries, of widespread unemployment and suffering in the West, make no more than transitory impressions, he contends.

In any nation, he reasons, leadership comes almost inevitably from the alert, thinking people in the population. With that group, he insists, facts fairly and fully presented will count in the long run.

CAUTION WITH NEUTRALS

Toward the so-called neutralist world, those nations holding aloof from close identification with either the East or the West, USIA under Mr. Larson will tread with caution, "We are guests in those nations," he points out, "and any attempts at undue pressure or improper activities violates our obligation to our hosts. The worst thing USIA could do would be to interfere, or even to appear to interfere, in the internal affairs of these or any nation."

Political activity in the field of foreign policy is a matter for the State Department, Mr. Larson points out. His own agency has only one job—to inform and interpret. Reading rooms, film strips, television, books, and pamphlets, radio broadcasts over the Voice of America and local outlets—these are the weapons of USIA. As Mr. Larson sees it, they are immensely effective.

Within the general policy laid down in the USIA headquarters building at 1776 Pennsylvania Avenue, Mr. Larson expects agency personnel abroad to use a wide measure of discretion in their daily work. It would be impossible, he declares, to attempt to dictate details from here.

Because events over the past few years have focused world attention more and more on the Middle East and the Far East, Mr. Larson is working now on a sizable increase in the USIA programs in those areas. The most effective personnel are being sought for key posts in the areas, physical facilities are being improved, more powerful radio transmitters are being built.

He is particularly interested in furthering the success of the People to People program—a recently organized private-citizen effort to build new roads of communication between the United States and foreign peoples.

Launched by President Eisenhower himself last September, People to People consists of 41 citizens' committees, representing almost every aspect of American cultural, social, economic, and professional life. These groups sponsor visits and tours, exchange speakers, concerts, and drama festivals—any possible means for the strengthening of truly personal contacts between the world's peoples.

THE RELAXED APPROACH

Mr. Larson is a tall, relaxed looking man with the fair complexion of his Scandinavian forebears. He talks easily and directly, with none of the traditional flamboyance of the politician.

His tour of duty as head of the USIA, in view of many, is a grooming assignment, perhaps in preparation for the 1960 elections or for Cabinet rank. Mr. Larson himself deprecates such suggestions. He has, right now, an immensely important task to perform, he says, and all his interests and efforts are geared to that task.

Mr. Larson joined the Eisenhower administration in 1954 as Under Secretary of Labor. During the 1956 campaign he published A Republican Looks at His Party, a scholarly analysis of what Mr. Eisenhower has called progressive conservatism. In broad outline, the books seek to reconcile conservative, traditional Republicanism, and the modern, social-minded, government-in-partnership approach espoused by President Eisenhower. As such, it is a sort of charter for the Eisenhower Republicans who seek to reshape their party.

Better To Pay Our Debts

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. SCUDDER. Mr. Speaker, a very interesting editorial published in the Humboldt Standard of Eureka, Calif., under date of Thursday, March 28, 1957, has just come to my attention. It is entitled "Better To Pay Our Debts" and I believe that it is good at this time when we are considering the budget bills to call it to the attention of the Members of Congress.

It is time for the Federal Government to curtail its activities. In trying to take the lead in every phase of our body politic, many of the programs the Federal Government has assumed in the past several years should be carried out by the responsible governmental agencies on the local level. Federal money is general taxpayers' money, but it is deemed easier to extract money from the public if the source of collection and expenditure is further away from the taxpayer.

For the past week we have been considering an appropriation bill to extend more and more assistance to various programs that should be carried on on the local level. The present pending pollution appropriation of $50 million to be carried on for 10 years and amounting to one-half billion dollars started out to be a bill to force the upstream polluters to clean up their waste created by the various cities and industries along our waterways. It is not fair or equitable for cities that provide for the disposal of their own waste to be compelled to contribute to those cities that have no regard for their neighbors downstream. This

program will cost $500 million and should be stopped if we are interested in reducing taxes.

I believe our responsibility should be to keep expenditures down and in the present drive by those who believe in economy, we are only trying to hold this year's expenditures in line with the expenditures of last year. We should be thinking more of paying something on the national debt with the idea in mind that just as soon as possible we can work for a reduction in Federal taxes. Anyone who thinks just a little must realize that the only possibility of reducing taxes is to cut down in expenditures.

As an extension of my remarks, I desire to include the following editorial:

BETTER TO PAY OUR DEBTS

"Tax increases from now on will center in local and State governments." Thus States a big national-economics magazine. What they say ties in well with Humboldt County, whose budget has increased 100 percent in 2 years. It's happening all over the Nation.

Among other items, they note that relief for indigent people, in the local picture, has climbed steadily during the greatest boom in history. Isn't that like the old adage of giving them an inch, and they will take a mile? Has a class of professionals been created?

Turning to the national budget—$14 billion has been allocated for welfare alone. Back in 1934, when we had a depression, the whole national budget—including welfare and relief—was $7 billion only. Apparently people hadn't been educated to welfare, then.

All right—suppose another grave economic setback should occur? Think of the reliefers there would be then—and plenty of them real. How could the taxpayers then support the tremendous burden of local, State, and national governments. And what about Government debt?

From your newspaper office, it looks as if Government should be trying to pay down its indebtedness while times over the Nation are good, instead of passing out billions in questionable handouts.

Take yourself. If you are doing all right, but still owe money to your bank, would you buy an extra automobile, or pay off? In the same sense, our country—locally and nationally—should bolster its financial structure. Time may come when we'll need it.

It amazed us recently to learn that Canada actually has a surplus. The account we read said that that nation is cutting taxes here and there to keep its surplus from becoming unwieldy. How do they do it?

Here in the United States, they are checking up on Dave Beck and his bully boys, which is good. They asked for it. Perhaps some checking up on others, in higher places, might be good, too.

Stronger, Not Weaker

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article which appeared in the Boston Daily Record of March 28, 1957:

STRONGER, NOT WEAKER

Nationalist China's Foreign Minister, George K. C. Yeh, said the other day that if the Free World expects to win the cold war against communism it will have to change its thinking about the prospects of profitable trade with the Communist nations.

Speaking of his own particular part of the world, Yeh said the quickest and surest way to turn the rest of Asia over to the Communists would be to remove all trade restrictions, especially those now in force against Red China.

Given free access to the natural and industrial resources of the free world, the Peiping regime would win Southeast Asia over to communism virtually by default.

Moral considerations alone should deter the free nations from the pursuit of profit in trade with Red China.

The slaughter of 20 million human beings already stands to the bloody shame of the Communist masters of the Chinese mainland, a career of wanton murder that makes the Soviet Russian massacres in Hungary appear almost merciful.

But even if morality means nothing, the sheer necessities for survival should persuade against association with the most vicious force that has come into the world since the beginning of civilization.

Trade with the Communists arms and strengthens them for their evil purpose.

It only prepares the way for them and makes it easy. Their intended victims only fool themselves when they see a profit in such suicidal commerce.

United States Steel Attempts To Make Employees Scapegoat for Price Increases

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by David J. McDonald, president of the United Steelworkers of America, which appeared in the April 1957 issue of Steel Labor, official publication of United Steelworkers of America.

In this article, President David J. McDonald has attacked the effort of United States Steel's corporate head to blame union wage increases for inflation as a coverup to switch attention from highly profitable price advances. Mr. McDonald, with facts and figures discusses some of the real reasons for inflation. His reply is in answer to a number of similar attacks made by Chairman Roger Blough of United States Steel in last year's report to stockholders, in public meetings since, and again in the current report:

(By David J. McDonald)

Once again, Mr. Roger Blough, chairman of the board of United States Steel Corp., has seen fit, through his annual report, to blast the steelworker employees and their union. This comes at a time when the 1956 annual report of United States Steel shows the highest sales ever, the second highest profits on record, the largest dividends to its stockholders.

Yet, Mr. Blough would have the public believe that the union is the cause for the recent increases in the cost of living and inflation, which he says threatens to become a permanent feature of American life. Mr. Blough alleges that industrywide unions (such as the United Steelworkers, presumably) have compelled annual increases in employment costs far beyond the increases in productivity, and this automatically has caused inflation.

To put it bluntly, Mr. Blough is making false charges.

They are a deliberate "cover up" to turn attention away fom the corporation's rapidly increasing profits and its steel price increases.

The facts are that productivity—output of steel per man-hour—has more than offset the "cost" of the steelworker wage increases in recent years. Mr. Blough knows this is to be true.

But even if the workmen were not producing more steel each hour than ever before and the wage increases had actually raised unit costs, the fact remains that the steel price increases have far exceded any such additional "costs."

Let us see if we can prove this statement to be true. In mid-1956, steel prices were raised by $8.50 a ton. Employment costs were increased 20 cents an hour. The corporation, based on its own production figures, will receive $230 million annually from its price increases.

But the increased labor "costs" will have been only $82 million.

In simple language, the corporation got $3 price increases for each $1 of wage increases.

Even if labor "cost" increase had not been offset by increased output per man-hour, the corporation still received this price increase. Mr. Blough knows that unit labor costs increased not at all.

The net profit to the corporation from the price-raising operation is obvious and in recent months it has increased its prices by another $5-$5.50 per ton by a series of carefully spaced and little-publicized increases.

No amount of talk can hide the corporation's efforts to shift the blame for its inflationary actions from its own shoulders.

No amount of talk can hide the fact that the corporation's price actions are part of an effort to increase its already high profits. In fact, steel industry publications are already talking about another price increase next July.

The corporation, in its 1956 annual report, carefully selects 1940 as a base year. It does not tell the public that during 1940 net profits were two and one-half times the profits of the previous year. But let us take 1940 and compare it with 1956—none of which is pointed out in Mr. Blough's report.

Profits before taxes in 1940 were $128,500,000. In 1956 they had climbed to $679,100,000—a 428 percent increase.

Net profits climbed from $102,200,000 in 1940 to $348,100,000 in 1956—a 240 percent increase.

Common stock dividends increased from $34,800,000 in 1940 to $144,900,000 in 1956—a 316 percent increase.

The corporation in 1940 set aside for depreciation $72,600,000 and in 1956, $277,600,000—a 232 percent increase.

Now let us look at how much profit the corporation made on each hour worked by each employee. In 1940 the corporation profit per employee was 26.3 cents per hour. In 1956 it was $1.34 per hour—a 411 percent increase. This profit is before taxes.

Net profit per employee for each man-hour in 1940 was 20.9 cents. In 1956 it had climbed to 68.9 cents—a 230 percent increase. And remember, from 1940 to 1956 the union won many wage increases, but the net profit per employee to the corporation more than tripled.

And what about steel prices? Since 1940 they have risen by 154 percent, despite the increases in output per man-hour.

Mr. Blough's charge that its employees' wage demands and Government tax laws

have left too little for replacement of equipment is denied by the fact that net profits retained have increased the corporation's net worth by over 100 percent since 1940, despite an increase in annual common stock dividends of more than 316 percent.

Let's look at those dividends.

The average steelworker employed by the corporation in 1940 earned $1,600 for that year. At the dividend rate paid in 1940, the dividends on 400 shares equaled the steelworker's annual earnings. In 1957, the average steelworker's earnings for a full year will approximate $5,600. By virtue of stock splits since 1940, 400 shares have become 2,400. The dividends on 2,400 shares of United States Steel stock, at the current rate, will yield $7,200, or about 28 percent more than the average steelworker's 1957 earnings. In addition, the current market price of these same shares of common stock is $115,000 more than the market price in the beginning of 1940.

The union cites these facts not in opposition to dividends but as concrete evidence that steelworker wage increases have not been at the expense of the stockholder or the corporation, but rather have been earned through increased productivity. Furthermore, this increased productivity through the years can continue to be the basis for benefits to all—steelworkers, stockholders, the public.

The union is, and has always been, strongly opposed to inflation—no matter what its source. We will oppose inflation wherever it rears its head. We only wish that Mr. Blough were really solicitous about inflation.

Ill-Advised Reduction in Appropriations for Department of Labor

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. SHELLEY. Mr. Speaker, I would like to just for a few moments direct the attention of the Members to what has been done by action of the committee to the Office of the Solicitor in the Department of Labor. And I would like to point out to the Members that this Office has been assigned a program for 1958 of a 15-percent increase in responsibility and that this report of the Appropriations Committee proposes a 4-percent increase in appropriations. The action of this committee has been to cut the appropriation another $204,000. If the action on the floor last week stands, the Office of the Solicitor would suffer a loss of $184,000. This cut will have to be absorbed, to the serious detriment of its law-enforcement activities and other programs.

The amount approved by the actions of the past days is approximately the same amount as that appropriated for fiscal 1957. But, in fiscal 1958, I think it is important to remember, the Solicitor's Office must meet $184,000 in mandatory charges which it does not have to meet during the current fiscal year.

The largest of these mandatory charges is the sum of $131,000, the contribution which the Solicitor must make to the civil-service retirement fund pursuant to laws passed by the 84th Congress. By our failing to recognize this mandatory obligation of the Solicitor's Office to contribute its share to the retirement system, the committee action would force it to meet this payment through a substantial curtailment in the activities of the Office which in turn will mean a substantial loss in services provided by this Office not only to employee groups and individuals but also to management and industry.

Another item eliminated here was the sum of $27,500 for legal services in connection with the Mexican farm labor program. The committee has eliminated all funds for legal services in connection with this program at a time when the need for such services is most urgent.

Let us remember that over 428,000 Mexican nationals came into the country last year under the Mexican farm labor program. This number does not necessarily reflect the workload, but legal problems created by the Mexican farm labor programs are increasing. Since many of these compliance cases under this program may result in liability for the United States, it is highly important that these cases receive careful legal review. In addition, there is need for discussion with Mexican consuls, employers, representatives of labor unions, and others.

The third item eliminated by the action here is $14,600, which represents a comparative transfer from funds available in the past to the Office of the Secretary for the operation of various central services for the entire department. This bill provided for the creation of a departmental working capital fund which will be reimbursed by the various bureaus and offices for which services are performed. This is an item which was formerly included in funds made available to the Office of the Secretary. Now it will have to be paid by the Solicitor. This is also true of an item of $10,900 which represents the Solicitor's Office's proportionate share of the increase requested for the working capital fund to pay for increased services due to expanded activities of the entire Department.

The volume of work of the Solicitor's Office has increased in each of the last 4 years. If the reductions as approved by the committee stand, efficiency of operation of the Office of the Solicitor will be impaired, at the expense of the wage earners and the employees who benefit by proper enforcement of our labor laws.

Three-Headed Monster

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith the following editorial from the News and Courier, Charleston, S. C., dated March 14, 1957. Hon. O. Frank Thornton is the distinguished secretary of state of South Carolina and his remarks I consider most worthy of appearing in the RECORD:

THREE-HEADED MONSTER

In a speech to the Traffic and Transportation Club at Columbia, Mr. O. Frank Thornton spoke some plain truths that the people of other States of the Union will do well to heed.

Mr. Thornton is secretary of state of the State of South Carolina, one of the constitutional officers who is elected by the people. His subject was the triple-headed monster of communism, Federal spending, and destruction of States rights. The three indeed are of a package. Mr. Thornton has performed a public service in thus calling public attention to them.

South Carolina, Mr. Thornton said in conclusion, may have its financial troubles, but thanks to a requirement that an appropriation bill may not be introduced without certification that it is within anticipated revenue, the State operates under a balanced budget. South Carolina survived reconstruction without economic aid from the Federal Government, Mr. Thornton reminded his audience. It is a proper source of pride.

Southerners May Have To Stand Alone in Defense of Constitutional Rights

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith the following editorial from the Charleston, S. C., News and Courier, dated April 2, 1957:

SOUTHERNERS MAY HAVE TO STAND ALONE IN DEFENSE OF CONSTITUTIONAL RIGHTS

The Associated Press reported this week that the Eisenhower administration's civil-rights bill is chugging along in Congress and getting somewhere.

Thoughtful men are profoundly disturbed as a result of the progress of the civil-rights bill. They see the threat to American liberties and the widening breach in our constitutional system. The ordinary citizen has only a limited opportunity at this time to resist this force bill. In the Congress, however, southern Representatives and Senators are doing yeoman work. As the Associated Press said in a recent report: "Wholly aside from any attempts to smother the bill in parliamentary redtape, southeners have been waging a vigorous fight against the administration measure this year on its content."

It is true that some Congressmen from Northern and Western States understand the threat embodied in the civil-rights bill. It is doubtful, however, whether a sufficient number of Congressmen understand or are prepared to act on their understanding.

The South does not have a monopoly on faith in the Constitution, though this sometimes appears to be the case. In the North and West are patriotic men and women who haven't been informed on what the civil-rights bill would do, how it would clothe the Government with the powers of an inquisition and deny citizens a jury trial. Were the northern press to inform them, we could count them on our side.

It would be great if there were a nationwide rallying of constitutionalists against the civil-rights bill. But this does not appear likely. The bill may pass and the South may have to go it alone in leading the resistance.

The South hasn't been afraid in former times to take bold steps to defend what it believes is right. The South, we are confident, has not changed in this respect. No

Southerner wants to be a martyr. If however, Americans are to be denied jury trial, and leading men in our communities and States be haled before a biased investigative commission in Washington, there will be resistance in the South. Liberty is a 180-year-old possession of American citizens. Here, in the South, citizens won't allow themselves to be the first to have it torn from them without a struggle.

If the civil-rights bill passes, interposition could take a hundred forms. We have mentioned some of them before: the denial of local and State facilities to the Federal Government, the clogging of the Federal courts with nuisance suits that would obstruct the use of these courts by a political Justice Department, the establishment of State investigative commissions with subpena powers. The range of possible action is tremendous.

We earnestly hope that Southerners may continue to enjoy their liberties and not have to defend them with all their mental skill and a spirit of noncompliance. If the times require an all-out effort, however, we are sure that southerners will be equal to their traditions.

King Cotton Goes International

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article from the February 9, 1957, issue of the Cotton Gin and Oil Mill Press:

KING COTTON GOES INTERNATIONAL

King Cotton is becoming an international celebrity.

In Medellin, Colombia, where the air is coffee-scented and even factories are painted in pastels, fashionable ladies go to see "modelos de algodon."

In Ghent, Belgium, a banner reading, "National Katoenweek" floats over a street first cobbled when Roman legions camped there.

In Toyko, across the moat from the Imperial Palace, 60 pretty girls, finalists chosen from 670 entries, compete for the title of "Menka no Joosama"—Miss Cotton.

UNITED STATES SETS PATTERN

Promotional patterns developed since 1939 by the National Cotton Council of America are now being applied by cotton organizations of 14 other countries. Four more are developing or considering cotton promotion campaigns.

Five years ago, the only significant promotion for cotton was that of the council in the United States. As late as 18 months ago only 2 other countries had programs of real size.

Two factors are behind this market development expansion. One is the help that the council has been able, because of its experience, to give foreign cotton organizations. The second is the financial support generated through Public Law 480.

Under Public Law 480, surplus United States agricultural commodities are sold abroad for foreign currencies. Part of the money is allocated to developing additional markets for United States agricultural products. The council contracted with the United States Department of Agriculture in 1955 to develop and supervise programs in behalf of cotton. The programs are financed 50-50 by local industry and Public Law 480. They are operated by the local industry organizations and are aimed only at increasing domestic consumption.

IT STARTED AT BUXTON

Most foreign cotton promotion dates from 1952 when the council program was described by Ed Lipscomb, director of sales promotion, before an international textile meeting in Buxton, England. The delegates, seeking an answer to the problem of declining world textile markets, had given little, if any, consideration to the concept of expanding markets for the benefit of all. This approach of the American representatives, the achievements of the council, and the suggestion of a policy "which contemplated help and cooperation for all," to use some recent words of Gerald L. Dearing, cotton editor of the Memphis Commercial Appeal, was "greeted with much greater enthusiasm than expected."

By 1954, cotton industries of five countries had activities going, the council offering all the help, advice, samples, and inspiration it could.

In the fall of 1955, the council's foreign trade division opened a two-man office in Paris. Early in 1956 a cooperative agreement was signed with France to improve and expand their existing program. Japan signed about the same time and Germany 5 months later.

The agreements with France, Japan, and Germany were re-signed last month and new contracts signed with Spain and Italy. Agreements for Austria, Belgium, Holland, and Switzerland are in final stages of negotiation. Close cooperation is being informally extended to entirely self-financed programs in England, Colombia, and Mexico. Canada, Greece, Pakistan, and Syria are planning programs based on materials and suggestions from the council. Egypt and the Sudan are financing cotton promotions in Europe and are now considering programs in their domestic markets.

SPENDING $3 MILLION YEARLY

Total budgets for cotton promotion outside the United States this year are more than $3 million—roughly 10 times the total 2 years ago. About one-third of this is Public Law 480 money. Foreign industry raises the rest.

Some of the countries and their promotion budgets are small by United States standards—yet, seven of them are putting their own money into promotion in sums which represent higher per capita expenditure than that of the United States raw cotton industry in this country.

INTERNATIONAL COUNCIL SET UP

An odd touch is that the National Cotton Council, which began it all, will henceforth play a supporting role. Complications in receiving money from outside the raw-cotton industry and in operating abroad made it desirable to organize a special corporation, Cotton Council International. Council experience, materials, and staff will be available to CCI. Everett R. Cook, Memphis cottonman, is president of CCI. Read P. Dunn, Jr., NCC's director of foreign trade, is CCI's executive director.

The council and CCI operate in four basic areas in order to transmit their experience and techniques to foreign cotton promotion.

1. CCI participates directly in countries with or seeking cooperative agreements. Under this program, CCI works with local industry to develop market research, public relations, and sales promotion projects and then supervises them after operation begins.

2. The program also includes orientation in market research and sales promotion for foreign personnel. Eleven specialists from five countries have been given short courses in the United States offices of the council. The European office has briefed others.

3. Translation and adaptation of council materials is a continuing process. Nine council publications were distributed in six foreign languages last year. A prime example is a sales-training booklet, Why Cotton, which the council began distributing this month, but which has already been adapted and distributed in Germany, Japan, and Spain.

4. The borrowing is not limited to booklet translation. One or more of such standard council techniques as Cotton Week, Maid of Cotton, press sheets, photo services, industry newsletters, fashion publicity, retail-sales training, and educational campaigns are now operating successfully in almost every sector of the globe. Council market research methods help guide promotion abroad just as in this country.

All programs follow a basic principle: Use the techniques and media of mass communication to convince people that cotton clothing helps them feel better and look better and that cotton household products give them more comfortable and more attractive homes. The goal is, of course, to get a larger share of the textile markets and of the consumer dollar (franc, yen, or mark) for cotton throughout the world.

HERE'S WHAT'S HAPPENING

Here is a country-by-country sampling of what is going on. First, the original three:

France: During 1956, the French Cotton Syndicate reorganized and enlarged its staff; completed an educational film and companion booklet; established a fashion-photo service; arranged a mill tour for the press; completed two full-scale market research projects and part of a third. An expanded program, featuring the first fashion advertising campaign for cotton in Europe, has been prepared for 1957. Previously existing press services, children's wear, work clothes, and fashion campaigns are being intensified.

Japan: The Japan Cotton Promotion Institute last year operated an ambitious program, including a monthly newssheet to inform and stimulate the industry in the field of promotion, translation, of three council sales training booklets, spring and fall wholesale promotions for cotton fabrics, a Cotton Week in 14 cities, selection of Miss Cotton to star in cotton fashion shows and other events, school lectures, and publication of an education booklet on the cotton industry. An expanded 1957 program is under way.

Germany: With signing of the cooperative agreement in mid-1956, the German Cotton Institute developed a bimonthly press and photo service which now reaches some 3,000 outlets; adapted Council sales training material; made some 20 market research reports; and arranged the most extensive Maid of Cotton tour ever held overseas—32 fashion shows or public appearances in 15 cities in 14 days, of which 2 were Sundays. By the end of the year they had located a more complete staff and were shaping a broader program for 1957, including a home sewing project, a touring fashion show, and several product campaigns.

The influence of these cooperative programs often extends into areas where Public Law 480 funds are not yet available by inspiring local industry to begin programs and staffs in expectation of a joint program which would multiply the effectiveness of local funds. This effect has been notable in most of the countries who have recently signed, or who are negotiating cooperative agreements.

Spain's cotton industry staged a Cotton Week around the visit of the 1956 Maid of Cotton to the Barcelona area. It was so successful that a larger program is being planned for both Barcelona and Madrid this year. Other projects are being developed for 1957.

Italy's Cotton Association has translated council materials, done markets surveys, and

is planning a Cotton Week in five cities in April, in cooperation with the council. The 1956 Maid of Cotton will be featured in fashion shows in the five cities. The Italian Cotton Institute has just signed a regular cooperative agreement with CCI and is readying a general market-development campaign.

Belgium's National Cotton Institute has created one of the outstanding programs on the Continent. Some 9,000 retail units took took part in their third annual Cotton Week last year. They built excellent promotions around the Maid of Cotton, and now have a very effective press service and well-organized schools and work-clothes programs. An enlarged program is planned for 1957 in cooperation with CCI.

Switzerland organized its Cotton Commission in June, and, by the end of the year has established a press service; held a mills tour for journalists; staged an impressive fashion show and a Christmas campaign. For 1957, in cooperation with CCI, the Swiss are planning a Cotton Week, fair exhibits, fashion shows, schools, and retail training campaigns, and market research.

Holland organized its Cotton Propaganda Committee last year, engaged a basic staff and began a schools program. This year, with CCI help, they are considering adding fashion publicity, a women's club campaign, a Cotton Week, and market research.

Austria recently took final steps toward a cooperative program with CCI, has begun assembling a staff and is planning press, fashion, market research, and retail-training campaigns for 1957.

The council and CCI also collaborate closely with promotional efforts of cotton industry organizations in many other countries, several of which have outstanding programs.

England's Cotton Board has held three successful Cotton Weeks in Australia; established a Cotton Color and Design Center which has won wide acclaim in its field; created a press and photo service; begun a manufacturer-retailer campaign; a retail promotion; a national advertising campaign stressing cotton's qualities, and a schools program. All are expected to grow in 1957. The council has supplied materials and service to the Cotton Board and their representatives have studied council methods in the United States. A cooperative agreement is being considered in the event funds become available.

Colombia's Cotton Promotion Institute has translated many council publications; last year built a "Maid of Cotton" promotion around Miss Colombia, outfitting her with high fashion cottons for shows in leading cities; based an advertising campaign on the "Queen of Beauty and the King of Fibers," and conducted general advertising and publicity. A cooperative agreement is being discussed.

Mexico has adapted several council publications and arranged small, but successful, retail promotions. The Mexican Cotton Associations have distributed 30,000 copies of a council sales-training booklet, 10,000 retail posters, and 2,000 copies of a council publication urging more research and promotion in an attempt to stimulate industry support for additional activities.

Mexico is a net exporting country, therefore a cooperative agreement is not being considered, only technical assistance. The same general situation applies to Egypt, the Sudan, Greece, Syria, and Pakistan.

Importance of these programs to the United States cotton industry is simple and clear. As Everett Cook, CCI president, puts it: "The free foreign world consumes cotton at a per capita rate of about one-fourth this country's. If these programs can, for example, raise foreign per capita consumption by just two pounds, we would need 6,600,000 bales more cotton per year. An increase of that order is quite within reason—2 pounds of raw cotton represent just 1 ordinary pair of overalls or 1 plain bedsheet."

CLUES INDICATE FUTURE VALUE

Measurement of results from these programs will require several years. They are not quick cure-alls. Some clues are, however, available. Paris high fashion collections for spring and summer used to run about five percent cotton. Now they run up toward 60 percent. Japanese per capita consumption of cotton for the first three-quarters of 1956 was calculated at 7.06 pounds, compared with 6.5 for the same period of 1955, halting and reversing cotton's downward trend of the past several years. And Belgium reports a 28 percent increase in cotton consumption in the past 3 years.

Despite the progress in number, size and financial support of cotton promotion programs in the world, there is still a fearful gap between existing programs and actual need. Synthetics, for example, spend 24 times as much as cotton does for promotion in the United States and the disparity is even greater in the rest of the world.

What the National Cotton Council, Cotton Council International, cooperating foreign organizations—and Public Law 480—have done is to get cotton started in the race for world fiber markets which cotton can and ought to win * * * if it really runs.

Tax Limit Contretemps

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I wish to present an editorial which appeared in the New Orleans (La.) Item, Sunday, March 31, 1957:

TAX LIMIT CONTRETEMPS

A rousing good fight may be in the offing between Congress and the Supreme Court.

Potential cause of the fight is a proposed amendment which would limit the Government's top take of an individual's pay to 25 to 35 percent in peacetime.

Backers of the amendment claim they are only one State away from success. The legislatures of 31 States (including Louisiana) have at one time or another passed resolutions backing the proposal.

Article V of the Constitution states that "the Congress * * * on the application of the legislatures of two-thirds [now 32] of the several States, shall call a convention for proposing amendments which * * * shall be valid to all intents and purposes as part of this Constitution, when ratified by the legislatures of the several States or by conventions in three-fourths thereof."

What may cause the fight is that this part of the Constitution has never been tried out.

No such Constitutional Convention has ever been held, and no one knows exactly how it would be assembled or conducted.

However, proponents of the amendment say they will ask the Supreme Court to force Congress to act if they get their 32d State.

So we have a possible situation of the Supreme Court pitted against Congress.

Spokesmen for organized labor have denounced the amendment as the rich man's amendment.

The Secretary of the Treasury has warned that it would cost the Government more than $13 billion in annual revenues, and President Eisenhower has let it be known that he opposes it.

One of two results could come of this revenue-cutting amendment:

It could wreck our expensive defense program.

On the other hand, it could force the Government to prune out the nonessential, ridiculous, and luxury items in its multi-billion-dollar budget.

And if the backers get their last State, the ensuing legal and political storm will teach the country a lot about the amendment provisions of the Constitution.

It might even lead to an amendment of the amendment clause.

Science, Technology, and Society

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. DURHAM. Mr. Speaker, last year the Subcommittee on Research and Development of the Joint Committee on Atomic Energy conducted extensive hearings on the shortage of scientific and engineering manpower. We received testimony from many educators and scientists.

Since these hearings I have been interested in seeing the many articles and statements by scientists and educators on this problem. They showed that our hearings were worthwhile.

Dr. L. R. Hafstad is one of our great scientists. He is presently vice president in charge of the research staff of the General Motors Corp. in Detroit. His scientific work has included the development of the proximity fuse, which played such an important part in World War II. He was also the first director of the Reactor Development Division of the Atomic Energy Commission, a post he held until 1955. Dr. Hafstad's greatest achievement in the field of atomic energy came in 1939. With R. B. Roberts and R. C. Myer he bombarded uranium with atomic particles to verify reports from Europe that vast energy could be released in this way. This was the first demonstration of atomic fission in this country, and their results lead directly to the full development of the atomic bomb.

At the annual meeting of the American Association for the Advancement of Science, Dr. Hafstad addressed the honorary scientific fraternity of Sigma Xi and the Scientific Research Society of America on the subject of Science, Technology, and Society.

His address once again highlights the necessity of modernizing our secondary school education, so that more of our citizens will be in a position to participate in the scientific age in which we live.

Mr. Speaker, under unanimous consent, I include Dr. Hafstad's address as an extension of my remarks in the Appendix of the CONGRESSIONAL RECORD:

SCIENCE, TECHNOLOGY, AND SOCIETY

(By Dr. L. R. Hafstad)

"When one reads the history of science one has the exhilarating feeling of climbing a big mountain. The history of art gives one an altogether different impression. It is not at all like the ascension of a mountain, always upward whichever the direction of one's path; it is rather like a leisurely journey across hilly country. One climbs up to the top of this hill or that, then down into another valley, perhaps a deeper one than any other, then up the next hill, and so forth and so on. An erratic succession of climaxes and anticlimaxes the amplitude of which cannot be predicted."

Many in this audience will recognize the above as a quotation from George Sarton, the eminent historian, and will concur in the idea that in working in science one has indeed the "exhilarating feeling of climbing a mountain." As working scientists and fully recognizing that we may be naive, we still cling stubbornly to the faith that we are somehow contributing to human comfort and human happiness, and that however stumbling our progress, this progress is upward.

The great acceleration of both science and technology on a worldwide scale since the war seems to confirm this impression. So does the great increase in suggestions in books, and in articles in journals and periodicals, to the effect that we are on the threshold of a second industrial revolution. Many predictions are extant as to the high standard of living which will be obtainable in a matter of a few decades. The problem of the shortage of raw materials has been emphasized by various writers, but technological ingenuity in the development of substitution is such that so far as material prosperity is concerned the possibilities do indeed seem limitless.

Much has been written in recent months about the shortage of scientitsts and engineers. This seems to be a worldwide problem and, as might be expected, it most acute where the development of technology is the most intense. It would seem to be axiomatic that the brave new world of plenty so earnestly desired cannot be attained without an adequate supply of scientists and engineers. To me, and I am sure to many of you, it seems somewhat surprising that so much campaigning and propaganda should be necessary to correct a shortage so obvious. In this area, however disappointing and annoying delays may have been, forces are now beginning to act in the direction to correct the dislocation. This at least is reassuring.

Following not more than a decade or two behind the Russians, in this country and in fact in the free world at large, we are now belatedly beginning to use a very potent force—the incentive system—to correct the shortage. Once the forces acting can be identified, we can isolate trends and begin to foresee at least the immediate future. Accordingly, since this Nation chose not to act on this problem until the shortage was upon us, I will now venture to predict the following sequence of events:

(1) A continuation of the current hectic recruiting campaign with increasing salary scales for anyone with a semblance of training in science or technology, and particularly for people with advanced degrees.

(2) A marked decrease in emphasis on quality in our schools to meet the increasing popular demand for quantity.

(3) A period of progressively diminishing returns to industry and society from the attempt to substitute standardization and quantity for quality in an essentially creative activity.

(4) A period of disenchantment with paper credentials as a substitute for education, and finally a renewed appreciation of scholarship and achievement.

There is nothing either profound or new in this cycle. It is an example of the "hunting" process under the action of central forces, which is familiar to all of us. It is interesting, however, to speculate upon the time scale involved.

There is now public recognition of the problem created by the shortage of trained personnel of all kinds. It happens to be, however, just about 10 years since this problem with regard to scientists and engineers had already reached the table-pounding stage on the part of a few forward-looking individuals in Washington such as Vannevar Bush, Merriam Trytten, and Allen Waterman. We must conclude, then, that in matters of this kind our particular type of society seems to have a time constant—an RC, or response time, if you please—of roughly 10 years. Successive responses to the 4 impulses listed above can, therefore, be predicted to require about 40 years. Now it is true that in the historical sense 40 years is not long in the life of a civilization, but one begins to wonder what the time constants are in competitive societies and how such societies are likely to react under similar impulses. Above all, one wonders why, with our highly developed communications facilities, our response times should be so surprisingly long.

Perhaps no small part of the explanation lies in the fact that scientists and engineers, who have long been aware of this situation, are, after all, a numerically very small fraction of our population. Added to this is the fact that the effects on a society of the activies of this group are invariably long delayed. A complete work stoppage on the part of the creative scientists would not, for example, be felt by our society as a whole for a decade or more. Thus it is difficult for the majority of our population to appreciate fully the function or significance of this relatively inconspicuous group. After all, the larger affairs of our society are, and no doubt always will be (and quite properly), handled by nontechnical people.

It is interesting to speculate about the somewhat anomalous situation into which we have gotten ourselves. There seems to be a tacit, but not clearly expressed, assumption that the purpose of the kind of society we favor is one which gives the greatest good to the greatest number. Our society has seized upon technology as a clearly applicable means to this end, so far as gratifying material wants is concerned. One would then assume that society, or more accurately the nontechnical controllers of that society, would as a matter of enlightened self-interest pay particular attention to the education and training of an adequate supply of what they refer to as "technicians." Instead, it is the technicians, the scientists and engineers, who have been calling for an increase in the supply of talent even though it would be to their own self-interest to restrict this supply of skills and thus improve their bargaining position. As scientists and engineers we ask the question from time to time, "for what and for whom are we working?" The sociologists from whom we assume we should expect a reply seem bewildered that the question should even be asked. By them technology seems to be considered as some extraneous activity apparently introduced or perpetrated by the scientists.

It is this deeper conflict in outlook and attitude between the humanist or sociologist and the scientist or engineer which gives me the greatest concern. The shortage of scientists is serious, but here the incentive forces are being brought in to play in a direction to correct the anomaly in due course. However, in the philosophical conflict, with our technology tending to become ever more complex, and with increasing specialization, unless current educational trends are reversed, the technical and nontechnical components of our society will continue to travel diverging paths, with hunting oscillations not of decreasing but of increasing amplitude.

As Sarton has pointed out, "The ominous conflict of our time is the difference of opinion, of outlook, between men of letters, historians, philosophers, the so-called humanists, on the one side, and scientists on the other." Similarly, Mees has stated:

"While the relation between the progress of scientific discovery and the structure of society is of the utmost interest and importance to those who desire to understand it or, still more, to control the changes that are occurring, there is a cleavage between those who follow the discipline of history and of the humanities and those who are eagerly pursuing the quest for scientific knowledge. Humanistic learning is the learning of the ancients; it is a study of the accumulated thought of mankind so far as it has been transmitted to us. Scientific knowledge, on the other hand, is a development arising from the observation of facts and their classification into patterns. The separation of these two types of learning has always been unfortunate; at present it is serious, and it may, indeed, be disastrous."

Many of you in this audience will recall that there is a principle in physics which says that in order for energy to be transmitted efficiently from one electrical network to another, it is necessary that there be an impedance match between the two circuits. Very similarly it has been my experience that for the transmission of information, or more accurately human understanding, between two individuals it is necessary that there be a matching of backgrounds. Historically such a matching has not existed between devotees of the humanities and of the sciences. So far as the development and enjoyment of the sciences by and for scientists are concerned, no matching is really necessary. Similarly, the humanities as a discipline are completely self-sufficient. If, however, the humanist chooses to use science as the basis for a technology designed to advance the standard of living of mankind, then it becomes incumbent on the humanist to so fashion an educational system that he can communicate with scientists and engineers. This he has failed and is failing to do. Teaching less science and mathematics and more art and music to scientists may enrich the life of the scientist, but it will not help solve the basic problem of the humanist, which is to create what he has concluded to be the good society. If there is to be a sizeable component of technology in his good society, he must at some point face up to the problem of matching impedances with the scientist.

Let us take a look at some of the facets of this problem which might have to be considered. Very early in my career as a student I became aware of the definition "life is struggle," and in my day we were so reactionary that we even came to accept it. It also became clear to me that the struggle was for an intangible something called progress. This was a much more elusive concept and one which I have found intriguing even up to this day. Somewhat surprisingly, I learned that the idea of progress was itself a relatively recent concept in human affairs. Still more significantly, it was not accepted without considerable opposition and conflict. People were burned at the stake. All this, of course, is spelled out in the literature and is particularly well summarized in the too little known book by Professor Bury. The important fact which emerges, however, is that the idea of progress, and the development of technology, are inextricably interlinked. As stated by Mees: "Technology is at once the source and the justification for the idea of progress." That this is true seems to be accepted by scholars throughout the world as is evidenced, for example, by the determination

of the underdeveloped countries to industrialize. The fact seems to be accepted everywhere except where it should be most obviously true and that is here in our own United States. Here is our society we demand progress—in fact we seem to take it for granted as a law of nature—but there are influential people who seem to be doing their best in our education process to escape or circumvent science and technology, which alone can make progress possible.

Perhaps I have overstated my case. Let us hope so—but a review of some recent evidence may give us a perspective in which to view the problem. In a recent study reported from Purdue, it was found that 14 percent of the students think there is something evil about scientists; 30 percent believe that one cannot raise a normal family and become a scientist; 45 percent think their school background is too poor to permit them to choose science as a career; 9 percent believe that one cannot be a scientist and be honest; 25 percent think scientists as a group are more than a little bit "odd"; 28 percent do not believe scientists have time to enjoy life; 35 percent believe that it is necessary to be a genius to become a good scientist; 27 percent think that scientists are willing to sacrifice the welfare of others to further their own interests.

This is indeed a devastating comment—either on scientists, or on our eduactional process, or both. With this the attitude among students, can there be any mystery as to why there is currently a shortage of scientists and engineers? Since the world managed to survive for some centuries before the advent of scientists or engineers, the attitudes expressed would be quite understandable if the students were or proposed to become mystics and lead the contemplative life, which certainly has its advantages. But these were normal American boys and girls demanding and getting 100 horsepower cars for transportation, radios, television, movies, jukeboxes, and all the other paraphernalia of our modern civilization. How could they have grown to college age without learning the simple facts of cause and effect with respect to the technological civilization in which they are clearly planning to live?

In this respect our school system is quite inadequate, in my opinion. The shortage of scientists and engineers is bad enough, but with some effort these immediate shortages can be corrected since the total numbers needed are not really large in proportion to the population. What is more serious (and more dangerous in the long run) is that the mass of our population who, in a society dedicated to the greatest good for the greater number, must in the end control it, remains in ignorance of the foundations on which that society is based.

The contrast between the studied complacency of the educators and the concern of scientists and engineers with regard to this situation can perhaps be emphasized or dramatized by Koestler's device of using a staircase to show the effects of different points of view bearing on the same problem. The humanist or so-called progressive educator looking from above sees a series of plateaus or tableaus (since they are flat to him) and notes with amazement and delight that each successive tableau shows a successively higher standard of living. With only a limited imagination he can make the slight extrapolation to the point where no one has to work. Being foresighted he places great emphasis on training for leisure. Being also sufficiently observant to note an increase of population with time, and being aware of the frictions and struggles brought about by individual differences, great emphasis is also placed on standardization. For the convenience of all concerned, why shouldn't the lowest common denominator solution be picked? From his point of view it makes sense.

Now look at the same staircase from the point of view of the scientist. He sees each plateau merely as a hesitation point between struggles to attain a higher level. To him progress represents work, and he is convinced that further progress cannot be made without struggle. To him there is nothing automatic or guaranteed in the comfortable and continuous progress which the humanist and progressive educator seem to take for granted.

Since our society has chosen for itself a kind of civilization which is so overwhelmingly dependent on advances in science and technology, it is only prudent to ask how we can expedite our progress in these fields. Here is where the shortage of scientists and engineers comes in. I will not attempt to review but merely cite some of the many excellent and realistic articles on this subject. Significant, in my opinion, are recent articles by Stratton, Rassweiler, Rickover, Bestor, and Beckman.

These articles, by unquestioned authorities in their fields, point out inadequacies in our present educational system, insofar as the production of technical personnel is concerned. I agree heartily, but I wish to make a deeper criticism. Even if an entirely separate educational channel were provided which more than supplied our foreseeable needs for engineers, I contend that the education of the rest of the citizenry should include a basic understanding and appreciation of our technological society, both its strengths and its limitations. Above all, at some point in the education process it should perhaps be brought to the attention of the students—very delicately, to be sure, to avoid psychological trauma—that progress cannot be made without struggle, nor freedom enjoyed without personal responsibility.

It has long been by contention that those who have done should teach, and, accordingly, that those who have taken an active part in creating our technological society should be best able to interpret it for others. Unfortunately, the very shortage of technical talent exerts great pressures on individuals skilled in these fields to concentrate on technical problems. Scientists and engineers are notoriously inarticulate, so a suitable education should include a heavy concentration on the arts of communication. This might be acquired in our elementary or secondary schools, but in our present predominantly superkindergarten system of education it is postponed until college. Here it is in conflict with the needs of ever more highly specialized professional training. The engineer remains inarticulate and the general public uninformed, thus the impedance mismatch is continuously increased, not decreased, and must eventually approach instability.

Dr. Glenn Frank has stated this problem with fine understanding. He says, "The practical value of every social invention or material discovery depends upon its being adequately interpreted to the masses. The future of scientific progress depends as much on the interpretative mind as it does upon the creative mind. * * * The interpreter stands between the layman, whose knowledge of all things is indefinite—and the scientist, whose knowledge of one thing is authoritative. * * * The scientist advances knowledge. * * * The interpreter advances progress. * * * History affords abundant evidence that civilization has advanced in direct ratio to the efficiency with which the thought of the thinkers has been translated into the language of the masses."

In contacts with students and even with reasonably informed grownups, I have found that such simple and basic things as the relation between research and engineering, between technology and the standard of living, or between progress and incentive, not only are not understood but that the discussion of these concepts is itself a fascinating new experience. An operations research approach to some of these problems might prove quite rewarding.

The scientist's work as a scientist is completed when a new item of information is established and recorded. It is no concern of the scientist, as a scientist, whether the information is useful or not. It is for this reason that we can say with conviction that it is not scientists who create technology. It is society itself which chooses to create a technology based on the information which the scientist has uncovered. This problem of application is the function of the engineer. At the beginning of the scientific era, science and engineering were widely separated in time. With the development of our current technological civilization, applications have followed more and more closely on the heels of discovery, with the result that in many fields the search for new information and understanding is carried out simultaneously with the application, that is, the effort to solve some practical problem. Though activities may overlap, the distinction in function remains. The same man who makes a discovery may choose, or be persuaded, to attempt to apply it to a practical problem. In this case he ceases to be a scientist and works essentially as an engineer, and is motivated not internally as a scientist but externally by society. I dwell on this point to counter the argument often advanced that it is the scientist who has created the complexities of our modern industrial civilization. I maintain it is not. It is society itself, and particularly the nontechnical part of society, which creates the demands which are the motive force behind our technology.

Let us turn to another basic question, the relations between standards of living, education, and technology. Much of the energy in our educational system these days is focused on new theories of teaching which will avoid grading and thus any semblance of conflict and competition. This is no doubt desirable sociologically, but apparently so is a rising standard of living. This presents a painful choice. In technology if incentive is removed, so is struggle, and if struggle is stopped, so is progress. This leveling process could, of course, be carried out at any point in the history of a civilization.

Who made the greatest real contribution to the goal of the humanist, the engineers or the self-appointed Robin Hoods of 1909, those people who thought all our social problems could be solved by a redistribution of the wealth at that time?

In summary, there is a continuing divergence in point of view between the sciences and the humanities. With the sciences, through the mechanism of technology, being called upon to make an ever-increasing contribution to a society as specified by the humanists, there is serious cause for concern in the fact that the educational system at the elementary and secondary levels seems to be out of step from a systems-engineering point of view with the foreseeable needs of such a society. The desire for progress cannot be reconciled with the lack of attention to, and an incentive for, students of exceptional ability. Similarly the desire for progress is inconsistent with the trend toward effortless education, and the substitution of pastimes for disciplines. Finally, the assumption that a larger and larger population can be supported on and by the work of a smaller and smaller fraction of highly trained creative specialists leads to a social structure like that of an inverted pyramid. Even more acute than the current shortage of scientists and engineers is the shortage of people who both can and will carry responsibility.

With increasing complexity and specialization in the technical fields, the gap between the sciences and the humanities becomes an ever-widening one. This adverse tendency could be reduced by insuring that

students of science were given a better grounding in the humanities, while students in the humanities were given a better background in science. This, however, would require more rather than less disciplined study in both fields, and runs counter to the current educational trends.

Republicans for Peace

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday April 3, 1957

Mr. VORYS. Mr. Speaker, I wish to insert in the RECORD a speech I made yesterday, Tuesday afternoon, April 2, 1957, before the Fifth Annual Republican Women's Conference at the Hotel Statler, Washington.

The speech follows:

REPUBLICANS FOR PEACE

Republican foreign policy has one simple objective: What is best for the Republic, regardless of party.

We have a bipartisan foreign policy on fundamentals and general principles, set forth in the platforms of both political parties and generally supported in Congress. We believe that politics should end at the water's edge. Many people grumble about this. They want the other party to let them have all the good, sound principles, and take all the ideas they disagree with. But free Americans refuse to accommodate such people. Both parties want the sound, patriotic ideas. Personally, I rejoice in this demonstration of the essential unity of our people in their free and voluntary choice of parties and principles. This unity in liberty brings power to our policies, hope to a divided world, despair to the despots.

Nevertheless, there are differences between our two parties that show up in methods, in means, in performance, in results. Under our Constitution, the President has primary and paramount responsibility for conducting foreign policy. Because of his great power and responsibility, and the support he has received from his party in Congress, the people—and the daily papers nowadays talk about the "Eisenhower foreign policy" and "Republican foreign policy," and the history books will say it that way.

We are in the fifth year of Republican foreign policy under President Eisenhower, a troubled, turbulent, complicated, critical period of continuing tension, controversy, and change throughout the world, involving courses of action on our part going on day and night, here and all over the world, some secret, many unnoticed, some exciting and dramatic. A day by day, play by play review now would be impossible and is unnecessary. You Republican women have an instinct, a genius, for going to the heart of things. Regardless of the ups and downs and zigzags of each day's headlines, you want the moving spirit behind the details—and the overall, practical results. On that basis, the heart of Republican foreign policy under President Eisenhower is simple, noble, practical; we work for peace.

President Eisenhower's first administration started with action for peace.

He had promised to end the war in Korea, and he did it.

He made his historic atoms-for-peace proposal in the United Nations, and the only nation that had ever dropped an A-bomb in war became known as the leader in devoting atomic energy to peace.

He electrified the world with his open skies inspection proposal at the Geneva Summit meeting, as a practical, workable step toward disarmament.

He asked for and obtained authority to use our Armed Forces in the area of Formosa; and peace has been maintained in Asia where war threatened 2 years ago.

He and our great Secretary of State, John Foster Dulles, with courage and skill, have prevented war by Soviet miscalculation by letting the Reds understand clearly that we would fight if they launched aggression, and never letting them know where we would not fight. If this policy had been followed in earlier years, we might have avoided the last three wars under Democrat Presidents. If the Kaiser had known beforehand that we would come in, World War I might never have started. If Hitler had not heard "again and again" that we would not send our boys to foreign soil, World War II might have been avoided. If the Chinese Reds had not heard that Korea was beyond our defense perimeter, they might have held off. To prevent war by miscalculation, our leaders must be courageous, but careful.

But peace to us means more than mere absence of war. We seek peace with justice, the peaceful settlement of disputes.

When the Suez Canal was nationalized, we immediately sought peaceful settlement. Then, right in the heat of our election campaign, Britain, France, and Israel, our old friends, launched aggression. We were put to the test and the President said: "There cannot be one law for our friends, another for our foes," and joined in pressures in the U. N. for withdrawal. But he said: "There will be no involvement of our forces in this situation." And, although his opponent criticized him and his acts day and night during that last week of the campaign, the people reelected him with a landslide. The people were for peace with justice. And today Britain, France, and Israel have withdrawn and our forces, as he promised, have not been involved.

At the beginning of his second term, President Eisenhower, in his great second inaugural address, said: "We live in a land of plenty, but rarely has this earth known such peril as today. * * * In too much of the earth there is want, discord, danger." He spoke of new forces and new nations striving across the earth, of old and great nations in this tempest of change and turmoil; of the designs of international communism, dark in purpose, clear in practice.

Then he said: "We look upon this shaken earth, and we declare our firm and fixed purpose: the building of a peace with justice in a world where moral law prevails. The building of such a peace is a bold and solemn purpose. To proclaim it is easy. To serve it will be hard. And to attain it, we must be aware of its full meaning—and ready to pay its full price."

The price of peace is high. Sixty-three percent of our budget is for our protection, to deter or combat Soviet aggression and subversion. But the price of war is higher, not only in budgets, but in blood and tears. In past wars we paid with the priceless lives of the young, our bravest and best. In future wars all of us risk suffering and death.

While the price of peace is great, the rewards are great, even during this uneasy, costly peace. We have had 4 years of the greatest prosperity, the highest standard of living, of any nation on earth in all human history. Our foreign affairs are profitable to our people. Last year our people received nearly $24 billion from foreign affairs from exports, foreign investments, foreign investors, and travelers, while our Government was spending $4.2 billion on foreign military and economic aid. Last year our exports, our sales abroad, amounting to $19 billion, were $5 billion more than our imports, our purchases abroad. We had 20 percent of the international trade of the whole world. That is, one-fifth of all commerce crossing international borders was sold by the United States, while in the last 4 years the cost of our own defense and our share in collective security, has been an ever-dwindling fraction of our ever-rising national income. Peace is not only, as our President so eloquently said, "our duty and our destiny." Peace is profitable to the United States of America.

We have in this country people who want the profits of peace without paying the price. They say, "if we cut out our military spending and our foreign aid, we would have even more profitable peace." Now I believe that the President and Congress should, and will, cut our military and collective security costs as low as possible, but I can assure you that, if we cut it all out, we would not have profitable peace. We would soon have war, or a peace dictated from the Kremlin, and it would not be profitable to us.

Most of us understand the need, the economy, of our own vast military machine, for maintaining peace, deterring more costly war. Let's look for a moment at the economics of our collective security, our mutual security program, our so-called foreign aid.

It costs about one-tenth as much as our military expenditures on our own forces. Foreign-aid appropriations in the past 4 years have been just about one-half what they were in the 4 preceding years of Democrat administration.

Let's look at the military equation in the cold war: We have about 19 divisions in our Army; Russia has 175. We have the best Navy in the world; Russia has 400 submarines to sink our Navy; Russia has the largest air force; we feel ours is the best. Both countries have A and H bombs, guided missiles. We have one thing Russia hasn't got. We have a string of air and naval bases all around Russia; Russia has no such bases around us. We have forces on those bases, and mobile air and naval forces ready to get to these bases quickly, but we depend largely on the forces of the countries near where those bases are located, to defend them against sudden attacks. When we help those countries to defend their own soil and these bases, we contribute to our mutual security. That system, as Admiral Radford says, is "part and parcel of our own defense."

It cost us last year $6,600 to maintain an American serviceman abroad, without counting his weapons. It cost us last year $789 per man in mutual security funds to help maintain an allied serviceman abroad, armed and equipped, ready for action, according to jointly made defense plans. Our so-called foreign aid helps to maintain 200 allied divisions in 44 nations, a naval force with as many vessels as our own, although not as powerful; 300 air squadrons, as many as we have, but not as well equipped. It is not our forces alone that deter Russia; it is the combination of our forces with those that surround her, that maintains peace, and give us and the free world mutual security, collective security.

I am opposed to giveaways; we cannot buy friends, but if we can help arm and strengthen nations that want to stay free and are willing to raise forces larger than they can support, and thus deter Soviet aggression, at one-tenth the cost of our own forces, we are getting a bargain in our mutual security program.

Some people say we should bring our forces home, arm to the teeth, and wait for the Soviets to come here. If we did that, it would cost more, and I think the Soviets would come here, after taking over the rest of the world and cutting us off from the strategic materials we need to import. I have seen war-devastated countries, where they fought at home. I prefer our policy of planning to fight our wars away from home, on friendly soil, if we have to fight, and not

doing all the fighting ourselves. In this way we give other free nations a chance to defend their soils. This policy of collective security, mutual security, has given us peace for 4 years.

I have told you that foreign aid amounts to one-tenth of our own military spending. Well, about one-tenth of that one-tenth is spent on nonmilitary technical assistance and development assistance, 80 percent in loans which goes also to nations with which we have no military mutual security agreements. This includes some neutralist nations. We wish they would join us in mutual defense, but in any case, we don't want them to go Communist, or be taken over by Communists, through relying on the Reds for development assistance. So we help them fight hunger, disease, and ignorance. We help them develop their economic and political independence, for that adds to our security in war, and in peace we do more business with more developed countries.

You have heard about our agricultural surplus problem. We use farm surplus in the mutual security program whenever we can. Since World War II just about 30 percent of our foreign aid, $16 billion of it, has been surplus agricultural products. Thus, foreign aid has been our biggest single farm aid program, while helping to maintain peace.

The legislation for these policies, involving the cost of peace, and the rewards of peace, has generally had bipartisan support. A majority of both parties in both Houses have voted for them, although, of course, the leadership and the execution came from the Republican administration. I believe in giving credit where credit is due. I must also report that there has been more Democrat partisanship in foreign policy in Congress in the last 3 months that I have seen in my 18 years in Congress, and it has not been good for our country. I believe in placing blame where it belongs.

You are all familiar with the President's Middle East doctrine. The law was signed March 9. It applied in the Middle East methods that had been tested and found successful in earlier acts. The aid provisions were similar to the Greek-Turkish aid law, passed by the Republican 80th Congress at the request of a Democrat President. The authority to use our Armed Forces was similar to that granted in the Formosa Resolution passed in 1955 by a Democrat controlled Congress at the request of a Republican President with but 3 no votes in the House and 3 in the Senate. No new appropriations were included. Emergency use of old appropriations winds up June 30, 1957.

You would have thought that, in view of the ominous and obvious tension and instability in the Middle East this law would have been rushed through.

Instead, a partisan hue and cry started, saying the proposal was unprecedented, unconstitutional, a declaration of war, a blank check—and that Congress had not been consulted; this went on for over 2 months. The House acted in 25 days, in commenable bipartisan spirit, for the most part, and made no crippling amendments. Now a House Member is not supposed to criticize or even mention the Senate, but somewhere, some amendments got in that I feel were unnecessary, unintelligible, or undesirable. The executive, however, considered them as merely harassing, rather than hamstringing, and the House accepted them rather than risk delay by a second filibuster—you know where.

One of these amendments involved the President's authority to use armed forces. A straight Democrat party vote struck out the words which were copied from the Formosa Resolution, "he is authorized" and inserted instead "the United States is prepared to use Armed Forces." It was amusing that the Democrats decided to repeal by law the charges made all through last year's campaign that the United States is unprepared to use its Armed Forces.

On this issue of bipartisan consultation, here are some facts: The President had a bipartisan congressional meeting at the White House for 4 hours on New Year's Day. Secretary Dulles went over the provisions of the bill, inviting comments and suggestions, with both House and Senate committees before the Presidential message on Saturday, January 5 stated his public position. The text of the bill when introduced later reflected the results of congressional consultation and suggestions.

Nevertheless some of the Democrats kept saying "there ought to be consultation and approval before any public position is taken by the President on such matters."

Last month the question of whether the United States should support sanctions against Israel in the United Nations was being publicly discussed by nearly everyone—except the President. He called a bipartisan meeting at the White House on March 21 to discuss the Israeli situation. Now those meetings are supposed to be off the record, but if any definite action is taken, it is announced in writing to the press immediately after the meeting in a White House press release. It is significant that no action was announced after that meeting except that the President was going on the air that night. The President then proposed a course for Israel, which I approved and which Israel followed, which kept the issue of sanctions from coming to a vote in the U. N., but there is no record that this course had the approval, or disapproval, of the Democrat congressional leaders. Nevertheless, the President called a bipartisan meeting to report on the Bermuda Conference the day after he returned.

When you start to play politics on this business of bipartisan consultation, you can work it two ways. You can say, "The President put us on the spot by taking a public position, committing himself without consulting us," or you can say "He tried to put us on the spot by consulting us in advance, before committing himself."

Playing politics either way on foreign-policy problems is bad for the country. We will have a Republican President conducting foreign policy for nearly 4 more years. We will have a Democratic Congress now and next year. You Republican women can help enormously by understanding our foreign policy, attacking unmercifully those who play politics with it unmercifully, working for the election next year of those who are committed to work for peace with our President—Republican Congressmen and Senators.

There is room for honest difference of opinion, for intelligent, sincere debate on the perplexing, complicated, controversial problems of foreign policy. There is no room for partisan politics. We Republicans must try to keep it out. If Democrats bring it in, then we must point it out, show it up, and knock it down.

For our cause, working for peace, is a noble one. It ought not to be above party. It ought to be the cause of both parties. Let us be sure it is ours.

I have dwelt, perhaps overmuch, on the practical, political aspects of working for peace, the cost and the rewards. But there are higher rewards. "Blessed are the peacemakers." I will conclude with these moving words from our old soldier, peacemaker President, in his second inaugural address:

"Before all else we seek, upon our common labor as a nation, the favor of Almighty God. And the hopes in our hearts fashion the deepest prayers of our people.

"May we pursue the right—without self-righteousness.

"May we know unity—without conformity.

"May we grow in strength—without pride of self.

"May we, in our dealings with all peoples of the earth, ever speak truth and service justice."

Hon. Harry Flood Byrd, of Virginia

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. ABBITT. Mr. Speaker, the people of America are fortunate indeed to have in the United States Senate, during these trying times, a man who is dedicated to the preservation of the American way of life; a man who is fearless, courageous, and willing to make whatever sacrifices are necessary to try to steer our Ship of State back on the course chartered for it by our Founding Fathers. This man is the Honorable HARRY FLOOD BYRD, senior United States Senator from Virginia. He has the confidence and loyalty of the overwhelming majority of the people of the Commonwealth of Virginia. They have known him and followed his leadership for approximately one-third of a century. His wise counsel, his courage, his leadership, and his great judgment has kept Virginia on a sound fiscal basis while progressing along with the rest of the Nation at one and the same time.

Senator BYRD is one of the outstanding Americans of today. He is a leader in fiscal affairs in our Nation. As chairman of the Finance Committee of the United States Senate and due to the great prestige that he has, he is the one great hope hope in America for continuing sound constitutional government for all of our people.

Senator BYRD understands so well the dire necessity of preserving the rights of the people and the sovereignty of our States that he is unwilling to submit to the tyrannical dictates of a political judiciary which is determined, by usurpation of power never conferred upon it by the people or the States, to ravish our Constitution and to deprive our people of their liberties as well as our States of their sovereignty. Neither is Senator BYRD willing to sit supinely by and see Virginia brought to her knees by the unholy alliance between Brownell, the present administration and the NAACP which alliance is determined to wreck the public school system of Virginia. Senator BYRD is not willing for us to be compelled against our will to take orders from Brownell and the NAACP. I stand wholeheartedly with Senator BYRD in his massive resistance campaign. It is the only hope that we have of preserving our public school system, the integrity and identity of the races and constitutional government in our great country.

On March 18, 1957, Senator BYRD delivered an address before the Richmond Kiwanis Club in Richmond, Va. The address pointed out some of the basic philosophies of our great statesman as well as the necessity of fighting to preserve our way of life. I commend him for the great work he has done, for the determined

fight he is now making for our people and I am proud of my association with him.

Under leave to extend my remarks, I include Senator BYRD's splendid address delivered to the Kiwanis Club in Richmond on March 18.

The address follows:

ADDRESS BY THE HONORABLE HARRY FLOOD BYRD, SENIOR UNITED STATES SENATOR FROM VIRGINIA, BEFORE THE RICHMOND KIWANIS CLUB, RICHMOND, VA., MARCH 18, 1957, BROADCAST OVER WRVA RADIO, RICHMOND

Mr. Chairman, His Excellency the Governor of Virginia, distinguished guests, and members of the Richmond Kiwanis Club, I have spent so many happy days in Richmond it is always a great pleasure for me to come back, and I am delighted to be with you today. I want first to express my deep appreciation to my beloved friend, Edmond Massie, for his all too gracious introduction.

I assume you expect a Member of Congress to speak on matters uppermost in the minds of the Nation, so today I will comment on the Federal budget, which is creating a great deal of interest for the first time since I have been in the Senate, and then make some reference to civil-rights legislation which is pending there.

A phenomenon has occurred. For the first time in my 24 years in the Senate the people back home are demanding in no uncertain terms a return to fiscal solvency and elimination of waste and extravagance in the monstrous Federal budget which is now before Congress.

Our goal should be to reduce this budget by at least $6½ billion. Personally I think it should be reduced by more, but certainly it should be reduced by $6½ billion in order to avoid some of the perils I shall discuss.

The way ahead is difficult and the only hope is the voice of the people back home. I know from experience that to break down entrenched Federal spending is one of the most difficult things to do on earth.

When a person receives a check more than once from the Federal Government he believes he has a vested right to receive these checks all the rest of his life. Now there are 37 million people receiving Federal checks. If you add dependents to this number of check receivers, nearly a majority of the population are interested in receipt of Federal checks.

There is one principle we must preserve if we are not to destroy this great constitutional democracy of ours. That is: people must support the Government, not Government the people. Upon that principle rests the future of our form of government.

I am keenly aware of the current change in sentiment with respect to Federal spending because I have done my utmost for nearly a quarter of a century in the Senate to prevent wasteful spending, or at least reduce it.

I have been condemned at times for my votes, especially in the early days of the New Deal.

I recall that I cast in 1939 the sole vote against prolonging the continuance of the Reconstruction Finance Corporation. Ten years later I was patron of the bill which finally abolished RFC. Now at this much later date, I looked over the budget the other day and found there are still 300 employees engaged in closing up the affairs of the Reconstruction Finance Corporation.

I mention this to show that once a Federal agency gets going in Washington it is extremely difficult to end it. And this goes for programs and functions as well as agencies.

Now thousands and thousands of letters are coming in to us at Washington. They are letters from people back home—housewives and others—who think that high Federal spending is increasing the cost of living, adding to inflation, and impairing the solvency of our Government. This is democracy at work.

Friday night I had the honor to address 500 businessmen called from all over the country in an emergency meeting by the president and directors of the United States Chamber of Commerce. They met in Washington to devise ways and means of arousing public sentiment against the luxury in the present budget and reduce it.

The spending spree began in the middle of 1933, when Mr. Roosevelt abandoned his campaign promises for economical Government. The first bill I voted for when I went to the Senate in 1933—I took my oath of office on the same day Mr. Roosevelt took his—was a bill entitled "To Preserve the Credit of the United States Government."

At that time we owed $16 billion. Mr. Roosevelt's bill provided for a cut across the board of 15 percent in all expenditures by Federal agencies. He had promised a 25-percent cut, but I thought a 15-percent cut was good performance, as political promises go.

Unfortunately, this attitude lasted only 6 months. Then we started this orgy of Federal spending which to date has increased our Federal debt in a brief space of twenty-odd years from $16 billion to $280 billion. Our contingent liability—those things we are guaranteeing, such as housing loans, etc.—has increased from nothing to $280 billion. Federal appropriations have increased from $4 billion to $80 billion. Federal direct taxes have increased from $3 billion to $75 billion.

We engaged in foreign economic-aid programs which have cost to date nearly $50 billion, all of which had been added to the public debt.

Prior to the Roosevelt administration, the Federal Government was operated practically on a pay-as-you-go basis. We had our wars, but we buckled down when they were over and paid for them. We practiced frugality and thrift and accumulated the great assets which we are now exploiting.

Andrew Jackson, great man that he was, was the only President of the United States to pay off the Federal debt in toto. It was not large, but he paid it off and bragged about it, and when I am asked what kind of a Democrat I am, I say I am an Andrew Jackson Democrat. He was a liberal who believed in fiscal conservatism. These two can work together, although liberalism in Washington often is determined by how liberal you are with taxpayers' money.

At this time I think it is important to remember that when Mr. Eisenhower came to office in 1953 he was confronted with the 1954 budget prepared by Mr. Truman. It called for $78 billion in expenditures. Mr. Eisenhower reduced that budget by $9 billion. And in the following year he further reduced it to $64 billion.

But in 1956 there was a $2 billion increase. In the current fiscal year 1957 another $2½ billion was added. The new budget for the coming year is up $5 billion, and this is exclusive of expenditures for public roads which has been transferred to a trust fund outside the budget. We are now confronted with the largest peacetime expenditure in history.

What disturbs me so greatly in this budget are the dangerous implications to the future welfare of this country. First is its bigness. It is not necessary for it to be so big. Second is the fact that it moves us into vast new fields of Federal spending. We must recognize that once the Federal Government embraces new programs and functions they become entrenched usually at continually rising cost.

In his new budget Mr. Eisenhower has embraced 14 new grants-to-States programs. There are already 53. Among others, he recommended a new program for construction of public school buildings. You couldn't open up a greater Pandora box. When Washington starts building school buildings in every locality, there will be no end for increases in expenditures for this program.

A third danger in this budget is that it is based upon two unpredictable things. First it depends upon an increase in postage rates to bring in between $600 million and $700 million. I would reluctantly vote for an increase in postage rates. I do not say I would support the bill as proposed; but if an increase in rates were based on equality in all classes, I would consider it because I think the Post Office Department should be self-sustaining. But, this is not yet enacted by Congress—yet it is required if the budget is to be balanced as the administration estimates.

Further, the new Eisenhower budget depends upon a 6-percent increase in prosperity during the year 1957 as compared with 1956. This is a doubtful premise. I think there is a leveling off. I have no idea whatsoever that a depression of serious moment is in sight; but to predicate a budget upon continuing prosperity at higher level is a dangerous thing to do. If we should go back to the national income of 1954, for example, there would be a Federal deficit of about $2 billion.

I mentioned new Federal grants-to-States programs a moment ago. I regard this as one of the most dangerous trends. It invites States, counties and cities to look to the Federal Government to do things they should be doing for themselves. This removes government from the people, and when you move these functions to Washington you increase the cost, and lose control.

There is no such thing as a Federal grant. The Federal Government has no funds except those collected from the people in the States. These Federal tax collections go through Federal agencies and red tape which take up to 20 percent before they are ready to go back through grants programs with strings attached. The Federal bureaucrats take control away from the people where the money is spent.

Don't ever forget the control which the Federal Government will exercise if it starts this school-construction program. It is supposed to run for about 4 years, and about $2 billion expenditure is already planned. This will be only the beginning of the cost, and it will be only the beginning of Federal control to be exercised over local public schools.

Foreign aid is an example of how Federal programs go on and on. It was first enacted with absolute assurance to Congress that it would last 4 years and cost $15 billion. That was the Marshall plan. It has been going on for 10 years at a cost of $50 billion; and Congress has just passed another bill to open up a new Middle East economic aid program—the extent of which no one can foretell.

These are some of the reasons it is so necessary for people all over the country to communicate with their Representatives in Congress to impress upon them the urgency of reducing the Federal budget.

We must cut Federal expenditures all down the line. They are padded all the way through. It is a luxury budget. There isn't a single agency that can't reduce its expenditures 5 to 10 percent.

CIVIL RIGHTS

Now I am going to speak about civil rights, and especially about civil-rights bills pending in Congress. This is a matter of tremendous consequence to all of us.

There are 15 or 20 of these civil-rights bills, and while I regret to say so, this is punitive legislation to punish the South. That's all it is. Their purpose is to punish us because we will not submit to the Federal Government in Washington—or may I say the Supreme Court—when we believe what we are doing is eminently constitutional, and to follow their bidding would destroy our public-school system.

One of these bills is especially offensive, and I shall limit my discussion to that one. It would establish in Washington a special bureau which would send its agents into the South and originate suits against southerners. They could go anywhere, of course. They could go to the North, the East, and the West. There have been riots and hangings outside the South. But this is an anti-South bureau.

When its agents originate cases against southern people, they would be tried in Federal courts without jury; subjected to contempt of court proceedings, and so forth.

I often think of those great Virginians who established our form of government, Jefferson, Madison, Mason, and so forth, on the basis that States were sovereign, and that the Federal Government should have no power except that delegated to it by the States, and it could be withdrawn by constitutional amendment.

I wonder what those great men would think of a Federal bureau established to go into Southern States originating suits against their citizens as punishment for conforming with State constitutions and laws.

What have we done to deserve this treatment? We have fought for constitutional democracy. We fought for it in 1860. We fought to the last ditch with the most conspicuous bravery in human history. Finally, in defeat by sheer numbers, we won everlasting world esteem.

We took our defeat with fortitude as we went through the terrible days of reconstruction. As I watch us handing out billions to defeated nations of World War II, I think of the kind of Marshall plan the carpetbaggers brought into the South to aid our reconstruction.

Since the War Between the States, as before, no section of the country has contributed more, in any respect, to the defense of the United States than the South. Yet we are to be punished because we disagree with Federal decree singularly designed to destroy the oldest way of life in the Nation.

Let me be frank; we southerners are fighting this thing with our backs to the wall, but what we lack in numbers we make up in our determination and will to protect our Southern States and the welfare of our people. We know that our form of government cannot exist over the years if States are to be mere provinces of a Central Government.

This is the greatest democracy in the history of the world. It has grown to this position in the brief span of 160 years, and with only 6 percent of the world's population. This could not have been achieved without the form of government bequeathed us as a sacred heritage by our forefathers.

Strike down the power of States to control their own affairs, and concentrate all power in Washington, and you strike at the heart of what makes this Nation great.

To me the decision of the Supreme Court abolishing segregation and compelling integration in State and local public-school systems was a vicious and destructive invasion of States rights.

It set aside all previous decisions by the Supreme Court on the subject, including the 1928 decision by Chief Justice Taft, a great and learned man and a former President of the United States, who held segregation was constitutional if separate equal facilities were provided. I don't want to say anything personal about the present Supreme Court, which repealed the Taft decision, but if I must choose between a decision rendered by the late Chief Justice Taft or by Chief Justice Warren, it doesn't take me long to make the decision.

This vicious recent decision did violence to State constitutions and laws, and even to Federal laws which provided segregation in the District of Columbia schools. It influenced 101 members of the United States Congress to take the unprecedented action of signing a solemn manifesto holding that the decision was an illegal usurpation of power.

It would strike down a way of life in the United States which has been developed over a period of 160 years and, if enforced, it will destroy our great public-school system.

I have had the great privilege of representing Virginians in various capacities for 40 years. I think I know something about conditions in Virginia. In my judgment, integration cannot be enforced in a majority of Virginia communities. I do not believe it is favored in any of them. How can we operate a public-school system in Virginia when a majority of the communities have withdrawn? A little deeper in the South, no communities will participate in an integrated system.

I congratulate Governor Stanley and members of the general assembly for their action in an effort to preserve the school system and the welfare of our citizens and their children. I congratulate also the Honorable Lindsay Almond for the great work he has done in this crisis as attorney general, and I know he will continue the fight he has made in any future office he may hold.

Let's be sure we understand the situation. Virginia has been selected by the NAACP and the Federal Government for their first onslaught. There are several reasons for this choice. In Virginia we have some communities where integration offers no problem. They believe if Virginia can be forced to surrender, it would have great effect on the fighting spirit in the rest of the South.

As in the War Between the States, Virginia will be the first battleground. It should be noted that these school suits have already been started in Virginia. They have chosen to wage war on Virginia because they think our communities are divided. I think they will learn their mistake.

But there is an ordeal ahead. In my judgment we have the courage and the fortitude to meet the challenge. We are already fighting, and we shall continue to fight to preserve our public school system, and that is precisely the objective of the laws recently passed by the Virginia General Assembly.

We are fighting, too, to preserve States rights which the vicious Supreme Court decision would destroy. We are facing a situation which is not only more serious than anything we have known in our day, but more serious than anything since the War Between the States. Our cause is right, and I pray we will meet our great responsibilities with calm but strong determination—but we must not let one act of personal violence mar our record for law and order.

I wish to make one more observation. We hear it said that a Supreme Court decision, illegal and vicious or not, should be obeyed without question. I have studied Thomas Jefferson's views on this subject, and I suggest that those who hold this view should do the same. Meanwhile I refer them to Andrew Jackson who defied the Court and told it to go and enforce its own decision; to Abraham Lincoln who had some unkind things to say about the Court in connection with the Dred Scott decision; and to Franklin D. Roosevelt who called the Court nine old men in their dotage, living in the "horse and buggy" days.

We are not demanding that the Justices be thrown out and the Court packed, as Mr. Roosevelt did. We are simply asking the Court to consider the damage it has done, reverse itself, and go back to the Taft decision of 1928.

Meanwhile we reserve the right to criticise the Supreme Court, just as we do the President of the United States, and Members of Congress. In fact, we reserve the right to defy the Supreme Court, so long as we do so without violence or attempt to overthrow the Government. That is inherent in our Constitution.

The Taft decision was as much of a Supreme Court decision as the Warren decision. I choose to follow the Taft decision. The Court has reversed itself before. I trust that, in view of the massive resistance throughout the South where its decision does most violence, this Court may see the error of its ways, and reverse itself again. This would be in keeping with freedoms of our great Constitutional Democracy.

I deeply appreciate this opportunity to meet with you. I have wanted to get here before, but something always prevented. I want to thank you for the partiality you have shown me throughout my public career.

Hopkinton-Everett Project

SPEECH

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, I have in my hand a letter from General Fleming, of the Corps of Engineers of the United States Army, Office of the Division of Engineers, New England. He says:

CORPS OF ENGINEERS,
UNITED STATES ARMY,
OFFICE OF THE DIVISION ENGINEER,
Boston, Mass., March 29, 1957.

Hon. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR MRS. ROGERS: In accordance with our telephone conversation, I am pleased to furnish you with information concerning the Hopkinton-Everett project.

The Merrimack River problem is the greatest unsolved flood control puzzle in New England. Fortunately, the construction of the Hopkinton-Everett project is the key to its solution. If the 1936 and 1938 floods were to recur today the flood damages would exceed $74 million in New Hampshire and $140 million in Massachusetts. The operation of Hopkinton-Everett Reservoir together with the flood-control reservoirs already built would prevent 85 percent of the damage in New Hampshire and 70 percent in Massachusetts.

Although $50,000 in planning funds was provided this fiscal year for Hopkinton-Everett no money could be used until concurrence in the project had been given by the State of New Hampshire. Due to this lack of concurrence at the time our budget requests were submitted it was impossible to request funds for this project for fiscal year 1958.

As you know, recent favorable action by the New Hampshire Legislature gave Governor Dwinell necessary authority to commit the State of New Hampshire to the project. Immediately upon the removal of the legal roadblock Governor Dwinell wrote to me giving the formal concurrence of the State of New Hampshire. This cleared the way for initiation of planning which is now getting underway.

When a project is authorized we develop a tentative schedule for surveys, planning, and construction, which is revised from year to year. This schedule is made up without any reference to other projects in the division, the total civil works program, or other program needs of the Government, or the availability of men or equipment generally

in any 1 year. It, therefore, is a figure for internal planning purposes only. That figure for this project is $600,000 for fiscal year 1958 and would include planning and some funds for limited real estate acquisition. For your further information the President has directed that our fiscal year 1958 expenditures as estimated in his budget presented to the Congress, be considered as the maximum that can be made within the overall fiscal policies of the administration for that year. Since no funds are included in the budget for the Hopkinton-Everett project, no funds can be utilized for this project and meet the administration's objectives.

Sincerely yours,

ROBERT J. FLEMING, Jr.,
Brigadier General, United States Army,
Division Engineer.

Mr. Speaker, there are $50,000 in planning funds that the engineers can already use in 1957 but they need, according to General Fleming, $600,000 for plans and certain land purchases for the fiscal year 1958. There is nothing in the budget for 1958 because at the time the budget was made up the compact between New Hampshire and Massachusetts had not been signed which would approve of the plan. The authorization already exists for the flood-control map and the compact already signed by them does not have to be approved by the Congress, although that formality will be prolonged by cost hazards; the authorization to go ahead with the projects already exists.

I understand that a committee of the Senate today approved the compact between New Hampshire and Massachusetts, and the gentleman from Massachusetts [Mr. LANE] has a compact to be approved by the Public Works Committee of the House. The gentleman from New Hampshire [Mr. MERROW] and I introduced companion bills, H. R. 6437 and H. R. 6438, and the chairman of the Appropriations Committee has promised us a hearing on those bills which provide for an appropriation of $800,000 for Merrimack River projects.

Social Security Abuse

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a copy of the resolution sent to me by Mr. Harry Southwell, president of Local No. 174, United Automobile Workers, AFL–CIO. In the following, Mr. Southwell and his local forcefully state their opposition to the manner in which protective provisions of the Social Security Act are being bypassed:

Whereas the Congress of the United States enacted legislation designed to safeguard the social-security benefits of workers during a prolonged period of disability by freezing such benefits; and

Whereas preliminary public hearings and debate established the intent of Congress to establish such protection entirely upon the basis of the covered members' inability to continue to be gainfully employed; and

Whereas many cases have recently come to our attention in which members are being deprived of such protection because of the administrative restrictions being applied to a degree which nullifies the relief which Congress intended to provide; and

Whereas the result of this administrative restriction if continued will permit established social-security benefits to dissolve during that the intent of this act be recognized; be it

Resolved, That local No. 174 go on record condemning this interpretation by the Social Security Administration, and demanding that the intent of this act be recognized; and be it further

Resolved, That copies of this resolution be sent to the convention resolution committee and to each of the Michigan Representatives and Senators.

HARRY SOUTHWELL,
President, Local No. 114, UAW, AFL–CIO.

Pro and Con on the 22d Amendment: Three Views

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. UDALL. Mr. Speaker, I am appending to these remarks three responses to my cross section survey among historians and political scientists on the wisdom of the 22d amendment. I present today the opinions of two political scientists: Dr. Thomas H. Eliot, of Washington University, St. Louis, Mo.; and Dr. Manning J. Dauer, of the University Florida. Both are advocates of repeal.

I also present the views of Dr. Arthur S. Link, professor at Northwestern University, who looks with favor on the 22d amendment.

These are thought-provoking letters, and I commend them to our colleagues:

WASHINGTON UNIVERSITY,
St. Louis, Mo., March 19, 1957.

Hon. STEWART L. UDALL,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN UDALL: I am glad that you have introduced a Joint Resolution for the repeal of the 22d amendment.

The argument in favor of your resolution, that a President loses influence in his second term because he cannot run for re-election, seems to me to be a minor one. Long before the 22d amendment, that loss of influence was customary. The two-term tradition was so firmly established, from 1796 to 1940, that, I think, most people assumed that a second-term President would not be nominated for a third term. Even so, as we know, there was a strong third-term movement for President Grant, and in 1919, before the extent of President Wilson's illness became known, there may have been some expectation that he would seek a third term. To some extent, therefore, the President, before the 22d amendment, was less likely to have his views ignored than he is today.

Far more important, it seems to me, is a foundamental principle: namely, that the American people should be free to choose the man that they want to be President. This seems to me to be basic to a democratic system. There must be some minimum qualifications, of course, and these the Constitution states; but while it is reasonable to disqualify a man because he is an alien, or because he is very young, it seems to me unreasonable to disqualify him because he had had 8 years of experience in the Presidency. The burden of the office is so great that, normally, a President would be well-advised to observe the two-term tradition; but a crisis may arise which makes the people want him to continue, and if he is physically able to do the job, they should be allowed to elect him.

Sincerely yours,

THOMAS H. ELIOT.

UNIVERSITY OF FLORIDA,
COLLEGE OF ARTS AND SCIENCES,
Gainesville, March 20, 1957.

Representative STEWART L. UDALL,
House of Representatives,
United States Congress,
Washington, D. C.

MY DEAR REPRESENTATIVE UDALL: I have never been in favor of the 22d amendment. It seems to me that the people and the political parties should be able to decide as to the eligibility of a President for more than two terms. My own feeling is that one of the great merits of the Constitution of the United States is its flexibility in many regards. This flexibility has been impaired by the 22d amendment. Consequently, I would favor House Joint Resolution 182, 85th Congress, 1st session, which provides for its repeal.

It has always seemed to me that the amendment was adopted with inadequate consideration and debate in Congress. Nor were there adequate hearings before it was reported on the floor. Finally, there was little consideration and little discussion before election of the members of the State legislatures when the amendment was ratified.

Among the considerations against the amendment is the lessened effectiveness of the President once he may be elected for his second term. Especially in a period when international and national problems are acute. It seems to me that we need governmental institutions which will permit adequate representation of the United States in all respects.

Sincerely yours,

MANNING J. DAUER,
Professor of Political Science.

NORTHWESTERN UNIVERSITY,
Evanston, Ill., March 20, 1957.

Representative STEWART L. UDALL,
House of Representatives,
Washington, D. C.

DEAR MR. UDALL: Thank you very much for your interesting letter of March 13 concerning the repeal of the 22d amendment. I must say that I have very mixed feelings about this matter. I think it was obvious at the time, and most scholars now agree, that the 22d amendment was adopted largely as a partisan and southern Democratic maneuver against the dead Franklin D. Roosevelt. If this is true, certainly it is poor reason for amending the Constitution of the United States. Moreover, I am inclined to think that the matter of presidential succession is something that the people themselves ought to be permitted to determine. Certainly the tradition against a third term will usually prevail, but there are undoubtedly times and places when the election of a President to a third term might be absolutely vital to the safety of the American people. These are some of the reasons for the repeal of the 22d amendment.

On the other hand, I think that a scholar must recognize the fact that there are good and sound reasons for the maintenance of the 22d amendment. The power of the Presidency, it seems to me, has certainly increased rather than diminished and is likely

to increase even further during the coming century. Indeed, I do not think it altogether fantastic to say that perhaps a century hence the executive department will exercise mainly a supervisory and limiting function. If this is true then certainly it might be well to establish the very clear constitutional principle that a President shall not serve more than two terms.

On the whole I must say that I favor the retention of the 22d amendment. We will be a very poor democracy, indeed, if we ever reach the stage where any single man is indispensable beyond two terms of the Presidency. This being true I do not suppose that I could be of much support for your point of view.

With all best regards,

Sincerely yours,

ARTHUR S. LINK,
Professor of History.

Statehood and Discrimination

EXTENSION OF REMARKS
OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1957

Mr. PELLY. Mr. Speaker, I understand the hearings on legislation to grant statehood to Alaska have just been concluded. Last Friday, on March 29, I testified before the subcommittee of the Committee on Interior and Insular Affairs in order to point up some of the important issues involved in statehood.

As one who supports the right of Alaskans to self-government and as one who supported statehood in 1954 by opposing the recommitting of such a measure by the House of Representatives to the Interior and Insular Affairs Committee, I have warned, nevertheless, that from a practical standpoint Alaska would fare much better under commonwealth status under which Alaskans would not have to pay Federal income taxes. This would allow incentives to the pulp and paper industry and mining operators to invest in the northland and develop her resources. As it is, due to high costs of transportation and other factors industry in Alaska is not able to compete with other areas of the country. Statehood, I fear, will increase taxation and delay the industrialization of Alaska.

Another important aspect of the statehood issue is the very obvious program of a certain group of Alaskans to eliminate nonresidents from employment in the fishing industry by discriminatory taxation. Such a tax which would levy a graduated tax on salmon after passing in the House died in the Alaska Territorial Senate on March 27, 1957 on an 8 to 8 vote. This proposal would have imposed a tax on the value of catches of salmon exceeding $20,000. Local independent fishermen would thereby have been exempt from the tax while employee type of operations such as employing Washington, Oregon, and other State residents would be eliminated by such a confiscatory tax. Statehood could increase the threat of such discriminatory methods of keeping nonresidents out of Alaska.

So I have strongly urged that any enabling act spell out and insist that protection be afforded to those who are not able, because fishing is seasonal, to live in the northland all the year round.

There is another matter to be considered. The Fish and Wildlife Service has just announced plans to allocate $786,500 for research on Alaska fisheries. Of this amount $572,600 is for salmon research, $130,000 for king crab research, and $83,900 for herring studies. As I stated in my testimony on statehood, I fear Alaska will not be able as a State to properly conserve and exploit her own resources. Where would she find the funds to spend $786,500 for fisheries research?

To meet this situation, I would hope an arrangement would be legally effected so the fishery resources could be retained for at least 10 years to enable the new State to have the benefit of Federal assistance. This is important, too, because so many problems of the salmon industry are international in scope.

Let us remember, as I have repeated before, the resources of Alaska belong to all American citizens. In granting statehood and self-government to the people of the Territory, who I repeat are entitled to full self-government, the American people are entitled to retain their rights as against residents. Emotionalism can be dangerous to the national interest, so let us consider carefully all aspects of statehood before it is too late.

Alaskan Statehood

EXTENSION OF REMARKS
OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1957

Mr. SAYLOR. Mr. Speaker, on March 30, 1867, a farsighted Republican Secretary of State concluded negotiations for the purchase of a territory one-fifth the size of the United States. The price was $7,200,000, a fantastically low price in terms of the actual value of lands and resources acquired.

During the past 90 years Alaska has returned to the economy of the United States more than $1 billion worth of fish, minerals, furs, and other products. This production is but a fraction of Alaska's potential. Recent years have witnessed a phenomenal growth in the Territory's population, renewed interest in its natural resources, and a realization of its strategic value.

Writing to Secretary of State Seward in April 1867, the famed Gen. M. C. Meigs stated:

> I trust that no effort needed to secure this great acquisition will be omitted. The execution of the treaty will crown our generation with the praises and thanks of future ages.

The passage of time has confirmed the views of General Meigs. Although virtually forgotten until the gold discoveries around the turn of the century, Alaska occupies an important place in our Nation. At long last the development of her vast timber resources has begun. Work is being done on her basic mineral resources. Agriculture is expanding. Production from Alaska's natural resources during the last year totaled $130 million, almost 20 times in 1 year the price of Alaska's purchase. Her civilian population in the past 6 years has increased 48.6 percent.

Alaska is peopled by Americans from every walk of life from all of the United States. They have brought with them our characteristic energy and institutions. Alaska is thoroughly American. Her cities and towns are the counterpart of almost any town in the United States. Her citizens demonstrate the same interest in Government and politics as Americans throughout the length and breadth of the continent.

Alaskan's today are petitioning the Congress to admit this vast and great Territory to the Union as a State. If we take this step and make of Alaska the 49th State, we shall, in the words of General Meigs, "crown our generation with the praises and thanks of future ages."

United States Shortcharges Los Angeles in Smog Fight

EXTENSION OF REMARKS
OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1957

Mr. HILLINGS. Mr. Speaker, I call to the attention of the House the concluding article in a series by Mr. Magner White which appeared in the Los Angeles Examiner of April 2, 1957. The article follows:

UNITED STATES SHORTCHANGES LOS ANGELES IN SMOG FIGHT

(By Magner White)

For 14 months, so far as smog is concerned, we've had it pretty good here, a few incidents excepted, compared with the situation as it was in previous years.

Weather conditions which previously produced smog have failed many times to do so recently, and fair weather this year has helped too.

Strict smog law enforcement, abandonment of probably 600,000 backyard incinerators out of the county's 1,500,000—all of which will be outlawed as of next October 1, and industries' heavy investments, now around $50 million in smog controls, all have helped hold the line.

But, for the present at least, while we await solution of the motor vehicle exhaust and other problems, the county air pollution control district is rapidly running out of things that can be done immediately to control smog.

Meanwhile, we grow—more people, automobiles, and industries; and more smog which threatens to overtake us again.

No automobile-exhaust device is in sight yet, except for some very large vehicles. Solvents, full of fumes, from industrial and processing operations, are under attack as smog contributors, but adequate controls for many are yet to be developed.

Public and private steam powerplant operators are spending $3 million to control emissions from their fuel-oil-burning plants in a joint campaign. Southern California Edison Co. alone is spending $1 million at its El Segundo plant.

When all these remaining things are accomplished, then what?

More people, more cars, more industries bring in more new smog.

MORE HELP

"That's why we feel the Federal Government should provide more help on our problem here, because what can be done here and what already has been done can help solve similar problems all over the Nation," says Smog-Control Chief Smith Griswold.

This is why, with the help of Griswold and Supervisors' Smog Chairman Warren Dorn, our California Congressmen are asking the Federal Government to spend some of its 5-year $25-million smog-research-program money here—where, so far, we've had less than $40,000 of this money in 2 years.

Dorn, Griswold, and Congressman Joseph Holt, who heads the California delegation's 21-man smog committee in Congress, have asked for a conference soon of Federal, State, and local air pollutions. The purpose is to divide the big smog-research-attack job—and to see where the Government can help on smog control here.

HOLT'S committee has a list of things the Government can do here which will not only help locally but help fight smog throughout the United States. The plan calls for Federal men to work here, at the APCD, with the Government paying their salaries.

SEVEN PROJECTS

Seven projects nearly $1 million.

The automobile exhaust problem gets the biggest attention, since exhausts, accounting for probably 60 percent of our smog now constitute the largest remaining uncontrolled smog source—and the percentage leaps upward as more cars arrive.

A $400,000 Federal project is proposed for research on a catalytic exhaust smog control device; $50,000 to develop methods of appraising such emissions so experts on the problem will be speaking the same scientific language, and $30,000 to find out what effect fuel composition has on exhaust emissions.

The district says its own research indicates promising possibilites for further study of fuel compositions, despite long-held theories that no matter what the fuel is, it will make smog from a motor vehicle engine.

POSSIBILITY

The hope, of course, is for a smogless gasoline, a possibility some experts view skeptically.

Such a product, however, would save the 2,700,000 motor-vehicle owners here from the awful prospect of having to install devices, costing up to $100, on their vehicles. The APCD and law-enforcement officers would be saved from the job of endless inspections of the gadgets.

The touring motorists coming here yearly, numbering over 1 million, would constitute no smog problem, as they would if an exhaust device were the only remedy.

A $40,000 project would seek a way to measure eye irritation from smog. This is not another medical project, Griswold says. The information is needed to help experts working on controls for exhausts and other sources.

PILOT STUDY

Next is a $150,000 full-scale pilot study here of industrial zoning—how to place industrial plants so they will not add to smog. The APCD has more than 3 years' accumulation of wind-movement data to be analyzed for this study.

Another $75,000 is sought to develop controls for solvents—dilutents, paints, thinners, inks, detergents, and so on, used in industries and in processing. Fumes from these have been found to be important in smog, the district says.

Research on control of smog formers from industrial use of fuel oils will require $60,000.

A like sum is asked to track down whatever it is in smog from vehicles that irritates eyes, damages vegetation, cuts visibility, and produces something which we have in more abundance than any other spot on earth: ozone.

It is proposed $60,000 be spent to determine how much ozone and oxides of sulfur and nitrogen a human being can take without becoming a serious, even fatal, health statistic. This information is important, it is said, to functioning of the public smog alert warning system.

Our Congressmen and Griswold and his staff believe these projects, undertaken with help of Federal men here, where so much already is known about smog, will add importance and more nationwide effectiveness to Uncle Sam's own smog program.

From now on you will read of developments in Washington on these matters, outlined in this examiner report to you on smog.

Stock Ownership in National Banks

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. MULTER. Mr. Speaker, on March 19, 1957, I introduced my bill, H. R. 6154, to protect the integrity and independence of national banks. In this connection, I received the following letter, dated March 26, 1957, from Mr. E. E. Placek, president, county bank division of the Independent Bankers Association:

THE INDEPENDENT BANKERS ASSOCIATION,
Wahoo, Nebr., March 26, 1957.

Hon. ABRAHAM J. MULTER,
House Office Building,
Washington, D. C.

DEAR MR. MULTER: I was indeed glad to receive your letter, together with enclosure of tear sheet from the CONGRESSIONAL RECORD. I am exceedingly well pleased to know that you have introduced a bill which goes further than the Burdick bill.

I hope and trust that your efforts and those of Congressman BURDICK, and others who are interested in preserving the integrity of the independent unit banks of this country, and especially the small banks which are being absorbed and gobbled up with such speed that it is difficult indeed to keep track of them.

It is also disheartening to see how many banks have been issued the privilege of opening branch banks not only in your State of New York, but throughout the whole country, and if this trend continues no doubt an effort will be made to nationalize the banks.

While sojourning behind the Iron Curtain in Czechoslovakia, a prominent Communist said to me: "The more concentration you have in industry and finance, so much easier it will be for us to take you over," and Mr. MULTER that is not an idle boast.

I hope that you will keep me posted on the progress of your bill, and if there is any help and information I can give you I will gladly do so.

Very sincerely yours,
E. E. PLACEK,
President, Country Bank Division.

State and Locally Financed Programs

EXTENSION OF REMARKS
OF
HON. CHARLES B. BROWNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1957

Mr. BROWNSON. Mr. Speaker, as I listen to the debate on the appropriation bill for the Department of Labor and the Department of Health, Education, and Welfare, I wonder at the lack of information available concerning the extent of State and locally financed programs already in existence in areas where the Federal Government intends to expand its activities.

For instance, the question is not a single one of "Who shall inspect food and drugs?" It is rather a series of questions, "How much are the States and localities already doing in this field? What must the Federal Government then undertake which the people cannot as effectively do or be helped to do for themselves? What programs must be undertaken on the Federal level because they cannot as effectively be carried through on the State or local level?"

We have debated long on this bill—but are we asking enough questions as these authorization and appropriation bills come before us? Do we actually have the information we need to guarantee that we are not unnecessarily duplicating existing State, local, and private-enterprise programs?

As I listen to this debate, I sense an attempt to overemotionalize the issue in many cases. Too often the question is posed in terms, such as, "Are you in favor of education for our youth, or are you against it?" Calm deliberation seems to indicate that the question might more fairly be phrased, "Granted that all of us want the very best possible education for every child in the United States, what echelon of Government or what agency outside Government is best fitted to finance, plan, develop, and control such a program, Federal, State, county, or local? It would help if the defenders of increased spending would talk to the issue once in a while, at least to mention the pending amendment.

So that my colleagues may know what Indiana is doing to solve her own school problems, I am asking unanimous consent to insert in the Appendix of the RECORD a legislative bulletin of the Indiana State Chamber of Commerce detailing distribution of 1957–59 State-collected tax funds to local schools with a discussion of how these funds, amounting to $197,556,433, may be used by local school units. This is information we need for every State before we vote to superimpose Federal aid to school construction or Federal aid to education on State educational systems which are doing a sound job today:

DISTRIBUTION OF 1957–59 STATE-COLLECTED TAX FUNDS TO LOCAL SCHOOLS AND HOW THESE FUNDS MAY BE USED BY LOCAL SCHOOL CORPORATIONS

Every community in the State will be affected by the recent legislation on school

finance, making State funds totaling $197,556,433 available to local school units.

This memorandum outlines some of the major features of the 1957–59 State appropriations for schools. You may want to analyze these figures and comments to determine how your own local schools will be affected financially.

Here are the basic statewide figures in the 1957–59 appropriations:

	1957–59	1955–57
(A) For teachers' salaries "and other lawful purposes"	[1] $161,726,833	$143,003,400
(B) For current operating expenses (approximately)	1,900,000	1,586,000
(C) For supplemental transfer tuition (up to)	300,000	775,000
(D) For transportation (at least)	14,802,000	10,790,000
(E) "Educational contingency fund" for supplemental transportation, equalization, and tuition support in "distressed" school corporations	3,000,000	
Total for purposes other than school construction	181,728,833	156,154,400
(F) "Local property tax relief fund" for school construction, repairs, debt service, and lease rentals (outright grants based on same percentage which each local corporation receives of regular tuition support distributions)	[2] 7,000,000	
Total outright grants for all school purposes	188,728,833	156,154,400
(G) Appropriation to Veterans Memorial School Construction Fund—available in 1957–59 biennium	4,000,000	
(H) Transfer from World War II bonus fund to Veterans Memorial School Construction Fund—available immediately	4,827,600	5,000,000
(Items (G) and (H) are for loan purposes only to eligible units.)		
Total funds for school construction loans $8,827,600		
Outright grants for construction (item (F)) 7,000,000		
Total made available for construction 15,827,600		
(I) Total State funds available for schools	197,556,433	161,154,400

[1] If a local school corporation's share of this amount is in excess of the amount required to meet the State's share of minimum salaries for teachers, after the local school corporation levies a 25-cent qualifying tax rate, the "excess" of State funds can be used for any lawful school purpose, except transportation.

[2] School units which do not need funds for construction, etc., may transfer their portions of the construction grants to other funds and use the money for other purposes. But transfer of these sums must be specifically shown in the published budgets of the school corporations.

It is important to note that while the total amount constitutes by far the largest Indiana State school aid appropriation in history, the great bulk of the increase is based upon the larger number of teachers and pupils which local schools will have in the next 2 years as compared to the past 2 years. In other words, since most local school units are going to have greater expenses on account of increased enrollment alone, the State's percentage share of total local school costs will by no means follow the degree of rise in total State appropriations for schools.

It is estimated that the total of $188,728,833 of outright grants to local schools for the 1957–58 and 1958–59 fiscal years is equal, on a statewide basis, to approximately $116 per pupil per year in average daily attendance. This is an increase of $13 per pupil over the $103 average appropriated in 1955 for the 1955–56 and 1956–57 fiscal years. The actual amounts to be received per pupil will vary in the different local school units.

SUMMARY OF LEGISLATIVE ACTION

Actions of the general assembly with respect to school finance may be summarized in the following manner:

1. An unprecedented total amount of money in outright grants was provided for State support of local schools. The amount was $188,728,833. The loan funds of $8,827,600 bring the total amount made available to $197,556,433.

2. The appropriation of outright grants was $32,574,433 higher than the $156,154,400 appropriated in 1955. This is the largest increase ever made by a session of the Indiana General Assembly.

3. Largely as a result of action of the House-Senate budget conferees, local schools for the first time in recent years will have substantial amounts of State funds for expenditure at the discretion of local school officials.

4. The local qualifying tax rate for participating in the program of State support for teachers' salaries cannot be less than 25 cents per $100 of adjusted assessed valuation during the next 2 school years. This rate has been permitted to vary in past years depending on the level of the minimum salary schedule for teachers and the amount of the appropriation for tuition support.

5. Inaugurated by the general assembly was a $7-million program of State grants for school construction, building repairs, lease rentals, and debt service. (But any portion of these funds may be used for other school purposes, as explained in the second footnote to the above table.)

6. The money in the veterans memorial school construction fund was increased from $5 million to $13,827,600. This was accomplished by transferring $4,827,600 from the World War II bonus fund and by an additional appropriation of $4 million from the State general fund.

7. The State support of school transportation systems was increased from $10,800,000 during the 1955–57 biennium to at least $14,802,000 for the 1957–59 biennium.

8. The maximum permissible property tax levy for school purposes (excluding school construction) was increased from $3.30 to $3.65, and the base was changed from actual assessed valuation to adjusted assessed valuation.

9. The maximum permissible interest rate on bonds issued by private nonprofit school building corporations (holding companies) was increased from 4 percent to 5 percent.

10. Private corporations were authorized to finance, construct, and lease school buildings to school corporations.

11. Securities in the common school fund were authorized to be exchanged for bonds of school-building corporations.

12. The assembly declined to raise the State-fixed legal minimum salary schedule for teachers, thus leaving the question of pay increases in the hands of local school officials.

Flood Control for Great Lakes

EXTENSION OF REMARKS

OF

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1957

Mr. ASHLEY. Mr. Speaker, today I have again introduced legislation which I hope will clear up—once and for all—the question of whether the Great Lakes were meant to be included in the Flood Control Act of 1936. At present, because of the totally illogical manner in which this Flood Control Act has been construed, no Federal funds whatever are available for construction of desperately needed flood-control projects.

Briefly, the background is this: In 1936, the Congress adopted a national program for flood control. In the declaration of policy written into the historic Flood Control Act adopted in that year, it is stated that flood control on "rivers, navigable waters, and other waterways" is a proper activity of the Federal Government. No specific reference is made to the Great Lakes area—nor to any particular river or other waterway—nor were the Great Lakes specifically included or excluded in the flood-control laws enacted in 1939, 1940, 1941, or 1942. However, the Flood Control Acts of 1944 and 1946 did authorize certain flood-control projects in the Great Lakes Basin, and the statutory authority for these projects, of course, was the Flood Control Act of 1936.

Despite this clear manifestation of congressional intent, the Director of the Bureau of the Budget declared during the 80th Congress that it was not the intent of Congress—in the 1936 Act or subsequently—to include lake and tidal floods within the national program for flood control. The then Secretary of War rejected this position, pointing out that amending acts had included the words, "floods aggravated by or due to wind or tidal effects," and that congressional authority for one Lake Erie project included such language. Later, in 1948 and in 1950, Congress again manifested its intent by authorizing flood protection projects on Lake Michigan, Lake Erie, and Lake Ontario. The Bureau of the Budget, however, steadfastly maintained that the 1936 act does not contain legislative authority for these Great Lakes projects. It has stated repeatedly that until Congress takes affirmative action to expand the policy enunciated in the Flood Control Act of 1936, it will not consider any projects authorized by Congress for flood control on the Great Lakes to be in accord with the national program for flood control.

It thus becomes clear that a demonstration of congressional intent satisfactory to the Bureau of the Budget will require specific legislation similar to that which I introduced during the last session and again today.

I think that it is both interesting and significant, Mr. Speaker, that the Department of the Army had always considered—until the preemptory position taken by the Budget Bureau—that congressional authority existed for flood-control projects on the Great Lakes. Commenting on my bill to specifically include the Great Lakes within the declaration of policy in the 1936 act, the Army stated that—

Legislation may be advisable in order to eliminate all possible doubt on this point if construction of improvements for prevention of this type of flood damages on the

Great Lakes * * * is to be accomplished as a Federal responsibility.

Mr. Speaker, it is high time that the Great Lakes area be treated on a parity with other sections of the country. The taxpayers of New York, Pennsylvania, Ohio, Michigan, Illinois, Wisconsin, and Minnesota gladly contribute far more than their proportionate share of tax dollars for programs directly benefiting less prosperous and developed sections of the country. Is it asking too much, Mr. Speaker, that the Great Lakes area receive the same consideration that it has accorded other areas for so many years? The bill which I have introduced today does not call for the appropriation of any Federal funds—it merely provides that home owners on Lake Ontario, Lake Erie, Lake Michigan, Lake Huron, and Lake Superior shall have the same opportunity to receive protection from floods as their fellow citizens whose property borders on rivers or other waterways.

Statement of Kaiser Industries Corp.

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. MILLER of California. Mr. Speaker, we are all aware of the industrial progress being made by our Latin American neighbors to the south. However, we sometimes overlook the contribution to their rapidly expanding economy that is being made by some outstanding industrial ambassadors of the United States. One of these men is Edgar F. Kaiser, president of Kaiser Industries Corp., parent company of the worldwide Kaiser organization.

Within the last 3 years, the Kaiser organization has made a considerable contribution to the economy of both Argentina and Brazil in the automotive manufacturing field. Under the direction of this young industrial statesman, Kaiser has built a new automotive manufacturing plant in Argentina and is substantially enlarging an existing plant in Brazil.

Transportation, as we all know, is one of the biggest problems encountered in improving and expanding the economy of many of the Latin American countries. The Kaiser contribution to improve transportation in Argentina and, indirectly, to bolster that country's economy is being made through Industrias Kaiser Argentina, an affiliate of Willys Motors, Inc., which in turn is a subsidiary of Kaiser Industries Corp.

The IKA plant in Argentina is located in Cordoba, and at the present time is producing a Jeep vehicle every 15 minutes. Under the watchful eye of Edgar Kaiser, the big automotive manufacturing plant was built and in operation in 13 months' time. It has a 1-shift capacity of 40,000 vehicles annually.

In Brazil, this young industrialist is moving to meet the pent-up demand for new automotive vehicles by spending close to $5 million to expand the automotive manufacturing facilities of another Willys affiliate, Willys Overland do Brasil.

An ardent spokesman for the American competitive enterprise system, Edgar Kaiser has packed more industrial experience into 47 years than most men in the field acquire in a lifetime. His integrity, resourcefulness, and broad understanding of basic economic problems qualifies him as one of this country's leading goodwill ambassadors to Latin America.

A constant traveler in Latin America, where his organization's engineering division, Kaiser Engineers, also is engaged in several projects, Edgar Kaiser has won hundreds of friends with his sincere, natural approach to people. He also has come to understand many of the problems of these people and their governments. Consequently, it is not unusual for him to receive requests for his opinions of these countries.

Recently the editors of the magazine, Latin American Report, asked his opinion of the current status of Argentina's national economy and its prospects for 1957. Mr. Speaker, under unanimous consent, I include excerpts from Edgar F. Kaiser's reply to this question in the RECORD:

STATEMENT OF EDGAR F. KAISER

The achievements in relation to Argentina's economy in the last 15 months have been very impressive. The creation of a free market for financial transactions has greatly facilitated international transfers on a realistic basis. The ability of private companies to remit dividends and royalty payments should encourage private investment. Similarly the payments arrangements with the countries of Western Europe should do much to restore Argentina's traditional pattern of multilateral commerce. The present Government is working diligently on increasing exports both to Europe and the United States.

One of the most urgent problems confronting Argentina today is that of transportation and the Government is taking measures to improve this situation. The negotiation of a loan of $100 million from the Export-Import Bank for transportation should not only help greatly in the solution of this problem but would demonstrate confidence in Argentina just as the extension of a substantial private credit from British banks indicates faith in the Argentine economy and in the present administration's program.

From the standpoint of our own company, Industrias Kaiser Argentina, S. A., I can say that we have received full cooperation in connection with our own problems and that we enjoy a relationship of confidence and mutual trust.

I have been asked what steps Argentina should take to accelerate the economic progress of the country, and I hesitate to answer because it is not my province to give advice as to what an independent government should do. In addition, it is easier for someone on the outside to reply than it is for those who have the responsibility. However, I believe there are certain steps that could be taken and which would have a beneficial impact.

Argentina has a dollar deficit in its international trading position of about $200 million a year. This deficit can only be eliminated by further measures to increase exports and by increasing national production of those products which are now imported at a heavy cost in foreign exchange. Strenuous measures must be taken to improve the internal transportation and power systems in order to stimulate the production of goods for export and local consumption.

Measures are also necessary to encourage additional capital investment from abroad, particularly to increase the national production of essential items which the country must now import. Fortunately, the Government has shown a keen awareness of these problems and is moving in the right direction.

In our own operations, we have encountered two types of problems which must be resolved if national production of essential goods is to be increased. First, despite the recent liberalization of investment regulations, there are still considerable difficulties in the way of Argentine firms who need machinery and equipment from abroad to expand their opertaions, either by purchase or as a foreign investment.

Second, under present regulations in Argentina, it is extremely difficult for retail buyers of trucks and jeeps and consumer hard goods to obtain retail credit, even to purchase items which are produced in the country. In virtually all countries where such items are manufactured credit is available on reasonable terms to those who buy the industry's products, and the availability of this consumer credit is a major factor in supporting the mass production volume necessary to achieve low unit costs.

The limited extent of such credit in Argentina tends to limit the national production of capital and consumer goods, and thus to reduce the potential contribution of new manufacturing industries to the economic development of Argentina. I hope that these problems can be resolved in the near future.

We have generally enjoyed excellent labor relations in Cordoba. Although I realize that there have been labor difficulties in other sections of the country, we have had no such problems at Cordoba. We have found that labor productivity at Cordoba is excellent and so far as our operation is concerned is competitive with that in the United States.

So far as investment opportunities in Argentina are concerned, I think that historically Europe has had a greater need than the United States to seek foreign markets and that, consequently, European bankers and businessmen in the past have been more aggressive in Argentina in this regard. Consequently, European firms in the past have pursued more liberal credit policies on exports and they have also moved boldly to develop their markets in Latin America by manufacturing programs in those countries where foreign exchange shortages have reduced imports of manufactured goods.

However, I believe that American bankers and businessmen today are becoming much more foreign development minded than in the past. As a result of World War II, our international position has changed and we are much more familiar with the outside world. Foreign trade and investment has also become more important to our national economy and increasing numbers of young Americans are willing to live abroad.

Today I would say that American bankers and businessmen are just as alert as the Europeans, and I believe that the kind of healthy competition that will result will be of great benefit to Argentina and the rest of the countries of Latin America. However, it is a fact that European governments give much greater assistance to their bankers and businessmen than our own Government does in extending favorable credit terms to purchasing nations, and the competitive disadvantage which this creates for the United States industry and investors requires careful study by our Government.

So far as the year 1957 is concerned, I think it will be the biggest ever in Latin

America. Productivity is increasing throughout the area as well as gross income and living standards.

In my opinion, the big danger is that internal credit facilities in Latin America will not keep pace with the expansion of local manufacturing which all Latin American governments desire, with the result that the new manufacturing enterprises in these countries may fail to achieve the high levels of production necessary to obtain the economies of mass production.

While Latin American governments must be on constant guard against the danger of inflation, they must recognize that the increased national production they all desire requires increased internal credit, and that the resulting increase in credit is not inflationary in character because it is accompanied by a corresponding increase in real production.

Latin America cannot industrialize every segment of its economy at the same time and with the same speed, and it is always necessary to channel the expansion of local manufacturing activities into the more urgent economic areas. But once the high-priority projects have been selected and approved, adequate internal credit must be provided for each manufacturing project and for the customers who buy its products.

Anyone who considers the actual and potential resources of the hemisphere, and the rate of growth that has already been achieved, cannot fail to have confidence in the future. If Argentina can provide sufficient internal credit for its manufacturing and agricultural activities, and at the same time avoid inflation, 1957 should be a better year than 1956.

Can We Muddle Through?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Walter Lippmann, which appeared in the New York Herald Tribune of March 28, 1957:

CAN WE MUDDLE THROUGH?

(By Walter Lippmann)

Mr. Dulles, having returned to Washington from Bermuda, was at pains to dispel any notion that there exists a British-American agreement on the line we shall take in the Middle East. As a matter of fact, nobody had any reason to suppose that there had been such an agreement. But the very fact that the President and the Prime Minister chose to meet at all in such a conspicuous way was bound to cause speculation, and in Egypt at least to arouse the suspicion that the two great powers, separated since last November, were now going to act together.

If, as we know from Mr. Dulles, there were no firm agreements, were there real disagreements? There were not, so it would seem, though there are undoubtedly wide differences of opinion as to what Nasser intends to do and how he should be dealt with. Almost certainly what happened in Bermuda was that the British accepted American leadership in the making and in the conduct of policy in the Middle East. There was no agreement as to what the policy would be, though no doubt various possibilities must have been canvassed. But there was an assent by the British, never formalized in any agreement, that the President, and more specifically that Mr. Dulles, should manage the Middle Eastern business. It was in that role that Mr. Dulles spoke with such personal authority at his press conference on Tuesday.

As the President and Mr. Dulles appeared to see it, the American role in the Middle East is to be its protector as against the Soviet Union from the outside, and within the region itself to be the impartial mediator and the friend of everybody. In practice, they have little or no hope of reaching genuine settlements within the area, be it about the canal, about the future of Jordan, or about the Egyptian-Israeli conflict. Our real policy in the Middle East is to speak boldly and loudly about what is unlikely to happen—namely, an overt Soviet military aggression—and on the real issues to zig and to zag and somehow to muddle through without any more shooting.

When Mr. Dulles spoke of feeling a "cautious optimism," he means presumably that there is a fair chance that for a while, at least, there will be tacit arrangements to keep the hot issues below the boiling point. We might guess that Nasser will have his way about the canal but that, except as to Israel, he will not actually molest or discriminate against other ships. We might guess that he will not build up serious military forces in the Sinai Peninsula which could threaten Israel, and that the raiding from the Gaza strip will not be organized on a big scale. And there would seem to be a fair chance that neither Nasser nor King Saud will in fact interfere with the passage through the Gulf of Aqaba.

This is, conceivably, how a new crisis may be stalled off—by saving Nasser's face and by adding to his prestige without provoking Israel enough for her to use force.

It can be argued that this is the best that can be made of a bad job. It can be said that the revolutionary movement among the Afro-Asian peoples which Nasser leads cannot be stopped by force or bought off by economic concessions; it can be said that the local conflict in Palestine is insoluble in this generation.

But it can be argued also that the best way to deal with the situation is not to muddle through, not to carry water on both shoulders, not to finagle and to finesse, with the object of provoking no one and of placating everyone. For if, as is now contemplated, we in fact appease Nasser both on the canal and on his claim to belligerent rights against Israel, we shall find ourselves much weaker when we come to the next phase of Nasser's revolution against the Western World.

Hon. Samuel A. Carlson, Mayor Emeritus of Jamestown, N. Y.

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. REED. Mr. Speaker, it is a pleasure to pay tribute to a great American, Hon. Samuel A. Carlson, who is still living a vigorous and useful public life in the city of Jamestown, N. Y., and who served his city as mayor with great distinction for a period of 26 years.

As a part of my remarks, I am inserting the following published account of the record of this outstanding civic leader:

MAYOR EMERITUS SAMUEL A. CARLSON OBSERVES 87TH ANNIVERSARY TODAY

[From the Jamestown (N. Y.) Sun of October 26, 1955]

Happy birthday greetings are in order today for Jamestown's first citizen—Mayor Emeritus Samuel A. Carlson.

This Wednesday, October 26, is the 87th birthday of the man who served 26 years as mayor of Jamestown and 24 years as member of various municipal boards.

Still active physically beyond the average of men of his years, and mentally the equal of most men many years his junior, Mayor Carlson retains a keen interest in public affairs.

One of the outstanding tributes paid to Mayor Carlson was delivered by the late Supreme Court Justice Robert H. Jackson, then Attorney General, at a testimonial banquet marking the 50th anniversary of the mayor's entry into public life. Justice Jackson spoke as follows:

"When I was asked to make another speech of farewell to Mayor Carlson I told the committee it would be very easy—all I would have to do would be to get out one of the old ones. We know just how to conduct ourselves at a farewell to Sam Carlson, because we have so many dress rehearsals.

"Seriously, however, I am glad to make this trip here tonight publicly to acknowledge the debt that I owe to Samuel A. Carlson. He, a Republican, appointed me to my first public office, although I was a Democrat and had resided in the city but a short time. A Republican council voted my confirmation. That, in a sense, is something of a symbol of Sam Carlson's administration. Among neighbors, his friendship did not stop at party lines, nor shy at party labels. It was in a very real sense at the elbow of Mayor Carlson that I took my initiation in public office, but I don't expect to last as long as he has.

"The career of Mayor Carlson has been a peculiarly individual career. For more than a third of a century he has been successful in nearly every election. Always the political organizations had other candidates, and the newspapers often had other candidates. Every election it seemed that nobody wanted Sam except the voters.

"The mayor has been very broadminded however. He has no prejudice against any political party. He would take any old nomination from any of them. Sometimes he has even nominated himself. But the interesting thing about it is that he was usually able to win any nomination, or without any nomination. And he has had no prejudice against any race, class, or nationality. He would accept any man's vote.

"The result has been that Mayor Carlson has never been a chattel of any political party—he has never been the property of any organization, and has never been the tool of any group. He has therefore kept his own career from being submerged in the temporary "ups" and "downs" of the many movements that have come and gone.

"This man whom we honor tonight has completed a public service which spans more than a third of a century. The citizenship which gave him his last victory is an entirely different generation from that which gave him his first commission. I was in high school when I learned of his first election as mayor. My son was in high school when he learned of Carlson's first defeat.

"This is an appropriate place for reminiscence. The period when I saw Sam Carlson at closest range was the period of the World War, and those were days that tested the courage and the faith of men. And it was in those days that I saw, in this seemingly gentle Sam Carlson, the stern kind of stuff of which martyrs are made.

"The Mayor joined with a small group of us in opposing the entry of the United States into the World War. Once in the war, we

favored backing the Allies with our economic resources rather than by sending an army to Europe. It has taken a long time to vindicate that position. I think it has become apparent today that the American Expeditionary Forces fought for ideals that even our allies in Europe did not share; that our participation in a 'war to end war' was futile; and our hope to make the world 'safe for democracy' was disappointed. But war was on, was uncomfortable, and it seemed, at the time, certain to end the careers of all who participated in the hope for peace.

"Throughout the war Samuel A. Carlson stood as the official head of this community, for free speech—not as a theory but as a fact. He always respected the civil rights of the people of this city.

"Mayor Carlson consistently stood up against the wave of intolerance that followed the war. The result is a city where anyone is free to speak in support of any 'ism' that one likes. And for that very reason there is no community where it is harder to sell an 'ism' to the people. Mayor Carlson always favored free, and open, and frank discussion of local and national problems, and was one of the leading spirits in the old Saturday Night Club, where 20 years ago a group of us were debating and studying labor relations, and concentration of wealth, and the problem of old-age benefits, and problems of unemployment, and all the rest of the problems—that have since become issues in our country.

"The thing that I see in Mayor Carlson that has enabled him to keep his leadership during this long period is not integrity alone—most men have that. It was not a good mind alone—many men have that. The distinguishing thing about Sam Carlson has been a certain vision and basic understanding of people.

"He has been able to sit in a conference in his office and yet see through the walls of men's homes and know how the problem of that conference was affecting their firesides.

"He could sense what was beyond the newspapers, and hear the word that was going from mouth to mouth at the workbenches and in the markets of the city. He looked beyond the false fronts which organizations put on and saw people back of organizations.

"The result of this vision was that no group was ever able to surround Sam Carlson. No little coterie ever could overwhelm him. He could think his way through and around them.

"Sam has been called a demagogue, a rabble-rouser, a Socialist, a Communist, and a crackpot. But the fact was that he just naturally and simply had a great belief in Lincoln's common people, whom Lincoln said God must have loved because he made so many of them. Those people through a third of a century have answered Sam's faith in them with an abiding faith in him.

"And he has kept that faith. Whatever may have been said about the wisdom of his financial policies, or the merits of particular projects, this community has never stood for 1 moment in doubt that Sam Carlson was striving for a good life in this city, for an abundant life—if you will, for a wholesome life, and for free life where men and women might develop without political or economic, or social suppression or opposition.

"He had a vision of democracy of substance, not merely a democracy of form. He has watched as have all intelligent Americans, and been instructed, by that sane, and just, and well ordered life which his own Scandinavian people have achieved to a greater degree than most others.

"So tonight I leave it to others to praise the material things which Sam Carlson has done for our city. Others may talk about the bridges, the pavements, the light plant and water system—all worthy in their way.

"My tribute to Sam Carlson is that his public life has been good for the soul of this city. For 30 years he has shown us how to take victory without arrogance, and how to take defeat without hatefulness. He has taught us how to follow ways of peace—peace for the nations of the world, and peace for the groups within the city. He has taught us how to go through the petty irritations that are inseparable from political life, without becoming a petty man. He has consistently encouraged and aided young men and young women, inspired them to the better things, without regard to political party, or to racial inheritance, or to the riches they might possess.

"I have never known him to fawn upon any man because he never imagined himself above the ways, or problems of humble people. He has led a simple life devoted to trying to make simple lives and humble lives better ones.

"It is these things—these spiritual qualities that will live in the citizenship of this city after the material things pass away.

"Mayor Carlson, after a third of a century of public office, you retire a poor man, measured by the goods of the world. But you have laid up riches in the hearts of men. And from those hearts tonight, from the proud and humble, from the rich and poor, from the young and old, there comes the wish that you may long outlive the Psalmist's allotment of three score years and ten, and that you may be happy amidst the fruits of your good work, and the affections of your fellow citizens."

A 60-Year Public Career

The following is a brief sketch of the public career of Samuel A. Carlson. Mr. Carlson was born in Jamestown, N. Y., October 26, 1868; he was educated in our public schools. In 1890 he assumed management of a furniture plant which he continued until 1895, when he became manager of a Swedish newspaper, the Vart Land (Our Country), which was subsequently published in both the English and Swedish languages, until the Scandinavian immigration diminished after the First World War. Mr. Carlson has a son, Wendell L. Carlson, a research engineer at Princeton, N. J. In 1893, Mr. Carlson was elected as councilman on a platform calling for the expansion of municipal electric service production and for a municipal water plant, paving, and sanitary sewer construction. In 1895 he was reelected, receiving the endorsement of three political parties, Republican, Democratic, and People's. And in the same year 1895, Mr. Carlson was appointed by Mayor Green and subsequently reappointed by Mayors Cooper and Johnson, as a member of the then board of public works. In 1908, Mr. Carlson was first elected as mayor.

Here is what the Jamestown Journal said February 21, 1894, concerning Mr. Carlson when most of our public improvements were in the controversial stage:

"The man who worked in and out of season, to whom a large share of the credit is due, is Samuel A. Carlson. His sledge-hammer arguments fell in all places at the right time and no one seemed to be able to stand against them. He was armed with an array of facts and figures and so well grounded in his position that it was impossible to shake him."

In reference to Mr. Carlson's connection with the early development of the electric plant, the following editorial appeared in the Morning News of April 16, 1895:

"The people remember that it was through the efforts of Mr. Carlson as chairman of the lighting committee, that the work of extending the municipal lighting plant, was brought about against powerful opposition."

As a further explanation in reference to the above comments, it should be stated that the municipal utility movement had its beginning immediately after the village of Jamestown had been incorporated as a city.

The first steps were taken at a meeting of the Ethical Society, which held public meetings Sunday afternoons, at which a motion was introduced by Mr. Carlson and carried, to petition the city council to authorize the construction of a plant to light the business streets of the city. This resolution, however, was pigeonholed by the council at that time.

Mr. M. George Martyn, a manufacturer and a frequent contributor to the press on local topics, gave vigorous support to this proposal. The board of aldermen, however, finally built the street lighting plant at a cost of $30,000. After this project had been successfully tried out Mr. Carlson, as stated above, was prevailed upon to become a candidate for alderman on a platform calling for the expansion of the lighting plant at a cost of $32,000, for the purpose of selling electricity to the citizens, which was not authorized under the street lighting system, and also erecting a new municipal water plant and other improvements such as paving and sewers. Jamestown was the first city in the United States of America to supply electric service to the people.

The conservative citizens were up in arms against Mr. Carlson. They said he was a "youthful inexperienced dreamer.". They called him a radical with visionary notions about the functions of government. They wrote letters to the newspapers denouncing his theories and asserted that he would lead the city government into financial bankruptcy by launching an intricate and complicated mechanism of electrical production as part of the city municipal administration.

According to the city statistical reports of 1955 during the past 42 years the total electric current sold to consumers by the local electric powerplant brought in about $38 million. Local consumers have paid about one-half the rate paid by consumers in cities supplied by privately owned plants, and this can be considered a saving to local consumers of $38 million during these 42 years—nearly a million dollars a year average. In addition, the city power plant has been expanded and paid for out of revenues and without taxing the citizens of Jamestown, its value at the present time representing many millions of dollars. Also, the board of public utilities has voluntarily contributed tax moneys to the city in excess of the amount which a private electric power company would have contributed, although the courts of this State have held that any municipal plant supplying utility service at low rates thereby makes the equivalent of tax contributions, and in some years the board has paid dividends to consumers ranging from 10 to 20 percent. Allowance for depreciation is made each year.

Many people talk about "creeping socialism" overlook the fact that any public utility system must be a monopoly whether publicly or privately owned. In Jamestown the average home owner gets electric service for all household purposes for less than 15 cents a day, even after the 18-percent increase fixed by the public service commission a few years ago. We have free enterprise in all privately conducted business undertakings, but there can be no free enterprise in the field of public utilities.

At Mr. Carlson's first election as mayor he had three prominent opponents, ex-Mayor O. F. Price, Prof. H. E. V. Porter, then president of the board of aldermen, and ex-Alderman John C. Swanson, a contractor. In order to give the voters of three minority groups official representation in the city administration, he appointed ex-Mayor Price to the office of city treasurer, Prof. Porter of the office of chairman of civil service commission, and ex-Alderman Swanson to the office of inspector of paving and sewer construction. The politicians told him that he would never get anywhere by that kind of a

policy, but he continued to give minority representation on all appointive boards.

Mr. Carlson has always favored control by the majority and fair representation to minorities in all legislative bodies. All voters pay their share of taxes either directly or indirectly and minority groups are often more progressive in opinions than the majority.

The leaders of the recent two presidential conventions praised independent voters. Why should they not be officially represented in our Government branches?

Mr. Carlson continued to be elected mayor for eleven 2-year terms and one 4-year term, the 4-year term being in compliance with a constitutional provision which was required when the amended constitution went into effect providing that all mayors should be elected in the odd-numbered years, and which was intended to eliminate State and national politics from city elections which had previously been held in the even-numbered years. This makes his mayoralty service 26 years. Later he was appointed by Mayor Leon F. Roberts as a member of the board of public utilities and reappointed to two additional terms by Mayor Stroth. In this connection it may be of interest to mention the fact that he also carried his city four times as candidate for Congress.

Mr. Carlson was a candidate for mayor in 14 elections. He was elected in 12 elections and defeated in 2 elections. His first defeat was in 1927 when he was opposed by Alderman Lars A. Larson but he was reelected at the end of Mr. Larson's two-year term.

Mr. Carlson's second defeat was in 1933 when he was opposed by Leon A. Roberts, a reporter for the Jamestown Evening Journal. His supporters criticized Mr. Carlson because his appointees on the public utility board had accumulated about $1 million from the profits of the electric plant to provide for expansion of the plant. Mr. Roberts and his supporters held that the surplus money should be used to reduce taxes, while Mr. Carlson held that the board was already contributing large sums of money to the city and the board needed the surplus funds to expand the electric plant in order to give more people lower electric rates. However at the next election Mayor Roberts was defeated and Mr. Carlson was reelected.

One of the most important official actions ever taken by the board of public utilities was the purchase of the Niagra electric distribution system in 1931. For a number of years there was litigation, confusion and a kind of rivalry that was costly and with no gain or benefit to either the city of the private company. Power lines were often tapped by alleged mistake. Both of the electric authorities accused each other of taking power unlawfully from the other's lines. But it was not until Mr. Carlson had returned to office to continue his policies of complete municipal control after his first defeat in 1927 that the private company seemed inclined to negotiate regarding the sale of their distribution system in the community. The company held out for a million dollar price for the transfer of its system in the Jamestown district. The company finally consented to sell the entire system within the Jamestown territory for the sum of $750,000 as proposed by Karl Peterson. The expansion of the plant from 1908 to 1933 was engineered by the Klauder Engineering Co. and Melvin O. Swanson. Robert H. Jackson, attorney for the company, advised the acceptance of the board's offer, (he was not then Supreme Court Justice). Attorney J. Russell Rogerson was then counsel for the board of public utilities.

It should be stated that it was Frank O. Anderson, an industrialist, who played a leading part in first making the municipal electric plant a formidable competitor of the private electric system. In 1933 under Leon Roberts' mayoralty administration, Clayton O. Johnson was appointed superintendent of public utilities, succeeding Melvin Swanson, and at the close of 1956 Merle W. Smedberg was appointed to succeed Mr. Johnson who had retired. The first superintendent of the plant was the late Charles Sundquist; it was Ernest Cawcroft who drew the charter that gave the board the necessary expansion powers.

The Jamestown Welfare Department, under the direction of Carroll M. Hall, has come to be recognized as the most efficiently conducted in the State of New York.

It should be stated in this connection that when the electric plant was in complete control of the board of aldermen elected by partisan methods in the early days of the electric-plant operations there were only about 200 consumers and less than $50,000 annual revenues, while during the period of nonpartisan administration the plant's list of consumers has reached 18,000, with an annual revenue of nearly $2½ million up to the time of this writing. Artesian well water is supplied by the city at a rate of less than 2 cents for each 50-gallon barrel and at this writing the city is practically free from any tax-payable bonded debt.

MR. CARLSON'S RELIGIOUS VIEWS

Mr. Carlson's religious viewpoints are based on the following passages from Holy Writ: Micah the prophet, said, "What does God require of thee but to do justly, and to love mercy and walk humbly with thy God?" The Great Master preached a doctrine of love, not hatred. He said, "Blessed are the peacemakers." He said love your enemies, not hate them. He never blessed the warmakers yet we continue to conscript our sons for foreign battlefields.

NEWSPAPER COMMENTS

Post-Journal editorial, May 1, 1943: "Down through this long span of years, Sam Carlson has made a contribution to the life of Jamestown which entitles him to the deep respect of all our people, regardless of differences in community politics and policies. No one can question the fact that at all times he has sought with intense sincerity and downright honesty of purpose to serve his native town to the utmost of his ability, and that he has succeeded in accomplishing a great deal of lasting value is true beyond the shadow of doubt. In certain phases of city government he has pioneered movements which have eventually become recognized as of vital significance in local history. Especially is everlasting credit due him for his part in the establishment and the development of the electric light and water systems, which will always remain a monument to his civic leadership."

The Buffalo News said: "Samuel A. Carlson becomes a symbol of good government, the most reelected mayor in America."

Charles A. Beard wrote Mayor Carlson: "Your autobiography is a living document for the history of popular government."

On January 1, 1938 when Mayor Carlson retired from the mayoralty, the city council conferred upon him the unique title of mayor emeritus in recognition of his long service to the city of Jamestown.

Referring to the purchase of the local Niagara power system by the city, the New York Times in commenting August 16, 1931, said, "The name of Samuel A. Carlson becomes closely identified from the beginning with the developments of municipal electricity in Jamestown, and he is the man who gives the personal human interest to most of the governmental history of that city for a longer period than is covered by the average memory of the present generation."

Mr. Edward J. Meeman, noted editor of the Memphis Press-Scimitar published at Memphis, Tenn., sent Mr. Carlson the following letter October 22, 1956:

"DEAR MR. CARLSON: I am very happy to have 'Sam Carlson's Own Story.'

"It is a great story—one of America's best stories, one of the world's best stories.

"It is inspiring.

"All good to you."

Those who wish further information regarding Mr. Carlson's public record can secure this at the James Prendergast Free Library where his numerous scrapbooks have been filed.

If We Cut Arms Budget

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1957

Mr. MULTER. Mr. Speaker, faced as we are with the largest budget in history, the following article by Sylvia F. Porter, which appeared in the New York Post of April 1, 1957, will be of interest to our colleagues:

IF WE CUT ARMS BUDGET
(By Sylvia F. Porter)

Now that budget cutting is becoming almost as popular a pastime in Washington as throat cutting, let's really dream a moment.

Let's imagine that we found it possible and feasible to slash defense spending across the board by a full 50 percent—to reduce the arms budget from today's $44 billion a year level to $22 billion.

What could this mean to us, as individuals and a nation?

Either it could mean a shuddering depression, bringing financial disaster to millions and fanning out all over the free world;

Or after a carefully managed transition from a cold war to a peactime economy, it could mean the beginning of a golden era in which living standards would rise to the highest levels ever.

Whether it would mean the first or second would depend on how skillfully we prepared in advance for the arms cut, what positive actions the Government took at once to ease the transition, how much the depression fear itself was kept under control.

Actually, I'm not dreaming nearly as much as you might think.

A Senate subcommittee this month has been holding hearings on precisely this—the possible impact of an across-the-board cut in arms spending—and some of the Nation's top authorities, including Reserve Board Chairman Martin, have testified in utmost seriousness on the necessity for major Government action to avert a slump following an arms slash.

In highly informed quarters in Washington and abroad, the belief is growing that the Middle East and East Europe crises may speed progress on disarmament just because they have pointed up so sharply the reluctance of powerful nations to risk general war.

Assume it then. Assume a defense spending cut totaling 50 percent starting against today's not too exuberant business background. Assume that the cuts are spread over the next 4 years.

What if we aren't prepared to cushion the impact?

Some of our key industries deeply involved in military work would be brutally hit. Joblessness would skyrocket. In the words of the Reserve Board, "Uncertainty throughout our economy could lead to cumulative repercussions beyond the industries directly affected by the military cutbacks." What's more, while the economy came through the 1947 and 1954 arms spending cuts pretty well,

forces were helping then that aren't helping now.

To quote another authority, Columbia University's Dr. Emile Benoit, writing in this month's Michigan Business Review, "Any defense cuts from here on out will have immediate deflationary effects, unless offset immediately by rising expenditure of some other type."

Bluntly, then, arms cuts could bring on a sharp slump—unless we plan now to fill the gap immediately and completely.

What should we be planning then? Here are some key proposals from highest sources:

(1) Immediate moves to channel every dollar saved on arms spending into the hands of other spenders—and that means moves at once.

Tax cuts for individuals and corporations would be in order to provide a basis for rising spending by private sources on goods and services—and there should be no payments on the public debt during the period of economic recovery from the shock of the budget surgery.

Much greater spending on highways, schools, water systems, urban redevelopment, public works in general would be justified.

(2) Strengthened and broadened systems of jobless insurance and veterans' benefits and new programs to retrain and relocate workers laid off from armaments jobs.

(3) Bold policies to give special assistance to specific areas and industries—for instance, special loans for reconversion of plants.

(4) Broad plans to develop and promote for civilian use inventions and products discovered through military research.

The fundamental point is we can't rely on the economy to make up for the arms cuts spontaneously. We can get through the transition and into the new era but the Reserve Board's words must be heeded:

"It is of the utmost importance that the Government be prepared to act quickly to meet any developments and that this determination be generally understood. It will be perilous if we ignore this warning.

The Importance of Action by the 85th Congress To Assist Small and Independent Business

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. CRAMER. Mr. Speaker, there has been much said about relief to small business during the past few months and many efforts by various executive branches of Government have been made to assist this vitally important segment of the American economy. Perhaps the major move to bring real aid and not just conversation is the introduction of several bills, including my own (H. R. 5986), which would bring about methods of tax relief to small businesses with taxable incomes under $150,000 a year by amendment of the Internal Revenue Code.

Small-business concerns today, and there are over 4 million in the United States, face a future that is neither bright nor conducive to the expansion of this traditionally independent and important part of the Nation's great backbone of manufacturing and service trades. It is imperative that such conditions should be improved through the efforts of the 85th Congress.

In the bill that I have introduced revision of existing laws would be made to provide for the growth, expansion, and modernization of independent business enterprises engaged in trade or commerce. This would be achieved by methods of tax computation that would bring them nearer to a par with larger corporations when endeavoring to utilize capital assets to finance operational and expansion borrowings. Participation of family-sized farms and agricultural interests is also provided in the proposals of my bill.

The most logical and practical method of immediate relief for the widest segment of small business is through tax relief. In only this way can we strike at the heart of the problem of the many small-business men of the Nation. They must have direct tax relief that will overcome the fluctuations of income and resultant onerous burdens imposed by present Federal taxes.

The table of exemptions proposed in my bill allows for certain expenditures to be treated as not chargeable to the capital account within certain limits. Allowable expenditures would include construction, erection, installation, improvement, or aquisition of any facility, land, building, machinery, or equipment used in the business.

The following table explains limitations of these deductions:

If taxable income is:	The limit is:
Not over $10,000	50 percent of taxable income.
Over $10,000 but not over $25,000.	$5,000, plus 40 percent of excess of taxable income over $10,000.
Over $25,000 but not over $50,000.	$11,000, plus 30 percent of excess of taxable income over $25,000.
Over $50,000 but not over $100,000.	$18,500, plus 20 percent of excess over $50,000.
Over $100,000 but not over $150,000.	$28,500, plus 10 percent of excess over $100,000.

The expenditures so treated shall be allowed as a deduction.

Other sections of the bill would allow for further election on the part of the taxpayer in filing returns and provide incentive for the investment of private capital in small business.

It is most demanding on this 85th Congress that concrete action to relieve the distress of the small-business man be taken. I urge such action both in the committee and on the floor of the House.

An Overstuffed Mattress Proves Budget Cuts Not Futile

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. CRAMER. Mr. Speaker, I have asked that two editorials appearing recently in newspapers of the First District of Florida be included in the RECORD because of the good thinking and constructive approach they have taken to the problem we face in reducing the national budget and also because of the appropriate suggestion made by the combination of their titles. The Tampa Morning Tribune has headlined its editorial "An Overstuffed Mattress" and the St. Petersburg Independent title is "Budget Cuts Not Futile." Their combination as "An Overstuffed Mattress Proves Budget Cuts Not Futile" carries out what I believe to be the attitude of the American public. I ask inclusion of these two editorials that such a point may be brought to the attention of the Members of the House and to indicate the general opinion of the majority of people in the first district whom it is my honor to represent.

The editorials follow:

[From the Tampa Morning Tribune of Friday, March 29, 1957]

AN OVERSTUFFED MATTRESS

We can't blame President Eisenhower for losing his press conference poise when a reporter asked whether, to help cut the national budget, he'd be willing to "do without that pair of helicopters that have been proposed for getting you to the golf course a little faster than you can do it in a car."

The question carried an unfair implication, since Mr. Eisenhower's political critics have made so much of his golf playing. And the fact is that the announced purpose of the helicopters is to enable the President to save time in getting from the White House to the airport. From the airport he may head for Augusta and golf, or he may fly somewhere else on important official business.

Few Americans, we think, would object to the expenditure of $120,000, plus upkeep, for helicopters which would save the President both time and nerve strain.

But the fact that the question was asked at all indicates the new national emphasis on economy in government.

Public outcries against excessive Federal spending began to be heard after President Eisenhower submitted to Congress the 1958 fiscal budget calling for an expenditure of $71.8 billion, or about $3 billion more than for the current year.

Senators and Representatives reported a surprising volume of cut-that-budget letters from the home folks. Almost overnight, the wallflower economy became the Perle Mesta, of Washington. Everybody wanted to go to her party. The House fell under her spell and began flailing away at departmental appropriations, knocking off $5 million here, $80 million there, $115 million somewhere else—enough, all told, to mount up toward a billion.

For the first time in years, we suspect, newsmen actually sat down with the 1,249-page budget and began peering at details of its proposed expenditures. Virginia's Senator BYRD, whose yearly call for a reduced budget made about as much impression as Groundhog Day, found himself speaking now to an attentive Nation.

The average citizen finds it almost impossible to come to grips with a $71.8-billion budget. It's like trying to carry a feather mattress: the thing is too big and formless to get a firm handhold on.

But when that tremendous total is broken down into its component parts, a man begins to understand why Government spending is so high. And to get mad about it.

He learns, for example, that 3 out of every 4 existing Federal agencies propose to spend more money next year—that their demands, altogether, are up 36 percent over 1954.

He reads (in an analysis by the Knight newspapers) that his tax money is going for such items as $300,000 to buy ammunition

and trophies for civilian rifle clubs; $105,000 for a Department of Commerce agency to decide what official information ought to be withheld from the public; $2,683,000 to bring in and supervise Mexican farmworkers for the benefit of commercial farmers; $42 million to cover losses on strategic minerals the Government buys high and sells low; $1 million (double the present figure) to pay travel costs for Housing and Home Finance Agency Administrators; $41,850,000 for air conditioning Federal buildings.

It is an axiom in Government that old bureaus never die—they grow on and on. Senator BYRD pointed out to the Senate a classic example of this the other day. The current budget carried an item of $150,000 for something called the President's Committee on Education Beyond High School, which was supposed to turn in a report and (presumably) bow out this year. But, lo and behold, the new budget proposes an additional $300,000 for the Committee to complete its report, another $650,000 for grants and subsidies, and a further appropriation of $2½ million "to implement recommendations of the Committee." All this from a $150,000 survey, still uncompleted.

These are some of the feathers that go into the budget mattress. It makes a cozy bed for an army of bureaucrats and assorted special interests, but it is gradually breaking the taxpayers' back.

We don't begrudge President Eisenhower his helicopters. But we think the Nation has a right to expect him to show greater concern than he has to date about the many Federal expenditures in the new budget which have far less justification.

BUDGET CUTS NOT FUTILE

President Eisenhower's rather testy attack on congressional efforts to cut his record $71.8 billion peacetime budget would be more understandable if both he and Treasury Secretary Humphrey had not invited Congress to take such action.

In his press conference this week, the President said it is futile to talk about major cuts in the budget if the United States is to maintain its position in the world and provide its citizens with programs agreed to be necessary.

In the past both the President and Secretary Humphrey have agreed that the present level of Government spending is too high; that it should be reduced. Further, the President has said that if Congress can find places where the budget can be cut without harming essential services it should proceed to do so. Indeed, even this week he agreed that it would be possible to "save money here and there, and I am all for it to the last dollar bill."

What he seemed to fear, however, is that Congress might cut his budget by billions instead of millions. He insisted that such items as defense, atomic energy, foreign aid couldn't be slashed without disastrous results, and that substantial cuts in domestic programs would cripple such activities as veterans benefits, farm aid, and school construction.

Indeed, he said, no major reductions could be achieved unless Congressmen who are talking economy want to eliminate the great number of public works projects they have authorized for political purposes.

However, it might occur to many Americans that public works programs—political or nonpolitical—are as essential to the welfare of this country as those achieved in foreign countries with the help of American aid.

We are not convinced that the sacrifice of all public works programs is the only means of reducing the present staggering budget.

We are not convinced that there is not a lot of nonessential spending in every department and agency of the Federal Government—including such sacred cows as defense, foreign aid, atomic energy, as well as our vast domestic program.

We don't believe that the answer lies in making crippling reductions in any single Government service, but in the elimination of nonessential spending in every department from the top to the bottom. If Congress in its drive toward economy can achieve that end, major reduction in the budget will be achieved without disaster to anyone.

The Inter-American Highway

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. CRAMER. Mr. Speaker, in the prominent Latin American newspaper, Diario Las Americas, published in the State of Florida, appeared a report I have prepared on the Inter-American Highway. This important link between the Nations of Central America and the United States is of vital interest to this Congress and the Nation. For this reason I ask inclusion of the article at this time and urge greater understanding between our nations through such great cooperative projects as this highway that is now nearing completion.

[From the Miami Springs, Fla., Diario Las Americas of March 10, 1957]

THE INTER-AMERICAN HIGHWAY

(By Congressman WILLIAM C. CRAMER)

More than any shouted platitude quiet strokes of a few pens on final construction contracts will demonstrate to the world the ability of neighboring nations to achieve a common goal—peacefully and with complete respect of each other.

What is, perhaps, the world's greatest project to be conceived and jointly programed by several nations, the Inter-American Highway, will by next April reach final stages. By the pen, final contracts for the few remaining miles of work will be signed. This 3,200-mile link from the southern border of the United States through Central America to the Panama Canal soon will be as great a bond of friendship and commerce as the world has ever seen.

As a member of the Public Works Committee of the House of Representatives, it has been my privilege to play a part in this work that was originally conceived in 1924. I have inspected the entire route of the highway and was impressed with the great engineering skill that has been demonstrated in overcoming what would seem to be impossible terrain. I have talked to the people responsible for the program in each of the nations of Central America and know the sincere desire to provide a pathway of commerce and friendship. Above all, I have been impressed that the program has been one of complete cooperation and united effort in providing the manpower, brains, and funds to do the job at hand. The people of Central America showed unusual skill and determination in this effort.

The highway today has reached the final stages.

Mexico has completed all portions of the road and is busy paving an additional 548 miles.

Guatemala will open to controlled traffic by July of this year the 25 mile strip, previously impassable, to add another link in the chain.

Honduras continues to improve its portion of the highway.

Of the 140 miles of incomplete road in Costa Rica, 100 miles of construction is now underway, and the remaining 40 will be contracted for in 30 days.

On March 15, Panama will open bids on the final 15-mile strip that will complete construction programing.

These are the up-to-date facts of the Inter-American Highway—a project exclusive of Mexico's contribution, nearly one-half of the route, costing approximately $191 million.

There is much more to the highway than just the dollars and cents of construction and a hard-working team of engineers and workers. This primary means of travel will make each of our countries a little stronger—will strengthen the bonds that have held us together over the years as friendly nations. It is the means by which each nation can and will encourage the neighborly contacts and mutual understanding that brings true friendship.

Those of us who have made exhaustive study of the highway know it will establish a greater and stronger economy in the nations that it traverses. Mutual accessibility of marked areas beyond the borders of each nation will expand trade relations and enlarge opportunities for free trade in new areas. Strong cultural and spiritual ties will extend from one end of the road to the other. The North American tourist now spends annually a billion dollars in the Caribbean area, and with the completion of the highway I confidently predict this expenditure will be far surpassed and this gateway to the Latin Americas will be a most popular destination of hundreds of thousands of my fellow citizens.

The Congress of the United States, representing the people of this Nation, is proud of the part it is taking in completion of this great project. We are even more proud of the fact that this international effort has been a friendly cooperative program of accomplishment between peaceful nations and that today we are near our goal.

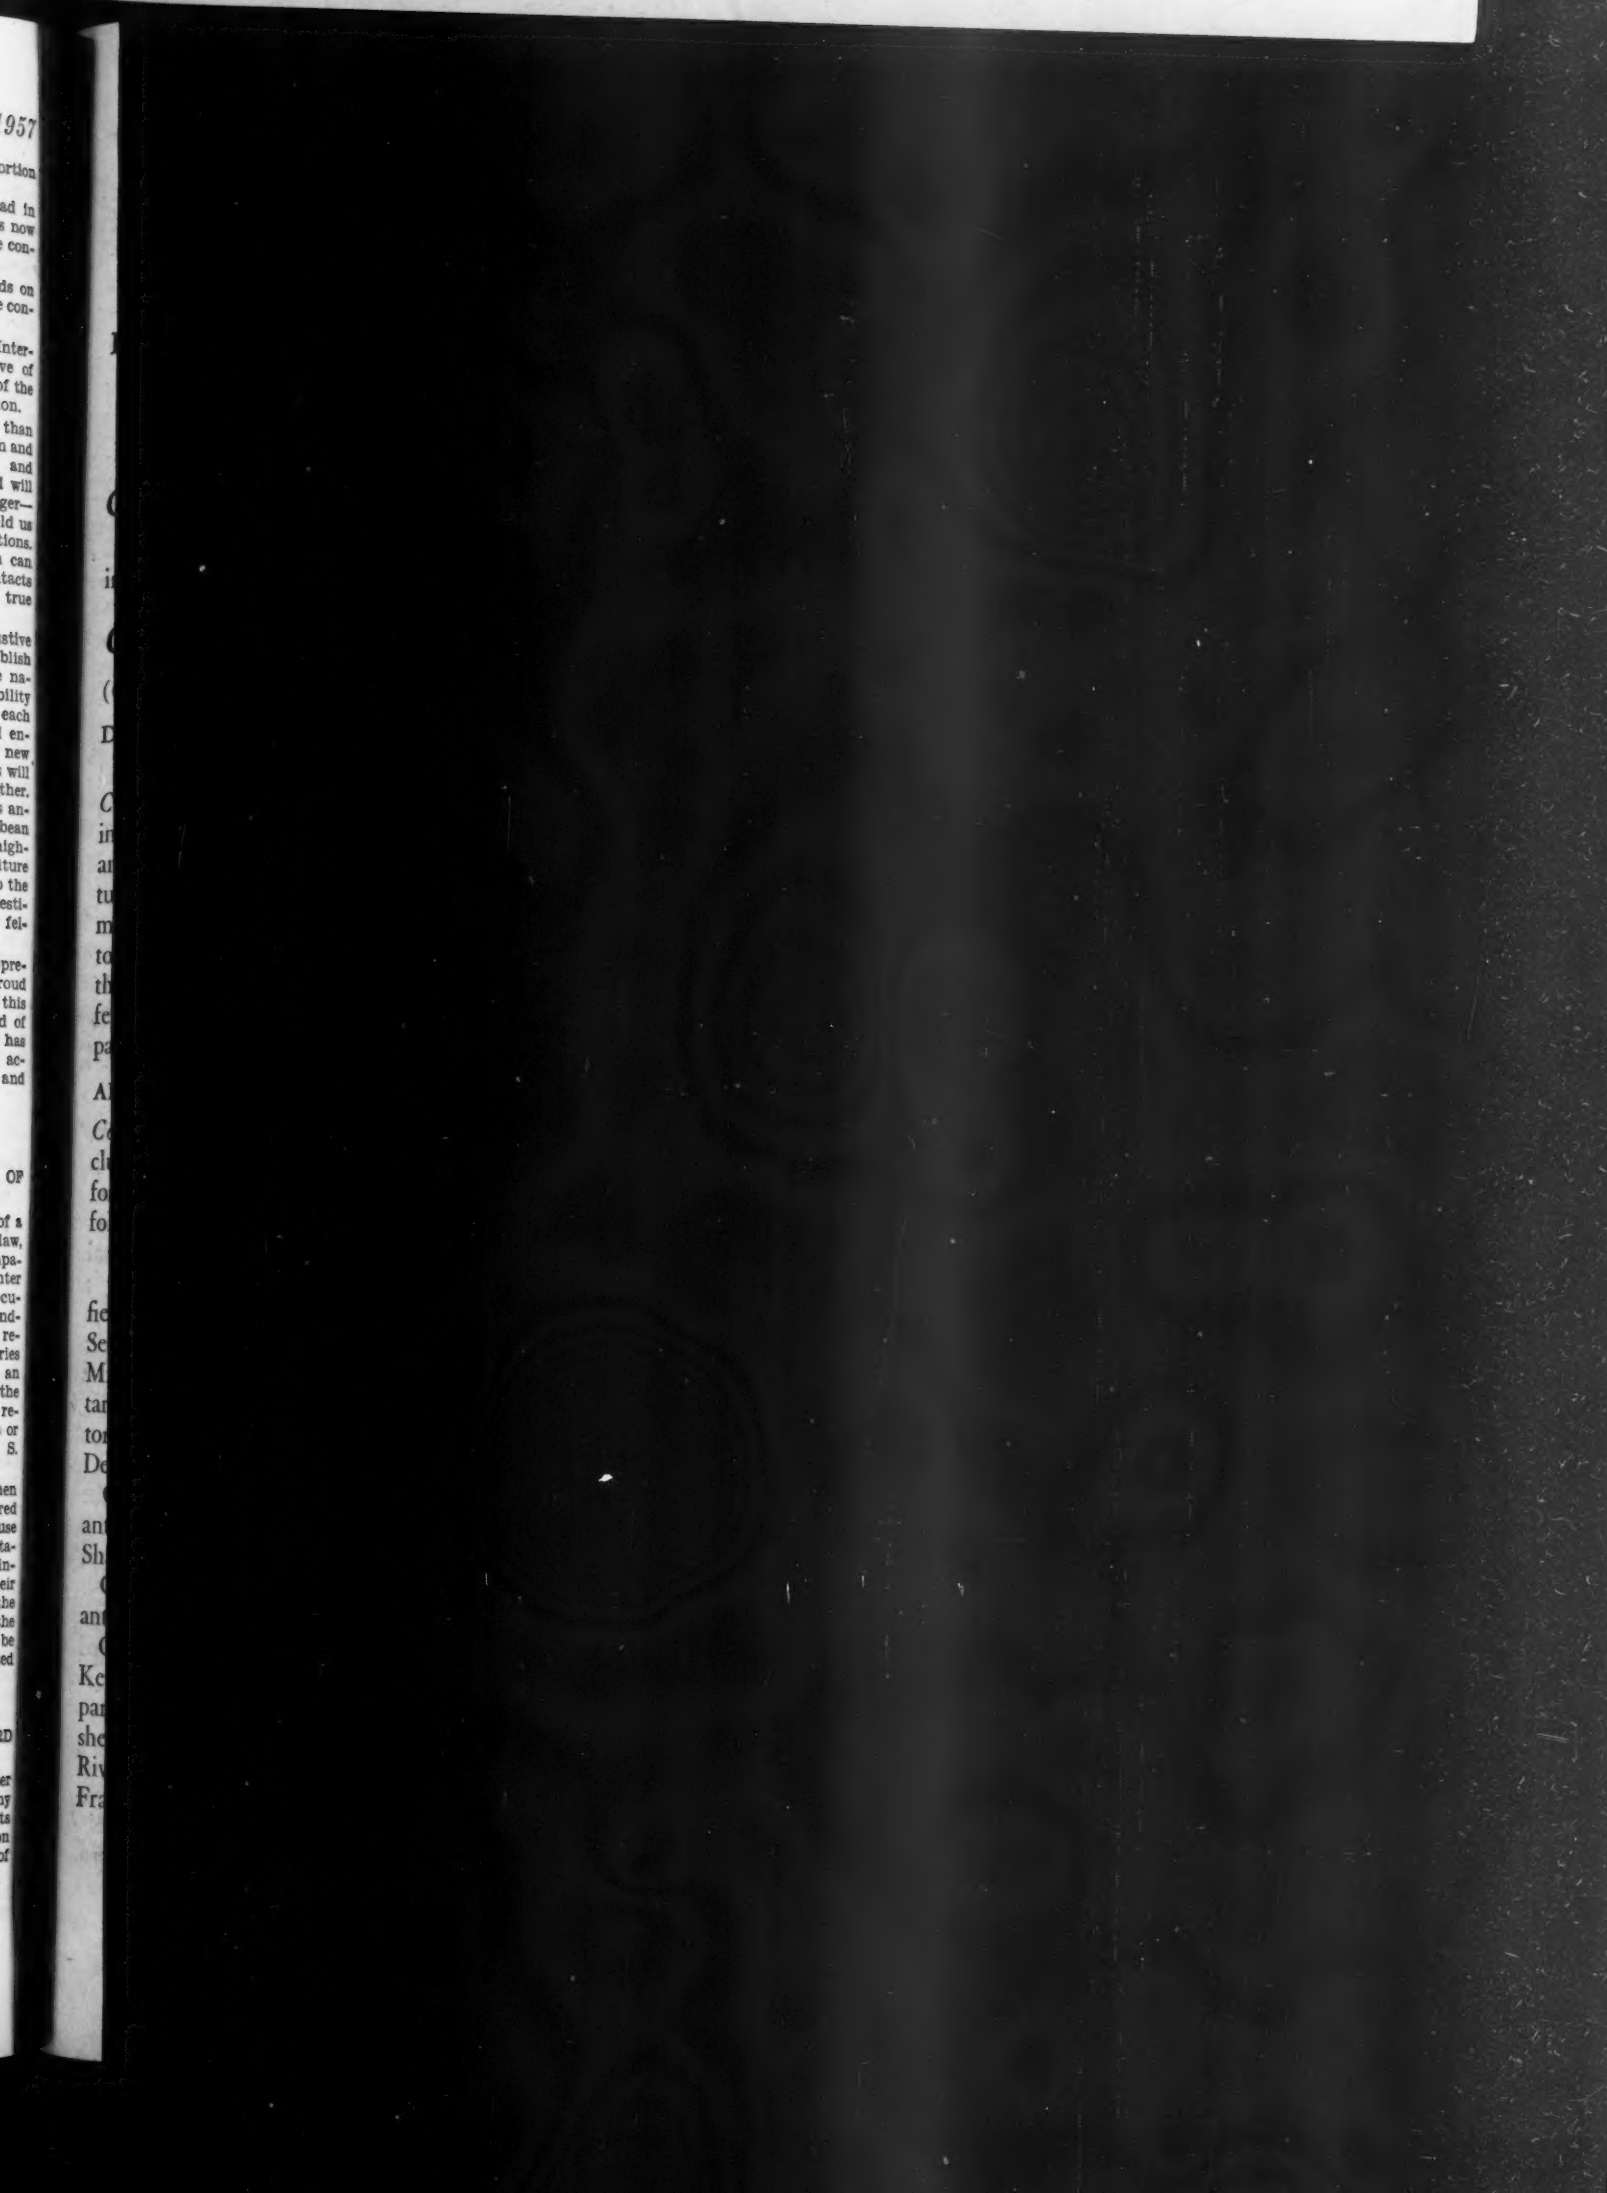
LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).



Appendix

The Overall Housing Program

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, April 4, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful statement on the overall housing program which was made before the Banking and Currency Committee on Wednesday, March 27, by Jerry Bialac, president of Rental Development Corporation of America. Mr. Bialac is a highly capable young man who has had an active and successful participation in housing projects and programs of various kinds. I feel that his views would be of interest to all Members of Congress and to the public.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF JERRY BIALAC, PRESIDENT, RENTAL DEVELOPMENT CORPORATION OF AMERICA, MARCH 27, 1957

Mr. Chairman and members of the committee, again I am indebted to this committee for the opportunity of expressing my ideas and recommendations on this important legislation. Today marks my third appearance before you as a private citizen, and I know that although I represent no group or pressure lobby, my testimony will be as carefully considered as any that has been presented before you, for on each of my past appearances you have seen fit to incorporate a number of my recommendations into legislation.

To review my background briefly, my father, Samuel G. Bialac, and I are engaged in the planning, development, building, and operation of low-medium cost apartments. My father has been in the building business for some 17 years and I joined him after leaving the Air Corps in 1945. During this time we have built thousands of FHA homes and apartments in the southwest United States. At the present time we have completed and are operating a 608 project in Los Angeles of 795 1- and 2-bedroom apartments; a 207 project in Phoenix, Ariz., consisting of 523 1- and 2-bedroom apartments, a park swimming pool and shopping center; and we are starting a 207 project in San Diego, Calif., of 735 badly needed apartments with shopping facilities.

San Diego is the most critical housing shortage area in the United States today. Our project will be approximately 3 minutes from the new Atlas missile plant which is now under construction, and which I understand will employ some 17,000 persons. The FHA in San Diego, under the able Mrs. Fay Hartman, has cooperated with us 100 percent to get this needed housing started. We also have in the planning stage section 207 projects for the Los Angeles and Denver, Colorado areas.

We have recently attempted to secure contracts for various Capehart military-housing construction and with Senator CAPEHART's help I have had conferences with the heads of military housing in the Pentagon for the purpose of discussing certain inadequacies of the law. It is with this experience that I offer the following comments and suggestions.

Section 207 of the National Housing Act provides the only low-rental housing program to the general public. Its provisions for rental control are in line with the present effort to stave off inflation, and is the only way permanent and pleasant surroundings may be rented at a reasonable rate in such rental-starved areas as, for example, San Diego. The inability to acquire such rentals will keep many engineers, scientists, and workers from jobs in plants like the CONVAIR Atlas missile plant—and seriously hamper the Nation's defense as well as the economy of our country. In the past, the rate of production of rental units under this act has ridden on the roller-coaster cycle of the whimsical mortgage market and the incentives—or lack of them—in the various housing bills; Therefore:

1. To even out the mortgage market and level production rate of apartments so there will not be too many or too few apartments available, but the right amount to keep a small, even vacancy factor which will make competition and keep the services and maintenance top quality, as well as force conventional apartments to a more realistic rental ceiling, it is recommended—

(a) That the Federal Reserve System require member banks to keep a minimum and maximum portion of their portfolios in Government-insured housing.

(b) FNMA, which has recently announced that it will take prior commitments on section 207's, has taken a step in the right direction, but teeth must be inserted. They must put their prices more realistically in line and keep them on a permanent basis to balance the market in times of need. A warehousing provision will keep the mortgages until a better market is available and FNMA will have to pick up only a small fraction of them.

(c) No more raises in interest rates. This is inflationary and in the long run will help no one. Builders will argue that it will loosen the market. It is not so; if the money is available for construction it will come forth. The builders do not pay this increase; it is tacked onto the price of the house or the rental of the apartments. Many builders presently building under the old rate will find themselves with absolutely no market for their mortgage paper at the lower rate, and those competing for the money who are not in the housing business will have to raise their offer rates, and consequently their prices; and the builders will have to pay more for materials, hence the vicious circle.

In the long run it will not help the banks; all the paper they hold at lower interest rates would depreciate greatly, should they have to cash in some of that paper.

2. Many builders are shying away from 207's because of the cost certification. This in effect says the FHA estimates the cost of the building will be X dollars; if you are an average builder you will come out with a 90-percent loan but if you are an efficient and experienced builder you must give back your savings. This destroys initiative and discourages enterprise. I do not recommend the abolishment of cost certification but I do recommend that it be modified to read 100 percent of costs instead of 90 percent of costs. In this way no windfall could be realized but it would encourage the good and efficient builders to participate in this program.

Title 8 of the National Housing Act, commonly referred to as the Capehart Act, is an act which basically is the right answer to military housing, but in its present form, and with its administration depending upon so many branches, subbranches, military arms, area engineer branches, and base commanders, that by the time the finished plan is back and ready to bid it is so elaborate, expensive, nonfunctional, expensive to maintain, and expensive to live in, that it has lost its identity as its original purpose, to have pleasant, inexpensive, and convenient quarters for families of the armed services personnel.

The reason and cure for these charges will be explained in the following recommendations:

1. As a result of the overplanning of these units builders have been afraid to bid freely, as the cost of construction is so close to the legal limit allowed by the law and, in some cases more, and the elaborate plans and specifications make biding too much of a risk. Also, the huge loans and financing costs cut further into their profits.

Recommended:

(A) Plans should be standardized for all branches of the service and it should then be the duty of the architects who are chosen to adapt these plans to local climatic and architectural styles from the same standard floor plan; and engineer these plans to the local terrain.

(a) Base commanders who are now allowed too much leeway in the planning of the projects would then only specify the number and types of units needed by the base, and approved by higher authority. This would eliminate much of the extravagance and waste now showing up in the plans. In their natural effort to get the best for their men and the finest for their post, the taxpayer is often forgotten, and, of all times, now is the time to cut.

(b) The greatest problem faced by military families moving from post to post is that drapes and curtains practically never fit the new windows, and they have to either throw them away and get new ones or leave the windows bare or ill-fitted. The furniture too often doesn't fit because of different size rooms and varied wall space caused by different placement of windows and doors. In these cases, unless the military family is ready to go to great expense, no matter how elaborate the quarters are, the living is sublevel. Duplication and monotony of design can be overcome by the correct use of colors, exterior design, and site planning.

(c) Standardization of plans could achieve many savings in construction and future maintenance. Bearing walls could be so placed that standard sizes of lumber could be utilized with no waste, cabinets and doors of standard sizes and in available quantities could be specified. Too often custom-made cabinets and items in short production are required.

(d) Architects should be chosen for their experience and ability in this field. Many architects are more eager to achieve an artistic monument than a costwise, pleasant functional project.

2. Another of the shortcomings of military housing is the maintenance which is going to be way out of proportion in the plans that I have seen. Standardization of certain features will cure much of that, but it is recommended that:

(a) More multifamily units be built.

1. Because of their concentration, common walls, centralization of utilities, switchboxes and meters, hallways, sidewalks, garages, etc., multifamily units are easier to maintain. They are far cheaper per unit to build and their land cost is far less per unit. Multifamily units properly planned with parks, playground, and swimming pool, can be far easier and pleasanter living for the military family that moves frequently. Many items of maintenance that must be done by families themselves in their limited time—mowing the lawn in single-family houses could be eliminated because of the concentration and land coverage in multifamily units. Too often the wife must do these manual chores because of duty by the husband.

3. There are other items which can be corrected which will make this act as workable and as beneficial as it can be.

Recommended:

(A) That all Capehart projects be halted temporarily and a committee formed of builders, architects, land planners, engineers, military to study the problems and recommend a procedure to regulate further construction.

In these times of high Government spending there is one obvious duplication of effort which, if corrected, would not only cut costs but would make more efficient the job both agencies are striving to do. I speak of the VA Appraisal and Examination Departments. It would be highly advisable to—

1. Dissolve the VA Appraisal and Examination Departments and transfer such personnel as architectural building inspectors, underwriters, planners, etc., to the various FHA offices.

2. Provide a new program under FHA to include all the benefits that the GI would get under the present VA regulations. This would not interfere with other VA activities and the GI would still get his certificate of eligibility from the VA.

3. The increase in trained personnel in FHA would enable that agency to take on the added traffic and even to process their regular cases better—because there would be no cross-purposes. This too would eliminate competition with each other in the mortgage market and standardize such things as interest rates, regulations, and building standards.

When I appeared before this committee in 1954 I suggested that, because of the huge growth of the construction industry—which is the Nation's largest industry—and I included home building, school, and defense plant construction, road building, commercial construction, and many other phases, a Department of Housing and Construction be created, and that this department be headed at a Cabinet level by a Secretary of Housing and Construction.

I suggested further that the Housing and Home Administrator, Mr. Albert Cole, should be that man. The events of the past few years: the multi-billion-dollar-road bill, ever-expanding school, home, and factory construction have increased that need a thousandfold. The capable and efficient way in which Mr. Cole has administered his complex Agency prove beyond any doubt his ability and specialized knowledge, needed to handle this post.

I urge this committee to use its great influence for this purpose; to fill a gap in our governmental administration which is so important to our economy, defense, education, and welfare.

Thank you.

Cutting High Taxes

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1957

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article of mine which was published in the Farm Journal of April 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HELP US CUT THESE HIGH TAXES

(By Senator HARRY F. BYRD)

I've been in the United States Senate 24 years. I've survived the New Deal, the Fair Deal, and the present deal. But the budget that this administration has just sent to Congress is by far the most dangerous that I've ever seen.

I have three good reasons for saying that:

1. This country is mortgaged to the hilt at this moment.

The $275 billion Federal debt—that you and I owe—equals the full assessed value of all the land, all the buildings, all the mines, all the machinery, all the factories, all the livestock, everything of tangible value—in the United States.

In addition we have another $250 billion of contingent liabilities. These are obligations which you and I have guaranteed in case they materialize such as $40 billion worth of possible losses on Federal housing.

Local taxes—the kind levied by 48 States, 3,000 counties, 16,000 towns and cities, 17,000 townships and 79,000 school districts—come to $25 billion, and are headed higher. (Local taxes are about 25 percent of the total.)

Thirty-three cents out of every dollar that the people of the United States earn now goes for taxes of some kind.

We owe so much money that it takes 10 percent of our taxes just to pay the interest.

There's a limit beyond which even a country as great and rich as ours cannot go. I think we've reached it.

2. In the face of all this, the President has sent Congress the biggest peacetime budget in history.

The budget is $3 billion bigger than last year, which in itself was a record-breaker. And this $3 billion doesn't include another $2 billion set aside as a special fund for the new national highway program.

Many people assume that the size of this budget is accounted for largely by military needs. Actually it calls for spending $2 billion less than in fiscal 1954 on the military, but asks for about $7 billion more in domestic, civilian expenditures.

This 1958 budget asks for 13 new State aid programs. That would make 73 in all.

This represents a change in policy—a change from a policy of frugality in Government on the part of this administration to a policy of big Government with power concentrated in Washington.

If continued, it means that both political parties are pledged to big Government and big spending. Whom does that leave to be the watchdog for the people?

3. I believe that taxes are so burdensome that if continued at present and proposed levels they will lead to serious consequences:

They will take the money this Nation's economy needs for growth to provide jobs and markets for farm goods.

They will cause a downturn in business and in personal incomes, which in turn will reduce the tax intake.

They will unleash a tremendous inflationary force.

Look what has happened since 1940. By 1952 your dollar, yes, your dollar, had lost 48 cents of its value. When President Eisenhower—newly elected on economy promises—cut $9 billion from the proposed Truman budget, this stabilized the dollar. But under last year's record budget, another two cents of the dollar's value was lost. The new budget would chip off more.

The loss of half the purchasing power of its money should be a serious warning to any nation.

It is no exaggeration to say that there is nothing on earth more important than to preserve the fiscal integrity of the United States of America and the freedoms upon which our Republic is founded.

Public debt is not like private debt. If private debt is not paid off, it can be ended by bankruptcy proceedings, and maybe not too many people are hurt. But if public debt is not paid off—and paid off with taxes—the end can only be disastrous inflation or repudiation. Either would destroy our form of government.

If we become insolvent, we cannot even defend ourselves militarily, nor can we preserve our freedom.

"But we have an emergency need for schools and roads and more health services," some argue.

I admit that it seems so. Some may think that a good case can be made for the 13 new State aid programs asked for in this budget. They come to only $400 million the first year—but like foreign aid expenditures, these would grow and grow.

The original Marshall plan was set up for $15 billion and had a time limit of 4 years. Since then we have spent $40 billion more in foreign aid. And today Congress has been asked to open up vast new spending in the Middle East.

It is an interesting fact, I think, that the debt of the United States is 2½ times as great as the combined debt of 12 European nations that we have been helping. They have a smaller per-person debt than we have, but we're still contributing to them.

We need to drive home the point that the Federal Government does not have a magic, ever-flowing spring from which gushes "Federal aid for States." This money must first come from the States and communities themselves in taxes.

And only some of it ever gets back. Washington takes out a slice for administration—and then tells you how to use the part it sends back. This weakens the ability and freedom of States and communities to help themselves.

Certainly, it is difficult to oppose specific money-spending proposals. But the point is—we must stop somewhere. We must deal in principles. As an individual family, you can't do all the things you want, or need to do, and still stay out of court or the poorhouse.

Naturally, I favor spending whatever it takes for an adequate Military Establishment.

But I maintain that we can cut $5 billion off our Federal budget without any real harm.

I personally will advocate that the President send a special message to Congress asking that the tax-saving Hoover Commission recommendations be adopted.

I will urge that President Eisenhower suggest cuts in this budget, just as he did when he cut $9 billion from the Truman budget when he came into office, and not just pass the buck to Congress with a pious hope that it can do something.

I will urge that we eliminate some of these new expenses, such as the 13 new aids to the States.

It might be necessary to end up cutting the budget by a flat percentage across the board. It is an almost impossible task to cut item by item in the 1,165-page budget.

Actually, we should be reducing the public debt at this time, not increasing it. If we can't balance the Federal budget and reduce the debt in peacetime and with better than normal prosperity, when can it be done?

There is one principle that we must always preserve if our democracy is to survive: "It is the duty of the people to support the Government and not the Government to support the people."

Say what you will, we can't afford to pay out a third of our income for taxes.

Welfare of Farmers and Ranchers

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 4, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a copy of a statement made before the Subcommittee on Agricultural Production, Marketing, and Stabilization of Prices, of the Committee on Agriculture and Forestry, by one of America's great farm-machinery producers, be printed in the Appendix of the RECORD.

Senators will find that this statement strongly reinforces the position of the junior Senator from Minnesota that agricultural credit in the great farming areas in the West, particularly those areas which have been stricken by years of drought, has become almost nonexistent.

This statement is made by a distinguished representative of the Minneapolis-Moline Co., one of the largest farm-implement manufacturers in the Nation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY WILLIAM W. LUNDELL, DIRECTOR OF PUBLIC RELATIONS, MINNEAPOLIS-MOLINE CO., MINNEAPOLIS, MINN.

To the Honorable Members of the Subcommittee on Agricultural Production, Marketing, and Stabilization of Prices, the Committee on Agriculture and Forestry of the United States Senate:

Mr. Chairman, may I first thank you and the members of this committee for giving us this opportunity to indicate our deep interest in the welfare of our farmers and ranchers.

I have been asked by Mr. Henry S. Reddig, the president of our company, Minneapolis-Moline, to bring you his warm greetings. He has asked me to communicate to you our company's interest in and support of the legislation you are considering.

In an age when America concerns itself with the salvation of over half the world, we contend it is about time for the American farmer to be reestablished in his rightful role as a first class American. The first responsibility of our Government must be to our citizens. And when one group or segment of Americans has fallen into a period of depression, our Government should help them find the means to help themselves.

We of Minneapolis-Moline commend the Senators who have introduced this legislation for their foresight, for their understanding of the needs of the farmers and ranchers and for their willingness to rise above the cold and abstract limitations of some theoretical economic philosophy to deal with the concrete human needs of our day.

I believe, gentlemen, that we all agree there is no more sound investment we can make than the investment we make in our farmers and ranchers as individuals.

The need to discuss funds for such investment arises from the fact, all too evident in the past months, that there is both a tight-money situation and that some local country bankers have extended credit—in the disaster areas in particular—to the limit of their resources.

Now it is obvious that one of the greatest needs in the drought-stricken areas is the availability of quick and reasonable financing plans. In most of these areas, one matter requiring action is this: Funds are needed immediately for sinking irrigation wells and for installing irrigation equipment. These projects are soundly conceived and properly planned in the different States.

The company I represent—Minneapolis-Moline—has a deep interest in our farmers. Our research facilities are devoted to designing machines to help the farmer and the rancher make his crop with the least labor and at the lowest cost. But to make his crop he must have machinery. And to have machinery, he must have funds.

If the Congress can expedite the furnishing of adequate funds at a reasonable rate quickly to those having good credit before another crop season passes, it will warrant the thanks of all the people of America.

With action such as we of Minneapolis-Moline hope you will take with the greatest of dispatch, our ranchers and farmers in the drought-stricken disaster areas can once again become self-supporting—as they have been for a hundred years—except for the past half dozen drought years.

There is much talk about fickle weather, gentlemen, but the weather has been anything but fickle in the disaster area. The weather has been enormously consistent—consistently dry for years and years. We think the time has come for our policy to be just as consistent, and we believe that it must be our policy to provide funds for our good farmers. Let us never forget that in time of stress and national emergency, these farmers have—consistently—met and supplied the needs of the Nation.

To get down to cases, we believe that loans for irrigation equipment will largely take chance and hazard out of the picture. With irrigation equipment the farmer can himself make his own weather—choosing when and where and how much water his crops need at the best times for growing.

We realize that in certain areas the water table is being lowered dangerously. But in most States local State laws and surveys of the soil conservation districts are protecting our basic water resources. With the emerging watershed programs the future of our water resources can be viewed with optimism.

The major value of irrigation, however, is the complete control it gives the farmer in applying water in the specific areas and at the exact period of growth when a little water will do much. Irrigation does not mean indiscriminate flooding of land and consequent waste of water. Irrigation permits the wise husbanding of water. In short, irrigation is water economy.

With proper mechanical aids to implement the careful research as to available water in all of the States, American farmers and ranchers will once again become self-supporting—not dependent on odd jobs or charity. Our ranchers do not want a dole. Our farmers do not want a dole. But with private banking resources expanded almost to their limits, it appears necessary that the Government step in to make reasonable funds quickly available.

It is difficult today for a farmer businessman in many of the disaster areas to get any more funds from his good friend, the local banker, because that local banker just hasn't got any more money available under the rules and regulations within which he, the banker, must operate.

A great man, of half American descent, Winston Churchill, said in another time of crisis, "Give us the tools and we shall finish the job." The American farmer asks no more.

In conclusion, may I again express the appreciation of the company I represent, Minneapolis-Moline, for the courtesy of your invitation to appear here in Washington to lend our voices in support of this legislation for the benefit of our American farmers and ranchers—most particularly for those in the drought disaster areas.

Thank you.

Plants for Depressed Areas

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, April 4, 1957

Mr. GOLDWATER. Mr. President, near the end of the last session of the 84th Congress a bill appeared on the floor of the Senate that would purportedly have given relief to so-called depressed areas. This measure was acted upon hurriedly, and many questions that touch upon the future security of our economic system were left unanswered. Knowing that legislation of this nature is again headed toward the floor of the Senate, I urge that all Senators give serious consideration to the full implication of these proposals.

One of Arizona's most outstanding editors, Mr. William Stuart, has expressed much of this concern in an editorial appearing in the Prescott Courier of March 27, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PLANTS FOR DEPRESSED AREAS URGED

The Senate is moving toward passage of depressed-area legislation which could plague industry for years. The objective is to use the money and power of the Federal Government to locate factories in areas having heavy unemployment.

This involves many things, such as initial Federal financing up to $324 million, loans up to 75 percent to provide factories, $50 million for access roads and community facilities, Federal technical aid and the like. Some sponsors of the legislation say this is just a start, a minimum. They expect the Federal Administration of Depressed Areas—if established—to be given power to divert Government procurement contracts to these areas. They want the Federal Government to deal directly with local communities, thus bypassing States.

The Senate Banking Committee, which is considering the legislation, has been told that factories must be located in some depressed areas because unemployed men do

not want to move. A rather drastic program is embodied in a bill introduced by Senator DOUGLAS (Democrat, Illinois). It is pending in the Senate Banking Committee. More moderate bills, supported by the Eisenhower administration, have been introduced by Senator DIRKSEN (Republican, Illinois), and Senator MARTIN (Republican, Pennsylvania).

At the hearing Senator CAPEHART (Republican, Indiana) raised vital questions which were unanswered, asking: "How are you going to get industry into these towns? Must we require the Federal Government to decentralize defense factories? Must we tell corporations to diversify?" In the past, legislation of this character has been strongly opposed by Members of Congress from the South and West.

European Unity

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 4, 1957

Mr. JOHNSON of Texas. Mr. President, I commend to the attention of the Senate a very thoughtful and very excellent summary of the problems that must be solved before European unity can become a reality. It appeared Monday in the Louisville Times.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STEP TOWARD EUROPEAN UNITY

Six nations of Western Europe took an important step toward the goal of European integration last week with the signing in Rome of treaties setting up a common market and a plan for common development of atomic power.

The taking of one step does not necessarily mean, of course, successful completion of the journey. Nor does the mere signing of treaties make it certain that the provisions of the pacts will be carried out. There is still a difficult road ahead.

The next step will be ratification of the treaties by the Parliaments of the six countries: West Germany, Italy, France, Belgium, Luxembourg, and the Netherlands. At the moment, prospects for ratification seem good.

However, assuming the treaties are ratified, there will remain the problem of putting them into effect. Inevitably, difficulties will arise. The common market plan, for example, calls for gradual elimination of tariff and other economic barriers among the six nations. This is obviously desirable, but, equally obvious, it will run into strong resistance from various vested national interests, just as in our own country special interests resist efforts to lower or abolish our economic barriers.

The basic idea of the common market plan is to allow the six nations gradually over a long period—perhaps 12 to 15 years—to coordinate their national economies into a single entity that could compete on something like even terms with such giants as the United States and Russia. Eventually the six countries would have a single tariff on goods from outside, capital and labor would circulate freely within the area, and the national economic policies would be meshed into a common economic policy.

None of this would be accomplished or even attempted overnight. During the transition years, individual members would retain certain rights. France, for example, would be permitted to keep special taxes on imports and to continue its export subsidy. Eventually, these would be surrendered in the common interest.

European unity or integration has been an age-old dream. The shattering of Europe by World War II and the cold war has made the dream doubly desirable, for, as Walter Lippmann wrote a few weeks ago: "This divided and subdivided Europe is unable, either by diplomacy or by force, to affirm and defend its vital interests in the outer world."

Since the war Europe has been driven by necessity to take several actions leading toward a more integrated economy. Probably the most important of these was the establishment of the Coal and Steel Community. This latest action could be even more important, and it will be if the mutual jealousies and suspicions can be submerged by the common need.

Thirty-ninth Anniversary of the Estonian Republic

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, April 4, 1957

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a declaration approved by the concert rally under the sponsorship of the Joint Committee of Estonian Organizations in Baltimore, Md., celebrating the 39th anniversary of the Estonian Republic on February 24, 1957.

There being no objection, the declaration was ordered to be printed in the RECORD, as follows:

The U. S. S. R. has committed multiple crimes against the rights of the Estonian nation and against the liberties, properties, and lives of Estonians. The perpetration of these crimes continues in violation of precepts of international law and solemn commitments of the U. S. S. R.

The same pattern of crimes is being practiced over other Soviet dominated countries, and preparation for new aggressions and other crimes, is underway on worldwide scale. Millions are suffering under Soviet imposed terror and misery. No people in the world have accepted voluntarily the Soviet system. All are longing for the opportunity to overthrow the Communist regime.

Throughout history Estonians have been fighting against the foreign invaders until they regained their independence after the liberation war against the Soviet Union. The same spirit prevails at present. Only overwhelming Soviet forces stationed in Estonia prevent the people from driving out the enemy.

In their tragic situation they are looking for support from the free world. Sporadic declaration about law, liberty, and rights of subjugated nations are not sufficient if they are not implemented.

We declare that for achievement of international peace and justice it is necessary that the free world condemn Soviet acts of aggression as international crimes, exercise pressures for the termination of these crimes, and as a first step demand the withdrawal of all Soviet forces and administration from Estonia and the other occupied countries. This should be the primary condition in any dealing with the U. S. S. R.

The Mideastern Crisis

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 4, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial which appeared in the American Jewish World, published in Minneapolis, Minn. This editorial has been written by Mr. L. H. Frisch, editor and publisher.

Mr. Frisch is one of the outstanding citizens of the State of Minnesota, and one of the most brilliant and learned editors in American journalism. His comments on the Mideastern crisis are worthy of the thoughtful attention of every Member of Congress, and particularly of those persons in Government responsible for our foreign policy. I commend the editorial of March 22, entitled "As the Crisis Unfolds," to the attention of my colleagues.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AS THE CRISIS UNFOLDS

As the situation develops day by day, Israel's withdrawal from the Gaza strip and from the strategic points guarding the Gulf of Aqaba, as an act of faith in the United Nations and the United States, has not eased the possibility of an explosion in the Middle East—an explosion, if not prevented by immediate and energetic steps on the part of our Government in and out of the United Nations, may lead to a global war.

Driven by his ruthless and reckless ambition, encouraged by the Kremlin and by the vagueness of declarations and procrastinating tactics of our State Department, the impudence and aggressiveness of Nasser grow from day to day, and he is acting—to quote the New York Times—"as though he had won a great personal victory," instead of having been given a severe beating, as was long due to him, by little Israel.

He insists that the Gaza strip be returned to the status quo before Israel stepped in to clean up the Fedayeen nests where the nightly assassins of Israel's peaceful population were receiving official training by the Egyptian Government. The United Nations' scanty troops are being pushed and restricted to the Gaza-Israel armistice lines.

In this connection something very sinister is afoot. It is revealed, unconsciously perhaps, in a New York Times editorial of March 16, which states that under "these circumstances the immediate means of checking Nasser are limited." This means that the Fedayeen attacks on Israel will continue, and Israel is urged to "maintain its self-restraint and not permit itself to fall for provocations aimed at its destruction."

What strange advice, in view of all that has happened before and since Israel's march into Sinai. It means a return to the policy of the present administration since Dulles took over. Israel must be patient. Israel must not retaliate no matter what the provocation.

Another suggestion in the Times editorial that "it would greatly improve Israel's international position if it should admit United Nations patrols on its side of the border in line with United Nations resolutions," is both a trap and a threat.

It is a trap because the small U. N. force spread out thinly on the long and exposed border, cannot effectively stop the Fedayeen invaders. Moreover they can easily come in through Jordan. The only protection is that the U. N. patrol the whole Gaza area where the murderers are trained and where they find sanctuary after a raid.

U. N. patrols on the Israel side of the border cannot be accepted by Israel for three reasons: First, it will create the impression that both sides are equally guilty of aggressive raids, whereas it has been conclusively established that Israel never took any but retaliatory action; second, it would not prevent Fedayeen attacks; third, it would only prevent Israel's retaliation and expose its peaceful citizens to a continuous reign of terror and murder.

What is even more sinister is the threat against Israel and the pressure exerted to accept this unrealistic suggestion. Unless Israel admits U. N. patrols on its side of the border, which definitely cannot be sufficient in stopping the rightly invaders from the Gaza strip, Israel will be subjected to continued sanctions.

Let us not forget that during the Sinai crisis, the United States administration has more than demanded the U. N. sanctions against Israel. It has unilaterally imposed sanctions. It suspended American relief; it stopped the negotiations for an international loan requested by Israel; it stopped issuing passports for tourists to Israel.

One would reasonable expect that with Israel's withdrawal as asked by the U. N., these State Department sanctions would automatically be withdrawn. This is not the case. All we hear is talk about talks for the resumption of relief. No passports are being issued. When a newspaper, like the New York Times, can say editorially that if Israel "should admit United Nations patrols on each side, it can be assured of a quick resumption of American aid," it doubtless reflects smoke signals of the prevailing State Department policy.

It is all too obvious that the State Department has learned nothing in the last tragic months. The Senate cannot be too forceful in its demand for a clear-cut policy which would reflect the conscience of the American people, the will of Congress and the hope of the free world.

The issue of the Gulf of Aqaba and the Suez Canal is fortunately obvious. Either Israel shipping will have free access or it will not. In regard to Aqaba, Israel has made it clear that it will fight for its rights and for its lifeline.

Nasser very shrewdly is hinting now that it will not be Egypt that will stop Israel at Aqaba. It will be Saudi Arabia. The Arab dictators depend on the American oil trust with its great influence on our Middle East policy to check Israel from asserting its right. This is a situation which Congress must face squarely. One fact is certain, Israel does not consider itself expendable, and will fight for its life.

As far as the Suez Canal is concerned, the issue involves many nations. "Egypt," President Eisenhower assured the American people in his address on February 21, "by accepting the six principles adopted by the Security Council last October in relation to the Suez Canal, bound itself to free and open transit through the canal without discrimination, and to the principle that the operation of the canal should be insulated from the politics of any country."

It is no secret now that Egypt is repudiating the six-point principle of the Security Council. Will the President and the State Department now take as energetic a lead—at the U. N. and unilaterally—to bring Egypt or Saudi Arabia to law and order as it has done when Israel was involved.

The Minneapolis Morning Tribune on March 18 stated editorially that "unless our Government takes the leadership in answering these questions raised by Nasser's violations, its good faith will be suspected by Israel and the free world."

We may add that the consequences will be far more serious. Israel and the free nations will more than suspect the good faith of our Government. Our administration in Washington will be branded as a conscienceless betrayer. We trust that the American people and Congress will not permit our Government to play such a role.

Juvenile Delinquency

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials from the Washington Evening Star, one entitled "Juvenile Gangs," published in the Washington Evening Star of March 20, 1957, and the other entitled "Curbing Delinquency," published in the March 30, 1957, issue of the same newspaper.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of March 20, 1957]

JUVENILE GANGS

The juvenile riot, or mob scene, or whatever one may wish to call it which occurred outside Douglas Junior High School last week has stirred up a community debate over ways and means of dealing with the problem of juvenile gangs.

It has been suggested that the trouble-making youngsters feel they are too tightly controlled, that the real problem lies with a hard core of young hoodlums, or that the community, somehow, has failed to measure up to its responsibilities. Perhaps there is something to all these points of view. But the real difficulty, we think, stems from an abiding belief on the part of too many of these young delinquents that they can rough up a policeman or manhandle a motorist and get away with it. Consequently, we hope that Inspector John E. Winters, head of the police department's youth aid division, means what he says. What he says, in substance, is that he is tired of temporizing with these teen-age mobsters, that when they "pull this sort of thing" they are going to be arrested and brought in, and that if they get violent they are going to be subdued.

Some people will think that this attitude represents a turning back of the clock. But the way things are going in this city, it is time to turn it back—at least to this extent.

[From the Washington Evening Star of March 30, 1957]

CURBING DELINQUENCY

For the past 3 years I have served as associate counsel of the United States Subcommittee to Investigate Juvenile Delinquency, and I am now counsel for the minority of the Antitrust and Monopoly Subcommittee of the Senate. However, I write as a resident of the greater Washington area.

I read with interest your editorial of March 20 dealing with juvenile gangs. It is most disturbing in this age of the greatest prosperity in the history of the United States, with great advancements in all fields, that we still have to concern ourselves with problems of juvenile delinquency and specifically juvenile gangs. The position taken in your editorial is one shared by many people interested in the juvenile delinquency problem.

At one of our hearings on July 14, 1955, in Chicago, in which Senators KEFAUVER, LANGER, and WILEY participated, a witness who appeared before the subcommittee was Dr. Bernard Schulman, who specializes in psychiatry and is the assistant director for professional services of the Community Guidance Interest of Chicago. Part of his testimony which is applicable to your editorial was as follows:

"What we have is a completely different relationship between parent and child than we had 50 years ago. We cannot go back any more than we can give up electricity and internal combustion engines; any more than we can blind our eyes to the existence of atomic energy. We cannot at this stage establish the authoritarian relationship that existed between parent and child years ago. First of all, the community won't stand for it. There was a time when, if a father beat his child, the neighbors thought it served the kid right or, at the most, a father who beats his child too much, but nobody ever thought of dragging the father to court for beating his child, or ostracizing him because he beat his child. That was considered a father's right. Do we want to go back to this? Maybe some of us do, but we can't. The community won't stand for it. We have come too long and too far away from that position.

"The chief difference between the child of years ago and the child today is not the fact that the child is more rebellious. There was just as much of a war between adults and children then as there is now, but then the child did not dare to rebel openly because the community did not support it. Today, defiance is the order of the day, and this is the chief difference: That the child today can be openly defiant and can get away with it. Why? Do we train our children to be nondefiant? No, we encourage them to be defiant. We encourage them to fight. We encourage them to get rich quick, to look for the easy way out—to want prestige. In every way in which we train our children, we are also training them partly to be juvenile delinquents. Why, in this Michigan boulevard housing project, the Rosenwald project, was there a decrease in juvenile delinquency? Because a community was formed in which there was enough social pressure to keep the children from going astray into unconstructive ways of behavior * * *."

Mr. Chumbris: "Well, as to this particular problem, you say that the community attitude guides. Now do you think it would be wise for the community's attitude to change back toward, not quite all the way back to where it was 50 years ago, but to turn back maybe 10 or 15 years?"

Dr. Schulman: "We are pretty safe in assuming that we are all moving toward a more democratic way of life, in spite of the fact that our democratic way of life is threatened by outside forces, and part of the cost of changing seems to be this growing defiance on the part of the child, just as one of the other costs of changing seems to be the rising of divorce rate, the inability of so many people to find happiness in their marriages. People will have to learn new ways of getting along with each other, and the training that will be necessary is tremendous. We will have to train everybody. First we all have to train ourselves to be able

to train people, because we have to know better what is going on—parents, teachers, children, everybody is going to have to get into this. No one group will be able to carry it through."

Mr. Chumbris: "First of all we have to crystalize the idea of where that place should be, I mean so far as parental authority, what the community's attitude should be toward parental authority. We have to establish that first, don't we?"

Dr. Schulman: "What would you like the community attitude to be?"

That is a good question. What do we, as a community, desire as our attitude not only as to parents' attitudes toward children, but also the community, the police, the juvenile courts, etc., toward the youth?

Without going into a long dissertation as to what an excellent program to combat juvenile delinquency should consist of, I would like to briefly state that most experts agree that four requisites are necessary: (1) Research, (2) trained technicians, such as psychiatrists, probation officers, social workers, correctional institutions staff, etc.; (3) public information and public relations, (4) social action. The first 2 require expenditures of considerable sums, however, the last 2 items could be maintained with the minimum of expenditures. In many communities such as the metropolitan area of the District of Columbia the newspapers, radio and television stations donate much time to matters of youth and problems of juvenile delinquency. By social action it would require the coordination of all organizations both public and private for the betterment of our youth.

PETER N. CHUMBRIS.

The Nature of Friendship

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 4, 1957

Mr. JOHNSON of Texas. Mr. President, one of the outstanding newspaper editors of Texas is a scholar and philosopher named H. M. Baggarly. Mr. Baggarly is editor and publisher of the Tulia Herald, a weekly newspaper that serves an important area of the Texas Panhandle.

The Tulia Herald is published every Thursday, and its editorial page regularly carries a column by the editor under the title "Thoughts for Thursday." On a recent Thursday, Mr. Baggarly addressed himself to the nature of friendship. I ask unanimous consent that his editorial on this subject be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THOUGHTS FOR THURSDAY
(By H. M. Baggarly)

During the 5 years that this column has appeared in this paper, many comments have come from its readers. Some topics considered seem to provoke more comment than others. They seem to strike closer home. Some of the more popular topics have been those on friendship, old age, sympathy, and others closely associated to these.

It seems that so many people are hungry for friendship, want reassurance as they approach old age, are lonesome, and long for attention from their children. Our correspondence indicates that so many oldsters feel forgotten and in the way. They feel that they are neglected by their children and the younger generation. There are many, too, who feel friendless and forsaken.

This week we have selected a quotation which is along the line of those we have used in the past which proved unusually helpful and popular.

This selection concerns true friendship:

"He likes you just as you are. He does not want to alter you.

"He likes your moods and enjoys your pessimism as much as your optimism.

"He likes your success. And your failure endears you to him the more.

"He is better than a lover because he is never jealous.

"He wants nothing from you except that you be yourself.

"He is the one being with whom you can feel safe. With him you can utter your heart, its badness and its goodness.

"There are many faithful wives and husbands; there are few faithful friends.

"Friendship is the most admirable, amazing, and rare article among human beings. Anyone can stand by you when you are right. A friend stands by you even when you are wrong.

"Like the shade of a great tree in the noonday heat, is a friend.

"Like the home port, with your country's flag flying, after a long journey, is a friend.

"A friend is an impregnable citadel of refuge in the strife of existence.

"It is he who keeps your faith in human nature that makes you believe it is a good universe.

"He is an antidote for despair, the elixir of hope, the tonic for depression.

"When you are vigorous and spirited, you like to take your pleasures with him; when you are in trouble you want to tell him; when you are dying you want him near.

"You give to him without reluctance and borrow from him without embarrassment.

"If you live 50 years and find 1 absolute friend, you are fortunate."

Here are some original definitions of a "friend" which a London newspaper came into possession of as the result of offering a prize for the best definition: "The first person who comes in when the whole world has gone out." "The sunshine of calamity." "One truer to me than I am to myself." "The essence of pure devotion." "Friendship, 1 soul in 2 bodies." "The triple alliance of the three great powers, love, sympathy, and help."

While we are not a fan of Oscar Wilde, we do appreciate many things that he has written. He penned a bit of prose which expresses a noble thought.

Here it is:

If a friend of mine gave a feast, and did not invite me to go to it, I should not mind a bit. But if a friend of mine had sorrow and refused to allow me to share it, I should feel it most bitterly. If he closed the doors of the house of mourning against me, I would move back again and again and beg to be admitted, so that I might share what I was entitled to share. If he thought me unworthy, unfit to weep with him, I would feel it as the most poignant humiliation, as the most terrible mode for which disgrace could be inflicted on me—he who can look on the loveliness of the world and share its sorrow, and realize something of the wonder of both, is in immediate contact with divine things, and has got as near to God's secret as anyone can get.

Dr. Archie D. McMurdo, Candidate for Oregon's Doctor of the Year

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, April 4, 1957

Mr. NEUBERGER. Mr. President, in the East Oregonian, published at Pendleton, Oreg., there appeared in the March 29, 1957, issue, an interesting account about Dr. Archie D. McMurdo, who has been selected as the Umatilla-Morrow county candidate for Oregon's Doctor of the Year. Written by Mrs. Tom Wilson, of Heppner, county seat of Morrow County, this biographical sketch of Dr. McMurdo's more-than-45-years as a country doctor touches briefly on the drama, courage, resourcefulness, and civic spirit which give an epic quality to his career. The epic quality is unfolded, too, in the years spanned by Dr. McMurdo's career. When he began practice, the common means of transportation was still the horse and buggy. His calls might take him north to the banks of the Columbia River or south into the Blue Mountains. Today, a plane can span the continent in the time it took the doctor to reach his more distant patients. While he took care of the physical troubles of the individuals in the community, he immersed himself in their civic and group activities and shared the responsibilities imposed on the few who willingly shoulder the obligations and duties of our society.

Mr. President, I ask unanimous consent to have this inspiring story by Mrs. Tom Wilson printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PIONEER HEPPNER PHYSICIAN TACKLES ILLNESS WITH A SMILE
(By Mrs. Tom Wilson)

HEPPNER.—Dr. Archie D. McMurdo, who is entering his 47th year of medical practice, has been selected as the Umatilla-Morrow county candidate for Oregon's Doctor of the Year.

A keen sense of humor and enjoyment of life has marked Dr. McMurdo's 45 years as a country doctor in Heppner since coming here in October, 1912.

Traveling by livery stable team over cow trials to treat patients in the country, delivering as many as 4 babies in 1 day in widely separated areas and operating at country homes with members of the patient's family as assistants were all in a day's (and night's) work.

"If I had the chance, I'd do it all over again," Dr. McMurdo said.

PURCHASED RCH CAR

When Dr. McMurdo arrived there was only one car in Heppner. The following year he bought an assembled RCH car and later drove a Model T. Before that he walked or rode a bike on town calls and hired a team from one of the two livery stables here for country calls.

"The Ford was a great boon to the doctor's practice," Dr. McMurdo said. "But broken wrists dropped off 90 percent after the self starter was invented."

A call to Hardman, in the foothills 20 miles above Heppner, was an all day trip in winter. Usually it was an overnight trip too as patients flocked in when they heard the doctor was in town, Dr. McMurdo recalled. Sometimes it was necessary to travel as far as Monument as there was no doctor there or in Hamilton. In the winter, when the snow was deep, it was a long, rough trip over the mountains. The doctor could go as far as Parkers Mill in a car where Monument people would meet him with horses to continue the trip by horseback.

ACTED AS DENTIST TOO

"I always carried forceps for extracting teeth as there was no dentist in the interior and usually someone wanted an aching tooth pulled. On one occasion when in Monument a Portuguese sheepherder was in agony with the toothache and wanted it out right now," Dr. McMurdo remembered. "I got the forceps, sat him down on the curb and removed the evil spirit. He was so pleased he reached in his pocket and gave me a $5 bill. That was a lot of money in those days."

The doctor was at a loss to remember the number of babies he has brought into the world. Whenever there was a storm it seemed a baby would be born in some out of the way place, but maybe if it happened on a nice day it would not be so well remembered, Dr. McMurdo said. One time he spent 2 days at a farm in Blackhorse waiting for the arrival of twins.

RECALLS FLU EPIDEMIC

"The most hectic period of my practice was during the flu epidemic of 1918," Dr. McMurdo observed. "Everyone in town was sick, including the members of my own family. For awhile I was going night and day until it caught up with me and I fell into bed exhausted with a temperature of 103 degrees. After 3 days in bed I got up to operate on a ruptured appendix and immediately afterwards nearly died of pneumonia."

The hospital and churches were full of patients and little help was available. In desperation Dr. McMurdo called his brother, Dr. P. F. McMurdo, who was stationed with the Navy in Portland. His brother, fearing the Navy would not give him leave, came without permission and stayed over a month to help with the emergency.

JOINED HOSPITAL CORPS

Dr. McMurdo, who was born in Shadwell, Va., learned his first elements of nursing when he joined the hospital corps of the Army on June 24, 1901, in Washington, D. C. He had just graduated from high school in Charlottesville, Va.

The Fourth of July after his induction one of the Army boys tried to swim the Potomac, got halfway across the wide river and cried for help. Without taking off his clothes, Dr. McMurdo swam to the struggling swimmer and brought him back to safety. For this he has a certificate of merit signed by President Theodore Roosevelt.

In January 1902, Dr. McMurdo was ordered to the Phillipines, where he was stationed 26 months. On the trip over, terrible storms washed the rudder off the transport *Buford*. She drifted 250 miles off course and finally landed at Gibraltar after 15 days. The entire trip took 2 months.

CHOLERA BREAKS OUT

Cholera broke out in the Philippines the day the ship arrived and the men were kept in quarantine on the boat 48 hours before landing. While in Manila Dr. McMurdo was stricken with pneumonia and was delirious about a week with a temperature of 106. Then he was stationed as a nurse in the Hospital Corps on Mindinao at Camp Vickers where Gen. John J. Pershing, then a captain, was in charge. While there he was in many battles and skirmishes with the fanatical Moros who gathered credits for killing Christians. Dr. McMurdo still has his discharge papers, listing the many battles in which he participated.

After 3 years in the service Dr. McMurdo entered the University of Virginia as a medical student. At the university he played fullback on the football team and was the lightest fullback in the history of the university, weighing 142 pounds stripped. Later he had to have bone removed from a muscle of his leg, injured in blocking a kick.

PRACTICES IN PORTLAND

After 1 year internship at Marth Jefferson Hospital in Charlottsville and 15 months at Polyclinic in Philadelphia, Dr. McMurdo came to Portland to practice in 1911. For a year he stood the clouds, fog, and rain and finally asked a druggist, John Leach, former Morrow County resident: "Isn't there any place in Oregon where the sun ever shines?" Leach told him it never rained in eastern Oregon. The doctor believed him when he stepped into dust 6 inches deep at the depot in Heppner.

Dr. McMurdo started in partnership with Dr. N. E. Winnard and later went into practice by himself. However, both worked together in the Heppner sanitarium, located at the present site of Piper's Hotel. Times were tough and we shared deficits, Dr. McMurdo smiled.

Later Dr. Winnard left; the owner of the sanitarium building took it over and Dr. McMurdo operated a hospital in several different homes.

Finally he bought the old Sigsbee place, furnished and equipped it on his own, and operated it up to World War II when he could no longer get help to run it.

Large credit for running the Heppner hospital was given by Dr. McMurdo to Miss Mildred Clowry, whom he rates as "the greatest nurse of modern times." She was an efficient manager of the hospital, prepared the surgery for operations, gave the anesthetic if there was no doctor to assist, did the buying, cooked meals, and cared for patients. All this with usually just one helper. One time when Dr. McMurdo was in Seattle at a medical meeting, he recalled, she had 4 maternity cases in 1 day.

Early day traveling had its tribulations, too. Once in a storm on a dark night on a call to Butter Creek the doctor stopped to get a better view of his route. Luckily, he had stopped just short of a 10-foot dropoff into Butter Creek where the bridge had been washed out. Many times he walked miles to get an ax or other tools to make repairs on his auto.

USED TWO-HORSE TEAM

"On one occasion on a call to the country west of Heppner with a two-horse team I got out of the buggy to open the gate, led the horses through, and went back to close the gate. The horse on the left looked around, and when he saw I wasn't near, started both in a circle on a run in the direction of town. They overturned the buggy, ran through the barbed wire fence, broke loose from the buggy, and finally came to a stop against the second fence on the east side of the lane.

"I uprighted the buggy, patched the harness, hitched up the horses, and made the call without further incident—except a bill from the livery stable for further repairs of the broken harness. As no one knew this except the horses and myself, it did not get to the local press."

One winter, in deep snow, on a call in the night from Harvey McRoberts, about 7 miles east of Lexington, the doctor's auto stopped in a deep drift within 2 miles of the house. Walking to the house of a near neighbor, Mr. Miller, Dr. McMurdo got him out of bed and was kindly provided with a saddle horse on which the call was made and a fine son delivered.

In the morning, on his return Miller harnessed a two-mule team to pull the car from the drift. The car wouldn't budge. Miller returned for two more mules and the car was finally pulled free.

"All the people at all times gladly and willingly gave freely of their help any time you were in trouble. That is what made me love the people and the country," Mr. McMurdo explained.

In 1908 the fire which destroyed the Palace Hotel burned all the buildings except McMurdo's home on the block south of it. A change in the wind saved the house from only scorching and cracked windows. "Later," said Dr. McMurdo, "I heard some people thought I had fireproof paint on it and some thought I paid the men on the fire department $20 apiece for keeping a hose on my house. It just happened I was in the mountains up Willow Creek during the fire."

Dr. McMurdo was married to Miss Ruth Hager October 15, 1913. Four sons were born to this marriage. Three now living are Ted, a chemist at Portland who has 3 children; Bernard, a dentist in San Mateo, Calif., with 3 children; and Scott, who has a medical laboratory in Corvallis.

ENTERS PUBLIC AFFAIRS

In spite of a busy practice, Dr. McMurdo has found time to enter in public affairs and keep up with his hobbies which include hunting, fishing, farming, raising honey from his own beehives, and horticulture. He still offers stiff competition on the tennis court.

In the winter when the ponds are frozen he may be seen cutting fancy figure 8's on his skates. In addition he is an expert at trapshooting and always keeps a bird dog.

In 1931, Dr. McMurdo won the State handicap championship at the Oregon State shoot and for this a trip to Del Monte, Calif.

Two ranches totaling about 3,00 acres were owned on Rhea Creek and Clarks Canyon by Dr. McMurdo for about 15 years. When he sold them in 1946 and 1947 he reserved 7 acres on the Clarks Canyon property for a garden and all kinds of fruit trees. "I call it my health resort," says Dr. McMurdo, who believes most people nowadays don't get enough fresh air and sunshine.

A sprinkle of Dr. McMurdo's humor was found in the classified ads of the local paper one fall recently when he advertised: "Beware! To the persons who picked my plums in Clarks Canyon, they were sprayed with a deadly poison."

Before the arrival of a regular veterinarian in Heppner Dr. McMurdo used to take care of the casualties of dogs, cats, horses, cows, and other dumb animals with never a charge.

In community activities Dr. McMurdo served on the city council from 1933 to 1937, was a member of the school board from 1926 to 1930 and from 1934 to 1938 served as a member of the Boy Scouts advisory board for several years, was first chairman of the President's birthday ball and held the post for several years following, is a senior warden in the Episcopal Church of which he is a lifelong member, recently receiving his 40-year pin in the Elks lodge, is a member of the Masonic Blue lodge and the Royal Arch Masons.

OLDEST COUNTY OFFICIAL

The oldest county official in point of service, Dr. McMurdo has been county health officer for 44 years since 1913 and was county coroner from 1933-53. He was president of the staff of the Pioneer Memorial Hospital from 1950-54 and suggested the name of the hospital which was adopted by Judge Garnet Barratt and the county court. He worked with other members of the Veterans of Foreign Wars to collect funds for the county ambulance and suggested its name of "White

Angel." He is a member of the chamber of commerce, was president of the Lion's Club in 1935 and belonged to all similar clubs which existed here.

In his own profession Dr. McMurdo is a member of the Eastern Oregon District Medical Society and served as its president in 1931, is a member of the Oregon State Medical Society, the Umatilla County Medical Society, of which he was president in 1948, the American Medical Association, the American Academy of General Practice, the Association of American Physicians and Surgeons, the Western Association of Railroad Surgeons, the American Association of Railroad Surgeons, and was district surgeon for the Union Pacific Railroad in Heppner for 31 years.

Dr. McMurdo served on the medical examining board during World Wars I and II and has been selective service examiner from World War II to the present time. In 1927 he entered the medical Reserves as captain and was recommissioned in 1932.

"The practice of medicine has changed over the years," Dr. McMurdo observed. "Patients used to come in and ask for your advice. Now they tell you what is wrong and prescribe the treatment."

Tennessee Valley Authority Purchases, 1934–56

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD a tabulation of purchases by the Tennessee Valley Authority of materials and supplies during its first 22 years. The TVA purchased more than $1 billion in materials and supplies from States outside those of the Tennessee Valley. The Tennessee Valley has become one of the greatest markets in the United States for electric equipment of all kinds, none of which is produced in the valley, but all of which is bought in other parts of the United States. These figures show how the entire Nation benefits from the Tennesese Valley, in addition to the flood control and soil conservation it provides for the States of the Tennessee Valley, for that which benefits and builds up economically and socially one section of the Nation is of corresponding benefit to the total productive capacity of the entire Nation.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

TVA procurement sources

	1956	Total (1934–56)
Alabama	$3,780,304	$117,229,660
Georgia	941,379	28,224,719
Kentucky	26,244,495	158,776,227
Mississippi	241,303	6,660,606
North Carolina	194,129	13,867,812
Tennessee	23,180,305	389,034,197
Virginia	8,367,512	19,252,848
Total valley States	62,949,427	735,046,068

TVA procurement sources—Continued

	1956	Total (1934–56)
Arizona	$1,835	$122,059
Arkansas	19,246	1,210,555
California	888,840	10,238,534
Colorado	18,486	1,115,823
Connecticut	309,306	7,476,380
Delaware	824,323	19,259,048
District of Columbia	25,493	2,485,289
Florida	91,771	7,513,710
Idaho		2,302,188
Illinois	9,008,984	112,465,966
Indiana	2,200,078	22,404,807
Iowa	24,301	1,527,154
Kansas	21,109	595,610
Louisiana	752,699	10,357,442
Maine	102,574	594,348

Total	121,530,197	1,760,951,283

The Life and Character of Henry B. Daems, of Montana

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1957

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Oldest Montana Native Son Hopes To Make Gold Strike," published in the Billings (Mont.) Gazette of March 31, 1957. It is a story relating to Montana's oldest native son, Henry B. Daems, of Varney, Mont.

Mr. Daems is a colorful and outstanding personality, who has, in his early late years, turned to uranium prospecting at the age of 92. We are proud of this pioneer and we appreciate his philosophy, his character, and his contributions to our State.

Now president of the Montana Society of Pioneers, we wish him many years of health, happiness, and good luck.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OLDEST MONTANA NATIVE SON HOPES TO MAKE GOLD STRIKE

BUTTE.—At 92, he's Montana's oldest living native son. But for Henry B. Daems, president of the Montana Society of Pioneers, there is no stop for the spark of youth.

The native of Virginia City celebrated his latest birthday with a party Friday and announced to newsmen he's going to satisfy a childhood desire—to make a gold strike, preferably the Alder Gulch mother lode, which many claim exists but which never has been uncovered.

Colorful and philosophical, Daems objected vigorously when referred to as retired. "Retired? I'm not retired. I'm a prospector now," he said. He plans to move to Whitehall soon—with his equipment for uranium prospecting, a Geiger counter and other modern-day prospecting utensils.

"While I'm looking around for uranium with this new-fangled stuff everyone is making a fuss about, I'll be keeping an eye out for that mother lode.

"I know every nook and corner of Madison County, and a few others around here," he said, "and if there is uranium around and the good Lord spares me long enough, I hope to make a strike."

Daems spent most of his life on his ranch at Varney, 9 miles south of Ennis. He sold the ranch about a year ago and for the past several months has been making his home at Butte with his granddaughter, Mrs. Berta Mitzner and her husband.

How has life been for a man who has seen 92 years of it?

Daems isn't apologetic.

"Life isn't difficult, it's just what you make it," he says. "Sure we have troubles, who doesn't? But the longer you live the more you find that the law of averages works out. Troubles often come in bunches. That's when it's tough. But there's always better days, and I've found it is just about a tossup—the good and the bad.

"I've learned to let things rest in the hands of God. He'll take care of most difficulties if we'll just put our trust in Him, and help ourselves along with a little prayer.

"Most things in life," he continued, "are worth praying for, and I've found when the going gets rough it's a good bet to call on the Lord to lend a helping hand."

Daems has 29 grandchildren, 52 great grandchildren, 18 great-great grandchildren, and 7 living children. Five children and 12 grandchildren are deceased.

Daems' parents were among the first settlers in Virginia City. His father, a doctor, operated the first drugstore there. He says the backroom of the store was where the Vigilantes held their initial meetings.

Montana Society of Pioneers' record show Daems was the second child born in Virginia City.

He is awaiting publication of a book he has written titled "Through the Eyes of a Pioneer."

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1957

Mr. HUMPHREY. Mr. President, I have just received a letter from the president of the Minneapolis school board, Mr. Frank E. Adams, who reports on the special committee of Minneapolis citizens appointed by the Minneapolis board to study the question of Federal aid to education. The report itself is of special interest to Members of Congress,

as we study the proposed school legislation soon to be considered. I ask unanimous consent that the letter and the report just referred to be printed in the Appendix of the RECORD.

There being no objection, the letter and report were ordered to be printed in the RECORD, as follows:

HENNEPIN COUNTY VETERANS' SERVICE OFFICER,
Minneapolis, Minn., March 29, 1957.

Senator HUBERT H. HUMPHREY,
Senate Office Building,
Washington, D. C.

DEAR HUBERT: As president of the Minneapolis School Board, and by action of the school directors, I appointed a special committee of Minneapolis citizens to study the entire question of Federal aid to education. I am enclosing herewith a copy of this report and the committee members.

Our board met on March 26, 1957, and unanimously endorsed this committee's report. It was voted to send copies to our Senators and Congressmen for their consideration.

It has been my feeling that some form of Federal aid to education is not only inevitable but necessary. It was my concern as to what type of aid and who will be the recipients.

We hope that our conclusions will serve for some sort of action in the right direction.

To my knowledge this is the first time any large school board has undertaken such a project.

Very truly yours,
FRANK E. ADAMS,
President, Minneapolis School Board.

A REPORT OF THE SPECIAL COMMITTEE TO STUDY FEDERAL AID TO EDUCATION

MARCH 25, 1957.

To the Members of the Board of Education:

The members of your committee, appointed in accordance with your resolution of January 15, 1957, have considered the many facets of the problem of Federal support for the public schools.

This committee realizes and believes in the necessity and inevitability of Federal aid for publicly controlled and tax-supported schools, and recommends:

1. Federal support for the public schools should be distributed solely on the basis of the number of children of school age within each State.

2. Control of the public schools should remain the complete responsibility of the States and local school districts; and any funds derived from Federal sources should be channeled to the several States through the United States Office of Education and the respective State departments of education.

3. The basic responsibility for the financial support of the public schools should remain with the States and local communities; but it is in the national interest and entirely appropriate for the Federal Government to give continuing and extended partial support.

4. In addition to providing partial current support of education, and filling other educational needs, Federal funds should be used to construct and equip public-school buildings.

5. The offshore oil and gas resources beyond the limits of State jurisdictions belong to all the people; and the proceeds from such resources should be dedicated to the use of publicly controlled and tax-supported schools.

Respectfully submitted.

JAMES B. LUND,
Chairman.
Mrs. HOWARD S. KAHN,
Secretary.

The recommendations of this committee have been established upon certain basic considerations which may be summarized as follows:

Proposals for Federal aid to schools now being considered by the Congress generally emphasize aid for school construction. These proposals are based on the premise that many school districts are unable to meet the classroom shortage through their own resources; consequently, these districts should be helped through Federal grants. Even though some of the proposals would distribute Federal funds among the States on the basis of the number of schoolchildren, each State would determine how the funds would be apportioned among the school districts. In most States, need and the ability to pay would be a major factor in determining the amount allotted to each district.

Because Minneapolis has more taxable wealth per pupil than the average community in Minnesota or in the Nation, the Minneapolis schools would probably not benefit directly from any plan of Federal aid which was based upon equalization of needs. The proposals now before Congress would be of indirect benefit, by providing some aid to other Minnesota communities whose needs might otherwise have to be financed from State taxes, a substantial part of which are paid by Minneapolis citizens.

In America, schools have been kept close to the people and there is general agreement that it is in the interest of democracy to keep them thus. Financial support is closely related to control over expenditures. There is general concern that Federal support should not be synonymous with Federal control. In a Federal program based on need, or equalization, there is a danger of Federal control. In order to preserve the fundamental principle of local control of public schools, therefore, any program of Federal support should be distributed on a purely objective, pupil population basis.

The Federal Government creates no wealth. It has no resources which are not available to States and local communities. However, with the growth of nationwide industries whose wealth-generating powers stretch across State lines, and with the corresponding growth of tax collecting powers and the increasing concentration of tax collections at the Federal level, greater equity is secured by assessing a part of the cost of education through taxing powers at the Federal level. There is also real justification for using the income from certain natural resources which belong to all the people, such as the offshore oil lands, for the benefit of all the people by using such income to improve the quality of schools throughout the Nation.

Because in a democracy all have equal votes in determining the affairs of government; because education is the foundation of high living standards; and because of the mobility of population within and between the States, it is in the interest of all communities and of all citizens that there should be no educational slums. Because good education for children in all parts of the country is a national concern, the Federal Government may properly be called upon to provide some support for the educational program. Because local control of schools is also important, the control and expenditure of such funds should be determined by the local district.

MEMBERSHIP, SPECIAL COMMITTEE TO STUDY FEDERAL AID TO EDUCATION

Lund, James B., chairman; Kahn, Mrs. Howard S., secretary; Adams, Frank; Drake, Benjamin; Dunshee, Mrs. Donald; Granger, Shelton; Heggerston, A. I.; Hill, Dr. Frederick W.; Huebner, John; Langton, York; McNulty, Kenneth F.; Mansfield, Mrs. M. L.; Smaby, Mrs. A. J.; Watson, Dr. Wm. E.; Wishart, Robert.

The Equality of Opportunity Bill

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a statement by Representative WRIGHT PATMAN, made before the Subcommittee on Antitrust and Monopoly of the Senate Judiciary Committee. I think that this thoughtful statement in support of S. 11, the equality of opportunity bill, which would plug a loophole in the Robinson-Patman Act, is worthy of the most careful consideration by all Members of the Senate. Mr. PATMAN's record in support of small business is well known. As coauthor of the Robinson-Patman Act, his is an authoritative voice in this field of legislation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF HON. WRIGHT PATMAN, OF TEXAS, BEFORE THE SUBCOMMITTEE ON ANTITRUST AND MONOPOLY OF THE COMMITTEE ON THE JUDICIARY, UNITED STATES SENATE, IN SUPPORT OF S. 11, THE EQUALITY OF OPPORTUNITY BILL

Mr. Chairman, I am highly honored that this distinguished committee should wish to hear my views on the subject of this hearing, namely, S. 11, the equality of opportunity bill. You have received during the course of your hearings a great deal of testimony. Your witnesses have included the distinguished chairman of the Select Committee on Small Business of the United States Senate, who appeared and gave testimony in support of S. 11.

WHY S. 11 AND H. R. 11 ARE NEEDED

The pending bills would amend the Robinson-Patman Act to close a gaping loophole which the Supreme Court has driven into that act. That loophole was created when the Supreme Court decided a case in favor of Standard Oil Company of Indiana. It held that a giant concern, such as the Standard Oil Co., is now privileged to discriminate in price with the effect of destroying its competitors, destroying its customers, substantially lessening competition, and tending to create a monopoly so long as the giant concern shows that it has accomplished all of those things in "good faith." (*Standard Oil Company of Indiana* v. *FTC* (340 U. S. 231).)

S. 11 goes to the very vitals of small business. It involves a direct question of whether small business shall continue to exist. I need not tell the members of this distinguished committee what the Robinson-Patman Act and other Federal legislation against price discrimination mean to small business. It has been hailed as the magna carta of small business. Next to the tax law, this act is probably better known by small-business men over the United States than any other law passed by Congress.

The record is clear on the point that prior to the passage of the Robinson-Patman Act, wholesale destruction of small business took place during the twenties and early thirties as a result of price discriminations. When we put that law on the books, it resulted in a sharp check on that destruction and redirected the course of business by giving small business a new lease on life.

At this point, I would like to read a paragraph from a letter which a small-business man in Charlotte, N. C., wrote me under date of March 20, 1957. It is as follows:

"From the time of the enactment of the Robinson-Patman Act to the Supreme Court decision there had not been any price wars in my area or anywhere in our State. Immediately after the above decision major oil companies started instigating price wars by setting up a competitive situation and then asking their dealers to meet that competition. Any competition that they did not create themselves was considered by them as not being legitimate. Statements to this effect have been made to me by oil companies and their district managers."

In the years prior to the passage of the Robinson-Patman Act, small, independent businesses disappeared by the tens of thousands. Giant corporations led by a few giant chain organizations utilized the destructive monopolistic practice of price descrimination to sweep away small businesses. We were rapidly headed for a complete monopolization of the distribution business in this country.

As is indicated in the letter of the small-business man I have just quoted, the Robinson-Patman Act slowed down, if it did not stop that disastrous march. I believe it to be no exaggeration to say that without this law we would very probably have no small businesses left in the United States today.

Now we are faced with a problem of making that law effective again. Our problem is to close the loophole which was made in that law by the decision of the Supreme Court in the case of Standard Oil of Indiana. S. 11 and H. R. 11 are modest proposals. They would operate to make unlawful destructive price discriminations even though done in good faith where the effect would be to substantially lessen competition and tend to create a monopoly.

The issue before you is clear. It is a question of whether we will do what representatives of big business are asking us to do, namely, leave the law so that they may continue to discriminate in price with the effect of substantially lessening competition or tending to create a monopoly. That issue is on the table before us. Those of us who are suporting S. 11 and H. R. 11 are asking that the law be strengthened so that these giant corporations will no longer be able to destroy their competitors and customers through the practice of price discrimination with the effect of substantially lessening competition and tending to create a monopoly.

I have always understood that our national public policy is a policy to prevent monopoly and monopolistic practices, whether accomplished in good faith, bad faith, or through indifference. If I am correct on that point, then S. 11 and H. R. 11 are clearly in accord with our national public policy against monopoly. This pending legislation would not provide any penalty. It is not an amendment to a criminal law; it merely provides a means for stopping practices which in fact substantially lessen competition and tend to create a monopoly.

Therefore, in those few words I have attempted to explain what H. R. 11 and S. 11 are intended to do. From what I have said, you can see that they are intended to guarantee, for instance, the hometown merchant the right to buy his goods, wares, and merchandise from General Motors, General Mills, General Electric, or General Foods, under the same terms and conditions that the chain store across the street is permitted to buy its goods, wares, and merchandise from the same seller. The pending bills would make it a violation of law for the seller to discriminate against the hometown merchant, whether he is in the dry-goods business, the grocery business, the drug business, the service-station business, or any other kind of locally owned business.

What could be fairer than that? Why should the big concerns continue to have the right to discriminate against hometown merchants? If something is not done within the next two decades, and discriminations are permitted to continue, the giant corporations with assets of over $100 million will own all of the manufacturing, processing, and distributing business in the United States.

We all know and we profess to subscribe to the fact that small business is the backbone of our country, and certainly should be encouraged to the extent that Congress will not permit the big concerns to unduly and unfairly destroy them. Congress must act to prevent such result.

Among the big people of America, most of them are big hearted, generous, charitable, and believe in the Golden Rule, and actually practice the Golden Rule in their business, but there are some Captain Kidds in business and industry—some racketeers—who have no regard for the rights of the other man. It is the latter group that we are trying to deal with through S. 11 and H. R. 11 to restrain them in their greed and selfishness.

WHO ARE THOSE SUPPORTING S. 11—THE EQUALITY OF OPPORTUNITY BILL?

We know that small business and many of the friends of small business are asking for relief from destructive price discriminations. They have appeared before a number of congressional committees and testified in support of legislation such as is proposed by S. 11. In some of their appearances, they have stated that among the many things that small businesses wish from the Congress, and particularly in the field of anti-monopoly legislation, is legislation to strengthen the law against price discrimination. They have said that there are many things that small business needs and wants, and that there are several pieces of legislation which they strongly recommend, including tax relief. But they have said that just to make things simple they want the Congress to pass promptly the legislation provided for in S. 11. Included among those who have taken that position are the representatives of a large segment of the small-business firms of the country. They include the following:

National Association of Retail Druggists, representating 40,000 independent druggists.

National Association of Retail Grocers, representing 65,000 grocers.

United States Wholesale Grocers Association, representing about 2,000 wholesale grocery firms.

National Food Brokers Association, representing more than 1,700 food brokers.

National Congress of Petroleum Retailers, representing approximately 35,000 retail gasoline dealers.

National Association of Independent Tire Dealers, representing 8,000 retail tire dealers and tire retreaders.

United Fresh Fruit & Vegetable Association, representing 2,800 wholesale distributors of fresh fruits and vegetables.

National Federation of Independent Business with a membership of more than 100,000 small and independent business firms.

National Council of Agricultural Co-ops, which is composed of approximately 5,000 agricultural cooperatives carrying on cooperatively the affairs of almost 3 million farm families.

National Farmers Union with more than 700,000 members.

The International Association of Machinists with approximately 700,000 members.

The American Federation of Labor-Congress of Industrial Organizations, representing the bulk of organized labor in the United States.

SMALL AND INDEPENDENT MANUFACTURERS WANT AND NEED S. 11

About 18 months ago, a notorius lawyer-lobbyist, who has for several years specialized in propagandizing against the Robinson-Patman Act, appeared and testified before a hearing conducted by the House Small Business Committee over which I presided. Recently he testified before your distinguished committee in opposition to S. 11. On the occasion when he appeared before the House Small Business Committee, he berated the Robinson-Patman Act. On other occasions, he has contended that small manufacturers would be harmed by the passage of S. 11 and H. R. 11. In view of some of the charges and contentions he made when he appeared before the House Small Business Committee, I sent a form letter to many hundreds of the food canners and food processors inviting them to comment and tell me frankly, what they thought about the Robinson-Patman Act. The replies were overwhelmingly favorable to the Robinson-Patman Act by a margin of better than 15 to 1. On March 15, 1956, at pages 4247–4254, I inserted in the CONGRESSIONAL RECORD excerpts from quite a number of those letters. Now those food processors and canners operate factories. They are in a sense, small and independent manufacturing concerns.

On February 4, 1957, I placed in the RECORD, at page A724, a copy of a letter a food processor and canner had written me under date of January 23, 1957. In that letter the president of the small and independent manufacturing firm pointed out that in 1954 there were 1,911 canning firms listed in the directory of the National Canners Association. By 1955, 581 of those, or 30 percent, had gone out of business. They represented not merely canning plants, but canning firms. That high rate of mortality of small business firms was attributed to the practices and conditions we are attempting to remedy by the passage of S. 11 and H. R. 11.

Recently opponents of S. 11 and H. R. 11 thought up the gimmick of arranging for a number of small and independent manufacturers to write to members of your distinguished committee and to other Members of the Senate and to Members of the House, and in so doing expressed opposition to S. 11 and H. R. 11.

A few days ago a small and independent fountain-pen manufacturer sent me a copy of a letter in which it was stated:

"I wish to submit the following statement for the consideration of your committee in regard to Senate bill No. 11, which is designed (I understand) to eliminate the good-faith defense under the Robinson-Patman Anti-Price Discrimination Act.

"I have received several bulletins from our association, Fountain Pen & Mechanical Pencil Manufacturers Association, Inc., which have presented several arguments against Senate bill No. 11.

"I have also received a memo prepared by the NAM law department arguing against this legislation."

Incidentally, since I have made reference to the canning industry, I would like to call attention to a statement which was made in a letter addressed to one of the Members of the House of Representatives on March 15, 1957, by one of his small-business constituents. In that series of correspondence the Member had stated that he was confused because of the arguments which were being made by representatives of giant corporations that H. R. 11 would not help small manufacturers. In the letter of March 15, 1957, the constituent wrote:

"I can well understand that you and other Congressmen are confused. I lived with the Robinson-Patman Act for 7 years. I played a role in litigation involving this act. I went to work for a citrus canner in Florida in 1936, starting out as a bookkeeper at $20 per week. In 3 years, by virtue of endless hours of work and wholehearted application to my work, I wound up second high man in the company, who at that time was the four largest canners of citrus juices in Florida. I had a brilliant future in front of me. Then we were

discriminated against by American Can Co. We fought them tooth and nail, and litigation involving the Robinson-Patman Act went to the Supreme Court of the United States twice, the first time getting one of those famous 4-to-4 decisions. My company won their suit against American Can, and I believe that I am right when I say it is the only time that damages have been awarded under this act. However, that company is now bankrupt, going to the wall in 1952, and with it went the future I had worked so hard to carve out for myself. The cost of fighting American Can Co. was too much and contributed in a large measure to destruction of this company.

"Now I am in business for myself and I am faced with the same danger of having the ground cut out from under me. Believe me, sir, I know what these big companies can do if they have a mind to. I do not contend that all big companies do act that way or that bigness in itself is an evil."

Under date of March 8, 1957, the Armstrong Creamery Co. of Wichita, Kans., wrote a letter to Members of the House and to Members of the Senate in which price discrimination practices of the National Dairy Products Corp. were outlined. That, up to date, instance of price discrimination was described by the Armstrong Creamery Co. as follows:

"Recently the National Dairies Division (Sealtest) at Kansas City lowered the price of ice cream 25 cents per gallon throughout this area. Discounts and all other factors considered, this new price is lower than 97 percent of the sales volume in the area before Sealtest lowered the price. This low price makes it impossible for any dairy to sell ice cream at a profit, and if continued very long will force a number of independent plants out of business. At the same time Sealtest has been raising prices in other areas where competitive situations are as bad, or worse, than they are here.

"The plain fact is that through ineptness and mismanagement, Sealtest has lost a lot of volume in the past few years and has taken this method of regaining their position. Right now they can use the excuse that they are meeting the price of the 3 percent of the volume which was sold at a cut-throat figure (and which will always be sold that way.)

"Of course Sealtest's profits in other areas will more than carry the losses they will take in this one."

The letter of the Armstrong Creamery Co. concluded as have many others I have received from small and independent business concerns in a plea for the passage of H. R. 11. The closing words of that letter were: "It is the only salvation for a great number of independent businesses."

FARMERS, CONSUMERS, AND WHOLESALERS WANT AND NEED S. 11 AND H. R. 11

Representatives of farmers have testified before this distinguished committee, and before other committees strongly supporting S. 11 and H. R. 11. You have heard the testimony on behalf of the National Farmers Union, which has a membership representing almost 1 million voters. That testimony strongly supports the proposed legislation you have under consideration. In the CONGRESSIONAL RECORD for March 21, 1956, at page 4712, is a showing that representatives of consumer groups are in support of S. 11 and H. R. 11. Also the RECORD for March 27, 1956, page 5167, shows that wholesalers and retailers in large numbers have made strong pleas for the passage of this legislation.

I have noted that on the afternoon of March 14, 1957, representatives of several hundred small-business men, who are retailers of petroleum products, appeared before your committee and testified (transcript pp. 513–520) to the effect that the major oil companies are discriminating in price to the damage and destruction of small business. They urged passage of S. 11 and H. R. 11.

FTC, AN EXPERT AGENCY ON PRICE DISCRIMINATION, SUPPORTS S. 11 AND H. R. 11

The Federal Trade Commission is the agency of Government charged with the primary responsibility of the enforcement of Federal legislation dealing with price discrimination. That agency has dealt with the problem of price discrimination since it was created in the Wilson administration in 1914. Prior to that time, the Bureau of Corporations, its predecessor, studied and reported upon the problem of price discrimination during the period of 1903–14. It is the only agency of Government with any substantial experience in dealing with the problem of price discrimination. In view of that fact, it is believed that its position respecting the pending legislation should be regarded as important. After careful study of S. 11 and H. R. 11, the Federal Trade Commission has announced that it supports those bills. In its official formal report to the Committee on the Judiciary, House of Representatives, on March 12, 1957, the Commission stated:

"The Commission is of the opinion that the objectives of H. R. 11 and H. R. 398 are of sufficient importance to the effective operation of the Clayton Act that such legislation should be enacted without awaiting further case-by-case development under section 2 (b) as presently worded." (H. R. 398 was introduced by Hon. BYRON G. ROGERS, of Colorado. It is an identical companion bill to H. R. 11.)

On March 26, 1957, all members of the Federal Trade Commission appeared before this distinguished committee and explained why the Commission is supporting S. 11 and H. R. 11.

WHO ARE THOSE OPPOSING S. 11 AND H. R. 11?

You received testimony in your hearings on March 12 and 13, 1957, which established beyond question that the major oil companies met secretly in October 1956 and planned a campaign to oppose this proposed legislation. The testimony you have adduced shows that the representatives of the major oil companies, with the cooperation of the American Petroleum Institute, arranged for each of a number of the major oil companies to distribute, to their high officials, copies of a master brief containing a number of arguments against S. 11 and H. R. 11. Those arguments were reproduced and dressed up to give them the greatest possible force for persuading the unwary that S. 11 and H. R. 11 would be harmful to small business and should not be passed. Also the representatives of other big business concerns and the Washington representatives of the United States Chamber of Commerce and the National Association of Manufacturers have sought to persuade small and independent businesses that S. 11 would prove harmful. In my statement today, I have made reference to an instance of the law department of the National Association of Manufacturers preparing and distributing to small manufacturers a brief arguing against the passage of S. 11.

Therefore, you have before you clear and unmistakable evidence that Standard Oil Company of Indiana, Standard Oil Company of California, Gulf Oil Corp., Shell Oil Co., Pure Oil Co., and a great number of other big business firms, which, according to other testimony before you, are currently practicing price discriminations destructive of small business, are campaigning against S. 11 and H. R. 11, and are urging you to prevent the passage of such proposed legislation which would curb their practice of destructive price discrimination.

In addition, a number of small and independent business concerns have written or wired that they are opposing S. 11 and H. R. 11. Some of those who have so expressed their opposition, have done so by presenting the same arguments which have been included in the master brief against S. 11 and H. R. 11 as distributed by the American Petroleum Institute and its members and representatives. In fact some small and independent businessmen who have voiced opposition to S. 11 and H. R. 11 have frankly stated that they were pressured into doing so by the representatives of the major oil companies.

Not all of the opposition to S. 11 and H. R. 11 has come directly from the offices of giant corporations. Some attorneys who have represented such corporations in price discrimination cases have appeared and testified against this legislation. For example, Mr. Hammond Chaffetz and Mr. William Simon who have argued in court in defense of price discrimination practices of the Standard Oil Company of Indiana, have appeared before your distinguished Committee and opposed this legislation. They have held prominent positions on committees dealing with this subject in the antitrust sections of the New York State and the American Bar Associations. And those who served with them on those committees have been persuaded to voice opposition to S. 11 and H. R. 11. Also those representatives of major oil companies served as members of the Attorney General's National Committee to Study the Antitrust Laws, and during March 1955, that Committee, with the help of the gentlemen I have named, issued a report which took a position contrary to what is provided for in S. 11 and H. R. 11. It is notable that at page 181 of the Report of the Attorney General's National Committee to Study the Antitrust Laws, the following statement appears:

"This committee approves the result of the Standard Oil decision."

It has been established that other members of the Attorney General's committee had been representing big business concerns charged with violations of our antitrust laws.

Incidentally, Hon. Sinclair Weeks, Secretary of Commerce, was a member of the Attorney General's committee. He has reported to the Committee on the Judiciary, House of Representatives, in stating the official position of the Department of Commerce, that he is opposed to the passage of S. 11 and H. R. 11. In that connection he made it clear that he is for the practice of price discrimination when done in good faith even though the effect "may have been to substantially lessen competition or tend to create a monopoly." (See the letter of Mr. Weeks to the Committee on the Judiciary, House of Representatives, dated March 6, 1956).

Of course, the Department of Justice, which is under the jurisdiction of the Attorney General, has voiced its opposition to S. 11 and H. R. 11. It did so in a report to the Committee on the Judiciary, House of Representatives, March 28, 1957. Before I complete my statement I shall make further comment regarding that report from the Department of Justice.

MISCONCEPTIONS AND MISSTATEMENTS ABOUT S. 11 AND H. R. 11

The propaganda which has been prepared and distributed by representatives of the American Petroleum Institute and their members, and by some of those who were members of the Attorney General's National Committee to Study the Antitrust Laws is loaded with misstatements. Those misstatements have created misconceptions about the Robinson-Patman Act and what S. 11 and H. R. 11 would provide.

The master brief of the API, a copy of which has been placed in the record of the proceedings before your distinguished committee, contains many misstatements. For example, it contains a statement that Pres-

ident Truman vetoed legislation similar to what is provided for in S. 11 and H. R. 11. What President Truman vetoed in 1950 was S. 1008. That bill, in effect, provided for the opposite of what S. 11 and H. R. 11 would provide. Attorneys who have represented major oil companies have appeared before you and testified and added to the confusion created by such misstatement because they adopted and made such misstatements a part of their testimony.

Mr. William Simon who testified before this committee on March 26, 1957, at transcript page 1406, stated that the bill which went to President Truman contained the Carroll-Kefauver amendments. I have understood that Mr. Simon has been dabbling around with this matter for a number of years. Therefore, he should know that the fact is the Carroll-Kefauver amendments to S. 1008 were knocked out in conference and did not appear in the bill as it was presented to President Truman. The bill which was vetoed would have weakened the law. The Carroll-Kefauver amendments would have strengthened the law.

Likewise, on March 14, 1957, Mr. Hammond Chaffetz, one of the legal representatives of the Standard Oil Company of Indiana, at transcript page 459, testified that "President Truman did veto a bill which did have the Carroll-Kefauver amendment in it. The Carroll-Kefauver amendment was very similar to the amendment which is proposed here." Although those gentlemen have been dabbling in this matter for a number of years, it does not appear that they studied that bill or the action of the conferees in deleting from that bill the Carroll-Kefauver amendments.

The fallacious argument has been made by representatives of major oil companies that if S. 11 and H. R. 11 were to be enacted, then any seller who wanted to lower his price to one customer would find it necessary to lower his price to all customers throughout the country. It appears that the argument which was thus prepared by representatives of the major oil companies was artfully worded, widely distributed, and has had its calculated effect on a number of small- and independent-business men who are engaged in the sale and distribution of petroleum products. It has stirred a number of them to oppose the pending legislation.

Now, the representatives and members of the API, in distributing such fallacious arguments, pointed to proceedings currently in litigation at the Federal Trade Commission as a basis for their statements. Those proceedings involve the Pure Oil Co. because it was discriminating in price with respect to sales it was making in Birmingham, Ala.

With reckless abandon, reference was made to a sentence or two which appeared in the complaint of the Federal Trade Commission in that case. No effort was made by them to explain to the small and independent businessmen, or to the members of your distinguished committee, that if the facts alleged in the complaint in that case should be proven, there will be no good-faith defense available in that case. Therefore what is provided for in S. 11 and H. R. 11 would have no application to situations such as are involved in the case of *FTC* v. *Pure Oil Company* regarding the Birmingham, Ala., situation.

What I have just said about the Federal Trade Commission's Pure Oil Co. case (sometimes referred to as the Birmingham, Ala., case) was made perfectly clear in the testimony given by representatives of the Federal Trade Commission when they appeared before your distinguished committee on Friday, March 15, 1957. On that occasion the FTC official who is in charge of the litigation on that case testified to the following effect:

"Senator DIRKSEN. Would these cases be affected by the pending bill?

"Mr. MCIVER. No, sir; I do not believe that the pending bill would have any effect on the result in these particular cases (transcript, pp. 785–786).

* * * * *

"Mr. DIXON. Now, if your theory is correct, good faith there will not be a defense to what you have charged?

"Mr. MCIVER. That is our contention. Yes, sir (transcript, p. 789)."

The confusion which was created by the contention made in the API master brief and by representatives of the major oil companies in the opposition they have voiced to S. 11 and H. R. 11 to the effect that if a seller should decide to lower his price to one of his customers, then if these bills passed, he would be compelled to lower his price to all of his customers, seems to have enveloped the Attorney General of the United States and the Department of Justice. In the report from the Department of Justice to the Committee on the Judiciary, House of Representatives, March 28, 1957, on H. R. 11, it is made clear that one of the reasons why the Department is opposed to S. 11 and H. R. 11 is because it believed "that a seller constrained by law to reduce prices to some only at the cost of reducing prices to all might well decide to reduce them to none."

In that report the Department of Justice did not cite any case wherein the law had been construed to provide that requirement.

Furthermore, in the report from the Department of Justice a number of recent cases were cited in which the "good faith" defense had been rejected. And the observation was made that for that reason S. 11 and H. R. 11 are not needed. What the Department of Justice appeared to overlook is the fact that in each of the cases it cited, a discriminatory pricing system was in question. As early as 1945, the Supreme Court of the United States had ruled in the case of *Federal Trade Commission* v. *A. E. Staley* (324 U. S. 746) that under the Robinson-Patman Act, a seller who adopts discriminatory pricing systems of his competitors will not have available to him the good-faith defense provided for in the act. And the Court said:

"The act thus places emphasis on individual competitive situations."

Therefore it would appear that the Department of Justice not only missed the point in its citation of the various cases refered to in its report opposing S. 11 and H. R. 11, but in doing so actually highlighted its own confusion over what is provided for in the Robinson-Patman Act on the point it made about a seller being required to reduce his prices to all, if he reduces prices to one. It had simply overlooked what the Supreme Court had ruled in the Staley case 12 years ago regarding the application of the Robinson-Patman Act to individual competitive situations.

Since it is clear that the Robinson-Patman Act, as amended by S. 11 and H. R. 11, would not permit the good-faith defense except and only for the purpose of meeting competition in individual competitive situations, the contrary cannot be true. In other words, when you lower your price in good faith to meet competition in an individual competitive situation, you are not doing so all the way across the country in all competitive situations. The Supreme Court held that the A. E. Staley Co. not only was not required to change its prices in all competitive situations in order to avail itself of the good-faith defense, but the Court also went further and held that Staley did not act in good faith because it, in claiming to meet competition at one place, had changed its prices to all of its customers everywhere. What more is needed to refute the fallacious arguments which have been made by representatives of the major oil companies and the API in its master brief, that under the Robinson-Patman Act, as amended by S. 11 and H. R. 11, a seller would be required to lower his price to all of his customers if he should lower to one?

Equally fallacious is the argument made in the API master brief and in statements made by others opposing S. 11 and H. R. 11 to the effect that those bills would prevent freight absorption. In the RECORD of March 18, 1957, at page A2145, I inserted a statement outlining why it is considered that S. 11 and H. R. 11 will not prevent freight absorption. I refer to that statement now for the benefit of those who wish to review more material dealing with that point. Furthermore, the API master brief and the statements of others who are opposing the pending bills, disregard and ignore the fact that S. 11 contains the provision to the effect that nothing contained therein shall be construed to alter the law applicable to freight absorption.

On page 4 of the API master brief there appears the following statement:

"Furthermore, it is important to note that the Robinson-Patman Act marked a departure from the traditional ideal of American justice by putting the burden of proof upon the person charged with violating the law * * * unless he could prove that his price decision had no effect on competition, he would probably be in violation of the law if this legislation should pass."

Now what are the facts?

The general common-law rule regarding the burden of proof in a case in litigation applies in price discrimination cases arising under the Robinson-Patman Act. In general that rule is to the following effect: The burden of proof in any proceeding lies at first on that party against whom the judgment of the court would be given if no evidence at all were produced on either side—regard, of course, being had to any presumption which may appear upon the pleadings.

Let us analyze how that rule applies in a price discrimination case arising under the Robinson-Patman Act. First of all, pleadings by the plaintiff or the Government in order to state a cause of action in a price discrimination case under the Robinson-Patman Act must among other things allege that—

(1) The party charged with a violation of the law is engaged in commerce (meaning, of course, interstate commerce).

(2) In the course of such commerce the party charged has discriminated in price between different purchasers of commodities of like grade and quality, and that some of those purchases involved in such discrimination were in interstate commerce.

(3) The sale of the commodities involved in the discrimination were sold for use, consumption, or resale within the United States or some other place under the jurisdiction of the United States.

(4) The effect of such discrimination may be to substantially lessen competition or tend to create a monopoly in any line of commerce or to injure, destroy, or prevent competition with any person who either grants or knowingly receives the benefit of such discrimination, or with the customers of either of them.

Pleadings by the plaintiff or the Government in such litigation not containing allegations to the effect indicated above would fail as not having stated a cause of action.

What about the burden of proof in such proceedings? First, let us assume that a simple answer had been filed by the defendant who merely denied the allegations made by the plaintiff. Assume further that no evidence was offered by either party. Then under the general rule regarding the burden of proof the plaintiff would fail. He had alleged a good cause of action but he had failed to prove his case. The burden of proving the case is upon the plaintiff and that means proving each of the necessary allegations as above indicated. The defendant need not prove any of those allegations. In his pleadings it is sufficient for him merely to deny them.

Momentarily, when they have lapsed into unguarded pose and permitted their better selves to express their inner thoughts, arch opponents of S. 11 and H. R. 11 have acknowledged that what is contended in the API master brief is not true. They admit that the person charged does not have the burden of proving "that his price decision had no effect on the competition." For example, see the testimony of Mr. William Simon before your distinguished committee Tuesday, March 26, 1957, at transcript page 1392.

In view of these circumstances, it is difficult to understand why some lawyers who oppose S. 11 and H. R. 11 are so reckless as to charge that the effect of the passage of S. 11 and H. R. 11 would be to require the defendant in a price discrimination case, under the Robinson-Patman Act, to prove his innocence. That is utter nonsense. I am disappointed that lawyers with ability have argued such nonsense. I cannot but believe that they know their argument is nonsense.

Of course no one supporting S. 11 and H. R. 11, to my knowledge, has taken the position that the burden of proof, under the Robinson-Patman Act, departs from the common-law rule in any respect. Therefore, all of us acknowledge that when a defendant asserts the "good faith" defense, it is his burden to prove that he acted in good faith. Likewise, in criminal cases when one is charged with murder and asserts that he acted in self-defense, it is not the burden of the State to prove that he did not act in self-defense. The burden is on the defendant to make out that defense.

At page 7 of the API "master brief," the statement is made:

"If all manufacturers in an industry complied with this law, they would be in danger of being charged with a conspiracy to fix prices."

That, like the API argument about the burden of proof, is utter nonsense. Nothing in the Robinson-Patman Act requires any two or more sellers of any commodity to charge the same or different prices. Nothing in that law requires any seller to act in any particular way regarding his relationship with another seller. The act applies only against a single seller's action in discriminating in price. It is significant that the API "master brief" failed to cite any decision in a case supporting its nonsensical arguments.

On page 8 of the API "master brief" are statements that both the Truman and Eisenhower administrations have opposed legislation such as is provided for in S. 11 and H. R. 11. I have pointed out that those statements are false insofar as they relate to the bill which was vetoed by President Truman in 1950.

It is believed that statements in the API master brief respecting the position of the Eisenhower administration on legislation such as is provided in S. 11 and H. R. 11, should be scrutinized as carefully as the statements contained therein regarding the position of the Truman administration. The API master brief takes the position that the Eisenhower administration opposes legislation such as is provided for in S. 11 and H. R. 11. Now, what about President Eisenhower? Where does he stand on S. 11 and H. R. 11? Certainly, small business would like to know. To my knowledge he has issued no statement in opposition to S. 11 and H. R. 11. On the contrary, my mind goes back to a statement he did issue to representatives of small business on October 16, 1952. The following are quotations from that statement:

OFFICES OF DWIGHT D. EISENHOWER,
New York, N. Y., October 16, 1952.

Mr. WATSON ROGERS,
National Food Brokers Association, Washington, D. C.

DEAR MR. ROGERS: At my conference today with you and representatives of other national associations of American industry and business, you asked for my views concerning the protection of small business from monopoly, and particularly concerning the provisions of our antitrust laws against unfair and discriminatory pricing practices that are destructive of competition and free enterprise.

* * * * *

Our laws against unfair and destructive pricing practices, as well as other practices leading to monopoly, must be fearlessly, impartially, and energetically maintained and enforced.

I am for such necessary rules of fair play because they preserve and strengthen free and fair competition, as opposed to monopolies which mean the end of competition. * * *

Sincerely,

DWIGHT D. EISENHOWER.

CONCLUSION: CONGRESS SHOULD ACT NOW TO HELP SMALL BUSINESS

Small business is pleading for protection from the practice of destructive price discrimination. Each time the Congress has investigated and studied the practice of price discrimination, it has concluded that such practice is monopolistic, anticompetitive, and therefore contrary to our national public policy for a free and competitive enterprise system. Opponents of S. 11 and H. R. 11 are arguing for allowing a continuation of destructive price discriminations. They argue that legislation should not be passed that would assure a halting of price discrimination. In effect, they are telling the Congress to legislate so that price discrimination, at the same time, should be permitted as well as prohibited. I am of the opinion that any effort to thus serve big business will fail to serve small business and our free and competitive enterprise system.

If Congress should conclude that the representatives of big business are correct in their arguments that price discrimination is a good thing, then it would be logical for Congress to repeal all of our laws which prohibit price discrimination. We should have more of what is good. However, if our experience in investigating and studying price discrimination since 1875 and the conclusions we have reached on the basis of such experience are sound, then we must conclude anew that price discriminations are bad. We should have less of what is bad. On that issue we should not compromise simply to satisfy the whims of big business. We should not legalize the use of a tool which will destroy small business.

Promises to small business during an election year will not do the job. Action is needed to save small business from destruction. Enactment of S. 11 and H. R. 11 will help to do that job.

Politics With People's Money

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 4, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Playing Politics With Your Money," published in the Rome, Ga., News-Tribune of March 14, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PLAYING POLITICS WITH YOUR MONEY

President Eisenhower and Members of Congress who are staging a waiting game, trying to pass the buck on responsibility for cutting the Federal budget, may think they are playing smart politics.

But they had better get out in the hinterlands and learn what the rank and file citizens are saying about the budget. The refusal of Eisenhower and Treasury Secretary Humphrey to make suggestions for trimming the record peacetime outlay and the refusal of the House leaders to take over their responsibility is disgusting to a lot of grassroots citizens.

It is high time for the Government—the President and Congress—to make an "agonizing reappraisal" of the plight of the taxpayer.

While the outlook for business and industry is still good, there are many pockets of unemployment and curtailment in the job market. The cost of living is still going up. Many citizens are caught in a tight squeeze and are having to borrow money to meet their tax payments.

This is not a healthy situation—for the taxpayers or the politicians.

Georgia's congressional delegation, including Senators RUSSELL and TALMADGE, realize that the time has come when the United States taxpayers can no longer continue such a heavy load of economic assistance to foreign countries, regardless of the motive.

Unless something is done to reduce Government spending, balance the budget and give the taxpayers some relief, the Nation will be headed toward bankruptcy and an economy that wouldn't make it worth the while for the Communists to try to take over.

The public is going to place responsibility on both the Congress and the President for shirking their duty. The huge budget should be trimmed.

Congressmen who fail to do their duty and go back home to face the voters next year will find that the citizens feel a cut in spending and taxes is possible. And they are not interested in who gets the credit if it is done.

But they will know who to blame if this action is not taken—and soon.

How a Texan Came Up From the Salt Mines

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 4, 1957

Mr. JOHNSON of Texas. Mr. President, the Lone Star Steel Co., of Texas, has made important industrial history during the last decade. The man who directs the destinies of this great industrial enterprise is Eugene B. Germany, of Dallas. Mr. Germany's story, as told briefly in a recent issue of the Dallas Times Herald, is an inspiring chronicle of success and service.

I ask unanimous consent that the article from the Times Herald be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"GENE" GERMANY: SALT MINE START

(EDITOR'S NOTE.—This is another in a series of articles on Dallasites who have attained success in their chosen fields.)

E. B. (Gene) Germany, who actually worked in the salt mines during his early married life, heads a firm that sold almost $90 million worth of products last year.

As president of Lone Star Steel Co., he's often described by friends and associates as "the wildcatter on a hot tin roof." Others insist that his "know when" has meant as much in his success as "know how."

A native of Sweetwater, Mr. Germany spent most of his life to young manhood around Grand Saline helping work his father's 40-acre farm. He finished high school there and worked his way through Southwestern University at Georgetown.

GETS TEACHING JOB

With his college diploma in one hand, he took a marriage license in the other and married Maggie Lee Wilson. When Mr. Germany was tendered a job teaching in the Grand Saline schools, he jumped at it.

The pay was scant, and to supplement their income the newlyweds worked in the salt mine near Grand Saline. Mr. Germany sewed salt sacks and his wife filled them.

Figuring that teaching school really wasn't up his alley, Mr. Germany started to study geology. Within a few years he had staked a wildcat location near Bastrop and drilled his first well, a producer.

There were more and more producers, and when in 1947 he accepted the presidency of Lone Star Steel, there was little economic basis for his taking the job. But there was a moral responsibility, mainly for hundreds of his friends who had invested their money in the firm.

FUTURE WAS DOUBTFUL

Ten years ago, the future of Lone Star was mostly speculative. Many experts said the venture was economically unsound because the ores being considered for tapping had a low iron content.

But on October 26, 1947, the company's blast furnace was tapped for the first time and real iron flowed. Gene Germany had brought in another wildcat.

In the ensuing years, there have been rough spots—certainly. But Lone Star earned $3.84 per share in 1956, and this year's prospects are equally good.

Throughout the rapid growth of Lone Star, Mr. Germany's stanch belief in the goodness of mankind has stood out. And smooth labor relations bear out his insistence that employees be treated fairly.

SONS HANDLE OIL

The industrialist's oil business continues to prosper under direction of his sons, Wilson and Norman. A daughter, Annette, is married to Rev. Jack Wilkes, a Methodist minister in Oklahoma City.

As though running Lone Star Steel and lending a hand when needed to two sons in the oil business are not enough, Mr. Germany has taken on dozens of extra-curricular activities.

He is a board member of the American Iron and Steel Institute, of the Scottish Rite Crippled Children's Hospital, Methodist Hospital of Dallas, and the Dallas YMCA. He is State director for the National Association of Manufacturers; executive vice president, Texas division, Red River Valley Association; chairman of the State payroll savings bond committee; chairman, Texas State Park Development Association, and director of the Texas Law Enforcement Foundation.

In his spare time, Mr. Germany makes solar batteries to run small motors and radios. Sometimes, he experiments with such intricate problems as removing salt from water.

His weekend relaxation includes driving to his farm near Grand Saline or to wet a hook in his private pool where he raises rainbow trout.

Mr. and Mrs. Germany reside at 3301 Beverly Drive in Dallas.

Jury Trial Is Basic Right

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Basic Right Usurped If Jury Trial Is Denied," published in the Nashville (Tenn.) Banner of March 19, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BASIC RIGHT USURPED IF JURY TRIAL IS DENIED

Like Pandora's box, that misnamed civil-rights package has been jockeyed around by reckless hands to where, unless restrained, other reckless hands can pry the lid off. What then is to protect against these plagues?

What recourse to law for offenses loosely defined in cases of prosecution before the fact or in judicial hearings in which the right to trial by jury is blanked out?

The Constitution has not been repealed; it has not been amended on these protective points. The authors of this force bill propose simply to sidestep it.

Southern members of the House Judiciary Committee, with some conservative Republican help, battled valiantly to preserve the constitutional principle. They were fighting for a fundamental right which, once destroyed, will be lost for all citizens, North, South, East, and West, and in such event may never be regained.

In that committee the cards were stacked, numerically. But on the floor of Congress, and particularly in the Senate with rules of unlimited debate, the whole case can be assessed in the spotlight of national attention. There the right hand of the body politic—a constituency as broad as the 48 States—can more clearly see what its left hand is doing.

One of the facts underscored beyond concealment is that a basic right abridged for one—for punitive purposes, or otherwise—is abridged for all. The instant breach in such an event is prophetic; the precedent immeasurably far-reaching in damaging consequences. Once an extraordinary power is bestowed, such as discretionary treatment of a fixed point of law, it leads invariably to abuse and extension of power-hungry, pressure hands; and never to recovery of that power by the hands in which, under the Constitution, it belongs.

President Eisenhower, as he said in his frank admission to a press conference, may not be qualified to pass legal judgment on this express proposition. Hardly can he fail to grasp the fact, however, that it challenges the basic premise of a government of law.

He cannot be so ignorant of the law generally as to sanction a glaring trespass, or be willing to sit by and see his Republican cohorts in Congress and leftwing Democrats team up to force down the throats of the American people this damnable piece of legislation masterminded by his Attorney General, Herbert Brownell.

A concerned Nation is looking to the President as well as to the responsible, Constitution-minded Members of Congress, to prevent this outrageous assault upon fundamental rights of every American citizen.

For once the Chief Executive and Congress can forget the politics involved in the question of segregation, whether applied to the public schools or whatnot. The dimensions of this threat are greater than that issue. Every citizen is vitally concerned, and must not be subjected to the jeopardy inherent in such a proposal—particularly in view of the liberal-mindedness of the present Supreme Court.

The Executive as the congressional branch has one safe and adequate yardstick by which to measure authority and duty—it is the Constitution, to whose support they took oath.

It was in awareness of human fallacy and eccentricity under pressure that the Founding Fathers left principles neither to mischance, administrative discretion, nor whim. They fixed them, rather, in a government of law. The winds of caprice must not be allowed to overturn that.

Twentieth Anniversary of the Divini Redemptoris

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1957

Mr. BEALL. Mr. President, 20 years ago Pope Pius XI issued one of the most profound documents of our time, his encyclical on atheistic communism. Freeman of all faiths have hailed this work, as they have hailed the Roman Catholic Church's relentless fight against atheistic communism, and I think it would be especially timely and fitting at this time for us to review the ideas offered to the world by Pope Pius XI just two decades ago in his Divini Redemptoris. Therefore, I ask unanimous consent that a newsletter of the Maryland Action Guild commemorating the 20th anniversary of this encyclical be printed in the Appendix of today's RECORD. The newsletter was sent to me by Mr. George D. O'Neill, chairman of the Maryland Action Guild.

There being no objection, the newsletter was ordered to be printed in the RECORD, as follows:

NEWSLETTER COMMEMORATING 20TH ANNIVERSARY OF DIVINI REDEMPTORIS

On the feast of St. Joseph in the year of our Lord 1937, our glorious holy father Pius XI renewed and reviewed the authoritative position of holy mother church on atheistic communism. In his great encyclical Divini Redemptoris he said, speaking of the need for a spiritual power for good, which he described as the Catholic Church—to contest vigorously the spiritual evil of the day, communism—that he placed the "vast campaign of the church against world communism under the standard of St. Joseph, her mighty protector."

His eloquent restatement of the need for this campaign needs no further explanation or paraphrase. On this 20th anniversary of that encyclical, commemorated with humility and confidence by the Maryland Action Guild, we feel it in order to quote a few key passages from Divini Redemptoris for the continued guidance of an informed laity and for the purpose of a call to greater zeal directed toward all members of the faith who might read these words and thus be encouraged to go further in this campaign.

The holy father, speaking of the necessity of complete distrust for communism tactics, said:

"In the beginning communism showed itself for what it was in all its perversity; but very soon it realized that it was thus alienating the people. It has, therefore, changed its tactics, and strives to entice the multitudes by trickery of various forms, hiding its real designs behind ideas that in themselves are good and attractive. Thus, aware of the universal desire for peace, the leaders of communism pretend to be the most zealous promoters and propagandists in the movement for world amity. Yet at the same time they stir up a class warfare which causes rivers of blood to flow, and, realizing that that system offers no internal guaranty of peace, they have recourse to unlimited armaments. Under various names which do not suggest communism, they establish organizations and periodicals with the sole purpose of carrying their ideas into quarters otherwise inaccessible. They try perfidiously to worm their way even into professedly Catholic and religious organizations. Again, without receding an inch from their subversive principles, they invite Catholics to collaborate with them in the realm of so-called humanitarianism and charity; and at times even make proposals that are in perfect harmony with the Christian spirit and the doctrine of the church. Elsewhere they carry their hypocrisy so far as to encourage the belief that communism, in countries where faith and culture are more strongly entrenched, will assume another and much milder form. It will not interfere with the practice of religion. It will respect liberty of conscience. There are some even who refer to certain changes recently introduced into Soviet legislation as a proof that communism is about to abandon its program of war against God.

"See to it, venerable brethren, that the faithful do not allow themselves to be deceived. Communism is intrinsically wrong, and no one who would save Christian civilization may collaborate with it in any undertaking whatsoever. Those who permit themselves to be deceived into lending their aid toward the triumph of communism in their own country will be the first to fall victims of their error. And the greater the antiquity and grandeur of the Christian civilization in the regions where communism successfully penetrates, so much more devastating will be the hatred displayed by the godless."

Then His Holiness, speaking directly to laymen, called for Catholic action:

"We extend our paternal invitation to our beloved sons among the laity who are doing battle in the ranks of Catholic action. On another occasion we have called this movement so dear to our heart 'a particularly providential assistance' in the work of the church during these troublous times. Catholic action is in effect a social apostolate also, inasmuch as its object is to spread the Kingdom of Jesus Christ not only among individuals, but also in families and in society. It must, therefore, make it a chief aim to train its members with special care and to prepare them to fight the battles of the Lord. This task of formation, now more urgent and indispensable than ever, which must always precede direct action in the field, will assuredly be served by study circles, conferences, lecture courses, and the various other activities undertaken with a view to making known the Christian solution of the social problem."

Turning to the duties of the Christian state, the holy father stated:

"It is the duty of the Christian state to concur actively in this spiritual enterprise of the church, aiding her with the means at its command, which although they be exercised by states to prevent within their prirve object the good of souls.

"This means that all diligence should be exercised by states to prevent within their territories the ravages of an anti-God campaign which shakes society to its very foundations. For there can be no authority on earth unless the authority of the divine majesty be recognized; no oath will bind which is not sworn in the name of the living God. We repeat that we have said with frequent insistence in the past, especially in our encyclical Caritate Christi: 'How can any contract be maintained, and what value can any treaty have, in which every guaranty of conscience is lacking? And how can there be talk of guaranties of conscience when all faith in God and all fear of God have vanished? Take away this basis, and with it all moral law falls, and there is no remedy left to stop the gradual but inevitable destruction of peoples, families, the state, civilization itself.'"

Pius XI concluded this great state paper on the most pressing of all problems of 1937—and of today since the message is timeless—by pointing to the eternal destiny of the church, and thus by predicting the ultimate conquest of the Church of Christ, with the following reminder to all of the faithful:

"With eyes lifted on high, our faith sees the new heavens and the new earth described by our first predecessor, St. Peter. While the promises of the false prophets of this earth melt away in blood and tears, the great apocalyptic prophecy of the Redeemer shines forth in heavenly splendor: 'Behold, I make all things new.'"

It would be presumptuous for us to say more. We count ourselves as fortunate to be able to participate in this anniversary.

Hon. Karl E. Mundt, of South Dakota

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Thursday, April 4, 1957

Mr. MARTIN of Iowa. Mr. President, the senior Senator from South Dakota [Mr. MUNDT] and I came to Congress together in 1939. During our long association I have found him to be an exceptionally capable and devoted Senator. I noted with interest a feature article concerning the senior Senator from South Dakota, written by Melva G. Chernoff, and appearing in the March 25 issue of the Sioux Falls Argus-Leader.

I share the author's high regard for the services contributed by the senior Senator from South Dakota, and I request unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATOR MUNDT PROVIDES FARM STATE SHREWDNESS IN UNION PROBE

(By Melva G. Chernoff)

WASHINGTON, D. C., March 25.—A neatly dressed man in a gray sharkskin suit, with a frank face and a disarming smile, is playing a large part in helping bring to light facts that may result in more enlightened legislation to regulation union pension and welfare funds.

He is KARL E. MUNDT, South Dakota's senior Senator, a member of the Senate's select committee to investigate improper activities in the labor or management field.

It's a paradox that this ever-smiling South Dakotan should be sitting on this particular committee since he is from a farm State where unions are not a prime factor in the economy. But it may be for that very reason that Senator MUNDT is a good man for the job.

MIGHT AFFECT FARMER

First, he brings no preconceived notions into the hearings and, second, he is making a determined effort to help protect the funds paid into union treasuries by workingmen. Senator MUNDT also believes that any misuse of such funds can also result in higher prices for heavy equipment and that, of course, includes farm machinery.

As Senator MUNDT sits near the end of the long mahogany table in the crowded committee room, taking notes to remind him of questions to ask, he pulls at the pipe that is his trademark.

The bright lights of the newsreel and television cameras do not bother him. He has been before them many times and he certainly became a veteran during the Army-McCarthy hearings.

So South Dakota's senior Senator sits there listening to Chairman JOHN MCCLELLAN, of Arkansas, and Committee Counsel Robert Kennedy grill the various witnesses. He makes his notes and then, just as you think things have come to a lull, Senator MUNDT indicates to the chairman that he would like to ask a question. This is done in a soft voice. An antagonistic witness begins to relax.

Coming after a barrage of questions from eager, boyish Counsel Kennedy and Senator MCCLELLAN, an ex-prosecutor of the old school, the witness wonders what this farm State Senator can pitch to him that can't be hit into the outfield. But the witness who underestimates MUNDT is quickly disillusioned. The Senator is no mean prosecutor himself. Read a few excerpts from the testimony and you'll see what I mean:

"Senator MUNDT (to teamster official Brewster.) If you will accept a friendly suggestion, Mr. Brewster, from a country boy out in South Dakota, where we do not have many teamsters or many unions, I would think that all of this big treasury that you have charge of, it would be wise to hire a little more storage room. This is the third time now that we have found you did not have enough room to keep the records and they have been lost.

* * * * *

WHO PLAYS SANTA CLAUS?

"Senator MUNDT. Do you believe it is a sound concept of basic Americanism to make it necessary for a man, in order to earn a living for his family, to contribute under compulsion to the election of a candidate whom he personally prefers to defeat? * * * I am trying to find out who plays Santa Claus. Out in my country the fellow who plays Santa Clause does not always keep all the gifts himself. He gives them away. But it seems to me that the fellows who are playing Santa Clause here get in on the dispensation of the largess. Right?

* * * * *

"Senator MUNDT. I understand. You are a sheep man and I come from sheep country and sheep men are not racketeers. You would not know too much about that.

* * * * *

"Senator MUNDT. They were simply using the union as a club to put Acme, their own outfit, into the pinball business.

"Mr. ELKINS. That is correct.

"Senator MUNDT. You have had some experience in that business. Had the plan (to make it a statewide operation) succeeded, what do you think would have been the annual take?

"Mr. ELKINS. Oh, Lord, it would have been terrific. The amount would have been fantastic."

"Senator MUNDT. Fantastic out in Portland is one thing and back in South Dakota

it would be something else. Ten dollars is a lot of money back home.

* * * * *

"Mr. SCHRUNK. During the last 2 months, we have had information that the Bellevue had ceased operations as a walk-in joint, but had been sneaking a few old customers and men sent from contact places.

"Senator MUNDT. That is point 1 for the investigating staff. They got that one. It is still open. Go ahead.

"Mr. SCHRUNK. No, sir; not open, as such.

"Senator MUNDT. Well, I did not mean they had neon signs up saying, 'Come on in,' but if they can sneak in, I would call it open. We are talking about the sneak-in places.

* * * * *

"Mr. LANGLEY. In this setting, the answer might tend to incriminate me.

"The CHAIRMAN. You mean to reflect upon this setting?

"Mr. LANGLEY. Not upon the committee, your honor.

"Senator MUNDT. Mr. Chairman, let us get a little more information about this setting. Will you dilate on that a little bit? What are you complaining about?

"Mr. LANGLEY. I am only using the language of the United States Supreme Court, Senator.

"Senator MUNDT. Will you apply the language of the United States Supreme Court to the Senate caucus room of the United States Senate so I can understand it?"

BECK AWAITED

Well, it's pretty hard to appreciate the great job the Senator is doing unless you either hear or read all of the testimony. But I think you get the general idea.

The Capitol is all agog now because Tuesday the committee reconvenes to question Dave Beck, the teamsters' head man. If he does testify, he has a new and different kind of adversary awaiting him.

Senator MUNDT is ready.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1957

Mr. POTTER. Mr. President, too often headlines, through their sensational quality, grant a misleading publicity advantage to the cohorts of Elvis Presley and the state of juvenile delinquency.

As an antidote to these temporary lapses of youth, I offer a speech entitled "I Speak for Democracy," written by Miss Eunice Schartow, a senior in the Saginaw High School, Saginaw, Mich. I ask unanimous consent that this speech be printed in the Appendix of the RECORD.

Miss Schartow, a young lady of outstanding ability and character, is living proof that the youth of America are worthy to lead the world of tomorrow. Her speech won a coveted trip to Washington, in a contest sponsored by the Junior Chamber of Commerce, the National Association of Radio and Television Broadcasters, and the Radio-Electronics-Television Manufacturers Association.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY

(By Eunice Schartow)

All Americans know something of the blessings of a democracy. You know and I know. How can we tell the others in the world. I should like to pack a box, a CARE package you might say, to tell people all over the world about democracy. This is no ordinary CARE package. This box does not contain sugar, rice, dried eggs, powdered milk. It is not sent to satisfy the physical hunger of some war-weary people. This is a very special box—a box of democracy, being sent to nourish the souls and spirits, the hopes and dreams of persecuted peoples.

What should we include? First, one American citizen, always looking quite well fed and well clothed, even in hard times; the smell of good, wholesome, plentiful and inexpensive food from a family table, or from a school cafeteria.

Let's add a group of highschool students, earnestly planning their club activities: taking advice, but doing most of the work themselves. The school PTA changing their name to PTSA, including the students in all the plans; the voice of one teacher: "Take whatever mark you want to earn." This we must show to the rule-laden teenagers of other lands.

Let's include Mr. America on voting day. He gets in a voting booth and closes the curtain, so no one may see how he votes. What an array of levers. Two political parties? This looks more live five. Mr. America knows who he votes for, and he's the only one who knows.

Put into the box the different pamphlets and books, giving the facts about various occupations; show a student, poring over them, and taking an endless number of tests, to find out for himself what career he wants.

We must include the strains of a hymn, sung by worshiping congregations; the prayers of a small child; the voice of schoolchildren as they join in "One Nation, under God indivisible."

We must not forget a scene at a political party convention; everything had been cut and dried; there was only one candidate for Vice President, and the States were going through the formality of nominating him. Then, a single man spoke up. "I nominate Joe Smith." Joe Smith was not elected, he was not real; but he remains a small symbol of democracy.

We should include the cry of a new baby, and the smile on his mother's face as she looks at her new son, hoping his life will be a success. The success story of a young man, almost penniless, but ambitious, winding up his career at the head of his own business.

Let's add a soft, silk-like cashmere sweater, bought by a 16-year-old girl with money earned from her part-time job; the voice of Elvis Presley singing Don't Be Cruel, while many swoon and many scoff. All of these are a part of a democracy. A wonderful demorcracy.

Where else in the wold do the people come before the Government because they are the Government. Where else are teenagers given so much freedom and urged daily to think for themselves? Where else may people vote a really secret ballot? Where else do we have real religious freedom, real opportunity? Where else would a citizen dare disrupt political proceedings? Only in a demorcracy are the people really free. Free to think and live as they please.

I close this box and send it on its way with the prayer that it will carry its message to all people, and show them the way to live. In this way, I speak for democracy.

Senate Committee Investigation of Labor and Management

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1957

Mr. GOLDWATER. Mr. President, the current investigations into improper activities in the fields of labor and management have caused widespread interest and comment across our Nation. I was pleased to discover the intelligent reaction to the problems created by the disclosures thus far in this series of investigations when I visited my home State this past weekend. One of the reasons why the people of our country are so well posted on current happenings and are able to intelligently appraise and analyze them is the newspapers of America. Two editors of outstanding newspapers in the southern part of Arizona, the Nogales Daily Herald and the Douglas Dispatch, editorialized on this subject in a manner to be expected of good journalism. I ask unanimous consent that both these editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Douglas (Ariz.) Dispatch]

DANGER AT THE TOP

The current investigation into the teamsters union has gone far enough to justify the time and effort of the congressional committee. If there have been charges it has been punitive in intent; these have been upset by the revelations of practices which none can justify.

For a long time, there have been suspicions the leadership of some big unions have strayed from their responsibilities to the membership. Now we learn that some of the actions of top leaders have been for personal benefit at the expense of the members.

Outside of large salaries, which in themselves are justified, some officials have claimed benefits more than questionable. Gifts of luxurious homes and other benefits, including retirement endowments, may not be out of line. But loans without interest and without security demand explanations. And use of union funds for personal gain and personal pleasure, apparently outside of loan or gift classification, arouse concern of the membership. Likewise, loose handling of pension funds, possibly diversion to other causes, demand correction and punishment.

Unions are now big business, ranking with some of the largest concerns in the country. They have come a long way and benefits to members in high-wage scales, in hospital and other benefits, and in pensions are such as to justify the strong central organizations. But the dangers in centralization of vast powers are now apparent.

Through the years attacks on union leadership have been shrugged off as originating with opposition to the union movement, and having no more basis of fact than a desire of enemies to weaken the union. But now the union memerbship has cause to worry and to feel that all is not well.

We cannot discredit a union leadership or a union organization because of a few scattered or isolated revelations of mishandling of

authority. But neither can the membership at large ignore multiple signs of trouble. A union's strength is built largely of faith and performance. When one or the other is lacking, it is time for corrective steps.

Time and again dissatisfaction within the ranks is squelched, and there are indications that the setup within the organizations does not permit correction. Before the congressional hearings are concluded, it appears that legislation will be enacted to make it possible for the rank and file to exact an accounting from their officers, even at the national and international level. Certainly there is ample evidence on which to make changes so that abuses may be curbed and wrongdoers may be punished.

[From the Nogales (Ariz.) Herald of March 25, 1957]

GET TO THE BOTTOM OF IT

Dave Beck, president of the huge teamsters union, seems to think it is perfectly proper that he should use his union's fat treasury as a kind of combination bank, RFC, and FHA to enhance his own personal position in life.

Already well known is the fact that he sold his lavish Seattle home to the teamsters for $163,000 and they thereafter allowed him to live in it rent and tax free.

Now he tells the Nation that he has borrowed between $300,000 and $400,000 from the union's so-called western conference over the past 10 years—without paying 1 cent of interest and without informing the union rank and file how its funds were being employed.

Beck believes everything is in order because he paid back these loans to the last penny. Evidently he satisfied other union executives that he was supporting the loans with plenty of collateral, so they couldn't lose if anything happened to him before he got a chance to pay the money back.

This friendly sort of private banking system, conducted with workers' funds but without their knowledge, hardly classifies as the responsible way to operate a union's finances.

Beck's astonishing disclosures provide the conclusive answer to those who question whether union finances require careful public control, including full and regular announcements of operations.

Obviously they do.

In the light of Beck's cavalier use of union money, in the light, too, of evidence that he paid more than $308,000 in United States income taxes from 1949 through 1956 while earning a union salary that calls for far less tax, President Eisenhower's decision to let the Senate Labor Rackets Committee review Beck's tax files appears entirely warranted.

The special Senate group clearly cannot rest now until it has examined every detail of Beck's personal finances as well as those of his lieutenants and the teamsters in general.

A union of such size is vested with a public interest.

It cannot be run as if it were a private financial empire to be manipulated at the whim of self-seeking men.

Tributes to Pierce Butler, Jr.

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1957

Mr. THYE. Mr. President, Minnesota lost a distinguished citizen in the death of Pierce Butler, Jr. He was the son of the late Pierce Butler, Associate Justice of the Supreme Court of the United States.

Mr. President, on March 26 there was published in the St. Paul Dispatch an article entitled "Attorney Pierce Butler Dies Here." On March 27 there appeared in the Minneapolis Tribune an article on the same subject; and on March 28 a similar article appeared in the Twin Cities Observer. I ask unanimous consent that these three articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the St. Paul Dispatch of March 26, 1957]

ATTORNEY PIERCE BUTLER DIES HERE

Pierce Butler, Jr., 64, St. Paul attorney and civic leader, died at 6:30 a. m. today of leukemia.

His death came suddenly at Miller Hospital where he had been a patient since Wednesday.

A native of St. Paul, he was the son of the late Pierce Butler I, the only Minnesotan ever to serve on the United States Supreme Court, and Anna Butler.

He was a member of the law firm of Doherty, Rumble & Butler.

Mr. Butler was best known to the average St. Paulite for his efforts in connection with the $39 million bond issue for civic improvements.

He served as chairman of the Second United Improvement Council which organized the bond issue and spearheaded its adoption. Following its passage in 1953, he was named chairman of the council's advisory commitee on the bond issue to see that projects undertaken were carried out in accordance with the bond issue.

The family home is at 1600 Edgcumbe Road.

Mr. Butler was born in St. Paul March 17, 1893. He was educated in the St. Paul public schools and was graduated from Princeton University in 1914 and Harvard Law School in 1917. He was a Phi Beta Kappa.

In 1917 he entered the United States Army from the Plattsburg training camp and served as a first lieutenant in the infantry until 1919.

He was admitted to the bar in Minnesota in 1920 and had practiced here since that time. He had a reputation of being an outstanding trial lawyer.

He was also consul here for the Mexican Government.

In 1928 and 1932, he was a delegate to the Democratic National Convention.

For several years he was an instructor at the St. Thomas College of Law and the St. Paul College of Law.

Mr. Butler was also a member of the executive committee and board of directors of American Hoist & Derrick Co., a director of the Minnesota Tribune Co., a member of the American, Minnesota, and Ramsey County Bar Associations, and a past president of the county bar group. He was also a member of the executive council of the United World Federalists and belonged to the St. Paul Athletic Club, the Minnesota Club, and the Minneapolis Club.

He was also a member of the Knights of Columbus and the American Legion.

Surviving are his wife, the former Hilda Vallandigham; 2 sons, Pierce III, of St. Paul, and Michael V., of Watertown, Mass.; 2 daughters, Mrs. Robert H. Beck, of Minneapolis, and Mrs. Jean A. M. Pellotier, of Paris, France; his mother, Mrs. Pierce Butler, of Baltimore, Md.; 1 sister, Mrs. E. K. Dunn, of Baltimore; and 3 brothers, William J., of Waunakee, Wis., Francis D., of St. Paul, and Leo, of Brookeville, Md. There are five grandchildren.

Funeral services will be held at 10 a. m., Thursday, at the Cathedral, Dayton and Summit, with burial in Calvary Cemetery.

[From the Minneapolis Tribune of March 27, 1957]

PIERCE BUTLER, JR.

Pierce Butler, Jr., of St. Paul, who died Tuesday, was one of Minnesota's most distinguished native sons. A son of the late Pierce Butler I, who was the only Minnesotan ever to serve as an Associate Justice of the United States Supreme Court, he won distinction in his own right in the private practice of law.

But he also was interested in a variety of other pursuits, including civic affairs, business, and international relations. Extremely well-read and well-informed, he could quote the classics or the Bible as the occasion demanded. He was an effective trial lawyer, an entertaining conversationalist, a warm friend. Many Minnesotans will miss him.

[From the Twin Cities Observer of March 28, 1957]

The death this week of Pierce Butler, Jr., St. Paul attorney and civic leader, marks the passing of one who truly could be called a personage, not merely a person.

Mr. Butler was renowned not only as a brilliant lawyer but for a wide range of interests in the industrial, political, and civic life of his city and the State. He was a founder and for many years chairman of the national executive council of the United World Federalists; he was chairman of St. Paul's United Improvement Council; he served since 1950 as Mexican consul in St. Paul because of his fluency in the Spanish language (he was equally familiar with Latin and French, and knew a bit of German as well).

He was widely respected, and he merited all the respect accorded him.

Grave Matter

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Grave Matter," published in the Augusta Chronicle of March 6, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GRAVE MATTER

(By Mary Carter Winter)

David Lawrence, one of the Nation's soundest news commentators, has drawn attention to unprecedented, inexcusable and frightening conduct on the part of the United States Department of Justice.

In a devious move, of which the public was entirely ignorant until Mr. Lawrence exposed it in his column, published in the Chronicle and elsewhere in the United States, the Department of Justice has substituted for the names of a local school board, in a law suit in Federal court, the words "The United States" as party to the suit.

This occurred in the Clinton, Tenn., segregation suit in which 18 citizens were arrested on a charge of hindering the Federal injunction issued in connection with disturbances that arose during the effort to integrate the Clinton High School.

That injunction brought storms of protests because of its no limits application to any and all persons, whether or not they were directly involved in the case. At that time, Mr. Lawrence pointed out the grave implications of such a no-limits injunction by the court. Now he has drawn attention to a graver matter.

The subsequent action of the Department of Justice in making the United States party to the Clinton case eliminated the possibility of a jury trial for the 18 defendants because—Mr. Lawrence pointed out—Federal law eliminates trial by jury when the United States itself is party to a suit involving contempt of court.

That in itself is bad enough. Worse still is the fact that the Department of Justice should resort to a stratagem of that kind—action that must be condemned by all honest citizens.

Mr. Lawrence declared that the 18 defendants in the Clinton case can be deprived of a trial by jury and put in jail as unfairly as if they were living in a totalitarian state. They are, in other words, being deprived of their civil rights in an outrageous manner by the Federal Government itself, which is crying aloud hypocritically for the enactment of a civil-rights program in Washington to protect certain classes of people in this country.

One wonders if the 18 defendants in the Clinton case were even informed, in person or through their attorney, that the original petition was to be amended so as to make the United States a party to the suit.

"If," declared Mr. Lawrence, "the Federal judge in Knoxville, Tenn., approves this request and it is sustained on appeal by the courts it will not be necessary for the Congress to legislate on civil rights. All that will be needed is for the Department of Justice to write out the order and the courts will uphold them."

This is indeed a flagrant abuse of power, which if it be allowed to stand, will eventually strip from the American people the protection of law and justice.

The question now is not whether 18 persons in Clinton, Tenn., are guilty of contempt of a Federal court injunction but rather it is: Are the citizens of the United States entitled to a fair trial by a jury of their peers on any and all charges of law violation?

If that right no longer exists the American people have become subjects instead of citizens—mere pawns upon the political chessboard, to be moved here and yon according to the dictates of those in power in Washington.

What the Department of Justice has done in the Clinton case calls for an investigation by Congress and for action to protect the rights of the masses of the people.

International Rescue Committee

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, April 4, 1957

Mr. GOLDWATER. Mr. President, an organization that is doing outstanding work in the field of creating better understanding of the Hungarian situation, and I am sure ultimately with the entire satellite situation, is the International Rescue Committee. This group of Americans have with diligence and hard work seen to the needs of many of the Hungarian refugees who have come to our shores in the past several months. Being close to the situation, their words carry authority, as they are quoted by Bob Considine in an International News Service column entitled "Blazing Way to Freedom." Because I feel our colleagues should be better acquainted with this organization, I ask unanimous consent that Mr. Considine's column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

BLAZING WAY TO FREEDOM

(By Bob Considine)

Look for more outbreaks in Hungary, say Leo Cherne and Angier Biddle Duke, chairman of the board and president respectively of the International Rescue Committee.

The two leading anti-Communists, both of whom assisted actively in caring for some of the nearly 20,000 Hungarians who streamed into Austria and Yugoslavia in the wake of last fall's rebellion, believe that two impending events will fan the smouldering embers into a fresh blaze.

One is the 109th anniversary of Hungarian patriot Louis Kossuth's rebellion against Russian rule. The other is the coming of spring, and with it the melting of the telltale snow which retained the footsteps of escapees and made more difficult their flight to freedom.

MUST BE READY TO HELP

The two leaders of a nonprofit organization which has raised more than $500,000 to make asylum easier to obtain and more bearable once realized do not confine their predictions to Hungary. They believe that Poland and East Germany could easily join in the fight against Soviet oppression. When and if they do, and if Hungary rises again, the IRC and every other humanitarian agency must be ready to move in a hurry.

Cherne says, "Intelligence reports that can be trusted put the strength of organized, armed Hungarian resistance at from 12,000 to 14,000. They are well-drilled, coordinated former Hungarian army men, mainly. When ready, they'll strike."

Duke, a member of the Knights of Malta, an organization which dates from the Crusades and which performed notably in spiriting hundreds of Hungarians out of the clutches of frontier guards, told us of some of the endless work of the IRC. He has just returned from Vienna.

The organization runs a children's home in Vienna, vocational schools in several countries, language schools in more countries, is setting up its own refugee high school in Vienna, makes arrangements with foreign and United States schools and colleges to accept freedom fighters, and arranged (for example) with the French Ministry of Labor to conduct 10-month vocational courses after which a job in French industry is provided. And it has put desperately needed spending and travel money in the pockets of thousands of escaped students.

TOUCHED HEARTS OF PEOPLE

The United States has taken in more than 20,000 Hungarians and relocated most of them, through religious and charitable organizations. Switzerland, with a population of 4 million, has taken 10,000; Canada, 18,000; West Germany, 12,000; England, 14,000; France, 14,000; Belgium, 4,000; Denmark a thousand, and so forth. Tens of thousands still remain in Austria, awaiting for a break. The United States Congress has before it a motion to admit another 50,000.

The work of the IRC has touched the hearts of people as separated in space and way of life as Vietnamese escapees who reached Saigon from the Red-held north (they raised $70,000 for IRC's Hungarian relief work) and Perle Mesta (who turned over the receipts of a $50-a-head party she threw at Philadelphia's new Sheraton Hotel Monday night).

IRC operates without Federal aid. Its top people, Cherne, Duke, Adm. Richard E. Byrd, Eric M. Warburg, Mrs. Kermit Roosevelt, Gen. William J. Donovan, and others, work hard and well, for no remuneration except the knowledge that they are easing what the gifted Duke calls, "a burden on the conscience of the western community."

Old-Age Assistance Grants and Living Costs

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1957

Mr. ROOSEVELT. Mr. Speaker, in connection with the introduction of the Humanitarian and Old-Age Rights Act today, a bill which would require the public assistance laws of the 48 States to be more uniform by having Congress establish a single standard of qualifications for the applicants, I include a table showing the amounts of public-assistance grants in the various States. For purposes of comparison, my colleagues may be interested in seeing a Bureau of Labor Statistics table on living costs in various areas of the United States. Under leave to extend my remarks, I include both these tables:

Old-age-assistance grants in all States as of June 1956 [1]

State	Number receiving aid	Average monthly payment
Alabama	100,236	$32.55
Arizona	14,058	55.68
Arkansas	55,127	33.11
California	267,320	71.44
Colorado	52,628	81.95
Connecticut	16,405	90.18
Delaware	1,573	44.79
District of Columbia	3,058	53.85
Florida	69,001	46.99
Georgia	98,100	38.34
Idaho	8,367	55.53
Illinois	90,831	60.88
Indiana	34,325	51.56
Iowa	39,613	60.99
Kansas	33,345	67.19
Kentucky	55,499	35.56
Louisiana	121,339	54.63
Maine	11,847	50.04
Maryland	10,204	46.52
Massachusetts	85,525	82.17
Michigan	71,006	57.47
Minnesota	50,871	70.81
Mississippi	70,865	28.80
Missouri	129,248	49.79
Montana	8,537	58.18
Nebraska	17,416	52.79
Nevada	2,587	61.74
New Hampshire	5,907	62.33
New Jersey	19,664	74.08
New Mexico	9,025	49.46
New York	95,982	83.10
North Carolina	51,750	32.71

[1] From September 1956 Social Security Bulletin.

Old-age-assistance grants in all States as of June 1956—Continued

State	Number receiving aid	Average monthly payment
North Dakota	8,056	$71.73
Ohio	95,210	59.45
Oklahoma	94,959	64.30
Oregon	18,571	66.54
Pennsylvania	52,678	46.48
Rhode Island	7,910	62.91
South Carolina	42,400	32.74
South Dakota	10,273	45.05
Tennessee	61,115	34.07
Texas	222,993	41.77
Utah	9,243	60.69
Vermont	6,682	49.53
Virginia	16,567	31.13
Washington	56,832	82.37
West Virginia	23,077	28.45
Wisconsin	41,400	66.95
Wyoming	3,887	58.85
Alaska	1,667	58.67
Hawaii	1,635	47.24
Puerto Rico	43,633	7.93
Virgin Islands	609	18.54
Total number of recipients	2,523,716	54.29

Living costs in different cities

City	Population	Budget cost December 1956	Increase since 1951	Relative cost [1]
			Percent	
Atlanta	470,000	$4,462	3.4	106
Baltimore	790,000	4,530	7.9	------
Boston	805,000	4,516	7.1	------
Chicago	3,760,000	4,457	6.5	105
Cincinnati	525,000	4,494	6.8	------
Cleveland	935,000	4,370	6.5	------
Detroit	2,025,000	4,476	6.7	105
Houston, Tex	690,000	4,489	4.3	------
Kansas City, Mo	490,000	4,206	6.2	------
Los Angeles	2,175,000	4,578	6.2	107
Milwaukee	690,000	4,576	4.3	108
Minneapolis	540,000	4,415	6.1	106
New York City	8,050,000	4,263	4.4	100
Philadelphia	2,140,000	4,310	5.7	101
Pittsburgh	680,000	4,417	5.1	------
Portland, Oreg	400,000	4,394	5.8	103

History of Hazleton, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on the history of Hazleton which appeared in the Hazleton Plain Speaker of April 2, 1957:

HISTORY OF HAZLETON BOROUGH, QUOTED FROM 1889 NEWSPAPER, SOUVENIR EDITION

The Hazleton Sentinel of November 28, 1889, in a souvenir Thanksgiving Day edition, printed a short history of the Borough of Hazleton.

Reference to the story is being made at this time in connection with the plans for the observance of the 100th anniversary of the date that Hazleton became a borough.

Here is the text of the 1889 story:

"It is not the purpose of the Sentinel to print a long and glowing history of our town. This sketch, therefore, will lack the charm of the average town history written by boomers and real-estate agents. Its history has not yet been written, but to do full credit it would require many months' time.

"The following articles will aim to give the salient points in the town's history. It is not a textbook. It is simply for the purpose of showing how from a very humble beginning the town has grown to its present size. We have not the skill of the colonization agent. We take things as we find them, and we find that to write up the history of such a town as ours would take more time and patience than can fall to the lot of the best newspaper writers whose work fill up the Sentinel, daily and weekly.

"The first house in Hazleton stood very near the site of David Clark's residence on East Broad Street. Back in the old stage-coaching days Jacob Drumheller kept a tavern at that place. In fact, he was known to have lived there in 1809.

"The Old State House was another landmark. It stood on the site of the Dryfoos mansion, on the old stage road running from Wilkes-Barre to McKeansburg. In the year 1817 those were the only houses standing. In 1834 there were seven houses. In 1833 Lewis Davenport built a hotel on the site of what is now the Hazleton House. It was once destroyed by fire but was rebuilt.

"The first store in Hazleton was built on the site of the A. Pardee & Co.'s present store on the southwest corner of Broad and Wyoming Streets. It was built by Ingham Brothers, who sold it to Mr. Cooper, and from his hands it passed into the possession of Pardee, Miner, and Hunt. The last named was the operator of the mines.

"From this humble beginning grew the present town of Hazleton. From a point of view it is as large a city as Easton. It has a population that is above the average mining town. It's businessmen are known throughout the State for their enterprise and probity. And although Hazleton has no self-adopted name, though it does not pose as a progressive city and makes no boasts, yet its influence is felt throughout the country and in the near future it will be a county seat that for vigor and push will lead the block of counties comprising the anthracite coalfields.

(EDITOR'S NOTE.—The historical sketch as printed in the Hazleton Sentinel of 1889, after the above introduction, went into a following sketch of the borough days of Hazleton. It then concluded with the early Indian history of the region and the construction of the first road through this section. To keep the sequence of the history, the Indian chapter and the roadbuilding sketch were given in the two series of articles we published last week.)

The sketch of 1889 continued with the following about the borough:

"The Borough of Hazelton was incorporated in accordance with an act approved April 3, 1851, and a supplementary act of April 22, 1856.

"In the old hotel which stood where the Hazleton House now stands the first election of the borough was held. Thomas Lawall kept the hotel. That was on March 27, 1857, and Abraham Jones was elected burgess and John Kahler high constable. The council was made up of Joseph Hamberger, George Brown, John Schreck, Andrew Ringlaben, George B. Markle, and William Ulrich.

"The president of the first council was George B. Markle; secretary F. A. Whitaker; treasurer, Charles H. Meyers.

"In December 1869 the boundaries of the borough were so enlarged as to take in the lands of William Kortz and 40 other properties lying between the lands of the Lehigh Valley Railroad Co., and the Diamond Coal Co., northwest of the former boundary line.

"In 1873 the police force was changed from the old volunteer system to the present efficient paid force.

"The fire department was authorized by the borough council March 15, 1869, and the following composed the Pioneer Engine and Hose Company: Thomas S. McNair, J. Sharon McNair, Thomas Monroe, T. Hall, Alexander McAllester, John A. Barton, C. F. Barton, John Lee, J. C. Tomlinson, S. B. McQuade, P. B. Conner, C. S. Longshore, S. D. Engel, Col. James Fitzpatrick, and Calvin Pardee.

"There had been an organization prior to that but it was an independent affair.

"In 1868, the council built the present engine house. The Diamond Hose, Hook and Ladder Company No. 2 was organized on September 6, 1889."

(EDITOR'S NOTE.—The foregoing reference that the Borough of Hazleton was incorporated in accordance with an act approved April 3, 1851, and a supplementary act of April 22, 1856, were the dates used in early accounts which carried the date of April 1856 as the day the borough was incorporated.

(Recent research, however, shows that these dates were the dates when the State legislature passed laws to govern the creation of boroughs. These laws cited how much land and population were needed before a new borough could be formed.

(It was in 1856 that 48 citizens of Hazleton, acting in accordance with these laws, presented a signed petition to the court of Luzerne County, asking that Hazleton be incorporated as a borough.

(The court granted the prayer of the petition and it became effective on November 1, 1856. This is the date that Hazleton became a borough, which franchise gave the borough the right to elect borough officers to conduct the borough government. It was several months before all details were completed for the first election. This was held on March 27, 1857.

(Thus the date 1857 is as significant as 1856 in establishing the birthday of the borough.

(The Hazleton Centennial Association is planning for a big celebration to start this month and conclude in a concentrated program covering 10 days in July.)

Speech of Ogden R. Reid, President and Editor of New York Herald Tribune

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, April 4, 1957

Mr. BEALL. Mr. President, for many years I have made it a practice to study the opinions of competent newspapermen concerning the vital issues of our times. I have found, as have millions of others, that I can usually gain added insight into the true values of a question when I read the views expressed on it by the men and women whose lives force them into close daily contact with matters pertaining to all races, colors, and creeds; the rich and the poor; the young and the old.

Therefore I considered it a very special privilege to hear the words last Sunday of Ogden R. Reid, president and editor of the New York Herald Tribune, as he spoke at the banquet during which he was presented the eternal light award of the Jewish Theological Seminary.

Mr. Reid's remarks were inspired by the highest traditions of patriotism,

journalism, and service, and although he spoke pointedly of the many problems facing our Nation, he nevertheless concluded his address on a high note of hope.

"This Nation has a very great opportunity," said Mr. Reid. And he added that we can do much "if we can help develop a consensus representing the common hopes and aspirations of mankind."

He then made a statement which, in my opinion, should be read and reread frequently by every Member of Congress. It was this:

Ultimately any government, including the Soviets, must be responsive to the pressures generated by a belief in the dignity of the individual, his inherent right to civil liberties, and a nation's right to self-determination and independence.

Mr. President, in view of the importance of these thoughts and the others expressed by Mr. Reid in his address, I ask unanimous consent that the entire speech be printed in the Appendix of today's RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY OGDEN R. REID, PRESIDENT AND EDITOR, NEW YORK HERALD TRIBUNE, DELIVERED AT THE JEWISH THEOLOGICAL SEMINARY'S SECOND ANNUAL ETERNAL LIGHT AWARD DINNER, WALDORF-ASTORIA HOTEL, MARCH 31, 1957

For the last decade, there has been increasing concern with the analysis of an old concept—the balance of power. To be precise, is the balance of power shifting away from the free world?

This is, of course, not entirely a black-and-white matter. Obviously, the recent events in Poland and Hungary have weakened the Soviet position before the world. Further, Vice President NIXON reports, following his trip, that the position of the United States and the respect for its principles is on the ascendancy in Africa.

It is also clear that communism in recent years was turned back in Guatemala and Iran; that the thorny issue of Trieste was equitably settled; that the free Western Republic of Germany is making important strides in spite of the pressing problems of reunification; that on the other side of the world, Japan is making an economic comeback and that she is resolving the situation brought on by the late war with fairness and dispatch.

Further, in spite of the tragic loss of President Magsaysay, author of the Pacific Charter, the Philippines are emerging as one of the leading powers of free Asia.

Certainly, progress has been made in terms of regional, economic, and military groupings. The Coal-Steel Community, OEEC, European payments Union, the Saar Agreement, Euratom, and more recently the agreement on the Common European Market, are important and productive steps that bode extremely well for the future of Europe.

Clearly, the Colombo plan and our point 4, economic and military aid programs are making important contributions in many countries.

Militarily, the Eisenhower doctrine in the Middle East—later supplemented at the Bermuda meeting by United States agreement to join, if asked, the Military Committee of the Baghdad Pact—will certainly bolster the political position of certain individuals and nations in the Middle East. The recent SEATO meeting reported agreement on plans to consolidate and enhance the progress made in preserving the freedom of all countries in southeast Asia. In Europe, there is a growing awareness of the need for a rather basic revision and evaluation of NATO. The regrouping of these forces along tactical atomic lines, with the future addition of the IRBM (or Intermediate Missile) to the British defensive arsenal, are all positive steps.

The meeting in Panama of the Presidents of American Republics speaks well for increased cooperation in the common interest of the several states in North and Latin America.

The visit last December of Prime Minister Nehru no doubt helped to clarify the anti-colonial and moral heritage of the United States.

King Saud's trip in February of this year can be another milestone in our relations with the Middle East—provided United States power and influence in concert with the United Nations when attainable—are actively brought to bear on an equitable and permanent settlement of the Israeli and Suez questions, not a return to the status quo ante. The United States must concern itself quite as much, if not more, with the positive steps needed to implement a principled course, as with the initial statement of that principle. Finally, in important matters of war and peace, we must be careful first to agree or agree to disagree on common objectives with, for example, Great Britain, France, and Israel. Only then should we find the words to so state. We must not be satisfied with words apparently bridging what are actually substantive differences.

It is also only accurate to point out that the development of the Emergency Force of the United Nations, now stationed in the Middle East, and the upholding of the policy that aggression cannot be condoned, may be more significant developments than we can now appreciate.

One may well ask, Does all this add up to real progress? The answer is certainly yes, but it must be measured against gains made by the Soviet Union, and the two must be plotted over a certain period of time and projected into the future.

In a word, is the Soviet curve starting to cross ours and that of the free world and where will the two curves be 10, 20, and 30 years from now.

Before, in all humility, attempting to evaluate this question, one fundamental statement of principle is indicated.

Put in its simplest terms, the United States and the free world must do those things that will result in the survival of our way of life.

It is not a question of how much we can afford, but more that we cannot afford to have the Soviets the master and tyrant of this planet.

Curiously, it is difficult to make this point. Freedom can be, and frequently is, lost by default. We could lose the peace without fighting for it. The Soviets could wrest the diplomatic initiative wholly from the United States and impose an atmosphere of fear and subservience on a large portion of the world.

To try and take stock, let us first look at a certain complex of so-called power factors which are the product of our educational system, scientific research and development, military weaponry, production programs, and economic resources.

These factors, I believe, should be measured against President Eisenhower's criteria:

1. That the United States must be able to sustain a surprise attack;

2. That our combined forces must be capable of an effective or devastating counter-attack; and

3. That the Soviets must be aware of our capabilities.

To put it another way, the administration believes that if two individuals are in the same room, individual A will not shoot individual B if he knows he will be hanged for his crime before he leaves the room.

In a sense, this argument needs to be carried several steps further. First, there is the question of what constitutes enough to sustain a surprise Soviet attack and mount an effective retaliation.

Second, there is the question of if we have enough now, will we have enough 5 or 10 years from now, given the long lead time of over 11 years from blueprint to production line inherent in some of our weapons systems.

Finally, there is the question as to whether at a certain point in time, if we may have enough, the Soviets may have more.

The point here is that the psychological implications of the Soviets having more could be of sufficient importance to mean that we should maintain more than what otherwise would perhaps be considered enough.

Dr. Edward Teller, who certainly had much to do with the development of our H-bomb, stated quite categorically that the Soviets are now roughly on a par with the United States scientifically. He adds that in 10 years the United States will be a second-rate scientific power; that there is nothing we can now do about it, and that our only hope is to recapture our lost lead 20 to 30 years from now.

Adm. Lewis L. Strauss, Chairman of AEC; Allan W. Dulles, Director of CIA; and William Benton have all reported that the current output of the U. S. S. R. in engineers and technological specialists may exceed that of the United States by as much as 50 percent.

On July 19, 1956, Lt. Gen. Donald L. Putt, Air Force Deputy Chief of Staff for Development, had this to say before the Symington committee, following his visit to the U. S. S. R.: "I was astounded at the foundation they (the Soviets) are laying in science and technology and the training of the people in those fields."

Dr. James R. Killian, Jr., president of the Massachusetts Institute of Technology, said before the same committee: "First, I am convinced that our national security can be jeopardized, and even lost, by the mismanagement of our resources—both proved and potential—of creative intelligence.

"This conviction is made firmer for me by the evidence we have—from the DeWitt study and others—that the Soviets are now educating more scientists and engineers than the United States."

The philosophy of education in the U. S. S. R. should also engage our attention. The Soviets believe that there can be no separation in training or in real life between the military and the political, that the two are everlastingly related.

To be specific, the Soviet military authority, Shaposhnikov, has written: "If war is a continuation of politics only by other means, so also peace is a continuation of struggle by other means."

Another major balance of power factor, and largely the byproduct of scientific and educational technology, is the field of military weaponry, including the necessary personnel.

Gen. Curtis E. LeMay testified before the Symington committee: "I have already brought out that the Soviets will have a numerical advantage in long-range bombers during the time period, and again assuming they will provide bases, weapons, maintenance capability, refueling capacity, and training to support this numerical advantage, then we will be inferior in striking power to the Soviet long-range air force by 1958–60."

To sum up the Air Force picture, Gen. Nathan F. Twining, newly nominated for chairmanship of the JCS, said in New York on October 11, 1955, and confirmed his previous statement again on July 19, 1956: "If being ahead is related to aircraft production, we are again only second best. The Communists are producing far more combat airplanes than we are.

"Even more important, if being ahead is related to rate of progress, we have fallen far behind."

In the guided-missile field, we have made impressive progress. However, some of the facts are not encouraging. We have 5 programs: 2 in the ICBM range—Convair's Atlas and Glenn L. Martin's Titan—and 3 in the IRBM range—Douglas' Thor, Redstone Arsenal's Jupiter, and Lockheed's Polaris.

Some competent opinion in this field feels that we are operating 5 programs when we have only sufficient scientific, technological, and productive capacity for 2 or 3. However this may be, the Soviets have had an IRBM flying for over 2 years with a 1,000-plus mile range. We have yet to fire an IRBM, of a regular test or production model, over 200 miles. It is true the Army fired an experimental missile over 3,000 miles, but it was not a standardized production or test missile.

It is a fair assumption to consider that the Soviets are ahead of us in both the intermediate and ICBM missiles. This lead is not an irrevocable one, but it may well increase if we do not do more. Certain current cuts, both with regard to the testing of missiles and in connection with the construction of related facilities, may not presage well for the future.

On this very point of estimating the Soviets, I think a word can perhaps be said. In the past, in several quarters we have tended to underestimate Soviet production of jet engines, the development of the A-bomb, and the production of the H-bomb; the latter being developed in roughly one-half the time of the United States bomb. As in a business operation, it would seem prudent to provide for a margin of overestimation of the Soviets, not repeated underestimation.

With regard to early warning, our radar screen—while it is improving for the detection of piloted aircraft—is still inadequate. We are vulnerable to some extent in the north. Further, the radar approaches to this country from the south and gulf coast are thin. If we are seriously concerned with civil defense, so that no aggressor could safely assume our human resources could be easily knocked out, it might well be prudent to produce and develop more rapidly new types of long-range radars that can reach farther toward a potential takeoff than the layman ever dreamed. These radars might provide enough time for many people to get into necessary shelters, which for the most part have yet to be built.

In this connection, the Soviets have in operation over 400 submarines, some of which are believed to be equipped for rocket and guided-missile launching. If we combine this means of delivery with the IRBM, we have a new element with which to contend.

Our Army of 19 divisions (992,290 men), plus 7 regiments and 2 regimental combat teams, can barely call on the airlift to move 1 5,000-ton division. Greater mobility, and the strategic implications thereof for localized defensive actions could be reevaluated.

In dealing with the purely political question of balance of power, certain questions can perhaps be formulated:

1. While the summit meeting at Geneva, and the magnificent leadership given to this conference by President Eisenhower, convinced the peoples of the world that this Nation was truly dedicated to peace—it also produced one other impression. There is the danger that we convinced the Soviets that we are so dedicated to peace that there are many situations they can exploit without the danger of United States action. The President's courageous action, with regard to volunteers in the Middle East arena, should have diluted this impression. However, the people of the United States, in a sense, are still not fully aware of the implicit seriousness of the Middle East situation nor that the Nation was put on a partial war alert basis on or about last November 6.

2. Are more nations gaining or losing their independence? On the positive side, we have seen Austria gain her independence with a measure of military neutrality as the price; a German peace treaty at the expense of reunification; and a Japanese peace treaty at the expense of certain territorial rights.

The Communist heel, on the other hand, has descended on North Vietnam, Tibet, and, more firmly than ever, on North Korea and Hungary. Soviet influence is on the apparent increase in the state of Kerala in India, in Indonesia, and in Syria.

3. This political question can be phrased still another way. Is the Soviet empire being kept off balance or is it being consolidated? Are we doing those things that would tend to separate Red China from the all-pervasive influence of the Kremlin?

Increasingly, also, there is another element in the Soviet picture. In developing a first-rate scientific and technological society, they have taught Soviet citizens to think. Many of these individuals, no doubt, sense that they do not have freedom, even though they do not know the real meaning of freedom. Certainly the likelihood here is that the Soviets will have to relax, as they indeed have to some extent, a portion of their state control.

Another major factor in this balance of power equation is the economic. Does, for example, the United States now have a long-range foreign economic policy or program? Is the country or the Congress prepared for, or aware of the necessity for, such a program in the national interest?

Quite obviously, the United States free enterprise system must remain solvent; inflation must be tackled not only through tight money, but also by keeping productivity ahead of rising costs. One of the long-term hopes of the Soviet conspiracy is to see this country's free enterprise system collapse and, therefore, the economy of the free world. Nonetheless, a long-range program of economic partnership with the underdeveloped nations is essential if they are to strengthen and maintain their independence.

What of the Soviet economy? Is their heavy industry expanding more rapidly than ours? Is the Soviet trade program making headway? Are nations being brought within the Soviet economic orbit? Does this suggest that the Soviets may, in turn, from this be able to gain a measure of political control whenever and wherever nations become dependent on the Soviet economy?

A further, and most important, area in this equation are the moral, spiritual, and psychological factors that pertain to the balance of power. In a sense, the great religions of the world and their ethics are implicit in the strength of the free world. What is not clear is whether these forces have been mobilized by the religious and lay leaders of the world in clear contrast to the Soviet system and dialectic.

It may well be that the Jewish Theological Seminary, under the leadership of Rabbi Finkelstein, can do much to contribute to the development of such a worldwide ethic; to the end that the peoples of the world will become increasingly aware of their overall responsibility to see such an ethic implemented.

Psychologically, are we winning the battle for men's minds? Are we doing those things in the Middle East, Africa, and Asia that are well calculated to put freedom, free enterprise, and our spiritual values in an inspiring light?

These, then, are only some of the considerations that enter into an analysis of the balance of power. There are, no doubt, many others—some of which perhaps you would feel more important. In essence, however, I submit that some such reckoning of the balance of power must be made, and out of this must come an overall long-range policy for the United States.

Specifically, do we indeed have an appropriate structure for analyzing and developing this kind of long-range objectives? Further, is there any group in Washington that is not only adding all these factors together but seeing to it that any such policy is coordinated and implemented with dispatch?

The National Security Act established the National Security Council as part of the President's staff, and it can only advise the President in the formulation of policy. President Eisenhower created the Operations Coordinating Board to coordinate—as the name implies—the operations of the several departments thereby implementing the President's decisions, based on the position papers of the NSC.

There is no question but what the NSC is working more effectively than before. Clearly, Vice President NIXON has brought much to the thinking and functioning of this group.

However, in a sense, the same comment that was made in 1949, by the first Hoover Commission, about the NSC can be made again tonight.

Specifically, the Task Force Report of the National Security Organization Committee, published in January 1949, stated:

"The National Security Council is probably the most vital element in the entire security structure. On its proper and effective operation the success of the whole system depends. While it has made considerable progress, especially in recent months, it does not yet measure up fully to the needs of the times.

"In general, the Council has proved equal to dealing promptly with matters of immediate urgency; it has not yet, however, produced a comprehensive statement of current and long-range policies."

The report then mentions certain examples and concludes with the following paragraph:

"For these deficiencies in the Council, the principal remedy must lie in a better realization, by the members of the Council itself, of the agency's true responsibilities and potentialities. The National Security Act has established it; but its own members will have to make it work as it was designed to do."

The Cabinet officers represented on the NSC frequently are too busy to give sufficient time to the development of long-range policy. In turn, the Planning Board of the NSC has not always developed coordinated long-range policy. The often excellent staff papers made down the line sometimes do not reach, and are not reflected in, the Planning Board's work. When the Planning Board reports or recommendations are rendered to the NSC, they in turn, upon occasion, suffer the fate of the lowest common denominator.

The final agreed NSC papers do not always represent the bold program and thinking of high vision that is increasingly called for in the world situation.

For example, the National Security Council did not come up with a clear, consistent, and coordinated policy on the Middle East. The ball—as is sometimes the case—fell somewhere between the State, Defense, and Treasury Departments. Inaction and delay were permitted, through stalemates, to operate in a situation that was sensitive and critical.

Traditionally, the State—and to some extent the Treasury—Departments have attempted to strongly influence, if not dominate, the NSC.

In any event, it seems increasingly obvious that we need a strengthened National Security Council and Operations Coordinating Board. Top cabinet officials and department heads could well consider delegating more authority to their Under Secretaries, thus

freeing themselves for greater concentration on and formulation of important national policy. Where necessary, additional men of stature could be brought in to the departments concerned to concentrate largely on operations. This again could help free the top officers of the Government to deal with the highest policy.

Also, as another possibility, it might be useful to consider appointing an independent chairman to the Operations Coordinating Board: A chairman who is not a representative of one of the agencies of the Government competing for authority. Here, I am thinking of the system, not an individual; the Nation is most fortunate to have Christian Herter as Under Secretary of State.

Finally, in assessing the NSC and OCB, it is only fair to state that it may be necessary to seek more drastic solutions to this problem.

Certainly, this is a question that only the President can decide in the light of his experience and responsibility.

To sum up then, and on the basis of available information, it seems fair to conclude that the Soviet Union is closing the gap in the relative balance of power. Nonetheless, we have time to act. The United States and the free world still have the resources to deal with the problem.

Viewed in another light, this Nation has a very great opportunity. If we can help develop a concensus representing the common hopes and aspirations of mankind, we can do much. Ultimately, any government—including the Soviets—must be responsive to the pressures generated by a belief in the dignity of the individual, his inherent right to civil liberties, and a nation's right to self-determination and independence.

The United States has a call to leadership never before given in such magnitude to a sovereign republic. We must be worthy of this responsibility. The lives and destinies of many are in all our hands.

Invocation by Hon. Cecil M. Harden at Banquet Meeting of Conference of Republican Women

SPEECH
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following invocation offered by Hon. CECIL M. HARDEN at the banquet meeting of the Conference of Republican Women, Hotel Statler, Washington, D. C., on April 2, 1957:

Almighty God, we thank Thee for the privilege of meeting here again in our Nation's Capital.

We ask Thy blessing upon us and upon the party which we represent.

Uphold our President of these United States, strengthen him, direct and guide him in his decisions.

Be with all those who are in our Government and be with our speaker tonight.

Give us, we pray, the power to discern clearly right from wrong and give us the power to understand Thy truth and permit all our thoughts and actions to be governed thereby.

Direct us, so that we may be united in our desire and efforts to give our Nation sound and honest government.

The Polish Eliza

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column written by Joseph Alsop in which Mr. Alsop discusses the present Polish Government and its leader, Wladyslaw Gomulka:

THE POLISH ELIZA
(By Joseph Alsop)

PARIS.—Reliable reports from Warsaw suggest that American policymakers will be most unwise to take the new anti-Stalinist Polish Government too much for granted as a permanent feature of the central Europe scene.

From the very beginning of the Polish uprising against Soviet colonial rule, the task of the Polish national Communist leader, Wladyslaw Gomulka, has been very like the task of Eliza crossing the ice.

For example, it can now be revealed that when Nikita Khrushchev and his party made their famous visit to Warsaw last November, their minds were nine-tenths made up to crush the Poles like flies—as Marshal Zukov subsequently said in a tone of evident regret. The price that had to be paid to avert a Hungarian tragedy was Gomulka's promise of continuing Polish adherence to the Warsaw Pact, which meant continued stationing of Red Army troops in Poland.

Gomulka's situation today is less immediately critical, but it is almost equally precarious for the long run. He would probably be in very deep trouble at this moment if he had not done so well in Poland's recent, curious, semifree election. The so-called Natolin group, the far from unimportant Stalinist faction in the Polish Communist Party, actually hoped the election would show a strongly anti-Communist result.

The Polish Stalinists correctly thought that such a result would eventually lead to the forcible reestablishment of full Soviet colonial rule in Poland. But Poland's wise and far-sighted Cardinal Wyszynski understood the danger. He quietly threw the immense power of the Polish Catholic Church into the balance on Gomulka's side. And thus the Polish Nationalist leader won a triumph at the polls.

All the same, Gomulka's present problems looks very grim indeed. To the right of him, he has the restive Polish anti-Communists, which means the vast majority of the Polish people, who admire Gomulka but hate his party. To the left of him, he has the Stalinist faction in the Polish Communist Party, whose designs are strongly supported by the masters of the Kremlin.

Finally, squarely in front of him Gomulka has the desperate economic situation to which Poland has been reduced by long years of Soviet colonial rule. Here lies his great chance and his great peril. According to one highly authoritative estimate, Gomulka has no more than a year to give his people a sense of greatly increased well being.

If he fails, he will go down to defeat in a conflict between the Stalinsts and the anti-Communists. But this will mean, in fact, that Soviet colonial rule will be reestablished in Poland. For the Kremlin will surely seize the opportunity of a Polish time of trouble to help its Warsaw friends with the naked force of the Red Army.

On the other hand, if Gomulka succeeds on the economic front, his leadership will cease to be challenged, either from right or left. He will at last gain the elbow room to deal with the Polish Stalinists. And the evolution of Poland can then proceed peacefully, not toward our kind of democracy, but at least in a direction that will be bearable for the Polish people and highly distasteful to the Kremlin.

At present, Gomulka is both being kept on leading strings and openly threatened by the Kremlin. With the economic problem overriding all others, the Soviet economic aid promised to Poland is being given in trickles, on a day-to-day basis. For instance wheat deliveries, according to the same authority quoted above, "have to be rushed to the flour mills, and the flour has to be rushed to the bakeries, to prevent a bread shortage."

By pulling on the leading strings in this manner, the Kremlin has encouraged Gomulka's recent concessions to the Polish Stalinists, which alarmed the West. Washington, of course, has the opportunity to cut the Kremlin's leading strings. But judging from this distance, Washington seems to be disinclined to grant Gomulka the generous American economic aid he so badly needs.

Yet surely, a government that is good enough for Cardinal Wyszynski ought to be good enough for Senator KNOWLAND. And surely, after all the grandiose talk about liberation, it is a bit odd to throw away the remaining chance offered by the deep unrest in Central Europe. For if Gomulka really succeeds in Poland, the position of the Stalinist regime in Czechoslovakia must finally become untenable. And even in the other Central European countries where Red army troops are stationed, Gomulka's success will create a permanently and explosively unstable situation.

The question, really, is whether Senator KNOWLAND and the administration policymakers he so often intimidates, prefer making cheap and empty anti-Communist gestures against Gomulka or gaining a major point in the world struggle against the Kremlin's power.

Repeal Federal Excise Tax on Transportation

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include Senate Joint Resolution 63, adopted by the 80th General Assembly of the State of Tennessee, urging repeal of Federal excise tax on the cost of transportation of property by common carrier:

Senate Joint Resolution 63

Resolution to memorialize Congress to repeal the Federal excise tax on the cost of transportation of property by common carrier

Whereas the Federal excise tax on the cost of transportation of property by common carrier was levied as a temporary measure for the duration of World War II, and the excise tax on the cost of transportation of persons by common carrier was levied for the express purpose of discouraging travel by common carrier during the wartime shortage of facilities therefor due to heavy troop movements; and

Whereas the purposes for which said taxes were levied no longer exist, and said taxes are discriminatory in nature: Now, therefore, be it

Resolved by the Senate of the 80th General Assembly of the State of Tennessee (the House of Representatives concurring), That it is the sense of the members of the 80th General Assembly of the State of Tennessee that justice and fair play require that said levies be repealed; be it further

Resolved, That a copy of this resolution be spread on the journal of the respective houses of the general assembly, and that the chief clerk of the Senate be authorized, empowered, and directed to send a certified copy thereof to the President of the United States of America and to each member of the Tennessee delegation in the Congress of the United States of America.

Adopted March 19, 1957.

JARED MADDUX,
Speaker of the Senate.
JAMES L. BOMAR,
Speaker of the House of Representatives.

Adopted, April 1, 1957.

FRANK G. CLEMENT,
Governor.

Grants for Administration of Public Assistance

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mrs. GRANAHAN. Mr. Speaker, I have two communications from officials of the Commonwealth of Pennsylvania, the Honorable George Leader, our Governor, and Mrs. Ruth Grigg Horting, secretary of public assistance, bearing on this matter of public-assistance grants for administration.

As a former public-assistance official myself prior to my marriage, I know the problems which beset a State of the size of Pennsylvania in connection with the administration of public assistance. There is, on the one hand, a steady drumbeat of criticism that people on assistance are not properly investigated to make sure they are deserving; there is loud criticism on the other hand that deserving cases have to wait too long and are not accorded sufficient consideration.

This is always a problem for a Solomon—it taxes the wisdom of any conscientious State public-assistance official. It is certain, however, that without adequate funds for administration of the program, the care which should be taken cannot always be shown. The sufferer, in many cases, is the deserving individual or family which has not been able to obtain prompt review of an application or which cannot get the help it needs, solely because of the lack of personnel for administering the caseload.

I submit for inclusion in the RECORD the communications I have received on this from our Governor and secretary of public assistance, and urge favorable consideration of the request they make for fair treatment:

HARRISBURG, PA., *March 29, 1957.*

KATHRYN E. GRANAHAN,
House Office Building,
Washington, D. C.:

Commonwealth is intensely interested in restoring $12 million cut in grants to State employment services made on House floor March 27. There are 140,000 Pennsylvanians over 40 who are unemployed. The $12 million in H. R. 6287 was earmarked for special employment counseling services for that age group. This service a real need to many in your district. Urge your help in replacing this amount.

GEORGE M. LEADER.

HARRISBURG, PA., *March 23, 1957.*

The Honorable KATHRYN E. GRANAHAN,
House of Representatives, Congress of the United States, Washington, D.C.:

Understand Appropriations Committee has reported H. R. 6287 with provisions for closed-end appropriation for Federal matching of State local funds for administration of public assistance programs.

Urge elimination of this limitation as contrary to basic principle of 50–50 sharing as provided in Social Security Act. Any arbitrary limit on administrative costs may result in inadequate determination of eligibility for assistance grants and result in waste of funds for grants much in excess of savings in administrative costs. Impractical to plan assistance programs based on arbitrary limits since need for financial help by needy persons depends primarily on economic conditions.

The further limitation proposed by committee that none of the funds can be used to pay for fiscal 1957 expenditures would be a default by Federal Government on its share of commitments made during current fiscal period for such items as equipment and supplies to be paid for upon delivery which may be in next fiscal period.

Also urge concurrence of House in Senate deletion of amendments to deficiency appropriation, H. R. 4249, which would have imposed arbitrary limit on administrative costs for current fiscal period.

Mrs. RUTH GRIGG HORTING,
Secretary of Public Assistance, Commonwealth of Pennsylvania.

Humane Slaughter Bill Approved

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. HOSMER. Mr. Speaker, the Humane Slaughter bill is working its way through our committee system and we hope will be before us for vote in the near future. The need for such legislation recently was pointed out editorially in the Long Beach Press Telegram newspaper in the following words:

IF YOU SAW IT HAPPEN TO A DOG

The Humane Society of the United States makes an irrefutable case in behalf of proposed legislation requiring packingplants to use humane methods of killing animals.

The society points out, for example, that 90 million hogs are killed annually in the United States in a terribly cruel manner. A chain is slipped around one of the hog's hind legs. The animal is pulled aloft with a bone-breaking jerk. He is stabbed. It takes several minutes for him to lose consciousness and bleed to death.

If it happened to a dog, almost any witness would call the police. But the process is fully as terrifying and painful to a hog as it would be to a dog.

Slaughterhouse methods that cause animals to suffer are unnecessary. Economical, practical, and humane ways of killing animals are available and are in use by a few plants.

Legislation requiring universal application of these methods in packingplants engaged in interestate commerce has been offered by Senators HUBERT HUMPHREY, RICHARD NEUBERGER, and WILLIAM A. PURTELL. It should be approved.

Economy Must Begin at Home

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. WHITENER. Mr. Speaker, I call to the attention of the Members of Congress the very splendid editorial entitled "Economy Must Begin at Home" which appeared in the Shelby Daily Star, Shelby, N. C., on Wednesday, April 3, 1957.

This editorial is heartening to those of us who have within the past few days consistently voted to reduce the tremendous Federal budget which the President has presented to the Congress. It is encouraging particularly because it indicates that the folks back home are conscious of their responsibility in this matter of budget reduction.

The editorial follows:

ECONOMY MUST BEGIN AT HOME

With the intense national interest in cutting the giant-sized Federal budget, everyone is getting into the news with authoritative statements on the best way to go about slicing the money pie.

The latest to make a public statement was Senator LYNDON JOHNSON, Texas Democrat, who calls for a cost consciousness campaign on the part of the administration.

What JOHNSON says makes a lot of sense. There is a danger in Congress sniping at the Federal budget from a generally uninformed position. As JOHNSON points out, department heads should know where they can cut expenses best; and he urges the administration to initiate a cost-consciousness campaign to spur the departments toward greater economies.

JOHNSON took a look at the new high in Federal payrolls which was hit in January. Nonmilitary employees of the Federal Government at home and abroad during that month were paid over $1 billion.

It is obvious that Congress cannot intelligently cut such a vast Federal establishment. It can urge that the administration start a program toward trimming the mammoth payrolls; but the job must be done at a level where efficient economy can be achieved.

Another important thing to remember is that Federal expenditures will not be cut as long as the voters at home demand more and more Government service.

We in Cleveland County cannot deny that we are receiving Federal funds. Our airport project will draw over a quarter of a million dollars from the Federal Government. We have heard no one decry this expenditure.

Recently, when the Veterans' Administration announced the closing of its hospital at Swannanoa, a howl went up all over western North Carolina. Congressman BASIL WHITENER, reacting to opinion from home, energetically petitioned the VA to reconsider.

Also recently, the Army announced a personnel cutback of some 234 civilian employees at Fort Jackson, S. C., and the yell from our South Carolina neighbors was heard all the way to Washington when Senator OLIN JOHNSTON collared the Army and stopped the economy move.

Again in Cleveland County, our welfare department receives a great deal of its funds from the Federal Government. Where is the cry for this to stop?

When the 4-laning of U. S. 74 to Kings Mountain is completed, 50 percent of the cost will have been borne with Federal funds. Yet, local citizens for the most part are ready to welcome the new addition.

The purpose in mentioning these various local and area projects sponsored or partially sponsored with Federal funds is not to condemn. Rather, it should be pointed out that this situation multiplied in communities all over the Nation is the cause of the $72 billion Federal budget.

When citizens decide to stand and refuse Federal funds, and actively campaign to eliminate Federal participation in local projects, the budget may be lessened.

The trouble lies in finding citizens willing to begin the attack at home.

Around the World in 80 Days

EXTENSION OF REMARKS
OF
HON. DAVID S. DENNISON, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. DENNISON. Mr. Speaker, I would like to call to the attention of the Members of Congress a notable event which will take place Monday evening in Washington, the Washington premiere of the movie Around the World in 80 Days. The performance is being staged here for the benefit of the American Field Service scholarship fund, a most worthy project, deserving of our support.

It was my great privilege during World War II to serve with the American Field Service in Africa and to be a part of the great work the organization performs in time of war. Since its inception in World War I as an ambulance unit, the American Field Service has seen action in all parts of the world, and it is fitting that the premiere of a movie whose theme is worldwide be dedicated to the peacetime work of the American Field Service. This project brings foreign-born students to America for their final year of high-school study. Hundreds of young people have thus had an opportunity to see our country at firsthand, to live with our people, to attend our schools, and to return to their own countries with greater understanding of America and Americans. I am a firm believer in the people-to-people approach to foreign relations. There is no greater guaranty of peace than understanding of one for another. In this work the American Field Service thus makes a notable contribution to peace now and for future generations.

I hope that many of you will support this cause on Monday and, at the same time, afford yourself the pleasure of seeing what has been described as one of the great moving pictures of all time by attending the premiere of Around the World in 80 Days at the Uptown Theater.

Pennsylvania's Cherry Blossom Festival Princess

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by John M. Cummings of the Philadelphia Inquirer, April 3, 1957, which features Miss Mary Ann Strilka, Pennsylvania's cherry blossom princess:

CHERRY BLOSSOM TIARA OLYPHANT GIRL'S GOAL

(By John M. Cummings)

HARRISBURG, April 2.—Rain and fog grounded Governor Leader at Waynesburg, in Greene County, whither he had gone with Lieutenant Governor Furman to help coal miners out there observe John Mitchell Day. Mitchell it was who as president of the United Mine Workers led the prolonged strike which brought the 8-hour day to the coal fields, anthracite and bituminous.

With the No. 1 and the No. 2 men away from Harrisburg, it devolved on Col. Jim Finnegan, secretary of the Commonwealth, to extend official greetings to a gal from our old home town of Olyphant who was en route to Washington to represent Pennsylvania as Cherry Blossom Festival princess. She could come out of the competition—and in our opinion should— with the title Cherry Blossom Queen. This would entitle her to wear a pearl-encrusted gold crown, gift of Japan's pearl tycoon, and another crown, with anthracite coal settings, fashioned by New York's Norman Le Beau.

Miss Mary Ann Strilka is 19 and a blond. She has all that it takes in the way of looks to wear the crown of a queen. On form, too, and how, she should experience little difficulty captivating the experts who will judge the contest. These judges will not select the queen, exactly. They'll pick a number of finalists and from this group one will be chosen by lot. For this part of the ceremony the wheel will be spun by Mamie Eisenhower, wife of the President.

Mary Ann is "Miss Anthracite," a title she won last year. On Labor Day she was chosen from among 12 competitors to represent the State in the Cherry Blossom Festival.

We met Mary Ann and her sister, Romaine, while they were looking forward to a rendezvous with the Governor. He was to extend the greetings of the Commonwealth.

These girls are true representatives of the melting pot that is Olyphant. Their father is a Pole, their mother an Austrian. Their parents have been in the town of Olyphant for some 25 years. Perhaps it could be said that the blonde hair of Mary Ann represents the Polish influence of their father, while the coal black tresses of Romaine are traceable to Austrian blood of their mother.

Anyway, we discovered their home is directly across the street from the Delaware Avenue house where our own father, a stern disciplinarian, on more than one occasion forcibly impressed upon us that there is no dividend in even minor infractions of the moral code.

The gals came to Harrisburg in tow of one Edward H. Ring, a member of Washington's Metropolitan Police Force, and president of the Pennsylvania Society at the Nation's Capital. With them too, was Ed Williams, of Glenside, representative of the Anthracite Information Bureau.

Mary Ann and Romaine Strilka are accomplished ballet dancers. They teach this art at a studio in Scranton. Last summer they were members of a Government team of entertainers which went to the Azores to give our troops there a lift. This summer they return to the Azores and, in addition, will dance at Army installations in Germany, Iceland, Ireland, Scotland and Bermuda.

Three hundred Pennsylvanians are in Washington's Metropolitan Police Force, according to Ring.

It was because he is a native of the State as well as president of the Pennsylvania Society of Washington, that Ring was selected to escort "Miss Anthracite" to the scene of her anticipated triumph.

At Washington Monday evening Mary Ann was greeted by the Pennsylvania delegation in Congress. Unfortunately for us, neither Mary Ann nor Romaine was born when we shook the coal dust of Olyphant from our dogs many years ago and lit out for Philadelphia. In consequence we had nothing in common in the way of recollections of a day long gone when no one in the town would have known a ballet dancer from a kangaroo.

But we promised Mary Ann that if she comes away from Washington as queen, we shall urge on the folks in Olyphant the same sort of celebration in her honor that Archbald gave Dave Berger when he became city solicitor of Philadelphia.

Civil Aeronautics Act Amendments

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. HARRIS. Mr. Speaker, at the request of the Chairman of the Civil Aeronautics Board, I have today introduced a bill to amend the Civil Aeronautics Act to authorize the Civil Aeronautics Board to include in certificates of public convenience and necessity limitations on the type and extent of service authorized.

In connection with the request that the bill be introduced, Chairman Durfee submitted the following statement of the purpose and need for the proposed legislation:

The fourth sentence of section 401 (f) of the Civil Aeronautics Act of 1938 provides that "No term, condition, or limitation of a certificate shall restrict the right of an air carrier to add to or change schedules, equipment, accommodations, and facilities for performing the authorized transportation and service as the development of the business and the demands of the public shall require."

Under this provision it is not entirely clear as to the extent to which the Board may im-

pose on certificates of public convenience and necessity effective limitations or restrictions with respect to schedules, equipment, accommodations, or facilities. Without some clarification this provision may result in preventing the Board from issuing certificates to carriers which request authority to perform air carrier operations on a limited scale. The purpose of the proposed legislation is to make it clear that a carrier may request and be authorized to perform limited services.

Speech of Hon. W. R. Poage Before Atlantic Cotton Association, Augusta, Ga.

EXTENSION OF REMARKS
OF
HON. JOE M. KILGORE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. KILGORE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following address:

SPEECH OF HON. W. R. POAGE BEFORE ATLANTIC COTTON ASSOCIATION, AUGUSTA, GA.

Mr. Chairman, my friends of the cotton industry, you have been most generous in asking me to speak to you on the problem of cotton. You are all experts—especially on price—I am a rank amateur. I do not claim to have any patent medicine intended to solve the serious illness of ailing King Cotton.

But I do know the king is sick unto death—and with him the whole economy of Dixieland. I recognize that those of you who have made the merchandising of cotton your life's work have lived through other periods of crises. You have, indeed, seen the cotton industry move from one crisis to another for half a century, but few indeed will suggest that apart from the years of war and depression, which even at the time we all recognized as being but temporary situations, there were so many problems, so many dislocations, so many hardships, and discouragements, associated with the production and marketing of the South's great money crop.

During the early forties, the cruel hand of war made both production and marketing physically difficult, but there were still attractive financial rewards for those who could overcome these difficulties. Even the harsh economic pressure of the great depression did not force families to flee from cotton farms to the cities as they are being forced to do today. Indeed, I recall that the farm became a kind of refuge of subsistence during the thirties—nor did we then see our system of cotton marketing seriously threatened with complete destruction. Of course, many growers blamed the buyer for low prices then—just as sellers always will.

It would be an unreasonable imposition on your time for me to try to review the long history of all the events which have brought us to our present difficulties, but I think that we can all agree that at least high on the list stands our failure to evolve a price system for American cotton which could meet the needs of producers, merchants, exporters, and consumers. Maybe, no such price structure can be devised, but unless it is—or unless some reasonable substitute achieving substantially the same results is developed we may as well reconcile ourselves to a continuation of the present disintegration of the entire cotton industry.

Now, just what do we want in the way of a long-time price program for cotton? Doubtless there will at first be a multitude of answers. The farmer will say, "I want a high price for unlimited production." The mills will say, "We want the lowest possible price." Your own members as middlemen might very well say, "We care very little whether the price is high or low. We just want a chance to handle as much cotton as possible."

With a little thought, however, we must realize that each answer is both correct and wrong. The price of cotton must, indeed, be high enough to give the farmer a fair return or he must receive it in some other form. The price must be low enough to enable the mills to use cotton or they must be given some other inducement to use cotton. The trade must be able to handle enough cotton to keep the unit cost of selling down. All of these factors are important and no one can be considered to be a satisfactory answer in itself.

Let us see if we can list a minimum number of recipes for a sound pricing program for cotton.

Surely a fair price must be:

1. High enough to return to the farmer an income somewhat comparable to other groups in our society.

2. Low enough to enable the mills to use American cotton, rather than synthetics, and to meet the competition of foreign growth in the world market.

3. Stable enough to encourage purchases of fiber both at home and abroad to make long-time investments.

4. Free enough to keep the trade in private hands and to take the Government out of the cotton selling business.

5. Effective enough to move cotton directly into the world market with a minimum of stoppages in Government warehouses.

There are a great many other desirable adjustments which would be achieved by a proper price for cotton. Undoubtedly, high among these anticipated benefits would be a gradual increase in the volume of American cotton which could be produced and sold at a profit, but I believe that most of us would be willing to settle for these five basic objectives and rely on them to bring about the adjustments. But you have, doubtless, already concluded even these five objectives seem to be contradictory and even self-defeating.

We know that in an effort to increase consumption Secretary Benson has slashed the support price from 90 percent to 77 percent of parity—but cotton consumption by United States mills the first month of this year was at the lowest average weekly rate for any January since 1949. Apparently, he has not created the other factors necessary to encourage the use of cotton, and most assuredly he has violated, without so much as a kind word, the first of our basic objectives—"the establishment of a price high enough to assure the farmer a fair return." I think this first prerequisite is fundamental and that no program which overlooks it can ever succeed. On the other hand, I recognize that it is not of itself enough. The 20 years of Democratic administration of our farm program did at least try to meet this need—and was successful to a remarkable degree, if one considers only the narrow objective of cash returns to producers per bale of cotton. The Democrats did hold up producers' prices. With the help of a long period of generally rising prices, they did it with a net profit to CCC of better than a quarter of a billion dollars, and with a very small inventory on January 1, 1953, when they turned control over to Mr. Benson. They had not, however, set this record without violence to other vital objectives of any cotton-pricing program.

One does not have to agree that 90 percent of parity is a high price (and I do not) to realize that it does very seriously impede the movement of American cotton into the markets of the world. Undoubtedly, our 90-percent supports did encourage the placing of additional millions of acres in cotton in lands around the world—and possibly even more serious—it did encourage the investment of multiplied millions in synthetic plants both at home and abroad. Definitely, the price was high enough to seriously increase the supply of fibers, which are competitive with American cotton.

Nor are these foreign cotton growers, or American, or foreign rayon mills, going to disappear like the morning mist just because we say some pretty words, or even because we momentarily reduce our price on cotton. There are vast sums invested in these productive facilities. The only way these investments can ever pay out is to produce fiber. I think that with lower prices on American cotton, we can discourage others from making similar investments, either in rayon mills, or in clearing jungles, or supplying irrigation for desert lands—either one is a rather expensive way of getting into the cotton business. But as for those who are already producing—they will continue to produce probably even to a point where production is at a definite loss. This means to me that it is outright folly to try to sell American cotton lower than foreign growth. No matter how low we cut our prices, foreign producers will, in my opinion, sell a penny or two lower.

Now, I am not saying that we should not try to remain competitive on the world market. We certainly should and must keep our cotton price in line with that of other producers, but that is a far cry from simply offering to undersell the world market no matter how low it goes. The difference is the same difference which exists between the immensely profitable price policies of the major oil companies and the ineffective price policies of some of their successful price-cutting competitors. And, yet, there are many influencial Members of Congress who have long insisted that we should underprice every bale of this world's cotton. I think it is essential to remain competitive, but I also think that this extreme policy could bankrupt not only all our competitors, but ourselves as well.

The farmer is not getting his fair return from the present downward flexing program. On the contrary, his prices are down 20 percent in the past 4 years—years during which almost everybody else has enjoyed very substantial increases in income. Therefore, the farmers' relative position is far worse than these figures indicate. In fact, it is so low that I do not believe that farmers will endure it much longer. Many have already moved away to the city. Others are trying to hold on though part-time farming with either the husband or wife working in town.

I will not argue the point here, but before you say that it would be better if all those so-called inefficient farmers moved to town, let me call your attention to the fact that what Mr. Benson calls inefficient farmers are the same farmers we have heretofore simply called small farmers. Of course, in this age of mechanism, it is true that the farmer on a small farm cannot produce as efficiently as that same farmer could on a large farm. And we are spending your tax dollars all over the world to bring about what we call land reform, which simply means that we have looked at Russia and have observed that the only group which has consistently held out for private property for 40 years has been the small farmer. Our planners decided that the best bulwark against communism in Japan, in India, in the Middle East, is the small operating farm family—living on the farm—preferably one they owned. I think this is true, and I wonder if it is true throughout the rest of the world why we should assume that it was not true at home. If it is true here, why should we not make some serious effort to keep our own small farmers on the farm? I believe that these small farmers can be just as valuable to the

United States of America as they can be to Turkey, Iran, or Cambodia. I feel that if we would retain our present political democracy in a competitive profit system economy we will be well advised to protect our small farmers.

Our present efforts to aid our farmers are not only a dismal failure—they have brought some of our other valued institutions close to ruin. In our laudable efforts to balance production and demand at an attractive price we have so reduced the volume of production that we have made the unit price of the product much less meaningful to the cotton grower than the size of his allotment. But the cotton grower does still get the advantage of the higher price. The remainder of the South and of the Nation gets it only very indirectly. The chief effect of our acreage-control program on nonfarmers has been to reduce the volume of business done. The gins, the oilmills, the compresses, the railroads, the banks, the machinery salesmen—all find their business restricted, and now the so-called soil bank (particularly the acreage reserve) is being managed in such a way that in the course of 3 years many historic cotton-producing areas will no longer be producing any appreciable amount of staple. Even though we might assume that the net income of the individual farmer might remain about intact, the community would lose approximately 50 percent of its normal circulation of cash. All too often we overlook the fact that while the farmer is personally interested only in his net income, his entire gross income contributes to the business of the community.

Surely, I need not recount the hardship imposed by our present cotton-pricing program on you cotton merchants. You know them so much better than I do. The loan program has become the market to which the average farmer looks. The Government warehouse has become the source of stocks for both domestic and export use to which the merchant looks. The Commodity Credit Corporation has practically become the sole supplier of cotton for industry. The Government loan, not the future market, fixes prices and, as I see it, it will be but a matter of years (possibly of months) before the future exchanges must close.

I was as a boy taught to fear these future markets, but as a man I know that the day they close that a large part of you merchants are going to have to close. You won't be able to hedge or insure the price of the cotton you buy. That is going to make credit far more difficult, and for some of you, it is going to mean that you won't get credit. I know that the fewer the buyers who bid for the cotton at Waco, Tex., the less that cotton is going to bring should we ever return to the days of free competitive buying, and I believe that friend and foe alike look on the CCC as only a temporary instrumentality.

We all know that in the past it has been and possibly still is politically popular to berate cotton traders in general and to compare the New York and New Orleans Cotton Exchanges to dens of theieves. But, in the long run, we all know that we cannot have a successful cotton economy without the price insurance functions of the exchanges and the maximum competition among buyers for the cotton our farmers produce.

But, maybe the advocates of the present program will want to defend it on the grounds of economy. We must do without a good many things these days we would like to have in order to try to reduce the largest peacetime budget ever submitted. If Mr. Benson's cotton-price program is saving money, possibly that is justification for its shortcomings.

Unfortunately, the figures do not seem to justify this construction. A couple of weeks ago, our cotton subcommittee at Washington heard some very interesting witnesses on this phase of the question. Your own Mr. W. D. Lawson was present. He spoke in behalf of this organization. He pointed out the fantastic costs to our economy of the soil bank. He did a good job and we hope he gets back in April when we are going to go into the price problem more directly. The next day, we heard from a group of small farmers from Alabama—we had also heard about 20 similar small farmers from North Carolina. We closed the hearing by listening to three leaders in the cotton trade—Mr. J. P. Henican, president of the New Orleans Cotton Exchange, Mr. M. J. Rogers, president of the New York Exchange and Mr. Lamar Fleming, president of Anderson-Clayton & Co. We were told that the Government had suffered a loss of $379,993,000 in the first 7 months of the operation of our competitive sale of cotton for export. Each bale is being sold at about $50 less than the Government paid for it. Of course, the Department of Agriculture carefully explains that this is not a subsidy to the foreign buyer. It is just a loss to the Government. With the addition of storage, carrying charges, adjustments of grade and other expenses, the men who I think know told us that the Government was out about $70 for each bale exported.

But this is only half or rather one-third the story. While we exported nearly 6,500,000 bales of old cotton during the 7-month period, we took into the CCC, over 4 million bales of new cotton during the same period. This means that our net reduction of surplus was only a little more than 2 million bales, and that instead of costing us only $70 per bale, this export program has actually cost us three times that amount, or about $210 for every bale of actual reduction in our surplus stock. Of course, that is more money than the cotton is worth, so we must admit that our present program finds scant justification on grounds of economy.

But so much for the problem and the shortcomings of the present program. You have listened patiently, but you knew all of these facts I have recited. What can we do to improve the situation?

There have been many plans suggested. Many have merit, some have none. I want to submit one which I hope has merit.

This plan is not original with me, although I have introduced legislation to implement it. It is the plan of many individuals who have tried to reconcile the contradictory requirements of a sound system of cotton pricing.

This plan frankly recognizes these contradictions. It recognizes that with the great differences which exist in living standards in the United States, where all American cotton is produced, and in foreign countries where much of our crop must be sold, that it is very unlikely that we can ever price cotton high enough to give the American farmer a fair return and at the same time price it low enough to make it attractive in foreign markets, or for that matter, to make it really competitive with synthetics at home.

Of course, the classic answer for such a situation has been the imposition of a tariff. But a tariff always raises the cost of the commodity to domestic consumers and it reduces our market for American goods abroad. These basic facts have always made me question the tariff system. In the cast of cotton, there is the further serious defect growing out of such a system's inability to meet the competition of synthetics. In fact, we already have a practical embargo on the importation of raw cotton and no matter how high we made our tariff on cotton goods, we would surely find it self-defeating, both because it would force more and more synthetics into the American market and because it would still further reduce the sale of American cotton abroad.

I have, therefore, felt that we had better look to the use of a direct payment to the producer of cotton to keep his income at a fair level while we let the price drop low enough to move our crop in the normal channels of trade.

I full well realize that Secretary Benson has, in his avowed opposition to any compensatory payment plan for cotton, confused the issue by raising the claim that such a plan was but a restatement of the Brannon plan. This charge is neither true nor fair. The Brannon plan was a very far-reaching and very complex proposal involving not only payments to producers, but it was a complete program of farm-income support which established priorities for all farm commodities. It was estimated to involve costs between five and ten billion per year. Cotton income was but a very small factor in the Brannon plan, and compensatory payment was but one of several tools proposed to be used.

Actually, embarrassing as it is to both of us to admit it, the proposal I am making for cotton is far more closely related to Secretary Benson's own compensatory payment plan for wool, and the only relationship that it bears to the old Brannon plan is through those features which Secretary Benson embraced and adopted for his wool program.

The truth is, however, that the compensatory payment plan is far older than either of Mr. Brannon or Mr. Benson. And again, I must confess to political embarrassment since it seems to have been first seriously advocated by the founder of what has become the Republican Party—Alexander Hamilton. It was Hamilton who urged a protective tariff for American industry and it was Hamilton who frankly stated that, "Of course, if we are to have a tariff for industry, we must pay the farmer a bounty." That bounty, Hamilton recognized, was necessary if the farmer was to continue to sell in a free market and was to buy, as Hamilton proposed, in a protected market. Basically, the recognition of the justice of this equalization of opportunity is all there is to the compensatory payment plan or the bounty as Alexander Hamilton called it.

As for details: Each one of us can work out a set of details which we feel would best meet the need of modern-day conditions. Those details can be modified, and, undoubtedly, in the process of legislation, anyone set of details can be improved upon. I claim no special virtue for the details of the bill I have introduced. I have tried to keep it short and understandable. I do want to make public acknowledgment of the very helpful suggestions of the editors and publishers of Progressive Farmer. Both Dr. Clarance Poe and Mr. Eugene Butler did much to shape my views. I feel they have been most helpful.

The bill itself is but a 1-page document. It does three major things:

1. It would lower the loan support level for cotton to 75 percent of parity, with the cotton market finding its own price position at any point above 75 percent. Possibly this should be dropped to 70 percent, but with the present state of the market, it seems that cotton can move at 75 percent and surely we should not encourage an unnecessary drop by any further lowering of the loan support level when it is not necessary.

2. It would make direct payments to cotton producers of the difference between the average market price for cotton and a fair price predetermined to be 90 percent of parity. This is Alexander Hamilton's bounty. I had had in mind paying it at the end of the year just as is now done in the case of wool, but some outstanding cotton men have suggested that the payments could very well be made in the form of a negotiable certificate issued at the moment of sale such as was done on a small scale more than 20 years ago.

3. It would continue acreage controls on cotton until surpluses have been reduced to a normal carryover. Although this plan would stop the movement of cotton into the CCC warehouses, it would not automatically move the present surpluses out. I think we all realize that we must retain controls until this surplus is worked down. I think this plan would bring these surpluses down in the course of 2 or 3 years.

There are also less fundamental and, possibly, more controversial provisions which can be included or omitted. First of these is a limit on the amount of the payment which is to be made to any one producer. I realize that this is a matter of much controversary, and I recognize that it is not fundamental to the basic objectives of the bill. I included in the draft of the bill the same type of limitation which we have long had in the ASC program, but increased the figure from $5,000 to $10,000—I did so both because I, personally, think that a limitation is justified, and also because I felt that its inclusion would bring support to the bill, both from those who feel strongly that such a limitation is right and from those who realize that it would substantially reduce the cost of the program. I repeat, this is no essential part of a Compensatory Payment Plan, and no difference of opinion on this subject should be allowed to influence our support of the principle of compensatory payments one way or the other.

A somewhat similar situation exists as to the financing of the program. As H. R. 877 is written, payments would be made through the Commodity Credit Corporation, ultimately from general revenue. There is considerable feeling that the program should be financed out of a special tax on textiles. This could be done or not—just as the present program could be financed out of general or special taxes. But this decision is not vital to the success or failure of the program.

I hope that we can agree to let these ancillary programs be decided each on its own merit without trying to make of them vital features of the compensatory program.

The compensatory program is, so far as I can now see, the only one which gives us a practical way of achieving all of the five requirements of a sound pricing program, as earlier enumerated. It would assure the farmer a fair return (90 percent of parity). The larger part of the return would be received in the market from the buyer. The smaller part would be received in the price adjustment.

It would expand the markets for American cotton, both at home and abroad, because American cotton would be selling competitively along with synthetics and with foreign growths. It would provide cotton to the mills at a substantially lower price; it would improve their export position; it would reduce the threat of foreign textiles on the American market; and it would vastly improve the competitive position of the mill which is using cotton as compared with the mill which is using synthetic fibers. It is possible that at times this would require a slighly lower loan support level but the opinion of the best cotton brains seems to be that under present circumstances we would not need to drop that floor below 75 percent of parity. Admittedly, the very existence of such a floor tends to keep the world price slightly higher.

This program would encourage both mills and exporters to depend on American cotton, since they would know that they would be able to buy competitively. I believe that most processors of cotton will be willing to back their judgment against the normal market variations. It is the influence of a government fixed market which they dare not risk.

It would put the trade back in private hands. The Government would cease to offer a loan in excess of the market. Farmers would again sell their cotton to cotton buyers for use or for export. The cotton exchanges would again perform their proper function of insuring price.

And this plan would automatically stop the flow of cotton into Government warehouses. Cotton now moves into the hands of the CCC because farmers can get more there than they can in the market. When we reverse this situation cotton will move into the market. We will stop the accumulation of surpluses and with a continuation of acreage controls we will surely eliminate our existing surplus in a few years. Then we can confidently look forward to an expanded production of American cotton. We all want that expansion, but I know of no other way of getting it without destroying some segment of the cotton industry. Too often, it is proposed that we sacrifice the farmer in an effort to expand production.

Now what of the cost? No matter how helpful a program may be, we should and must realistically appraise the cost and compare it with existing costs. When so compared, I believe that the compensatory payment program looks especially good.

We can very quickly and very accurately calculate the maximum possible costs. I believe that Mr. Lawson of this association has done a very fair and objective job. He assumes that the difference between the market price and the 90-percent return to the farmer will require 6 cents per pound or $30 per bale. He takes the existing allotment of 17,500,000 acres which will give about 17 million for harvest and applies the highest yield on record. This gives 13,300,000 bales of cotton. He then multiplies 13,300,000 by $30 (the cost on each bale) and gets a maximum cost of $399 million. I believe that everyone will be forced to agree that this is a liberal estimate.

Now this is the total maximum gross cost to the Government. There are no storage costs. There are no hauling charges. There are no adjustments to be made as to grade—and this covers every bale of the crop. The entire crop can move for this figure and there will be no replacement of two-thirds of the number of bales removed.

Remember that in 7 months' time we have spent almost this amount—$379,993,000 to be exact—on an export program which subsidized the foreign consumer and which only reduced our surplus a little more than 2 million bales and which only moved a gross of 6,500,000 bales.

Then remember that as of March 20, we had committed ourselves to pay $153,342,549 to cotton farmers for reducing their acreage under the soil bank and this figure is still incomplete. If we use maximum figures as we have for the compensatory payment plan the soil-bank costs will be the full $250 million which is authorized for soil-bank payments to cotton farmers.

Mr. Lawson estimates that the cost of the raw cotton export program for next year will only be $218,400,000. He assumes that we will only export a normal 4,200,000 bales which I think is a fair assumption. He only figures a loss of $52 per bale, although such authorities as Mr. Fleming, Mr. Rogers, and Mr. Henican agreed that the cost would be approximately $70 per bale.

Let us split the difference and say we will lose $61 per bale. That would give us a cost of the present export program of $256,200,000, and would leave 9,100,000 bales to be sold domestically. Surely no one believes that we can sell that much cotton at a fair price to farmers. This means that the Government is going to have to continue to take cotton into the CCC at an unknown, but very substantial loss to the Government.

To all of these present costs we must add the $30 million which represents the cost of the present textile export program. This adds up to a whopping $536,200,000, and it does not include any CCC losses on domestic cotton.

When we take into consideration, as we must, the fact that the compensatory payment plan would result in a savings of at least $100 million in costs to the consumers of cotton goods, we see that the proposed plan will cost the American people only about one-half of what the present plan is costing and that it will give them and all of them far, far more of the things we all want in any price program. It seems to me that we have the chance to buy a real bargain. I think that we had better put our heads together, try to work out any details and pass the basic ideas of this program as soon as we can.

I appreciate the constructive help which those of us in Congress have received from the cotton industry, and, especially, from the Atlantic Cotton Association. I apologize for the imposition on your time. I can only plead that I believe this matter of price to be vital to all of us. I thank you for your hospitality.

Explanation Due From USDA

EXTENSION OF REMARKS
OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1957

Mr. WHITENER. Mr. Speaker, in recent weeks I have joined with other Members of Congress from the cotton-producing areas in a fight for an equitable cotton acreage allotment program. We are very much concerned about the future of the legislation which we have proposed on this subject.

As indicative of the concern of the citizens of my district, I desire to call to the attention of the Members of Congress and the officials at the United States Department of Agriculture an editorial which appeared in the Shelby Daily Star, Shelby, N. C., on April 3, 1957.

It is my hope that the Members reading this editorial will subscribe to the thought which it has expressed and will be impelled to assist us in bringing about a more equitable treatment of the cotton farmers in my district.

The editorial follows:

EXPLANATION DUE FROM USDA

The United States Department of Agriculture owes the cotton farmers of the southeast a hasty explanation.

This week the Department, in a report signed by True D. Morse, Assistant Secretary of the Department, opposed enactment of a bill which would allot the Nation 154,321 acres of cotton.

The bill is familiar to Cleveland. It was here that the move to secure additional acreage was started, and the bill is a direct outgrowth of the February 26 appearance of a Cleveland committee in Washington.

The measure has already traveled a rocky road. And in 5 weeks it has moved only out of a House subcommittee to the full House Agriculture Committee. It must still travel through the House, Senate committees and the Senate itself.

The Department's pronouncement may kill the bill's chances of success.

The Department's opposition was made without explanation, and without a counterproposal.

Meantime, the pressures against the southeast cotton farmers continue. If they were

natural restrictions, the Government would launch quickly into means of giving emergency relief, as it has done repeatedly in the drought-stricken southwest.

But the restrictions placed on this region's small cotton farmers are man-made. They are based on laws which are designed to reduce the over production of cotton.

But these same laws are depriving southeastern cotton farmers of the right to make a living on their land.

So entangled is the administration of the cotton law that the subcommittee which originated the legislation did not know its intentions had been altered until it heard the Cleveland delegation.

It is in the attempt to administer the law equitably that the subcommittee approved the bill for additional cotton acreage.

The Department of Agriculture, which drew up the bill, has decided to oppose its passage.

The Department is under obligation to answer two questions: Why does it oppose the measure, and what better program does it offer southeastern cotton farmers who are being treated unfairly?

"The Earth Is the Lord's and the Fullness Thereof"

EXTENSION OF REMARKS
OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1957

Mr. JENSEN. Mr. Speaker, I hold in my hand a most impressive booklet published by the National Association of Soil Conservation Districts in cooperation with national church leaders of many denominations to commemorate Soil Stewardship Week, May 6 to June 2, 1957.

The words written therein are amplified by appropriate pictures which, of course, cannot be reprinted in the CONGRESSIONAL RECORD.

Under unanimous consent I am having the words in this wonderful booklet printed in the Appendix of the CONGRESSIONAL RECORD:

"THE EARTH IS THE LORD'S AND THE FULLNESS THEREOF"

(Foreword)

Sometimes when I am riding in a plane—often at altitudes of 3 or 4 miles—I look down upon the crops and grazing lands far below.

I see broad areas scarred by gullies and the white or gray patches of sterile subsoil where no good topsoil is left.

This thought usually comes to me: This must be the way that God looks upon what we have done with His gift of soil.

The sight can only bring sadness to Him.

And I think of the many more millions of people who year by year will move into our Nation and our world. Statisticians say the population in this country has passed the 170 million mark—a gain of 18 million in 6 years. Three million a year.

If we fail in our stewardship, the time may not be too far distant when our blessed abundance which has been our strength may give way to scarcity. Then there may come years when good crops will not be enough to meet our needs.

Looking at our farms and ranchlands from high above makes me more certain than ever that there is a divinely conceived charge to mankind to use God's land wisely, and to pass it on in better condition to the next generation.

Can a nation be neglectful of its stewardship of the land and still be a truly religious nation? Can a farmer or a rancher neglect his stewardship of the soil and still be a religious person?

This is God's earth. We ought to try seeing it as He sees it—and each of us may better realize our stewardship in the use of His land.

NOLEN J. FUQUA,
President, National Association of Soil Conservation Districts.

INTRODUCTION

In the creation of His earth, God provided a thin veneer of living soil to sustain mankind.

The soil averages only 9 inches in depth. It is principally a zone of microscopic life which converts minerals into plant food.

Without this zone most plant life would vanish. Animal life would go, too. Within the time of a few generations, we in this Nation, because of the way we have used this resource, have lost about a third of this important 9 inches of soil. The rest of it is going much too fast.

The Bible repeatedly emphasizes the importance of this gift of soil. It cautions man against the abuse and the neglect of the soil.

Yet, the land of Palestine referred to in Biblical times as the land of "milk and honey," in spite of God's warning, became a sterile desert. Parts of Africa and the Orient have gone the same way.

Heedlessness of laws of both church and state, ignorance and depravity are products of hunger. Illiteracy fastens itself upon areas of poor soil and malnutrition.

The use of the soil in accordance with God's directions is the concern of the church as it is of the state and the nation. In fact, studies show a direct relationship between the productive power of the land and the strength of the church serving the people who work the land.

The National Association of Soil Conservation Districts publishes this booklet in the hope that it will be an influence in awakening man to his responsibility as steward of the soil. May churches of all faiths find this booklet helpful in reminding all people of man's sacred obligation in his ownership and use of land.

Beginning on the fifth Sunday after Easter and continuing through the following Sunday, the 2,700 soil conservation districts will observe Soil Stewardship Week. It is hoped that the entire Nation will join in this effort.

In preparing this material, the National Association of Soil Conservation Districts has had the counsel and guidance of national church organizations and their leaders in town and country work. For this assistance the district association is grateful.

A MAJESTIC CREATION

The handiwork of God is on all sides. The psalmist standing under the starlit heavens sings: "The heavens declare the glory of God, and the firmament showeth his handiwork."

The vacationer retreating to the mountains for quiet and rest is overawed by the majesty of the rugged mountain walls and their lofty peaks. He is inspired to turn to the Creator and say in the words of the song writer of old: "I will lift up mine eyes unto the hills, from whence cometh my help." Man readily sees the hand of God in the spectacular, but he may fail to see it in the ordinary. He walks across the green grass in the valley without reflecting that the soil which gives nourishment to plant life is also wonderfully made.

The mountains and the rivers, the clouds, and the heavenly bodies find purpose for being as they work together in obedience to the laws of the Creator to give to man a fertile soil for him to use and to keep.

To do justice to this high calling from his Creator, the man on the land must understand that a productive soil is a major wonder of God's creation.

THE SOURCE OF THE SOIL

Fertile, productive soil is indeed wonderfully made. It ties up in one package a series of minute constructions and life-giving processes. It is the product of many forces of nature. The clouds sailing in the blue sky, the winds sweeping across the plains, the waters rushing down the mountainsides, the forces of heat and cold, the chemical processes, and the mystery of growth and decay, all join in obedience to God to bring soil into being.

The building of soil begins with rock. Mighty forces of nature crumble mountainsides of solid stone. Physical weathering shatters the rock by external pressures. Glacial and volcanic action play a role, but the steady process of making rock into soil is carried on mainly by nature's alternate use of heat and cold.

Uneven expansion of rock sets up stresses and strains which cause the rock to chip and to crack. Water accumulates in the crevices and pores of the stone. Pressures are created by the freezing water.

The disintegration of rock is aided, too, by chemical weathering. God in his wisdom has created simple forms of organic life that can live on barren rock. As these low forms of organic life live and die, they create acids which play an important part in the making of soil.

And here we encounter one of the wonders of nature—the miracle of the leaf, or photosynthesis. It is the process by which chlorophyll, the green pigment in the leaves of the plant, captures the energy of the sunlight and stores it in the form of grain and fruit for the sustenance of men and animals.

THE MIRACLE OF THE SOIL

The topsoil from which man and beast draw their sustenance abounds in living creatures.

These organisms are engaged in two forms of activity—vegetation and decomposition. They build and they cause decay. Through vegetation they are combined with minerals and with energy from the sun to build organic compounds. Through decomposition the microscopic organisms swarming in the soil decay organic matter.

While these two processes seem to be in opposition to each other, they actually are in complete harmony. They are engaged in a collaboration so harmonious and so intricate that it should cause the child of God to stand in awe at the wisdom of his Creator. It transcends human understanding.

This natural cycle that involves rain and sunshine, air and mineral, and life and decay is employed by God to build a productive soil. It has been estimated that it takes 400 to 1,000 years to build 1 inch of topsoil.

Man, to be a steward of God's earth, must have the utmost respect for the laws of nature and the processes that God has set up in building fertile soil. Man must seek to understand all the intricacies in soil production and lend a hand to nature in building a rich topsoil.

This living topsoil, so wonderfully made, God has entrusted to man. It is his to use so that he and his generation may have their physical needs adequately met. It is his to keep so that the generations coming after him may live free from hunger and want.

THE PENALTY OF POOR STEWARDSHIP

Good soil can be destroyed if man is a poor husbandman in his use of land and water. Many acres of good soil have been made useless because of poor stewardship.

Water may become an enemy instead of a friend. Black blizzards in winter months roar across the Plains, devastating crops and making life a gritty nightmare. Sand dunes at such times begin to march, often covering landmarks and dwellings. Some of the people, unable to withstand this onslaught of nature, leave homes and become wanderers and a social problem. The cause of these dark clouds of distress and despair is a man's heedlessness of the laws of God. Sometimes rivers go on a rampage, bringing destruction and death to many acres. This is a different kind of disaster, but nonetheless it is a result of man's sin against the laws of God. With the earth robbed of its natural coverage of timber, vegetation, and topsoil, the raindrops sent by God to be a blessing find no hold on barren slopes. They tumble rapidly toward the ocean in a terrible torrent that has no respect for life or for property.

The destruction of soil does not decrease the needs of man. God's burden of feeding billions remains the same. If people go hungry, it is not because God is unable to feed His children. It is because God has condescended to use man as His instrument in feeding them.

To the degree that man is a faithful steward and cooperates with God's laws of nature, he is able to satisfy the desires of every living thing. To the degree that man increases the usefulness of a single acre of ground, he extends the hand of God to feed the hungry. To the degree that man decreases the productive power of a single acre of ground, he shortens the hand of God in feeding His children. This places a great responsibility upon the users of the soil.

GOOD SOIL AND GOOD HEALTH

Our health is influenced as much by what the farmer does with his fields as by what the doctor does in his clinic.

Doctors more and more spend their time treating patients for deficiency diseases. Poor nutrition is one of the most important factors in making people susceptible to disease attack, and medical science is finding that prevention in many diseases offers more hope than cure.

Human health begins in the soil. The aim of soil conservation in a major respect is to keep mankind in good health. Health is impossible unless the food mankind eats contains the elements upon which health largely depends. Such food must come from healthy, vigorous, fertile soil.

Soil fertility on any farm can be depleted in a few seasons through failure to return manure, crop residues and other fertility forms. When that happens, it will have changed from a place of health to a place where disease may enter frequently and with persistence.

A human body deficient in iron will likely develop liver disorders, with skin and even the blood becoming pale, and the body becoming gradually emaciated.

A lack of zinc leads to thyroid troubles, and a lack of iodine for any extended period may mean goiter. A deficiency in copper may result in anemia, and a phosphorus deficiency could result in a wasting of body tissues.

Food cannot contain these elements unless they are in the soil to begin with. And the soil must be in a vigorous condition so that the growing plants may make use of the elements the body needs.

The people of this Nation spend many millions of dollars each year in trying to regain health. Much of this goes for vitamins and minerals bought in pills and capsules at the drugstores. Diet should have provided these needs in ample quantity.

Even the foods eaten in a health diet may not be health giving if they are produced on soils which do not contain the elements the human body must have.

Men and animals alike must suffer when the soil suffers through abuse and neglect.

PARTNERS WITH GOD

For too long we have said, "Anyone can farm."

Many are beginning to realize that our economic well-being as a Nation is dependent upon the fertility of the land, but few realize that our physical well-being is also related to the soil.

The farmer or rancher should see himself as a coworker with God. There is more to good farming than scratching the seed into the ground and harvesting whatever grows. There is more to ranching than simply harvesting grass with cattle and sheep. Good farming and ranching mean producing abundantly for the needs of man and at the same time providing for the increasing and continuing productivity of the soil.

A man must have more than the knowledge of new techniques and methods. In him must dwell the right spirit. He must have a deep sense of his responsibility to God and fellow man. He must have a love for the land. He must find pleasure in growing things and feel a hurt when a field is wounded by abuse or wrong judgment.

When men with this spirit live on the land, God's countryside flourishes with prosperity, contentment, and good will. Farm families find pleasure in the sight of well-kept fields and farmyards.

The products of the field are not considered as ends in themselves, but rather the means for sustaining happy family life. Schools and churches that adequately meet the need of the community are written large in people's minds. There is a healthy flow of farm produce to the market place. The entire country flourishes as farmer, businessman, professional men, craftsmen, and laborers exchange services with a sincere desire that each be adequately rewarded for his contribution to the well-being of the community.

Soil is the backbone of the Nation. Cities may be destroyed, but they will be rebuilt if the people's spirit is strong and natural resources are available. But no city has been built in a desert.

TOMORROW'S STEWARDSHIP

In any area of living it is a bad situation if the older generation does not bequeath to its children something richer and something better. However, some things can be corrected in a very short time. This is not so with soil and water. The mistakes and wrongs committed today against these precious natural resources in many instances will take hundreds of years to correct, and in others, restoration will never be possible.

The richness of America's soil and the plentitude of water will be reflected in the prosperity, the wealth, and the spirit of tomorrow's people far more than is generally believed. It has truly been said that "the soil is God's greatest material gift to mankind." This generation's greatest material gifts to tomorrow's world will be a productive soil and adequate water resources. Stewardship demands that we prepare, conserve, replenish, and protect these resources.

Urban and country youth should be conscious of the importance of soil and water in their everyday living and in their future. Soil and water play a vital role in the physical, economic, social, and religious life of the individual, the community, the Nation, and the world. This fact needs to be stressed so that the importance of soil and water is integrated into every phase of education—school, church, and youth organizations—both rural and urban.

Youth has a great stake in this effort. The time and energy that the young people spend in putting soil and water conservation programs into practice can be their best investment in their future.

RESPONSIBILITY OF LANDOWNERSHIP

The man-land relationship is a necessary part of God's universal scheme. In the Garden of Eden, God made man a steward of the land and responsible to Him for its care and use.

The Biblical message is clear and emphatic on land us and distribution. A man's inheritance of land was to be held, as nearly as possible, inviolate. Hear Elijah's judgment against Ahab when he would take Naboth's vineyard: "Have you killed and also taken possession?" (I Kings 21: 19.) Micah sets forth the prophetic ideal, "They shall sit every man under his vine and under his fig tree, and none shall make them afraid." (Micah 4: 4.)

God's greatest material gift to man is a very special kind of property, containing the basic sources of food, fiber, and fuel for man's use. Ownership of whatever sort, owner-operator, landlord or tenant, involves utilization of one's property to serve the highest purpose of human development and welfare. In many instances, absentee-owners fail to accept their responsibility as stewards of the soil. A special effort must be put forth to remind the absentee-owner of his moral responsibility. Profits made at the expense of soil jeopardize the local community and are made at the expense of the Nation.

In the exercise of his ownership of the land, a good owner develops a just pride in his acres, and is actively involved in the improvement of the attractiveness and the productivity of his acres. He comes to feel himself a part of the continuing creative process working cooperatively with God, "maintaining the yield," contributing to human welfare. Land ownership consciousness results in the conservation and the improvement of the God-given soil, and at the same time yields social satisfactions to the farmer, his family, his neighbors, and the world at large.

Such ownership eventuates in responsible citizenry and Christian stewards of the land. This kind of ownership should be transmitted from generation to generation. Farm families have a significant opportunity in father-son agreements. The son inherits the land and the soil stewardship practices of his father. The land of such a farm is conserved and enriched for future generations.

GIVE THANKS TO GOD

Through the ages man has been conscious of the need to give thanks to Almighty God for His bountiful blessings.

The word "rogation" comes from the Latin word "rogare" meaning "to ask." The 3 Rogations Days are over 1,500 years old. They began in the fifth century at Vienne, France, when in the year 470 there had been crop failures—due to earthquakes and bad weather—with resulting famine. St. Mamertus, bishop of Vienne, ordered prayer and penance on the 3 days preceding the Ascension. The clergy and the people made penitential processions calling upon God to help and asking His intercession.

Other communities took up the custom, and from France it soon spread throughout the world. At the end of the eighth century it was formally accepted by the church. Thus, it has become the practice to hold each year before Ascension Thursday a special Rogation service.

The purpose of the Rogation Day is to implore the mercy of God that He may keep us from all evils of soul and body, and give to the plants of the field an increase. In the spring, when the fields are becoming green and there is promise of a good harvest—but also the possibility of destruction through frost, hail, or rainstorms—the prayers and processions are a reminder to feeble man to turn with humility and confi-

dence to the Giver of all good. For, it is not the earth alone which brings forth fruit, and not alone the busy hand of man on which the increase depends; but it is God who gives the increase.

Each year thousands of people participate in soil-stewardship services and Rogation Day prayers in city, village, and open country churches. This is a tremendous demonstration of man's desire to give thanks to God and to ask for continued blessings.

Departments of Labor, and Health, Education, and Welfare, and Related Agencies Appropriation Bill, 1958

SPEECH
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6287) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1958, and for other purposes.

Mr. BUDGE. Mr. Chairman, the gentleman from Rhode Island and I have disagreed at various points throughout this bill but I hope that he will be in agreement with me on this amendment which relates to additional salaries to carry out the program on which the Committee of the Whole House just voted. As near as I can determine, there are about $100,000 in salaries carried for the Bureau of Public Assistance to carry out this program of training welfare personnel. That program was just defeated on a division vote. I would hope that the gentleman from Rhode Island will accept this amendment. It certainly should be adopted in view of the fact that the program for which the expenditure was to be made and for which the salaries were to be paid is not carried in the appropriation bill.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. BUDGE. I yield to the gentleman from North Carolina.

Mr. COOLEY. It is my understanding only $99 million have been made available and that they need $105 million. Unless we provide the money we will not be keeping faith with the several States; is that not true?

Mr. BUDGE. That, of course, would not apply to the amendment which I have offered, I may say to the gentleman from North Carolina.

Mr. COOLEY. I thought the gentleman's amendment was to put in this bill the amount that is short in the other bill?

Mr. BUDGE. No, that is not correct. The amendment offered by the gentleman from North Carolina would have restored $2½ million for the training of personnel.

Mr. COOLEY. I know that.

Mr. BUDGE. There is now in the amendment which I have offered $100,000 which is carried in the bill and should not be in the bill because it is to pay the salaries of the people who were to set up this training program to which the gentleman referred.

Mr. COOLEY. One hundred thousand dollars?

Mr. BUDGE. One hundred thousand dollars and the bill should be reduced by that amount because the purpose for which the $100,000 is in there was eliminated by the Appropriations Committee and that action has been sustained by the vote just a few minutes ago.

Mr. COOLEY. May I say for the benefit of the gentleman who made the inquiry that I have been advised by a member of the Committee on Ways and Means that the item I just introduced and which my amendment relates to did originate in the Committee on Ways and Means.

Mr. BUDGE. Be that as it may, in view of the fact that the $2½ million for this purpose is not carried in the bill, then $100,000 should not be carried to pay the salaries of the people who were to set the program in operation.

Mr. COOLEY. I thought that the whole $2½ million was to pay the salaries or scholarships or provide a program for the training of personnel?

Mr. BUDGE. I may say to the gentleman that the amendment which he offered would have done that, but since the amendment was not adopted and since there are no funds in the bill for that program, we should eliminate $100,000 to pay the Federal salaries to put the program in operation.

Mr. COOLEY. The gentleman is probably right.

Administrative Costs for Public Assistance in New York State

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. OSTERTAG. Mr. Speaker, an erroneous impression has been created in this House, possibly inadvertently, as to the cost of administration of public assistance in the State of New York. The statement has been made here that these costs run as high as 27 percent of expenditures.

In fairness to the administrators of my State, and for the sake of accuracy, I ask leave to include in the RECORD the following facts and figures.

First, it should be borne in mind that there are many service costs blanketed under the heading of administrative costs in New York State—services which are not made available to welfare clients in some other States. Among these are casework service, medical service to restore people to physical health, guidance to children, homemaker service, and so on. In other words, the department of social welfare is not merely a fund-dispensing agency, but renders many services which are designed to curb and lighten the burden of indigency both on the clients and on the public. It might be desirable to separate these service costs from administrative costs so that a clearer public accounting could be rendered as to the use of these funds. In the absence of such separation, the public and the Congress may be misled.

Even taking these added services and activities into account, New York State's administrative costs do not, in fact, approach 27 percent of expenditures, as charged.

In fiscal 1956, the latest year for which full figures are available, New York State spent $273,505,014 on federally aided assistance programs. Of this sum, $236,197,416 was for assistance, and $37,307,598 went to administrative costs. Thus the percentage of the total sum expended for what are presently labeled as administrative costs was 13.6 percent. Broken down as between New York City and upstate, here are the figures: New York City expended a total of $182,533,685, of which $155,478,753 went for assistance and $27,054,932 was expended for administration. This amounts to 14.8 percent for administration. In the upstate counties and cities, the expenditures for assistance amounted to $90,971,329, of which $80,718,663 went for assistance and $10,252,666 was allotted to administration—amounting to 11.3 percent for administration. The reason for the higher percentage of administrative costs in New York City is that there is a higher rate of turnover and a much higher rate of applications than exists in the upstate areas.

Soil-Bank Payments

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include an editorial written by Mr. Albert M. James, editor of the Syracuse Journal, of Syracuse, Kans. This editorial appeared in the Syracuse Journal for March 21, 1957:

SOIL-BANK PAYMENTS

Properly administered, and working as it was intended, the soil-bank program is as near ideal for drought-damaged Hamilton County as any plan that can be devised. It provides a substantial income for both landowner and tenant, without the senseless expense of planting a wheat crop under conditions that prohibit it making a crop, which was the biggest objection to the former acreage allotment plan.

But this plan is now in grave danger of causing great harm to the community through a squabble about who gets the Federal payments. There is no rebuttal to the argument that if tenant farmers are dispossessed from land, there will be great loss of population here, a loss which will be reflected immediately in business activity, and continue for several years of adjustment after conditions permit wheat raising again.

Actually there have been few attempts reported on the part of landlords to dispossess or raise the rent on tenants in order to get a larger share of the soil-bank payments. Most of them are going along with the program as it was intended, but the few instances already known point out the danger. If a few are successful in their efforts, they may be followed by many, and in a county so largely nonresident owned as is Hamilton, this would be disastrous.

What the outcome will be cannot be foretold at this time. It will not be known until after the applications are presented for the 1958 soil-bank program. The local ASC committee has a hard job ahead of it.

Here clearly is a conflict of human rights against property rights. When he is not farming, the landlord has little need for a tenant, and the tenant's share of the soil-bank payments is a tempting morsel. But the tenant who has fought dust and dry weather for the past several years, and lost money doing it, also has rights. He cannot remain idle like the land. He has spent years of hard work on the land, believing it was his to farm as long as he did a good job. He should not be deprived of this interest.

In such conflicts, we believe the human rights should have precedence over the property rights. The soil-bank program is for farm relief, not landlord relief.

Humanitarian and Old-Age Rights Act

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. ASHLEY. Mr. Speaker, today I have joined nearly 50 Democratic Members of the House of Representatives and Senate in sponsoring the Humanitarian and Old-Age Rights Act, a measure which will be welcomed by millions of our Nation's less-fortunate citizens.

Since enactment of the public assistance section of the Social Security Act, there has been reason to question the degree of humanity and justice with which the provisions of this act have been administered. The responsibility of Congress, Mr. Speaker, goes beyond the adequacy of financial assistance to needy Americans. We must also safeguard those receiving assistance from undue harassment and intimidation and restore to them their right to human dignity.

The Humanitarian and Old-Age Rights Act is a step in this direction. By establishing a single standard of qualifications for the applicants and recipients of public assistance—below which no State shall go—a degree of uniformity would be achieved among the widely varying laws of the 48 States.

For the first time a legislative intent would be established by Congress "that public assistance shall be administered promptly and humanely, with due regard for the preservation of family life, and without discrimination on account of race, sex, religion, or political affiliation; and the assistance laws shall be liberally construed."

Among the outstanding provisions of this bill are the following:

The age requirement for recipients of old-age assistance would be the same as that of retired workers receiving social-security benefits.

The aged and handicapped on public assistance would be allowed to earn up to $50 a month; the parents of needy children up to $30 per month, and the needy children themselves, up to $30 per month to supplement their assistance checks. The blind are already permitted to earn $50 without penalty of reduction in aid.

Recipients may own a home of an assessed value—less all encumbrances—up to $5,000 free from the imposition of a lien. The floor of $1,200 is established under the amount of personal property which a single recipient is allowed to have, and household furnishings are exempt, as are insurance policies or burial agreements up to $500 in value.

The practice of enforcing collections from the relatives of recipients and the publishing of the names of recipients is prohibited, and no person receiving public aid shall be deemed a pauper or referred to as being indigent.

The State-imposed residence requirement now allowed by the Federal Government would be reduced from 5 years to 1 year, and persons otherwise qualified who do not meet State residence requirements shall receive partial payments directly from the Federal Government until the State residence requirement has been met.

Departments of Labor, and Health, Education, and Welfare, and Related Agencies Appropriation Bill, 1958

SPEECH
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6287) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1958, and for other purposes.

Mr. BUDGE. Mr. Chairman, I rise in opposition to the pro forma amendment.

Mr. Chairman, I wonder, since the gentleman from Rhode Island has referred to rollcalls either tonight or tomorrow, if he would indicate to us just what amendments he intends to demand rollcalls on. Now, I have offered 5 amendments to this bill, all of which have been adopted, and I would like to know which ones the gentleman intends to call the roll on.

Mr. FOGARTY. I think the first one would be the Smith amendment cutting the solicitor's office.

The second one would be the one bearing the gentleman's name, called the Budge amendment, which cuts the veterans. The third would be the Smith amendment cutting the Bureau of Employment Security. The fourth, the Murray amendment, is a cut dealing with the Bureau of Labor Statistics. Fifth, the Anderson amendment cutting the Women's Bureau. The sixth would be the Hébert amendment cutting the Wage and Hour Division. The seventh would be the Jonas amendment cutting the Food and Drug Administration. The eighth would be the Dorn amendment cutting the Department of Education. Ninth is the Fisher amendment deleting $50 million for grants for waste treatment works construction.

We will have to wait until the end of the bill to see if we have any others. I have the gentleman down for one.

Mr. BUDGE. Well, that is the reason I asked the question. It places the authors of the amendments in rather a peculiar position when you want to call the roll on some of the amendments, and when they are all on the same theory. Would it not be proper to assume, from a reading of the amendments that the gentleman is seeking a rollcall on, that he favors the other amendments?

Mr. FOGARTY. Oh, no. I was just trying to save the time of the House. But I have all this week and next week, and if you desire to have a rollcall on some of these smaller amendments, I will be very happy to cooperate with you.

Mr. BUDGE. Mr. Chairman, I should like to say to the gentleman from Rhode Island [Mr. FOGARTY] that I certainly do not want to drag this matter out any longer than is necessary, but when five amendments are adopted, all of which propose the same thing, I cannot quite understand why the gentleman is so selective as to pick out only one bearing my name and leaving out the others. Is there some difference in the others?

Mr. FOGARTY. What are some of the others? Will the gentleman refresh my recollection? Maybe I have forgotten one or two.

Mr. BUDGE. Of course, it may work out that we would be constrained as the authors of the amendments to ask for a rollcall on all of them rather than just permit the gentleman from Rhode Island to pick out the ones he feels most sympathetic to.

Mr. FOGARTY. That is the gentleman's prerogative. I have given the House notice of what I intend to do as chairman of this subcommittee in the matter of asking for rollcalls on amendments. I hope that there will be a sufficient number of Members on this side and on the gentleman's side to get a rollcall. If the gentleman has any other amendments in mind on which he wants to get a rollcall, I shall be happy to cooperate with him in that regard.

Mr. BUDGE. I should like the gentleman, if he is going to ask for a rollcall on any other amendments that I have offered, all of which were intended to retain personnel at the present level, to ask for a rollcall on each of them instead of picking out one that happens to bear my name, toward which he seems to be sympathetic.

Mr. FOGARTY. I would suggest to the gentleman that he ask for a rollcall on any amendment he has in mind. I

have mentioned the ones that I think are important and that I think the membership would want to vote on. I have made my selection. If the gentleman wants to add any to those, I shall cooperate with him.

Mr. BUDGE. Mr. Chairman, I appreciate having had this colloquy with the gentleman from Rhode Island because it would help explain an action which we, as authors of these amendments, may feel constrained to take if the gentleman proceeds in the manner which he has outlined.

Mr. FOGARTY. Mr. Chairman, in answer to the gentleman, I am going to proceed in exactly the manner I have just outlined.

Mr. BUDGE. I thank the gentleman.

Mr. FULTON. Mr. Chairman, would the gentleman yield?

Mr. BUDGE. I yield to the gentleman.

Mr. FULTON. Mr. Chairman, can we learn what time this day of judgment begins tomorrow and what the schedule of voting will be?

The CHAIRMAN. That announcement will come from the leadership.

Spanish War Widows

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. O'HARA of Illinois. Mr. Speaker, as is well-known to the veterans of all wars among whom the National Tribune is regarded as an outstanding spokesman for the veterans of the country, the eighth page of this fine newspaper is devoted to news of interest to the United Spanish War Veterans. On this page of the issue of April 4, 1957, appears the following plea for prompt action on the Spanish War widows pension bill, just approved unanimously by the Committee on Veterans' Affairs:

Good news has come from the House Committee on Veterans' Affairs. H. R. 358, the O'Hara bill to grant increased pension for widows of Spanish-American War veterans, has been approved by the committee and now goes before the House of Representatives for a vote.

The fact that the House committee has approved it is a good sign and promises favorable consideration by the House as a whole. However, this is no time to loaf on the job. Every Spanish-American War veteran—in fact every war veteran—should express to his Representative in Congress the need for its prompt passage.

Early approval by the House should insure its consideration by the Senate at an early date and not die in a Senate pigeonhole as has happened in previous Congresses.

While there is surely a need for economy in Government spending such economy should not be made in the case of the needy widows of Spanish-American War veterans who have been compelled to exist on the pittance they are now receiving.

To use the slogan of politicians: "Now is the time for all good men to come to the aid of their party?" The party is the group of widows of the veterans of 1898–1902 and the time is now. A call for action should meet a prompt and favorable response. Let's go.

Proctor Band Wins Cherry Blossom Festival Band Contest

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. BLATNIK. Mr. Speaker, it is with considerable pride and great pleasure that I am able to announce that the winner of the Cherry Blossom Festival national high-school band competition held yesterday was the Proctor High School Band of Proctor, Minn.

These 72 young musicians, under the leadership of Band Director J. P. Moody and Assistant Director R. J. Melde, took first place in the playing-band category, second place in the marching-band category, and were named "best all-around band."

This is not the first long trip experienced by the now nationally known Proctor High School Band. In 1948 the band played at the Little Rose Bowl game in Pasadena, Calif. In 1948 it played in Winnipeg, Canada, and in 1950 the band traveled to the Portland, Oreg., Festival of Roses. Recently the band has performed in New Orleans' Mardi Gras parade and just recently made a fine appearance during the intermission in the Orange Bowl game in Miami Beach, Fla. I am sure the 1957 Proctor band can take its place with fine Proctor bands of the past and can add now, to its many honors already won, the title of best band at the Washington, D. C., Cherry Blossom Festival for 1957.

Proctor High School is one of the finest schools in northern Minnesota which is known for its many fine schools. Congratulations should be extended to the band director, Mr. Moody, and his assistant, Mr. Melde, as well as the very able educator, Superintendent A. J. Jedlicka, who accompanied the band, and Mr. W. R. Salmi, assistant superintendent.

A list of the band members includes: Sharyn Torba, Joan Moran, Diane Davis, Bertha Fransk, Jane Perrill, Annette Wiggins, Carol Malley, Louann Frolen, Nancy Burlovich, Joyce Pelletier, Sandra Soderberg, Nancy Stickney, Joan Haugen, JoAnn Traplay, Rosemary Timmerman, Wendy Lambert, Marilyn Sheehan, Deanne Oppel, Carolyn Carlson, Sharon Hoffman, Pat Norlund, Sharon Parsons, Doris Moen, Charlene Sedor, Clarice Anderson, Dorothy Larson, Charlene Brockway, Sandra Hoffman, Mary Jo Bijold, Carol Chapman, Donna Renaud, Jeanine Johnson, Marion Sauter, Margaret Norstrom, Judy Stickney, Donna Lee, Karen Breimon, Carol Stack, Roberta Mehling, Sharon Carlson, Judy Wolff, Kay Johnson, Sandy Lambert, Julia Denzler, Jane Johnson, Marilyn Gulbranson, Karen Nelson, Mary Lynn Johnson, Joan Wagner, Nancy Stewart, Barbara Mehling, Margaret Skog, Barbara Jugasek, Diane Beatty, Susan Granmoe, Corinne Robertz, Janice Wedlund, Sharon Barlow, Jean Sowa, John Breigenzer, Ronald Barlow, Joe Spencer, Victor Breemeersch, Jim Parmeter, Jon Parmeter, Duan Benoit, Dale Hoffman, Dan Quaderer, Roger Dahl, Duane Sedor, Harvey Burski, Butch Traplay.

The Financial Institutions Act—S. 1451

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. MULTER. Mr. Speaker, I am pleased to direct to the attention of our colleagues the following unsolicited letter, dated March 30, 1957, and written by John A. Schoonover, president of the Idaho First National Bank, Boise, Idaho:

THE IDAHO FIRST NATIONAL BANK,
Boise, Idaho, March 30, 1957.

The Honorable ABRAHAM J. MULTER,
Member, Banking and Currency Committee, House of Representatives, Washington, D. C.

DEAR MR. MULTER: The Financial Institutions Act, S. 1451, which is now being considered by your committee, deserves close attention. Generally speaking, this is a desired codification of a mass of Federal laws pertaining to banks and other financial institutions.

I do, however, wish to point out that chapter 4 of the Federal Reserve Act portion of the law includes a provision which would alter the procedures pertaining to the election of directors of the separate 12 Federal Reserve banks. The new law would limit such directors to two 3-year terms, and would, in effect, deprive the member banks of their right and privilege to elect their chosen representatives as class A and B directors of the various district Federal Reserve banks.

It is felt that this statutory limitation is inimical to the best interests of the member banks, and we find our position in this respect has been supported by a number of respected authorities. In a letter dated November 5, 1956, the Federal Advisory Council of the Federal Reserve System indicated opposition to such a restriction. The Association of Reserve City Bankers has evidenced its opposition, as has the special American Bankers Association's committee set up to assist in the preparation and study of the entire Financial Institutions Act.

The existing law and regulations provide for secret voting for directors of the classes A and B, which in itself should obviate the necessity of any new statutory limitation. It appears unwise to eliminate Federal Reserve bank directors who are recognized and experienced authorities, and who, at the same time, are capably and suitably representing the banks which elected them.

As this bill moves through your committee and onto the floor of the House, it would be sincerely appreciated if you would give this particular aspect your careful attention.

Yours very truly,

JOHN A. SCHOONOVER,
President.

Social Security Benefits for the Blind

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. ANFUSO. Mr. Speaker, in the last Congress I had introduced a bill, which I had entitled "Insurance Against Blindness Act," to amend title II of the Social Security Act to aid the blind. There was considerable interest throughout the country for this measure, particularly among the blind and organizations seeking to help the blind. Consequently, at the request of many of these groups and individuals, I am reintroducing my bill now.

My bill provides that any person who, at the onset of blindness, is employed in an industry which is covered by old-age, survivors and disability insurance shall be eligible for disability insurance benefits if he has four quarters of coverage. This insurance provision in the Social Security Act would not be based on the nature of the work in which the person was engaged at the time when blindness set in.

In other words, a person losing his sight from any cause and in any way while he is employed in a covered occupation shall be entitled to full social security benefits and be eligible to receive monthly payments from the time blindness has occurred. Actually, the bill calls for only four quarters of coverage under the Social Security Act for entitlement of insurance against blindness, which may be regarded as a reasonable minimum. The four quarters, however, need not necessarily be of continuous service in one year, but may be acquired over a period of years.

In instances where an individual ceases to be blind and becomes rehabilitated, no benefits shall be paid until he reaches the regular retirement age.

Experts working in the field of welfare for the blind estimate that approximately 22,000 persons in the United States lose their sight every year, but only about half of these would stand to benefit under this provision since the remainder are over the age of 65. This means that under my bill approximately 10,000 to 12,000 persons would be eligible to receive insurance against blindness benefits each year.

It must be emphasized, however, that these payments are not to be regarded in the nature of a grant, but rather as an annuity which the person concerned bought and which is to be payable to him without any restrictions in the event of blindness. It should be regarded in the nature of an insurance against blindness, similar in certain respects to the insurance purchased by an individual who is paying premiums toward a paid-up policy.

Mr. Speaker, it is my view that the blind, especially the newly blinded person, should be extended every bit of encouragement to become employed and to attempt to become self-sufficient to the best of their ability. In order to make possible this encouragement, my bill provides that the blinded person would not lose any benefits under the social-security system due to the earning capacity which he might develop in the course of time.

The proposals contained in my bill have the endorsement of the American Foundation for the Blind and the American Association of Workers for the Blind, which are nationally known for their activities and services in this field. I urge the Congress to give early and favorable consideration to this bill in order to provide a measure of insurance against blindness for those who will be needing it in the future.

Mr. Speaker, at my request, Mr. George E. Keane, vice chairman of the legislative committee of the American Association of Workers for the Blind, prepared an excellent résumé of the efforts to establish disability insurance for the blind. I am pleased to insert his statement at this time. It follows:

RÉSUMÉ OF EFFORTS TO ESTABLISH DISABILITY INSURANCE FOR PERSONS WHO LOSE THEIR SIGHT WHILE EMPLOYED

(By George E. Keane, vice chairman, legislative committee, American Association of Workers for the Blind)

From earliest days thoughtful citizens have been interested in and have tried to promote conditions under which persons who lose their sight may have relative economic security. Alms, of course, was the earliest answer to the problem and, as you know, dependency and mendicancy was the lot of the blind for most of the earlier centuries of civilization. In fact, until the turn of this century, there was no real organized effort on a national basis to find broader means of support for dependent blind persons than that of the alms-giver. There were some isolated developments prior to 1900; schools for the blind had been established, 3 or 4 agencies for the blind had been incorporated and the American Association of Workers for the Blind was still in its infancy. After 1900, many agencies and schools were established, and the American Association of Workers for the Blind realized that it was necessary to form a research and program development service, which is the American Foundation for the Blind. Not enough can be said for the courage shown by these early pioneers working with great faith but very little funds, to bring a better life to the blind of the Nation and to remove them from the rolls of the dependents and the mendicants.

With the development of the American Association of Workers for the Blind and of agencies and services for the blind throughout the United States, more coherent thinking was brought to bear on the problem, and several of the States introduced relief or dole programs, most of them of a very meager sort, to meet the problem. It can be said that there was no broad step forward until the writing of the Social Security Act in the early thirties. Every one who was close to the development of this act, including those of us who were active in the American Association for the Blind and the American Foundation for the Blind, brought all of our best thinking to bear on proposals to include services and assistance to the blind in this new act and, as you know with some success, title X of the Social Security Act, taken in conjunction with the earlier adoption of Public Law 732 and the later adoption of Public Law 113 affecting the rehabilitation and employment of blind persons might be said jointly to stand as the Magna Charta for the blind of the United States. When the Social Security Act was first under consideration, the best thinking of the country believed that title II might one day serve to make both title I and title X almost unnecessary, and at the time we, in work for the blind, urged that title II be expanded to include broad disability provisions and in particular broad disability provisions for the blind.

In the past, even the commercial life insurance available to those who could afford it, contained such disability provisions upon the onset of blindness as were proposed by us in the original Social Security Act. Later in 1950, when the first major efforts toward broad revision of the Social Security Act were embodied in H. R. 6000, which was later passed into law, we of the AAWB and AFB again came to Congress with similar proposals revised only to the extent that our increased knowledge of the problem and statistical information then available seemed to warrant. Several provisions which we proposed were written into the law at that time, particularly in amendments to title X and the propsal for an amendment to title II creating a disability allowance for blind persons was passed by the House, rejected by the Senate and omitted in the final draft of the bill which came out of the joint committee in the Senate and House. We were deeply disappointed for, as you know, no disability provisions were written into title II at that time.

We believe that now all social welfare experience, as well as a more accurate knowledge of the subject available to the Senate and House, has made the possibility of the inclusion of disability insurance more feasible and more probable this year than at any time in the past. What we are asking is stability for those of our citizenry who are employed in covered industries and who are unfortunate enough to lose their sight. We believe sincerely that such insurance provision should not be based on the number of periods of coverage, nor the nature of the work engaged in, nor the level of pay which such worker receives at the time of onset of blindness, but that instead, it shall be assumed that the maximum payments possible under OASI should immediately become payable at the moment any person employed in covered industry shall lose his sight. The number of those affected cannot be very great in any given year, and cannot in any case ever accumulate to a very large number. As you undoubtedly know, there are only 317,000 blind persons in the United States. It is estimated that 50 percent of this number are over the age of 60 and could not be affected by the provisions proposed, unless they are still employed in covered industry. This would mean that approximately 159,000 persons would have to be considered if a bill were to be passed. It has also been estimated that 22,000 persons lose their sight each year. Here again, more than 50 percent are over the age of 60, which means that a maximum of only 11,000 persons would have to be considered as affected by the provision. Again, it is apparent that not all of these can possibly be employed in covered industry and would still have to be taken care of through other provisions of the law than OASI.

The number of those who are already blind and who may become affected by the law because they are now employed in covered industry is even a more negligible figure, probably not exceeding 10,000 persons in the United States.

In conclusion, may we say that we believe that the proposed inclusion of such a disability clause, the old age and survivors insurance provisions of the law, will do more than any other act which Congress might perform, to restore dignity and stability to those blind persons who now must look to public assistance for their very existence.

We feel that it is a commentary on how far we have come in the United States in humanity toward our fellow men, that we can now seek with confidence a stable and dignified way of life for blind persons as a matter of right, rather than as a matter of dole or relief.

We cannot help but feel that in the long run this will be a less expensive way of giving security to those of our citizens who lose their sight and can no longer work.

May we, therefore, again ask Congress to consider a bill which will amend title II, providing that any person who is employed in a covered industry shall upon onset of blindness be deemed to be fully covered and to have reached retirement age. Such an act will earn the deep gratitude not only of the blind persons who will benefit from it, but all of those who have been working in the interest of and for the welfare of our blind citizens. Beyond this, we believe that all citizens will recognize this as adding to the security of every American—and will welcome it.

Not Charity but Justice

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an editorial from the National Tribune of April 4, 1957, as follows:

NOT CHARITY BUT JUSTICE

The House Committee on Veterans' Affairs has approved H. R. 358, sponsored by Representative BARRATT O'HARA of Illinois, which would grant a pension of $75 a month to widows of Spanish-American War veterans who qualify under existing law.

The National Tribune has sought for years to have the present meager pensions being paid to the widows of the men who served from 1898 to 1902 increased because it has realized that this group, now in its seventies, is unable to meet the demands of modern day living on the $54.18 which the Government pays them.

Handicapped by age and infirmities, these widows are even unable to eke out a living by babysitting (the last refuge of the old). Only last week the Department of Labor reported that the cost of food and shelter had reached a new record.

Most of our people are able to meet these rising costs with a little privation, but the widow of a Spanish-American War veteran, on $54.18 a month, has been unable to meet these costs for many years and, if no succor is given her by the present Congress she will be forced into abject poverty.

What a prospect for the women who lived faithfully with their veteran husbands and who cared for them in illness and death.

We feel sure that if the people of our country were properly acquainted with the facts they would demand an adequate pension to care for these splendid women who have shared the vicissitudes of life with those who fought to defend our Nation, and we feel certain also, that a generous Congress would not refuse the boon they seek.

The daily papers are full of stories about granting so many hundreds of millions to this country or to that country in order to relieve their economic distress—some of them former enemies—but when it comes to consider the dependents of our country's fighting men all we hear is the cry of "bankruptcy of the Nation," if so much as a meager increase is granted to the women who might profit by H. R. 358.

At last report there were approximately 82,000 Spanish War widows drawing persion. Some of them have since passed away. The increase proposed by H. R. 358 would amount to a little more than $20 million a year. It might be said that as fast as a Spanish-American War veteran dies his widow goes on the pension rolls if she qualifies under the law.

This is not a true statement of fact as many of the veterans have no dependents and even if it were true, every time a widow of a Spanish-American War veteran qualifies for a pension the Government saves $25 a month—the difference between the pension the average Spanish-American War veteran now receives and the amount asked for in H. R. 358 for a widow.

Considerihg the cost, as outlined above, of the O'Hara bill compared with other budget estimates, it is such a small drop in the bucket as to be infinitesimal. We hear talk of granting economic aid to Poland—a Communist country, and to others who have opposed us in more than one war—but when it comes to caring for our own the cry goes up that we cannot afford it. It may be all very well to seek economy in many departments of the Government—and we believe that many such economies are proper, but to seek economy at the expense of these few surviving relatives of our fighting men is going too far when it comes to cutting the enormous budget presented to us by the administration.

Let there be a little less foreign aid and a little more aid for our own. The people of the United States are, in the main, a long-suffering people, but surely they must look with disfavor on grants to outsiders when their own folks are not cared for properly.

It is noted that the Senate last week voted funds for the rivers and harbors bill (known better to the public as the pork-barrel or vote-getting bill) to the tune of some $1,500,000,000. That isn't hay, even to the farmers. "Millions for defense," said Pinckney, "but not 1 cent for tribute." Times have apparently changed, millions and billions for everyone but veterans and their dependents.

It must be remembered that the men who fought for their country during the 4 years of the Spanish-American War, the Boxer Rebellion, and the Philippine Insurrection were all volunteers who believed in the ideals of the Nation for which they fought. It must be remembered, also, that good women, true women devoted their lives to our country's defenders.

"To care for him who has borne the battle, and for his widow and his orphan" has become a tradition in the United States. Never should we lose sight of this tradition and never be it said that a forgetful people and a preoccupied Congress should ignore the needs of this worthy group. We ask that in considering H. R. 358 a kindly minded Congress bear this tradition in mind and grant not charity but justice to these deserving women.

Experts Are Needed

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial from the Greenville (S. C.) News:

EXPERTS ARE NEEDED

A study of the 1958 Federal budget shows that there is left over from the 1957 budget some $335,000 of a $400,000 item that was appropriated to pay experts $75 a day to advise the President on the establishment of more efficient business methods in Government operations.

From the looks of the budget this money should have been spent, if there were any efficiency experts for hire at $75 per day.

The rivers and harbors and flood-control division of the Army engineers, for instance, is asking for 13 percent more money, or $196,385,000. But it wants to increase personnel from 16,507 to 20,257 or 23 percent.

Could be these employees are needed to build Hartwell Dam, or, maybe, to justify it, but $25 million in 1 year is quite a jump.

Likewise, the Public Housing Authority wants to increase by $6 million, or from $93 million to $99 million, its annual contributions to public housing agencies. To give away this additional money the agency will need an increase in its administrative budget—from $10,700,000 to $13,300,000.

And still some people say the budget can't be cut.

National Paraplegia Foundation

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I would like to touch on another area in which I am convinced that the Federal Government could be of more assistance and that is in the field of paraplegia. Excellent work is being done on that problem by the Paralyzed Veterans of America through their National Paraplegia Foundation. For those of you who are not aware of the work this organization is doing, I include the following background analysis which has been prepared by the foundation:

NATIONAL PARAPLEGIA FOUNDATION

Paraplegia is not a new problem. Plutarch noted it. It was mentioned in the first and second century A. D. by Celsus and Aretaeus. Galen experimented in lesions of the spinal cord. Operations of the spine were advocated by Paulus Aegineta in the seventh century A. D. and were again recommended by Fabricius Hildanus in 1545 and were first performed by Louis in 1744.

There was an incidence of spinal cord wounds in every American war since the Revolution. In World War I, only 20 percent of soldiers incurring spinal cord injuries reached the United States, and only 10 percent survived for more than a year and as of this date not more than one or two are alive from that war.

During and subsequent to World War II with the advent of sulfa drugs and antibiotics, it became easier to control the complex factors of the injuries so that the injured could be kept alive, and as far as the majority of the new civilian paraplegic population was concerned it was possible to live a nearly normal life and to find employment and a place in the community. The Paralyzed Veterans of America was organized just after World War II and were able to do much to solve their problems and readjustment to civilian life.

All these men lost the normal use of their legs. The quadriplegics whose spinal dam-

age occurred near the neck, have lost much of the function of their arms and hands as well. Bladder and bowel control is a problem requiring retraining.

Aside from a few excellent pioneering institutions, civilian paraplegics have nothing like the services developed by the Veterans' Administration. Expansion of facilities is needed. Enough highway and industrial accidents occur to make wider dissemination of information necessary, especially on preventive factors.

It become evident almost at once that the civilian paraplegic was having a more difficult time because information on rehabilitation techniques was unavailable and few rehabilitation centers existed. The Institute for Rehabilitation at New York University—Bellevue Medical Center, is under the direction of Dr. Howard A. Rusk; the Kessler Institute for Rehabilitation in West Orange, N. J., under the direction of Dr. Henry Kessler; the Kieser Kabat Institute for Rehabilitation in Vallejo, Calif., are the only major facilities available to civilians. It was also evident that if solutions to the medical problems of paraplegia were to be found much medical research would have to be done. To educate the civilian paraplegic and the public on paraplegia and to promote research, the National Paraplegia Foundation was founded by the Paralyzed Veterans of America. Several civilian chapters have been organized and more are expected. Fellowships have been given out and a national newspaper, the "Parapiegia News," is published monthly.

Estimates as to the number of civilian paraplegics range to 100,000 and at present we are in the process of making a survey of the 48 States in an effort to determine the more accurate number of paraplegics. It is obvious from surveys received from various parts of the country that our estimate of 100,000 may be too low.

Our problem has been complicated by the very fact that up until recently, people such as us did not live or were classed as "shutins." As a group, the paralyzed veterans have proved that they are capable of living outside the hospital, driving their own cars, working full time, and for the most part in being successful citizens. However, until the large portion of paraplegics who have not had the advantage of adequate care are brought up to the minimum VA standards, we have work to do.

More than 70 percent of the men successfully treated during and after the Second World War are working a full or part-time basis. They are the nucleus of the Paralyzed Veterans of America (PVA), which works to aid those who still need basic help to bring the advantages they have had to civilian paraplegics, to spur research on the spinal cord, and to promote professional knowledge of rehabilitation techniques.

A survey made in 1953 by the present PVA president, Robert Frost, of a sampling of 318 paraplegic and quadriplegic veterans showed 82.9 percent were employed at 75 different kinds of jobs in electronics, watchmaking, industrial assembly, bookkeeping, clerical positions, aircraft, drafting, photography, insurance, journalism, the law, and a variety of other occupations extending from micropaleontology to operating garages.

As an organization, the PVA has performed and continues to discharge a number of valuable functions. These include:

(a) Opposing deterioration of VA treatment for paraplegics and quadriplegics, assisted by good cooperation from officials beset by budget cuts.

(b) Helping individual paraplegic veterans get through the redtape paper mill on questions of pensions, eligibility for housing and care, obtaining wheelchairs, prosthetic applicances and repairs.

(c) Advising Korean and World War II paraplegic veterans on-job training for their special abilities, needs, and interests, job placement, finding the right place to live, etc.

(d) Organizing an excellent recreation program starring a wheelchair basketball league and an array of ticket resources for such spectator attractions as theater, baseball, football, basketball, boxing, concerts, ballet, outings, and picnics.

(e) Other services which range all the way from getting license plates to legal advice and life insurance.

All National Paraplegia Foundation research projects and fellowship grants are administered by the Medical Advisory Committee of the Paraplegia Foundation organized by the PVA. Its membership is as follows: Dr. Leslie W. Freeman, chairman, director of surgical research, Indiana University School of Medicine; Dr. Percival Bailey, professor of neurology and neurological surgery, University of Illinois School of Medicine; Dr. Paul Bucy, professor of neurology and neurological surgery, Northwestern University School of Medicine; Dr. James Barrett Brown, professor of clinical surgery, Washington University School of Medicine; Dr. Louis B. Flexner, professor of anatomy and chairman of department, University of Pennsylvania School of Medicine; Dr. Andrew C. Ivy, professor of clinical science and chairman of department, University of Illinois School of Medicine; Dr. John F. Fulton, Sterling professor of the history of medicine and chairman of department, Yale University School of Medicine; Dr. Donald C. Malcolm, associate clinical professor of surgery, University of Southern California School of Medicine; Dr. R. Glen Spurling, clinical professor of neurosurgery, University of Louisville School of Medicine; Dr. James C. White, associate professor of surgery, Harvard Medical School; Dr. Winthrop M. Phelps, medical director, Children's Rehabilitation Institute, Cockeysville, Md.; Dr. Raymond W. Waggoner, professor of psychiatry and chairman of department, University of Michigan School of Medicine.

To date there has never been more than a few thousand dollars available in any 1 year to carry forward the work projected for the foundation. Its principal aims are:

(a) To establish a program of fellowships in medicine and the sciences requiring between $3,000 and $6,000 each annually for 3 years' duration.

(b) To provide grants-in-aid for specific research projects at schools of medicine and medical centers.

(c) To make possible collection of data on paraplegia for increased use in treatment and research.

(d) To prepare and disseminate material for interest and instruction of physicians, medical societies, industry, and the lay public.

When we consider the personal disasters which attend a serious fall with resulting paraplegia or quadriplegia, and the short survival of those who do not receive proper treatment, we can realize what a great contribution we may make if research and wider education succeed in preventing sports, industrial, and auto accidents from having tragic consequences.

Civil Defense Preparedness

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted unanimously at the steering committee meeting of the Berks County, Pa., Civil Defense Council on March 29, 1957:

Whereas the security of the United States depends to the same degree upon the preparedness of the certain population through civil defense measures as it does upon the readiness of the Armed Forces; and

Whereas the danger to the security of the United States is as potent today as at any previous time in our history; and

Whereas it is obvious that the United States must live within its expected income, and, accordingly, must eliminate such expenditures which are not absolutely essential to the public welfare: Therefore be it

Resolved, That the Berks County Civil Defense Council go on record this day as expressing concern that the proposed cut in the civil defense budget will seriously impair the effectiveness of the already limited civil defense activities; and be it further

Resolved, That priority be given to measures promoting a more vigorous and practical program by the Federal Government implementing civil defense preparedness, and that necessary economies in Government spending be instituted in areas that are not vitally necessary to the public good.

CHARLES S. ADAMS,
Director, Berks County Civil Defense.
WARREN K. HESS,
Deputy Director, Berks County Civil Defense.
MARGUERITE VOSS OSMAN,
Executive Director.

Dated March 29, 1957.

New York Polish Newspaper on Social Security

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an article written by my very dear friend, Peter Yolles, in the Polish daily newspaper, Nowy Swiat, published in New York. I understand that this is the only progressive Polish newspaper with a record of 50 years of civic service. The article by Mr. Yolles was originally written in the Polish language and translated into English. It was published in the issue of March 27, 1957.

Mr. Yolles is one of the ablest writers and lecturers. I have known him for many years. At the beginning of World War II, before I went on active duty overseas, I had the pleasure of serving with him on a selective service appeal board. He carried out his duties with humane understanding and, at the same time, in full recognition of his patriotic obligations. He was fair, just, and openminded. Men of his caliber are always a great asset to any community. I am proud to number him among my friends in all these years.

The translation of his article reads as follows:

OLD AGE IS NO JOY—A TALK WITH CONGRESSMAN VICTOR L. ANFUSO ON SOCIAL SECURITY

(By Peter P. Yolles)

My good friend, Congressman VICTOR L. ANFUSO, is an old and true friend of Poland and the Polish people. He represents a large

number of Americans of Polish descent who live in his congressional district in Brooklyn, and he has a laudable habit of maintaining a close contact with his constituents with whom he shares his experiences and his observations in Congress.

Congressman ANFUSO recently introduced a bill containing important amendments to the Social Security Act. He did it after studying the problems of his constituents and hearing from them directly as to how it strikes them most.

During a pleasant conversation with him after dinner in the restaurant of the Polish National Hall in New York, Congressman ANFUSO called attention to the fact that America is growing older—which is a new phenomenon in the life of our country (just as it is in our personal life and of which we are not always conscious until visible signs of that fact begin to appear). America was until now historically very young as a nation. It was also young from the standpoint of the average age of the population. It was certainly very young compared with the history of a nation like Poland, which is a thousand years old. The young American Nation has all the virtues of youth, but also all the faults of youth.

The American people, however, is growing old—even as you and I—which causes far-reaching and deep changes of a psychological, political, social, and above all economic nature in the life of the country. Our Congress is aware of it and has adopted a system of social security to aid the aged. But life writes its own amendments to all laws. Time exposes faults, shortcomings, and outright injustices which, in a true democracy, results in changes, improvements, and corrections in order to adjust the law to the conditions of life.

Congressman ANFUSO explained to me the gist of his proposed amendments to the provisions of the social security system. It is his endeavor to adjust the law on paper to the laws of life. Here is one instance:

"Under the social-security system as presently constituted, the minimum monthly benefit is $30. How it is possible for an elderly person to subsist on this niggardly sum for a whole month is something which I cannot comprehend. It is hardly enough for rent, let alone food, clothing, and other essentials. This is not only inadequate, but in many instances almost heartrending, since most of these people are physically no longer able to earn even the limited outside income permissible under the law. No wonder many of these older citizens receiving the bare minimum benefit are bitter and resentful and feel that they are the forgotten people of today.

"I propose to increase the minimum monthly payments to $40, an increase of only $10 per month. Even at the rate of $40 a month, the daily average comes to only about $1.30, which is hardly enough to take care of the most elementary needs. Yet, small as this increase is, it would be most welcome to many elderly people and give them a greater feeling of security and dignity. I believe it is fair. I believe it is urgent."

In order to be entitled to the benefits of social security, men must attain the age of 65 and woman 62. Here is what Congressman ANFUSO suggests:

"I am proposing in my bill to lower the retirement age from 65 to 60 years, and it is to be applicable alike to both men and women. The claim that this will cost us a substantial sum of money is undoubtedly true, but social security has paid for itself from the very first."

Then, there is another provision in the Social Security Act that is difficult and unreasonable. For example, I have attained the age where I am entitled to derive social-security benefits. I have from the very beginning been paying the highest rate and am now entitled to receive 108 dollars monthly. But this sum is inadequate for a whole month. The law allows me to earn another $1,200 during the year, or $100 a month. Even so, my total income would be limited to about $50 weekly, which is far below the standard of living and needs today, especially considering my status in the community.

Does that mean that I have to be degraded and pushed down the scale of life, in fact almost punished? Why should I not be allowed to earn more by writing, lecturing, etc., as long as I am able? Must I forfeit the benefits to which I am entitled and which are to a great extent my compulsory insurance? Why? I believe that is neither the intention of the law nor its aim.

Congressman ANFUSO understood my problem, which is not only my personal problem but of many others. One of his amendments, therefore, provides to increase the allowance of earnings up to $1,500 yearly. This is a considerable allowance, though still unsatisfactory.

I specifically mentioned my case because Congressman ANFUSO, who is a lawyer by profession, emphasized that the law is not supposed to be inflexible, meaningless, and heartless. It is supposed to contribute toward the welfare of the aged people and it must also allow for adjustment to changing conditions and needs in order to properly fulfill its purposes.

Thus, by direct contact with his constituents, Congressman ANFUSO gains a deep insight into the heart of many problems confronting him. His proposed amendments do justice to these needs toward a gradual improvement in the realization of the idea behind social security. I wished him good luck in his efforts to obtain passage of his bill.

Power Vacuum at Suez

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Herald Tribune of March 31, 1957:

POWER VACUUM AT SUEZ

The first convoy has passed through the Suez Canal. The physical rehabilitation of the waterway is virtually completed; the economic and political structure within which the canal can function as an international medium of transit has not even been sketched. President Nasser of Egypt has produced a plan in which virtually all the guaranties are provided by a unilateral Egyptian declaration, which makes no attempt to insulate the waterway from the politics of any one country, as the Security Council called for, which does not even suggest an international advisory body to work with the canal authority and which appears to reject the transit of Israeli ships. Yet the only overt step which the United States has taken is to caution American shipowners against using the canal at this time.

If the matter ends here it will be a virtual renunciation of the responsibility which the United States assumed when it took the leadership in forcing Britain and France to withdraw their troops from Port Said. It will be a surrender to Nasser, a payment to him for his inability to defend his own country against the violence he had provoked. It will be an admission that there is a power vacuum in the Middle East, so that the international community is unable to protect its rights against rabid nationalism.

Nasser's plan for controlling the canal was consistent with all his actions to date. He offers no concessions whatever—just as he has offered none in Gaza and the Gulf of Aqaba. The idea that he would make an internationally acceptable agreement because it would be right and reasonable and make the long-term path of his people easier was, of course, wholly naive. His position as Egypt's dictator (or at least as titular head of the various forces which make up the Egyptian dictatorship) depends on present success, not on reason or future prospects. To obtain an agreement that would meet the needs of the maritime nations and offer security and equality on the Suez route requires pressure, the presentation of alternatives that would be more onerous to Egypt than a fair adjustment of the canal problem.

Once the United States took the position that direct pressure of the kind that Israel, Britain, and France were applying was inadmissible, the search of alternatives admittedly became very difficult. Shipping companies do not want to bear the present expense of national policies that may bear only future dividends—such as going around the Cape of Good Hope in small- or medium-sized tankers. Western Europe, starved for oil during the winter, is not anxious to prolong the experience. Pipelines and big tankers that could bypass the canal are not to be constructed in a day.

Yet the alternatives must be found; the United States and its maritime associates among the nations of the free world cannot become vassals of Nasser; unbridled nationalism and general disregard for international contract cannot be allowed free play in the vital Middle East. It is up to the United States, now that Nasser has so clearly shown his hand, to assume the leadership in building up a whole system of pressures, in and out of the United Nations, moral pressures and economic, that will promote an enforceable system of law in this troubled region. This country cannot rely on broad statements of principle, however, high-minded, to introduce stability into the Middle East. It must act—and now—or see its leadership rejected, its influence wane, and its allies fall away.

Dixon-Yates Aftermath in Costs

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. BOW. Mr. Speaker, the experience of the people of Memphis, as described in the following article from the Los Angeles Times, should help destroy the myth that public power is cheap:

DIXON-YATES AFTERMATH IN COSTS

The storm which Tennessee Valley politicians raised in 1954 over the so-called Dixon-Yates contract is now pelting the taxpayers of the city of Memphis.

It will be recalled that in that year the Atomic Energy Commission, needing more power than the Tennessee Valley Authority was able to produce, and supply Memphis, too, contracted with the Mississippi Valley Generating Co. to supply the city of Memphis the electrical current it was buying from TVA. The howl from the public power lobby

wrecked the deal, the city of Memphis finally deciding to erect a municipal plant and scorn the power to be furnished by Dixon-Yates. Thereupon, President Eisenhower canceled the AEC contract.

It now turns out that Memphis is finding its public power far from cheap. A few months ago the city sold revenue bonds in New York and had to pay a coupon rate of 4.4 percent on them, for a net cost to the city of 4.47 percent; whereas the MVGC bonds in 1954 could have been sold for 3.5 percent. Further, the experts now figure the Memphis plant will cost $200 a kilowatt; the comparable Dixon-Yates figure was $165.

Memphis was to have bought power from the Dixon-Yates company for 3.98 mills a kilowatt-hour, a rate which the company was willing to guarantee would not be raised for 25 years. Now the municipal juice will cost 4.48 mills a kilowatt-hour and if additions to the plant are necessary the rate will be increased.

The Dixon-Yates plant would have paid regular Federal, municipal, and State taxes, while the Memphis plant will pay none. This may make little difference to Memphis, since the private plant was to be located in Arkansas; but Federal taxes are paid by all private plants and no municipal ones, so taxpayers elsewhere are subsidizing Memphis.

Germany: A Good Risk

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. CELLER. Mr. Speaker, because I believe that at this point in the swiftly changing currents of the United States relations with the other nations of the world a fresh study is required, I have undertaken the task of trying to look at each country anew in the light of existing facts and conditions. No mature evaluation of our foreign policy can be made unless we are aware of, and have an understanding of, the condition of each country not only as a political unit in and of itself but in its interrelationships with the other countries of the world.

We have lived through a period in the last decade of witnessing former enemies alining themselves currently with us. We have seen former friendly countries retreat to neutrality, and we are witnessing today the emergence of nationalism in Asia and Africa and the Middle East which shatters former patterns of the dealings we once had with them.

Unfortunately our reactions to political units or nations have been, in the main, visceral, based on emotions which have been generated by conditions which no longer hold true.

I have chosen to begin with Germany since, as former enemy and present friend, it most readily lends itself to fresh examination. We cannot doubt that much of the individual's evaluation of present-day Germany still rests on the image of a Germany first conquered and defeated by itself alone, and then conquered, in turn, by the world it sought to destroy. Hence we must begin by asking ourselves, "What is Germany today? How did she measure her own guilt, and how did she, out of the rubble and the fire, arise to take her place with the nations of the West? Where is she heading? What are her problems peculiar to herself which make her a pivotal point in the operation of American foreign policy?"

I begin with a quotation from the German economist, Hans Otto Wesemann:

In January 1947, nearly 2 years after the end of hostilities, German production was still in such a state of devastation and collapse that it was estimated that each inhabitant in the British Zone would get only 1 new suit of clothes every 40 years, 1 shirt every 10 years, 1 pair of socks every 4 years, and a pair of shoes every 3 years. At the same period the average food ration consisted of less than 1,000 calories—40 percent of the physiological minimum requirement.

That was 1947, 1 year before the currency reform, less than a decade ago. The German economy presented a picture of total chaos. The currency was unstable, the cities more or less in ruins, 500 million cubic yards of rubble had to be removed, railroad and motor traffic had shrunk to fractions of their former volume, the German merchant marine no longer existed, and every day thousands of refugees poured into Western Germany from pre-Hitler German territories in the east—in the end they totaled 10.9 millions. These people crowded into an area embracing only 52 percent of the former territory of the Reich. Dismantling of the industrial plants for reparations reduced the already wretched productive capacity of the country still further. Worst of all was the breakdown of all moral standards in business life and all confidence in the economic policies of the government.

Yet from this point on, the Germans went forward to meet the challenges of defeat, poverty, and despair, until today it is commonplace to read of the miracle of German recovery. In appraising this miracle, we remember that before Hitler let loose his holocaust, Germany's population was roughly 70 million in an area of some 182,000 square miles. Today, the bitter fact of separation leaves the Federal Republic of Germany with some 50 million in an area of some 95,000 square miles. Berlin itself has a population of 3½ million, of whom over 2 million live in the western sector and the rest in the Soviet-controlled eastern sector. The total population of the Soviet zone of occupation is almost 17 million in an area of 41,382 square miles.

The territories east of the Oder and Neisse Rivers, including Pomerania, Silesia, and East Prussia, with some 8½ million people, are now principally under Polish control and partly under the domination of the Soviet Union.

While it cannot be denied that at first the people of Germany—and I have reference here to the Federal Republic of Germany—cloaked themselves in resentment and bitterness, neither can we deny that the German people threw off this cloak in a surge of energy unequaled by any other period in its history.

Perhaps the most significant fact to note in the story of Germany's recovery is its development through its adherence to a basically free-enterprise economy. An appreciation of antitrust laws—an appreciation which is so tragically lacking in other European countries—enabled Germany to move forward so that competition could, in the main, be free and vigorous. I will come back again in future studies to the damage done to other European economies by the very absence of restraints against monopolies and monopolistic practices. Hence, in Germany we find in its economy three principles established: Freedom of commerce, principles of free trade, and the fight for free convertibility of currencies.

The economy of Germany does, however, have its "soft spots." One of them, as in the United States, is that of agriculture. Another is that of the dwindling of population, a consequence of the drop in birth rate during the war years. Another is the heroic absorption of some 10 million refugees, about half of whom have yet to be rehabilitated and trained for their place in the German economy.

While it is true that some industry and housing was subsidized by the German Government, we find that the need for these subsidies, taking various forms, of course, has diminished or withdrawn. We see this particularly in the tremendous housing program undertaken by the Federal Republic. Its achievement in construction is particularly staggering. We note that between 1949 and 1955 a new house is built for every fifth inhabitant of the Federal Republic.

The Germans themselves feel free to acknowledge the basic contribution of Marshall aid to their spectacular rise in productivity, distribution, and consumption of goods, durable and soft.

Today, full employment exists.

At this point, Germany seems to have discarded to a degree never known before any policy that would tend to draw her into isolation. She has joined with the West in the organization of NATO. She has moved closer and closer in the imaginative proposals of furthering integration of Europe through its membership in GATT. She has moved forward to help in the establishment of a European common market and on the Euratom project. The question of the Saar has been settled between France and Germany with the signing of the Saar Treaty.

Without the gift of prophecy, we cannot say in what direction Germany will ultimately turn. We in the United States must admit freely that we can only be masters of our own fate. We cannot captain the soul of another country.

We have heard the apologists for Germany. We have heard the barren excuses of a number of Germans of "the other fellow did it, not me"; and "I did not know of the mass murders." We have heard how they were misled by Hitler; we have heard you cannot condemn a whole nation; we have heard it all, and doubtless we shall continue to hear it.

But we today are concerned with whither Germany now, and the direction can only be given us by the signposts along the way. We know that the Federal Republic has moved with the West; that it is moving with rapidity and vision toward closer cooperation with the free countries of Europe. We know that it has embraced political as well as economic freedom. We know that the cultural expression of Germany, blacked out during the years of the Hitler terror, has slowly begun to emerge. Here I might say parenthetically and at this writing that the development of the arts has

lagged behind the economic resurgence, although we already see the emergence of art and art forms which were once an integral part of German culture. The German people do not and cannot "live by bread alone."

We know that the main political parties of Germany are moving toward the center, wary of the extremes of the right and the left. These are healthy signposts and they presage for the good.

There is, however, within Germany today one area of emotional content which can swing Germany in another direction—I say it can, I do not say it will—and that area is the unification of Germany.

It is not necessary for me at this point to contrast the conditions in Free Germany with those prevailing in East Germany. West Germany does not—and, I shall add, cannot—subdue its restlessness, its understandable passion for reunification. Just so long as Germany is split, just so long will the seeds of discord remain, not only in Germany but across the territories of Europe and the United States as well. The basic question, of course, is what price will Germany pay for reunification. Will she, as many of the advocates would enjoin, bargain away her western orientation—in other words, retreat to neutralism—as a price of unification?

We have seen lately signs of distress within Germany lest East Berlin rise, as did Hungary, and provoke Soviet terror which could easily spill into West Germany. Neither they nor we have forgotten the uprising of June 1953 in East Berlin which preceded the revolts of Warsaw and Budapest. How often is the question being asked, shall we make our peace with the Soviet Union and, by withdrawal from NATO, permit a bargain to be struck? Or will Germany, moving forward with the energy so far displayed to aline herself unequivocally with the free countries of the world, continue to do so stanchly, awaiting a general settlement in the cold war which would, and must, bring with it reunification? On this all the free nations of the world stand together. There can be no general settlement without the inclusion of a unified and a free Germany.

We must point to Conrad Adenauer's statement of 1 year ago:

> Everything that has been accomplished in the Federal Republic in the past few years is of importance to the whole free world. We believe that the ways and means by which these achievements were effected are essentially the same as those followed in America and other western countries—namely, setting free individual initiative and promoting a sense of responsibility of each toward all. It is encouraging to note that no longer does "all" refer solely to one's own country but to the entire community of free nations.

Fortunately, this is today still the overriding sentiment of Germany. It is her task, and in some measure our own, that in 1 year, 10 years, 20 years, this sentiment be one of the cornerstones upon which to rest the peace and security of the world. May it be saved. I believe, notwithstanding the difficulties and dilemmas facing her, Germany—Western Germany—is a good risk.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

1957

Appendix

President Spurs School-Aid Drive as Defense Need

EXTENSION OF REMARKS
OF

HON. HARRY G. HASKELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Friday, April 5, 1957

Mr. HASKELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of President Eisenhower's address last night at the centennial banquet of the National Education Association:

It is a privilege to take part in this centennial anniversary of the National Education Association.

Like all citizens, I am proud of the progress American education has made over the past 100 years. Like all citizens, I am indebted to the generations who built our schools, and I am glad to pay tribute to the schoolteachers of America who give their lives in the service of our children.

And for the work the National Education Association has done to promote the goals of popular education, I am happy to express on behalf of the citizens of the United States the appreciation of all.

Not always did the provisions of educational opportunity for all seem vitally important to most Americans. A hundred years ago, when Abraham Lincoln spoke of his boyhood, he said, "There was absolutely nothing to excite ambition for education."

At one time Lincoln even decided to give up trying to study for a public career in the law because he felt that his preparatory education was so woefully inadequate.

What a tragic loss it would have been if Lincoln's lack of early education had prevented him from the full realization of the great powers of his mind and heart. One wonders how many young Americans have been handicapped by a similar lack of education. How many potential Lincolns have been lost to us because there were no schools for them to attend—no teachers to excite their ambitions.

A LESSON FOR THE FUTURE

Here is another question that we might ponder. I know there is no answer to past mistakes, but perhaps in this question there is a lesson for the future. It is this: Might this country not have been spared the senseless grief of the War Between the States and a just and peaceable solution to its causes reached, if there had been more men of education, more men of wisdom, in positions of leadership and among our people a hundred years ago?

The hope of the world is that wisdom can arrest conflict between brothers. I believe that war is the deadly harvest of arrogant and unreasoning minds. And I find grounds for this belief in the wisdom literature of Proverbs, which says in effect that—panic strikes like a storm and calamity comes like a whirlwind to those who hate knowledge and ignore their God.

Because Lincoln had such a hunger for education, and because he saw our country endure such a tragic experience with the deadly fruits of ignorance and prejudice, he exalted the ideals of education.

In the very beginning of his political career, Lincoln made clear to his constituents how he stood on this important subject. He said: "Upon the subject of education, I can only say that I view it as the most important subject which we, as a people, can be engaged in * * *. For my part, I desire to see the time when education, and by its means, morality, sobriety, enterprise, and industry, shall become much more general than at present, and I should be gratified to have it in my power to contribute something to the advancement of any measure which might have a tendency to accelerate"—the wider education of our people.

In the year the National Education Association was formed there was introduced in the Congress the first college land-grant bill, a bill donating certain Federal lands to the States and Territories to provide a perpetual fund for the purpose of increasing the facilities for higher education across the country. The bill did not pass in 1857, but when Mr. Lincoln became President, he was pledged to support it, and during his administration it was passed.

Lincoln signed this bill at a critical moment in the Nation's history—at a time when hopes for an early end of the War Between the States were broken by the costly and indecisive battles of the peninsular campaign. It is significant that at the moment when Lincoln's military hopes were at their lowest ebb, he signed a bill providing for the rapid increase in our educational resources.

The two events can be closely related. The strength of our arms is always related to the strength of our minds. Our schools are strong points in our national defense.

Our schools are more important our Nike batteries, more necessary than our radar warning nets, and more powerful even than the energy from the atom. This is true, if for no other reason than that modern weapons must be manned by highly educated personnel if they are to be effective, and the energy of the atom can only be understood and developed by the most highly trained minds in the country.

OF PRIME IMPORTANCE TO ALL

But far more important than this our defense must always rest on clear comprehension of the basic values we seek to protect—the true nature of the contest between human dignity and regimentation.

Thus, the education of our children is of prime importance to us all. Moreover, to maintain the common defense and to guarantee the progress of our Nation, each of us must discharge his rightful and proper role in developing the intellectual capacities of all children living in every corner of our land. Each individual, each community has a vital function to perform.

For I remind you that the great colleges and universities that sprang up from Lincoln's college land-grant bill were not Federal projects. By no means. Most of the capital and organization for these institutions were provided by the States themselves.

In this, as in all other things, Lincoln believed that Government should do for people only what they could not well do for themselves. The land-grant bill furnished the stimulus for greater local effort.

At the present time, the land-grant colleges and universities receive most of their support and all of their direction from local citizens. Also, a healthy proportion of support comes from the students themselves. I add this because it is unwise to make education too cheap. If everything is provided freely, there is a tendency to put no value on anything.

Education must always have a certain price on it; even as the very process of learning itself must always require individual effort and initiative. Education is a matter of discipline and more, a matter of self-discipline.

Lincoln's faith in education is part of America's faith in the ability of the people to govern themselves. When men and women know the facts and are concerned about them, we believe they will make the right decisions. Prejudice and unreasoning opposition will more and more give away before the clean flood of knowledge.

This has always been my faith of democracy. Lincoln and education are closely associated in the memories of my boyhood. Indeed, the first school I attended 60 years ago was called the Lincoln Grade School. It was located across the street from our house in Abilene. Nowadays, they refer to it as the old Lincoln school, because, old and dilapidated, it happily was replaced some years ago by a larger and stronger school.

A GREATER BURDEN

Each generation must build better schools for its children. Especially in today's complex and challenging world we need stronger and bigger schools in which to train our children to accept their magnificent opportunities and grave responsibilities, opportunities for life even richer than ours, responsibilities for the defense of their homeland and strengthening the free world.

This puts a greater burden on education than ever before, a greater burden on our teachers, classrooms, and curriculum.

The school-building program of America suffered three grievous setbacks in this generation—the depression of the thirties, the war of the forties, and the Korean crisis of the fifties. These three periods caused a drying up of normal schoolroom replacement and expansion, almost like three successive droughts.

During the depression we were unable to build schools for lack of money; during the wars we were unable to build schools for lack of men and materials, because most of these resources was diverted into the war effort.

So now our educational plant is not ample to cope with the enormous burden of present and future enrollments. Therefore, it is my firm belief that there should be Federal help to provide stimulus to correct an emergency situation; that help should not imply a permanent acceptance of responsibility which belongs, not to Washington, but to the local governments and to the local communities and to the people themselves.

NO FEDERAL CONTROL

Federal help in building schools will not mean Federal control. After these new school are built, after the bricks are laid, and the mortar is dry, the Federal mission will be completed. All control and use of the schools will be in the hands of the States and localities.

Every phase of the educational process, especially in our system of public schools, is important to all of us.

Teachers need our active support and encouragement. They are doing one of the most necessary and exacting jobs in the land. They are developing our most precious national resource: Our children, our future citizens.

They can do their best only as we show them our appreciation and offer them our help. We hear a lot about the deficiencies and woeful conditions of education in America, a criticism that suggests a few questions.

How many parents have visited their children's schools? How many parents have offered to relieve some of the routine burdens of the teachers, or invited them to a friendly supper at home? How many parents have tried to make the teacher a real partner in the responsibility—and priceless privilege—of educating our children.

Lincoln had great respect for his teachers, that is, for the few he was able to find on the American frontier. But these few pioneer teachers must have had a great influence upon him, because in later life Lincoln was always able to recall each by name.

Just before he came to Washington as President-elect, Lincoln wrote a short account of his life. In this autobiography, directly following a description of his immediate family, Lincoln wrote about his schoolteachers. He was still able to recall their full names, with gratitude and affection, 30 years after he left school.

With this example before me, I was proud to take part in the first White House Conference on Education 2 years ago. This was a nationwide conference of educators, school administrators, and citizens concerned with the school problems of our day and devoted to the avancement of education across the land.

From these White House conferences—held in Washington, and more, appropriately, in 4,000 local communities in every State from coast to coast—from these White House conferences came some new ideas for strengthening the educational system of America. I trust those ideas will be useful to you of the National Education Association.

Using the words of Lincoln, I believe education is "the most important subject which we as a people can be engaged in," and I join you in the hope that we in our generation may continue to accelerate the wider education of our people.

Joint Committee on the Budget

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I am submitting an article by Mr. David Lawrence from the New York Herald Tribune, of April 5, 1957, because of its very real interest to all Members of Congress:

HARMONIZE BUDGET VIEWS SEEN IN SENATE-VOTED BILL

(By David Lawrence)

WASHINGTON, April 4.—By a virtually unanimous vote, the Senate has just passed a bill which, if the House of Representatives approves, may do more to harmonize the views of the executive and legislative branches of the Government in the making of the Federal budget than anything which has been suggested before.

For the bill would create a joint committee of 14 members—7 from each House—who would have an adequate staff to study and evaluate all the items in the budget. It would save the time of everybody involved, because it would mean one set of hearings. It would furnish the viewpoint of all groups, including those which want to see economy practiced.

The same kind of bill has passed the Senate on different occasions in recent years only to be defeated in the House of Representatives, many of whose Members traditionally feel that, since all the money bills must originate in the House, they must be given attention exclusively by its committees.

SPONSORED BY M'CLELLAN

Senator JOHN L. MCCLELLAN, of Arkansas, who is chairman of the Senate Committee on Government Operations, has sponsored the new bill. In his report he gives many persuasive reasons for the adoption of the measure. He particularly takes cognizance of the action of the House on March 12 last in adopting a resolution requesting the President to indicate the places and the amounts in his budget where he thinks substantial reductions may best be made. This, he says, is "a clear indication that the Congress does not have adequate information upon which to act in carrying out its constitutional responsibilities for maintaining adequate controls over Government expenditures."

Mr. MCCLELLAN reminded the Senate that Members of Congress "have learned from contacts with the people back home that there is a tremendous ground swell of public sentiment for economy in Government, and demands for action in eliminating unnecessary expenditures in the operations of the Government."

But, under the existing procedures, with different appropriation committees and small staffs, it is not possible to do more than listen to witnesses from the executive branch who are morally bound to support the budget as submitted. Members of Congress have to depend on what they can pick up from the outside as to what items might really be cut.

Taking a leaf out of the splendid record of the Joint Committee of Internal Revenue Taxation, Mr. MCCLELLAN and the 71 cosponsors of the new bill believe a great service can be rendered by the joint committee type of operation in the field of governmental economy.

Just now, of course, with the Congress in control of the Democrats and the executive branch in control of the Republicans, there is a natural antagonism between the two branches. But the division of the Government on this basis is not usual and the reform will be as useful, if not more so, when both Congress and the Presidency are in the hands of the same party.

The new committee would, to be sure, be made up always of 7 members of the Senate Appropriations Committee, which now numbers 23, and 7 from the House Committee on Appropriations, which now numbers 50 members. But in such a large membership of the appropriations committees today, there are various subcommittees appointed and it is virtually impossible for the entire committee to know as much about the items as the other subcommittees which have special fields to cover.

The theory back of the joint committee idea is that a large staff of experts, who serve continuously from one session through the next and so on, will build up a knowledge of the budget operations that will be invaluable to Congress.

Detailed analysis of the budget by congressional committees is not possible under the present system, and only a superficial examination is given to what is recommended by the executive. Conversely, the Budget Bureau has to accept programs created out of previous legislation by Congress and has no means of passing judgment on whether existing laws should be repealed. The Budget Bureau in those instances merely estimates the cost of operation and assumes a continuance of the laws. A joint committee could look constantly into the question of whether the laws that require appropriations from year to year might be modified, if not repealed.

The move just made by the Senate is in the direction of efficiency and could be the basis of some real economizing. Will the House pass the new bill or insist on the same haphazard ways that have prevailed in the past? The American people will be deeply interested in what happens to this bill in the House of Representatives.

The American Bar Association and Civil Rights Legislation

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. WILLIS. Mr. Speaker, along with many other clear-thinking constitutional lawyers, Mr. J. Y. Sanders, Jr., of my State and a former Member of this body, raised the very pertinent question of why the American Bar Association has not taken a position on civil rights and in particular on the many fundamental constitutional questions posed by this legislation.

Correspondence between Mr. Sanders and the senior Senator from Louisiana, the Honorable ALLEN J. ELLENDER, was made available to me. I insert it in the RECORD, as well as a copy of my personal reply.

The correspondence follows:

UNITED STATES SENATE,
COMMITTEE ON AGRICULTURE
AND FORESTRY,
April 2, 1957.

Hon. EDWIN E. WILLIS,
House of Representatives,
Washington, D. C.

DEAR ED: I am enclosing some self-explanatory correspondence that I have received from Mr. J. Y. Sanders, Jr., an attorney of Baton Rouge, La., concerning the American Bar Association's stand in connection with the so-called civil rights legislation.

I am forwarding this to you for your information since you are a member of the House Judiciary Committee which is handling the civil rights legislation.

With kindest personal regards and best wishes, I am

Sincerely yours,

ALLEN J. ELLENDER,
United States Senator.

BATON ROUGE, LA., *March 19, 1957.*

Mr. CHARLES S. RHYNE,
Chairman, Committee To Commemorate Magna Carta, Chicago, Ill.

DEAR MR. RHYNE: In answer to yours of March 15, I wish to say that I am very much interested in putting a monument commemorating the granting of Magna Carta at Runnymede. I enclose check for $5 as my contribution to this worthwhile event.

While the American Bar is building a monument to the granting of Magna Carta at Runnymede which guarantees our trial by jury which is one of the cornerstones of American freedom, as well as the freedom in other English-speaking countries, I have heard no voice raised by the American Bar Association against the blatant and outrageous attempt to circumvent the constitu-

tional guaranties of trial by jury in the so-called civil rights legislation now pending in Congress.

It might be well to look to our freedoms at home.

Very truly yours,

J. Y. SANDERS, Jr.

BATON ROUGE, LA., *March 26, 1957.*

Hon ALLEN J. ELLENDER,
Senate Office Building,
Washington, D. C.

DEAR ALLEN: The other day I received a letter from Mr. Charles S. Rhyne, chairman of the Committee to Commemorate Magna Carta, being a committee of the American Bar Association. The letter requested a contribution for the purpose of erecting a monument to Magna Carta at Runnymede.

It seemed to me ironic that the American Bar Association should go to England and build a monument to Magna Carta at Runnymede the very year that the United States Congress is apparently planning to pass this so-called civil rights legislation which would destroy the right of trial by jury to a certain class of accused.

I wrote Mr. Rhyne accordingly expressing my feelings in the matter and enclose a copy of my letter to Mr. Rhyne to you. I also wrote to Mr. David F. Maxwell, president of the American Bar Association sending him a copy of my letter to Mr. Rhyne.

It occurred to me that you and other Members of Congress that are members of the American Bar Association might see fit likewise to voice their protest to the American Bar Association erecting this monument to Magna Carta while at the same time remaining silent while the United States Congress prepares to violate one of the fundamental tenets of this same Magna Carta.

Anyway, I am sending a copy of my letter to you for such action as you might see fit to take.

I read your address as published in the New Orleans Times Picayune yesterday on this same question. I think it is fine.

With all good wishes, as always,

Cordially yours,

J. Y. SANDERS, Jr.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 5, 1957.

Hon. J. Y. SANDERS, Jr.,
Baton Rouge, La.

DEAR MR. SANDERS: In view of my membership on the House Committee on the Judiciary, which is charged with the responsibility of handling civil-rights legislation, our mutual friend, Senator ELLENDER, sent me a copy of your letter to him dated March 26.

The local and State bar associations throughout the country and the American Bar Association in particular are usually sources of valuable and constructive information to our committee on general legislation, and you would be surprised how often we hear from them on a wide range of bills affecting our fundamental judicial and constitutional processes.

I have not received a single letter from the American Bar Association, however, on pending civil-rights legislation, and I heartily agree with you that it is ironic that the voice of the association has not been raised, in light of the fact that the bill as reported by a majority of the House Committee on the Judiciary contains deliberately planned devices to deny the right of trial by jury in all contempt proceedings that will inevitably arise under the proposed legislation; to bypass State laws, State remedies, State courts, State judges, and State agencies, and to concentrate practically unrestrained powers in the Federal Government. I should point out that the amendments offered before the full committee to remove these provisions were defeated by the close vote of 17 to 15, and that, in fact, the use of proxy votes overcame the majority present and voting in favor of the amendments. Similar amendments will, of course, be offered on the floor of the House.

I am taking the liberty of sending you a copy of the report on the so-called civil-rights legislation, H. R. 6127. I call your particular attention to the closing paragraphs in the additional minority views, which I played a part in preparing:

"Only by bringing together the various parts of the bill under consideration can we realize the dangers involved and the deadly threats to constitutional liberties.

"For example, part II would create a Civil Rights Division in the Department of Justice, headed by an additional Assistant Attorney General and manned with an unlimited number of lawyers. The creation of a new division might in itself appear harmless, but—make no mistake about it—the lawyers in that division will displace local United States attorneys in the prosecution of all actions authorized to be filed. It can be expected, therefore, that United States attorneys who are familiar with local laws and customs will be relegated to the background and the cases will be presented by strange lawyers from Washington headquarters.

"Parts III and IV of the bill provide a device to bypass State laws, State remedies, State courts, State judges, and State agencies. Here is the second step deliberately planned to strike down States rights. Finally, under the calculated scheme of the bill all actions instituted would be filed in the name of or on behalf of the United States and tried before the Federal courts and in the enforcement of Federal court orders and decrees through contempt proceedings the defendants would be deprived of trial by jury.

"When we bring these provisions which appear here and there in the bill in close context, we see the totality of the powers vested in the Central Government wrapped up in one package: Unlimited grant of power to Federal authorities, abandonment of the concept of State's sovereignty, and eradication of trial by jury.

"Armed with the powers that this bill would expressly confer, a political-minded Attorney General, in combination with an unreasonable Federal district judge, could terrorize the people in any community. No Attorney General should ever seek such powers and Congress ought never to grant them."

It is my considered judgment that rather than protecting so-called civil rights this legislation would promote grievous civil wrongs, and I think the American Bar Association should take a position one way or another at least on these fundamental constitutional questions as they so frequently do on other legislation of comparatively minor import.

With best wishes and kindest personal regards, I beg to remain,

Very sincerely yours,

EDWIN E. WILLIS,
Member of Congress.

The Passing of Paul P. Biely, Outstanding Musician

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of April 3, 1957, commenting on the passing of Mr. Paul P. Biely, of Swoyersville, Pa., who had a long and exceptional career in the field of music:

Organist of Holy Trinity Church at Swoyersville for 39 years of a music career that spanned a half century, John P. Biely was not only a highly respected citizen, but a beloved figure in the West Side borough.

A man of exceptional talent, he brought beauty, inspiration, and comfort into the lives of many as he presided at his organ during regular Sunday services and on such special occasions as weddings and funerals. His fidelity to duty was as stimulating as the music he played. In his person, artistry and devotion were combined with happy results.

Like so many products of the old country, Mr. Biely found in this community an outlet for the genius with which he was endowed. Here he was in friendly surroundings, with audiences that repeatedly demonstrated their appreciation of his skill and service.

Men like Mr. Biely give to life a flavor that otherwise would be lacking. It truly can be said that Wyoming Valley is a better place because this maker of music passed through on the journey from the cradle to the grave.

Conditions in the Henryetta Coalfield

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. EDMONDSON. Mr. Speaker, under leave to extend my remarks, I would like to insert the following resolution passed by the members of Local 3061 and Local 2442 of the United Mine Workers of America, District 21. This resolution was passed in connection with the very serious condition of the coal industry in Oklahoma. This is a matter on which the Special Subcommittee on Coal Research of the House Committee on Interior and Insular Affairs expects to submit a full report in the next few weeks, and a matter on which early congressional action is urgently needed.

The resolution follows:

Whereas the members of Local 3061 and Local 2442 of the United Mine Workers of America, District 21, are faced with what is probably the most serious economic condition the Henryetta coalfield has ever experienced, wherein the activities in coal production has dwindled from some 35 producing mines some few years back, to 1 remaining mine, and wherein the remaining miners who look to that mine for employment, are only able to work a very few days out of the year; and

Whereas we have recently noted that the Congress of the United States has recognized our plight, along with other areas in the coalfields, and have sent an investigating committee, headed by our own Congressman, Hon. ED EDMONDSON, to Henryetta, to see what the Federal Government can do to assist us. We believe that the time has come for united action of our members, through our district and national officers, to follow up the results of this investigation, to the end that something be done to give us an opportunity to work and earn our living; and

Whereas there has recently been reorganized within the Henryette area, an organization known as the Henryetta Coal Research Foundation, which organization is dedicated to improve the economic circumstances of a depressed industry and to help all of the miners dependent on coal mining for their living. We believe this organization should receive our wholehearted support, and we do not overlook at this time our good State senators and representatives, who have recently authored a resolution, through the house and senate of our State legislature, asking the Federal Government to come to the aid of a dying coal industry within the State of Oklahoma: Now, therefore, be it

Resolved, That our district president, Brother Dave Fowler, who so ably represented us in his testimony before the Edmondson investigating committee hearings, held in Henryetta on March 9, be encouraged to bring our problem to the attention of our national president, Brother John L. Lewis, so that he may be properly advised of our situation, and be able to use his good and effective efforts to assist us in our time of great need and that we may have his help and guidance; be it further

Resolved, That the brothers of Local 3061 and Local 2442 of the United Mine Workers of America, District 21, go on record now as pledging their support to the Federal and State legislators, the Henryetta Coal Research Foundation, and all other groups or individuals who are trying to help our cause, and that we will do all within our power to cooperate with their efforts, and merit their aid and assistance.

BURKE B. PERRY,
President, Local Union 3061, UMWA.
JAMES BELL,
President, Local Union 2442, UMWA.
JOHN VANMETER,
Secretary, 3061.
W. M. SMITH.
Secretary, 2442.

The Suez Canal Situation

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. WIER. Mr. Speaker, the Minneapolis Tribune recently published a letter written by Mr. and Mrs. Ronald C. McLaughlin, 9400 Cedar Avenue, Minneapolis, Minn., expressing their deep convictions on the Suez Canal situation, world peace, and order. I think the Members of Congress and readers of the CONGRESSIONAL RECORD will find it interesting.

Under leave to extend my remarks, I ask permission to have the letter inserted in the Appendix of the RECORD.

The letter follows:

MINNEAPOLIS, MINN., *April 3, 1957.*
Hon. ROY WIER,
House Office Building,
Washington, D. C.

DEAR MR. WIER: Yesterday the Minneapolis Tribune published my letter on the subject of Suez. Because this is a matter on which my wife and I have deep convictions, as affecting our whole struggle toward world peace and order, we would like you to see this letter:

"Your lead editorial on Saturday, March 23, proposed in our bargaining with President Nasser, of Egypt, a greater emphasis on the "weapon" of bypassing the Suez Canal with pipelines and supertankers. The logical assumption is, of course, that the threatened economic squeeze would bring Nasser to terms.

"Inherent in this suggestion, however, is a tacit recognition of Egypt's claim that the Suez Canal, being solely within Egyptian territory, is also solely within Egypt's sovereign authority to control or bargain as she sees fit.

"I do not believe that we should aid and abet Egypt in this claim. I believe that the world has progressed too far to return to such a limited concept. Because it was man made does not detract from the fact that the Suez Canal has become as much a part of the commerce of the world and the fabric of society as the Strait of Gibraltar or the South China Sea. It should be our claim that mankind should be as free to sail between Africa and Asia as between any other two continents. It should be our claim that, while Egypt is entitled to the productivity of the Suez Canal to help feed and clothe her people, the right to grant or deny passage is not hers, but belongs to mankind.

"Perhaps it is for this very purpose that you would forge the aforementioned weapon. Yet I have doubts about the strategy. Under military pressure, President Nasser became desperate and blocked the canal for months. What reason is there to believe that economic pressure would make him any less desperate? We have the power, and perhaps the legal right, to contribute to an even lower standard of living for Egypt's millions by drying up this source of revenue. We can even say to them, 'It is not our fault, but that of your intransigent President Nasser.' Yet in the view of the Almighty and in the eyes of mankind, where is our moral right to such action? And what would be our gain? With every man who becomes desperate anywhere in the world the future security of America (of any nation) becomes ever so slightly more precarious.

"What then is the alternative? I suggest the promulgation of a great principle—that the use of all international waterways should be controlled, not by nations, but by mankind. I suggest the establishment of some kind of International Waterways Authority, in or under the United Nations. It should have power to guarantee free passage to any vessel bent on peaceful purposes. It, with perhaps the review authority of the International Court of Justice, should have the right to determine what waterways are international, and hence under its jurisdiction. It should provide for the maintenance of manmade and/or man-maintained waterways, and determine a just distribution of the proceeds, with full consideration of the rights of the owner nations.

"I doubt whether President Nasser could reject such a principle, provided it applied, as it must, to be a principle, to all alike: To Suez, to Panama, to Gibraltar, to Malacca, to the Dardanelles, and to Kattegat, to the Kiel, the Rhine, and the Danube, and the rest.

"There may be some who would have misgivings about the wisdom of relinquishing control of the Panama Canal, fearing that we might be losing too many American assets and rights. If we believe, as I do, that no nation is any longer sufficient unto itself, then we must measure assets in relation to how we are building world community. And as for rights, the very thought of bypassing the Suez Canal is an admission that we could be forced to relinquish the right of passage through any nationally controlled waterway. I believe it is high time we start living up to our responsibilities, as well as asserting our rights. Instead of feeding men's desperation, we can start feeding their hopes. It is just possible that thereby we might create a world in which our own and our children's lives and aspirations might find fulfillment."

Sincerely yours,
RONALD C. MCLAUGHLIN.

Indispensable Item in the Budget

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert the following editorial which appeared in the April 4 issue of the Los Angeles Times. In view of my introduction of H. R. 6575, which proposes the repeal of the upper Colorado River project, I desire to give an opportunity to all the Members of this body to read this editorial by Mr. Raymond Moley:

INDISPENSABLE ITEM IN THE BUDGET
(By Raymond Moley)

In the President's sharp criticism of the efforts of Congress to cut his budget, he seemed to say that programs once established are untouchable.

This ignores the fact that under his administration a number of commissions and committees have been appointed to review such programs. The most notable of these was the second Hoover Commission, which submitted its report in June 1955.

A major item in that report was its analysis and recommendations concerning water resources and power. The engineer who was employed by the Hoover task force on that subject was Charles D. Curran. Last month, in a comprehensive review of the Federal programs on water resources, Curran pointed out that after 19 months not a single recommendation of the Commission or the task force in the field had been adopted, either by the administration or by Congress.

Meanwhile, the President's own Cabinet advisory committee on water resources policy, established for the express purpose of reviewing the recommendations of the Hoover report, has made several very constructive recommendations. That committee, too, has been ignored.

Are we still to regard as fatuous all those who suggest that occasionally the administration should stop, look, and listen?

Even the specifications of some of the authorizations of programs have been ignored, and despite that, the President's budget calls for full steam ahead.

Consider, for example, the gigantic upper Colorado River storage project which was jammed through last year by the White House.

The bill that was passed was obviously a half-baked affair, because many of the items in the project had not been investigated. The bill provided that a thorough financial analysis should be made before work should start. No such analysis has been made, although the increased cost of interest and of materials obviously would now knock the roof off any past estimate.

The largest single item in the upper Colorado project is the proposed Glen Canyon Dam. The argument for this was that it is essential for the storage of water. However, the conditions in the Colorado River indicate quite clearly that storage capacity is not needed at all. It should be noted that the Glen Canyon Dam would be largely a duplication of the Hoover Dam and reservoir downstream. But Lake Mead, the storage reservoir above Hoover Dam, is now about one-third full. In fact, it offers unused storage capacity for all time to come. And if Glen Canyon is built, Lake Mead will never have a full supply of water.

There have always been engineering doubts about the Glen Canyon Dam project. For a long time the walls of the canyon were of questionable strength to hold a 700-foot

dam. Apparently the Bureau of Reclamation satisfied itself that it would be safe. But the present plans call for a dam of much less massive proportions than the Hoover Dam, which raises serious question whether it could hold a full load of water.

But the real purpose of the Glen Canyon Dam was to be the development of hydroelectric power. This in turn, was to provide revenues with which to pay for several irrigation projects. The cost of irrigating the land in question would be vastly more than the production of the land would justify. The cost of irrigating this land has been variously estimated, but the conservative figure placed upon it by Curran is $1,500 per acre.

Meanwhile, the valley of the Colorado is producing enough uranium to provide ultimately many times the amount of energy that is needed in the region. This suggests that Glen Canyon may be a $500 million monument to the foibles and fallacies of politics.

But an "indispensable" item in the 1958 budget is $25 million for construction on the upper Colorado project.

Coverage of Nixon Trip

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Washington, D. C., Evening Star of April 4, 1957:

COVERAGE OF NIXON TRIP—JOURNEY STAMPED AS UNITED STATES PROJECT, PRESS TRAVELED AT FIRE-SALE PRICE

(By Doris Fleeson)

The story of how the State Department achieved full coverage for Vice President NIXON'S long African journey with special attention to the American Negro press has now begun to appear. Like so much else, it all boils down to the economic factor.

What the Department did was to order the journey, press included, stamped an intergovernmental agency project. It could then offer it via the tax-supported Military Air Transport Service at fire-sale prices which were less than one-half the estimates furnished State by the commercial airlines.

State helped out in other ways. It cut the per person cost by assigning six members of the United States Information Agency to the press plane and a departmental press officer. This officer was in addition to NIXON'S personal press spokesman, Bill Henry, who took leave from his Los Angeles Times column and radio work to make the trip. State allowed two Negro publishers to include their wives at the bargain rate.

In its own announcement that the trip would be by MATS, State asserted that no commercial airline could enter part of the area NIXON proposed to cover. This is flatly contradicted by Trans World Airlines which wanted to charter the press plane and gave State estimates on it.

In the end 32 passengers and at times 34 occupied the press plane. For their 18,000-mile, 22-day trip they have State's promise that they will be billed not more than $1,000 each.

The party included, besides Government employees, 9 Negroes accredited to Negro publications and 17 reporters and photographers from the press associations, major broadcasting and news chains, and news magazines.

This 17 was a typical national news story group, and most of them, if not all, would have made the trip without regard to cost. Indeed, NIXON was a special news responsibility at the time because the President was ailing with his cough and cold.

In discussions of how the party was put together, the State Department officials who did the actual work differ. One says they had trouble up to the last minute getting people to go even at the cut rate. Another says the plane filled rapidly and had to be limited on a first-come, first-served basis.

State denies it solicited the Negro press, insisting that the large proportion resulted from the fact that the Vice President would visit the newly created free Negro State of Ghana. Most of this group came from out of town, and State officials admit they did some long-distance telephoning to reach them.

At the same time, no general word reached the press corps here or its prominent members that State had arranged such an attractive travel bargain. For so long a journey the cost is an important factor for many correspondents who would otherwise be tempted.

The Defense Department's ready cooperation in the Nixon enterprise represents a reversal of the rules laid down by Secretary Charles E. Wilson when he first took office. Neither MATS nor the services, he ordered, could take reporters overseas on routes covered by commercial airlines.

The intergovernmental agency gimmick last got general attention a few years ago when the late Harold Talbott, then Secretary of the Air Force, put that imprimateur on a long journey by a moral rearmament group. It was, like the Nixon press, then enabled to travel MATS at greatly reduced cost. The fact became public, as most things do here, and Talbott was much criticized for special favoritism to one religious group.

The political dividends to the Vice President from the full coverage of his African trip, especially by the Negro press, are obvious. Nixon expects to be the GOP candidate in 1960, and he has been for some time shooting for the crucial minorities in the pivotal States where elections are won and lost.

He has yet, however, as has the President, to make a similar handshaking tour of the American South where the Negro segregation issue is boiling.

Instead he met and charmed the Reverend Martin Luther King, hero of the Birmingham, Ala., bus boycott, in Ghana, where King was an honored guest. King complained in advance of meeting the Vice President that he had repeatedly written him but had had no reply. Afterward King expressed himself as pleased with NIXON'S attitudes.

Members of Congress have long since ceased to be surprised by anything Secretary of State John Foster Dulles chooses to do. They will put down State's helpful activities in the Nixon trip to just one more political act by an intensely political Secretary of State.

New President of Wilkes-Barre Rotary Club

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of April 3, 1957, commenting on the election of Donald E. Davis to be the next president of the Rotary Club of Wilkes-Barre:

The new president of Wilkes-Barre Rotary Club, Donald E. Davis, who was formally elected yesterday and takes office in July, is one of Greater Wilkes-Barre's up and coming young businessmen.

In the 14 years since his graduation from Lafayette, he has become a familiar figure for his civic activities as well as his executive post with the R. A. Davis Coal Co.

Willing and able, he has served his apprenticeship with the junior chamber of commerce and recently has been branching out into such important spheres as the United Fund and the YMCA. His church, Shavertown Methodist, has paid him the compliment of electing him a trustee and member of the official board.

It is reassuring to see the generation Mr. Davis represents take on added responsibility in the community. The presidency of Rotary is impressive recognition.

Soviet Submarine Fleet Is Watched

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. EDMONDSON. Mr. Speaker, International News Service on March 23 carried an article which should hold keen interest to all of us concerned with our military security. Accordingly, I should like to insert in the RECORD this news story as it appeared in the Daily Oklahoman for Friday, March 29, 1957:

SOVIET SUBMARINE FLEET IS WATCHED

PARIS, March 28.—NATO military leaders consider the Soviet submarine fleet more ominous than any other single aspect of the massive Russian buildup of arms.

Gen. Lauris Norstad's European Command headquarters estimates that the Soviets already have 500 submarines in commission and are building more at a rapid rate.

In addition, the Soviets now are turning out mother ships that could enable the submarines to stay out in the open seas for indefinite periods by resupplying them far from home ports.

The big question in the minds of SHAPE leaders is, Why does Russia or any other nation need so many submarines, if it is devoting its main effort toward defense? The submarine is primarily an offensive, not defensive, weapon.

An important SHAPE officer said he hopes the western diplomats now talking about disarmament with the Russians in London will ask some pertinent questions about the submarines. He said:

"I hope the Russians are asked a whole series of questions. Three that I would suggest are:

"1. Why do you need 500 submarines?

"2. Why are you still building more at a rapid rate?

"3. What do you intend to do with them?"

He said he thought the questions urgent because, "to my mind, the submarine situation is the most frightening aspect of the overall problem."

The free-world alliance which spans both the Atlantic and Pacific is vulnerable to terribly damaging blows on the open seas, while Russia, China, and the Communist satellites are cozy inside the great Eurasian heartland.

Vice Adm. Charles R. Brown, of the United States Sixth Fleet in the Mediterranean, emphasized the threat of the Soviet submarine fleet to the free world when he said:

"If the lifelines of the Atlantic are cut, it is not a question of how long the Sixth Fleet can stay in the Mediterranean; it is a question of how long this oceanic confederation we call the free world can survive."

He also pointed out that Germany started World War II with 57 submarines, far less than the Soviets have today, and almost knocked us out.

Separate but Equal School Doctrine

EXTENSION OF REMARKS
OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 5, 1957

Mr. ABBITT. Mr. Speaker, on May 17, 1954, the Supreme Court of the United States handed down a decision setting aside many prior decisions and declared, in effect, that the States no longer would be permitted, as guaranteed to them under the Constitution, to conduct their own internal affairs. They outlawed the separate but equal school doctrine. This decision has done much to cause strife, animosities, and disrupt racial relations throughout the Southland and indeed in many other sections of our Nation.

In an endeavor to acquaint the people with what was happening to them and to bring forcefully home to the people the fact that the Federal judiciary was usurping powers and authority never delegated or conferred upon them by the people or the States, there was formed in Virginia an association known as the Defenders of State Sovereignty and Individual Liberties. The association was created to defend the principles of the Constitution of the United States in the spirit in which it was written and to protect the rights of the several States from the encroaching powers of the Federal Government.

This organization was chartered in Virginia on October 26, 1954. In forming this organization, a statement of purpose was adopted, which reads:

We believe—

That the Constitution establishing a Republic of the several States of America gave certain enumerated powers to the Federal Government and expressly reserved the remainder of the powers to the several States;

That the clauses delegating authority to the Federal Government should be strictly construed, and always against the extension of Federal powers, and in favor of the States which compose this Union;

That each State can best protect the rights and provide for the well-being of the citizens within its jurisdiction;

That government of one or several of the individual States by the whole is contra to the letter and spirit of the Constitution of the United States of America;

That private enterprise by free individuals is the cornerstone of our Republic;

That concentration of power is one of the greatest internal dangers facing this Nation today;

That the powers and authority of the Federal Government should be strictly separated, and that domestic legislation by decree, judicial decision, treaty, executive fiat, or administrative order is foreign to the Constitution and an encroachment on the inalienable powers and authority of the several States and the Congress of the United States of America;

That attempts to change the lawful manner, mores, and traditions of any State of these United States of America by any branch of the Federal Governemnt is an infringement of the sovereignty of the States composing this Union;

That the right to determine segregation of the races is a power reserved to the States;

That those citizens, composing this Nation, who believe in the principles cited above, are duty bound in good conscience to employ every lawful means to defend and perpetuate them, to the end that this Republic may continue and prosper.

It is one thing to have a statement of purpose and another to follow it. In the intervening almost 3 years, this organization has not deviated from its statement of principles. Its program has not pitted race against race, nor has there been any action by its officers or its members to antagonize other races. Racial integration of public schools has been the burning issue. The Defenders of State Sovereignty maintains that "the right to determine segregation of races is a power reserved to the States."

The purpose nor the record of this organization have not deviated from the desire, intent, and determination to work for the advancement of all people. Nowhere have we read or in public addresses by members of this organization have we heard inflammatory remarks about any race. On the contrary, speakers have been kind in remarks about other races, and urged them to cooperate with the defenders' program to save the Republic, by defending the sovereignty of the States and the liberties of the individuals.

On March 22 and 23, 1957, the Defenders, in a statewide convention at Richmond, Va., adopted a declaration of convictions. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to include therewith a copy of the declaration of convictions as adopted at the aforesaid convention:

DECLARATION OF CONVICTIONS

The Defenders of State Sovereignty and Individual Liberties in convention assembled at Richmond, Va., this the 23d day of March deem it appropriate that we should declare and affirm our convictions.

We first affirm our deep and abiding loyalty and devotion to our country and its institutions. We acknowledge the Constitution to be the bulwark of our liberties, every subject to the sovereign powers reserved by it to the States and to the people. We know that the liberties of all Americans of all races rests upon the Constitution and the division of powers ordained therein. We deem it the obligation of freemen to preserve the powers reserved under the Constitution to the States and to the people and to preserve the constitutional separation of the powers of government in the legislative, executive, and judicial branches separately.

We believe that a policy which undertakes to force the association of one race with the other against the will of either, by court decree under threat of fine or imprisonment, is destructive of mutual good will and respect, breeds resentment and animosities, and is injurious to the true interests of all the people. We believe that the molding of the minds and characters of our children is the sacred duty and the priceless natural right and obligation of parents.

Freedom of decision with respect to these considerations touching as they do the most intimate relations of the people and the most cherished natural rights and duties of parenthood is absolutely essential to the maintenance, operation, management, and control of our public schools. We conceive this freedom to be among the sacred rights retained by the people under the ninth amendment of the Federal Constitution.

Among the reserved rights and powers of the States, guaranteed to the State of Virginia under the 10th amendment, is the power to maintain racially separate public schools. We do not perceive that the exercise of this power has ever been prohibited to the States by any provision of the Federal Constitution. We believe that this power can be prohibited to the States only by the States themselves. To concede the right of a Federal court to withdraw this power from the individual States is to concede that all the rights and powers of the States and of the people are enjoyed at the sufferance of the judiciary and that the guarantees of the liberties of the people are no longer fixed in the Constitution itself. Therefore, Federal courts having refused to recognize these most fundamental, intimate, and sacred rights and the profound necessity that they be respected, Virginia has been compelled to fix its course in defense of these rights of her people. We do most solemnly commend his Excellency Gov. Thomas B. Stanley and the members of the legislature of Virginia for their patriotic devotion to the liberties of their people and for the leadership they have given the people of Virginia in this crucial time. We pledge our support of the policy implicit in the measures adopted by the General Assembly of Virginia in its special session of 1956. We declare our conviction that these policies founded as they are upon that first American tenet of liberty—that free men should not be taxed against their will and without their consent for a purpose to which they are deeply opposed—to be both sound and in the finest patriotic tradition of the Commonwealth.

We do most solemnly commend our great senior Senator from Virginia, HARRY FLOOD BYRD, for his recent clarion call for all Virginians to stand stanch and firm where Virginia has always stood in ages past in opposition to tyranny from whatever quarter it may come. We do likewise salute the entire Virginia delegation to the United States Congress and Senate, both Democratic and Republican, for the stalwart fight which even now they wage against the vicious assault upon the liberties of all Americans being made in the United States Congress through the proposed pernicious force bills, sometimes called civil rights bills, now pending before that body.

The threat to the liberties of our people is mortal. The course of Virginia has been set. The contest is for eternal values. We call upon all local legislative bodies of the counties and cities of Virginia in the sacred name of the liberties of our people to stand firm and united in support of the policy and the course which has been fixed for Virginia in this crucial hour.

We likewise call upon all people of America everywhere to unite in this time of crisis that we, in our day, may be worthy of our heritage and pass it on to future generations pure and unsullied.

We believe in the absolute and utter necessity of preserving unimpaired for all Americans the priceless right of freedom of speech and peaceful assembly, the right of an ac-

sumed to be confronted by his accusers, to presentment by grand jury and a trial by a jury of his peers presided over by a fair and impartial judge. We decry the use by the Federal judiciary of coercion, intimidation and threats of punishment to be visited upon local school boards and officers unless they refuse to recognize the lawful authority of the Virginia Pupil Placement Board and usurp and exercise pupil assignment powers which have been denied to said school boards and local officers by the duly enacted laws of the State of Virginia. We direct the attention of the entire nation to the dangers inherent in the wholesale resort to injunctive and summary contempt procedure designed to subvert and thwart the traditional constitutional and common-law methods of criminal procedure.

These measures conceived and nurtured in the cynical greed of politicians for power, are directed against the people of the South, but they hold within themselves a deadly and mortal threat to the most sacred and essential constitutional safeguards to the liberties of all Americans of all generations. We appeal to Americans everywhere to arouse themselves from their lethargy and unite with us in the condemnation of these iniquitous measures.

While the immediate issue in the great contest that is presently being waged is brought into focus for Virginia and the people of the South in the unconstitutional usurpation of power exemplified in the school segregation decision by the United States Supreme Court and the threat of fine or imprisonment of our school and State officials, and through the denial of freedom of speech and trial by jury by Federal injunctive decree, nonetheless we are deeply convinced that the sinister attack upon the fundamental liberties of Americans and upon the basic constitutional system itself, manifests itself in many other facets of our American life.

Therefore we do further declare:

(1) It is essential that those responsible for the administration of our schools should be alert, that the fundamentals of a sound education are taught to our Virginia children, including an understanding of the fundamental constitutional system under which we live, the blessings of liberty which it alone bestows, the part played by great Virginians of the past in the struggle for the establishment and preservation of these liberties.

(2) It is essential that the molding of the minds, characters, and spiritual lives of our children should remain under the control of Virginia parents. We do, therefore, urge our representatives in the Congress and the United States Senate to oppose all legislation designed directly or indirectly to repose control of our educational system in the Federal Government. We specifically condemn the wholesale expenditure of Federal funds in support of the public schools of Virginia, knowing full well that the acceptance of such support requires the submission of our schools progressively to ideologies and influences alien to our people.

(3) We oppose any effort to weaken further the immigration laws of America and the further depletion of our economic resources in the continuation of so-called aid to foreign nations. Loyalty and friendship in foreign affairs is controlled by self-interest and cannot be purchased however vast may be the outpouring of our tax revenue.

(4) We recognize that the real source of Federal power and centralization rests in the control of the Federal Government of the income and economic resources of the American people. We deplore the continued and ever-increasing burden of Federal taxation, the return of such revenue to our people being always conditioned upon a further loss of their liberties. We do, therefore, urge the people of America to demand the immediate reduction in Federal expenditures with the resulting reduction of the ever-mounting Federal revenues exacted from our people.

(5) We declare our unalterable opposition to the submission of any portion of the sovereignty of the United States of America to the control of the United Nations or the submission of the domestic affairs of the States or the rights of any citizens of the United States to the control to any extent or by any means to the United Nations or any of its agencies or to the authority of any foreign power, government, or agency whatsoever.

Wherefore, since Virginia, as so often in the past, is again in this generation the battleground upon which the struggle for the eternal liberties of America must be waged, let us not falter. Let us conduct ourselves with dignity, with self-restraint, without violence and without hatred or ill will toward any man or group of men. But withal let us conduct ourselves as worthy heirs of those who have gone before.

Alexander Wilson, American Legion Essay Contest Winner

EXTENSION OF REMARKS

OF

HON. JAMES G. POLK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 5, 1957

Mr. POLK. Mr. Speaker, a young constituent of mine, Alexander Wilson, of Chillicothe, Ohio, an 11th grade student, has written a very commendable essay entitled "Patriotism in Modern America."

Alexander is one of the winners of this year's American Legion essay contest. Under leave to extend my remarks, I herewith include this essay in the RECORD and commend it to my colleagues:

PATRIOTISM IN MODERN AMERICA

(By Alexander Wilson, of Chillicothe, Ohio)

What are the thoughts that come to men's minds as they consider patriotism? The natural sentiments are love of country, love of government, and surely love of and thankfulness for the freedom which is theirs.

Love of country denotes a strong character. If a man truly loves his country, he will pray and fight for its perpetuity with a holy fierceness that startles his oppressor. His country is something dear to him. He realizes that if he becomes lax and uninterested, he is doing his country a grave injustice. He is obligated to love and defend his country because the connection between his love for his country and its freedom are so closely related as to be almost dependent upon each other. He is dependent upon that freedom himself. Whether he realizes it or not, he depends on his fellow Americans to love and defend their Nation.

The patriotic man next considers his Government. He recognizes the importance of this strong functions unit—a unit which is a vital part of his life. He takes time to study its great governing documents, the Declaration of Independence and the Constitution. He familiarizes himself with its doctrines and foreign policies. By taking a keen interest, he does, in a certain sense, strengthen his Government. He is better able to defend his country, for he now understands its vital principles. He selects carefully his candidates for public and national offices, looking for traits of good leadership, honesty, and wisdom in each of his choices. In general, his Government is just as important to him as his family and friends, since it is the institution which assures protection for his loved ones.

Lastly, we come to freedom, the most important inheritance which the patriot may possess. If love of country and Government are virtues, then freedom is a man's best reward. His love of freedom is an instinct; no man wants to be dominated by a dictator, nor be forced to conform with the unscrupulous desires of greedy men. Realizing this, the patriot is determined to insure freedom for himself, his family, and his children's children. He accepts willingly and unquestioningly the perpetual fight for freedom against aggression, not only in wartime but in time of peace, by living up to the principles which make freedom possible. If we consider freedom as a reward, it will only come to us after we have done something to earn it, be that fighting a war or living as a patriotic citizen. Such is patriotism in modern America.

Industrial Uses of Agricultural Products

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 5, 1957

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I am including the suggestion of Dr. John W. Headley, president of South Dakota State College, at Brookings, S. Dak., with his suggestions for achieving productive research toward increasing the industrial uses and purposes of agricultural products. Dr. Headley has a very worthwhile suggestion and I feel it merits your careful consideration. His statement follows:

To accomplish the purpose stated by the Commission on Increased Industrial Uses of Agricultural Products, expanded research, experimental, and developmental programs are needed. The objective must be to expand markets for farm products by increased uses of present production, or by creation of new products from which farmers can obtain income. How to obtain a relatively stable farm enterprise is a problem that has persisted in one form or another since colonial days. Means are being sought to place the farm enterprise on an equal footing with industrial and business activities. It appears natural to promote research, experimental, and developmental activities to solve a problem. It is customary to look to the scientific and specialized manpower to help provide answers to problems. Before advocating a special and separate program to meet the current situation, the availability of trained personnel should be considered.

The work of the Nation is being handicapped and retarded now by a shortage of scientific and specialized manpower. The shortage exists for people to serve in government, in industry, and in private and public education. The Commission faces two choices: (1) Attract into research, experimental, and developmental activities large numbers of scientists to engage in a new program, or (2) institute a plan that would utilize existing available manpower to the maximum. The first choice would eliminate or severely reduce much of the research and education now in process. An attractive new and separate program could aggravate the present shortage of manpower to the extent that research activities and educational functions would have to be abandoned or reduced to the point of very low return and service. Colleges and universities could not continue

at their present level. The second choice, if adopted, would give recognition to the crucial scientific manpower shortage. It could recognize the strengths now inherent in the present system of research and education and prevent abandonment or reduction of their services. A program could be developed that would serve as an incentive to greater numbers of people to enter careers in research and education. It is apparent that the numbers of young people prepared for research, administration, and teaching should be increased. No shortcut to increase availability of high quality personnel is known. Preparation is a long and exacting process. The immediate need for action on farm problems should not be allowed to destroy the system of education and research at its base, the college and university campus.

Various commodity groups have attempted to solve their surplus problems by encouraging increased uses for their particular commodities. Since the capacity of the individual to consume food is limited, the results have most often been detrimental to the demand for some other food commodity. When more of one commodity is consumed, the tendency is to use less of another, creating another surplus. Low income consumers could use more of some products if purchasing power were available. Even this source for increased consumption has its limits and could not offer a permanent solution to the farm surplus problem.

Because of the gravity of the farm situation and the importance of agriculture to the American economy, a nationwide approach to the problems is warranted. The shortage of scientific manpower would prove undoubtedly to be a limiting factor in the success of any new program. A system should be devised that would expand the activities of qualified workers over their present level of production and encourage large numbers to remain in their present occupations. One way to accomplish this end would be to stimulate additional work by the adoption of a recognition and monetary award system to employed workers. Some persons who have been retired might be attracted into such a program. This could be a "crash" program of research and development. It could be instituted without severely disturbing the existing necessary functions of research and education in colleges and universities.

Incentives to more pointed and greater effort are common. The American professional worker responds to a stimulus of this kind. Hope for reward through special recognition and monetary inducements are usually productive of greater effort and acceptable results. Some might consider acceptance of an incentive system as unbecoming to a professional employee. Actually, few ever work so hard that they could not increase their efforts under appropriate stimulation. Few ever reach their capacities for creative effort until they are faced with an impelling reason for doing so. This country has seldom engaged in programs of research which have been carried at a level that utilized the full potential of scientists. An incentive system, properly conceived, might accomplish that objective.

Simply because too much wheat and too much corn are grown are not reasons for believing that this is necessary. Finding new sources of income for farmers to substitute for these commodities is worth trying. Products exist, and others might be created through research, that could serve as substantial contributors to farm income. New uses for depressing byproducts of production can be discovered. This reasoning could be applied to all products now in surplus.

The program proposal below is based on recognition of an existing and continuing future shortage of personnel for scientific pursuits. The steps can be worked out and varied for differing situations. An outline of the proposal follows:

1. Organize a nationwide research program around the existing land-grant college experiment station framework. Land-grant colleges could serve as area centers to institute research programs in which professional staff, graduate students, retired workers, and the facilities of the institution would be used. Further, the land-grant college would be charged with the responsibility for stimulating programs of research and development among businesses, industries, and competent individuals living within the area.

(c) Grants could be made to these institutions for the special activities that promise to provide solutions. The grants could include provisions for equipment, incentive pay, recognition awards, and employment of personnel.

(b) Provision could be made to obtain coordination among the experiment stations. Teams of workers for specific problems could be established in this manner.

2. Initiate a special incentive system that would be applied nationwide. This could include special recognitions and substantial monetary rewards, in addition to regular salaries, to successful and deserving workers at all levels. The intent would be to encourage special concentrated effort.

3. The administration of such a program could be worked out with special adaptations for the emergency nature of the program as an adjunct to the present experiment-station program at both the State and National levels. Considerable flexibility should be provided, and even encouraged, to make the most of all resources.

4. The engineering staffs and the engineering experiment stations could be integrated into the broad program of research and development proposed above. These would be added resources to the present agricultural experiment station activities.

5. Industrial firms with competent personnel in each State area could be drawn into the setup.

6. Some additional special personnel for supervision, development, and administration would be required, but the numbers would be fewer than demanded by a separate new organization, since some existing personnel would serve in more than one capacity.

7. The program could be established on an experimental basis for a limited period. The amount of money required would be relatively small compared to the amounts now expended in futile efforts to solve the problems of agriculture.

It must be remembered that experiment stations have never had enough money to realize their full potential. A program such as one described above should promise results. This would alleviate the dangers of loss to basic research and education, almost certain to occur with a special, separate agency. Coordination of the efforts of everyone interested should result in efficiency of operation and utilization of both human and physical resources.

The problem of how to stabilize the agricultural industry at a level that will make farming profitable in relation to the total economy is considered one of the most important problems of our time. We believe that an attack organized in the manner proposed above is promising. We would be pleased to supply additional detail describing proposed operations.

Tax Relief to Small-Business Enterprises Seems Imperative

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. BURDICK. Mr. Speaker, I am in receipt of a letter from Link Manufacturing Co., of Fargo, N. Dak., that, to me, sets forth a case where relief in taxes to small-business enterprises will do more than can be done in any other way to resuscitate the life of small independent concerns, not only in North Dakota, but all over the country.

Here follows the letter:

LINK MANUFACTURING CO., INC.,
Fargo, N. Dak., March 27, 1957.

Congressman USHER BURDICK,
United States Congress,
Washington, D. C.

HONORABLE SIR: We feel obliged to write you on our considerable concern with respect to two features of legislation on which we would like to express our views.

We operate a small manufacturing business dealing exclusively in products for grain handling purchased by the farmers of the United States and some foreign countries. The continuing spiral of increasing prices for those materials necessary to our operation and the subsequent decreasing of the revenue of those who buy our products has become a serious problem. We are obliged to advance prices from time to time with increasing freight rates and raw material costs, most of which is created by the demands of organized labor for a continuing increase for their share of the gross national product. With each increase demanded, we find a resistance developing within our trade.

It would appear to us that there is no attempt being made in the major industries nor in Government to create efficiencies and institute economies by which this price spiral can be stopped.

We, therefore, present to you our feeling and express the hope that you will lend every consideration to the implementation of legislation that can in some manner bring into being a greater stability and a reduction in the continuing spiral of raw material increases. To this end we are gravely concerned over the expenditures of the Federal Government. We will not need to recite the myriad incidences of governmental incursion into more and more control and activity that is more properly the field of local government. We are not prepared to take your time to recite any personal observations of governmental efficiency and economy. We do feel that if economy is to be started under a budget system that those in Congress could very well demand an overall minimum reduction in the expenditures of every department of 5 percent with reduction in many far greater than this demanded minimum. It is time that public-spending bodies were made conscious of the need for greater economy and reduced distribution of public money.

As our business is dependent on the purchasing power of the farm trade, and the vagaries of agricultural revenue, we have never been sufficiently strong to demand prices allowing us to create reserves to do many of the things that we would like to do by which

we could serve agriculture better. We need new plant facilities, but every dollar of profit that we are able to create is taxed so heavily that it takes the net profit each year to care for the inflated value of the inventory that we must carry. We feel that Congress has, for many years, made a pronouncement of its desire to help small business, but very little effective legislation seems to be forthcoming.

The large businesses which have been established in this country were mostly built in the days before the excessive taxation that is now effective. They were able to accumulate reserves permitting expansion and development that is not possible for a small business today. In other words, the rules have been changed, and we who aspire and have products to serve agriculture must spend a lifetime in building sufficient to consider the expansion that we should be allowed to have during the more active days of our life.

We advocate, through you, that if the taxation base was changed for all business so that the first $10,000 of profit would be nontaxable, and the next $15,000 taxable at 10 percent, and the next $25,000 taxable at the, say, 32 percent, that the same revenue as now obtained from business profits would result, but it would give a tremendous lift of energy to small business. Under such a plan there would be no distinction between small and large business as to taxation, as large business would obtain the same benefits in the first brackets as would small business. We think that such legislation would strengthen the industrial structure of this Nation and reduce difficulties and problems that now plague smaller business institutions.

There might, of course, be some restrictions as to a minimum of invested capital of, say, $50,000, to classify for such taxation exemptions. The details we would not propose to advise, but the general principle of allowing small business a little more space in which to operate for greater security and expansion would, we feel, do more to stabilize the economy than any other factor a government might legislate.

We cannot express to you too emphatically our dissatisfaction with the excessive budget now before Congress and the lack of any concrete substantial consideration to the stringent and serious difficulties faced in continued operation by small-business enterprise.

We present these thoughts to you and trust that you will give some consideration to them in the disposition of decisions that may later be yours to make.

Yours very truly,

C. H. PUCKERING,
President.

Federal-Aid Payments and Internal-Revenue Collections

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

Mr. RAY. Mr. Speaker, under permission to extend my remarks, I place in the RECORD a tabulation of Federal-aid payments and internal-revenue collections for the fiscal year 1956. The percentage relationship between the two columns, State by State, may throw light on reasons behind some of the votes cast in the rollcalls relating to H. R. 6287 on Thursday, April 4.

FEDERAL-AID PAYMENTS ABOVE $5 BILLION MARK

The annual report of the Secretary of the Treasury discloses that during fiscal year 1956 Federal grants to State and local units under 54 programs totaled $3.46 billion. An additional $1.69 billion went for Federal-aid payments under 41 programs to individuals, institutions, etc., within the States.

Large as these payments total, they constitute only a small percentage of the huge amounts of internal-revenue collections in most States. Here is a comparison, broken down by States, for fiscal year 1956, in millions of dollars:

	Aid payments	Internal revenue collections
Arizona	$43	$185
California	432	6,008
Colorado	80	782
Connecticut	47	1,290
Delaware	12	838
Florida	111	891
Idaho	36	120
Illinois	213	6,098
Indiana	88	1,675
Iowa	88	572
Kansas	77	520
Kentucky	100	1,440
Maine	31	180
Maryland	60	1,859
Massachusetts	136	1,973
Michigan	157	7,156
Minnesota	102	1,182
Missouri	175	1,818
Nebraska	56	423
New Hampshire	19	136
New Jersey	86	2,191
New York	349	14,316
North Carolina	126	1,663
North Dakota	33	69
Ohio	170	4,759
Oklahoma	128	703
Oregon	71	498
Pennsylvania	231	5,464
South Dakota	36	79
Tennessee	116	566
Texas	291	2,407
Utah	44	176
Vermont	17	73
Virginia	88	1,182
Washington	99	848
West Virginia	63	312
Wisconsin	90	1,350
Wyoming	32	59

The Hoover Report

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, April 5, 1957

Mr. POLK. Mr. Speaker, under permission heretofore granted, I insert in the RECORD a resolution I received from Mr. Albert G. Schmerge, president of the Owensville Kiwanis Club, of Owensville, Ohio, in support of the Hoover Report.

I commend this resolution to the attention of my colleagues on both sides of the aisle:

RESOLUTION IN SUPPORT OF THE HOOVER REPORT

Whereas the Owensville Kiwanis Club believes it to be the civic duty of all citizens and organizations like this to take an active interest in the conduct of government and to make known their views on matters of government to responsible officials so their representative government may more truly represent them; and

Whereas having heard the reports of the bipartisan second Commission on Organization of the Executive Branch (the Hoover Commission reports) discussed, we do feel that these reports offer a blueprint for reducing the cost of our Federal Government without impairing its necessary functions and services and strengthening the basic structure of our way of life and preserving its benefits for future generations; and

Whereas, with bipartisan support, action has already been taken on some of the recommendations of the Commission by the administration and the Congress, but many of the most important recommendations still await action: Now, therefore, be it

Resolved, That the Owensville Kiwanis Club commends the Administration and the Congress for the action already taken on the Hoover Report; and be it

Resolved, That we urge them to continue and accelerate, on a bipartisan basis, attention to the recommendations still awaiting action; and be it further

Resolved, That copies of this resolution be sent to the President of the United States; United States Senators JOHN W. BRICKER and FRANK J. LAUSCHE, Congressman JAMES G. POLK; the Citizens Committee for the Hoover Report (777 14th Street NW., Washington, D. C.); and members of the press serving this area; and, be it further

Resolved, That Congressman POLK be requested to call the attention of his colleagues in Congress to this resolution by inserting it in the CONGRESSIONAL RECORD, and that editors of the press in this area be asked to call it to the attention of our fellow citizens through the pages of their newspapers.

Passed this 1st day of April 1957 at Owensville, Ohio.

ALBERT G. SCHMERGE,
President.
TOM M. DAVIS,
Secretary.

More Aid, Not Less, Is to Our Interest

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Friday, April 5, 1957

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Louisville Courier-Journal dated March 10, 1957, on our foreign-aid problem.

The editorial follows:

MORE AID, NOT LESS, IS TO OUR INTEREST—BUT WE NEED A BOLD NEW PROGRAM TO GIVE OUR ECONOMIC ASSISTANCE ITS FULL EFFECT HERE AND ABROAD

We have been deluged of late with reports on foreign aid by committees of competent and respected men. There was one authorized by the Senate Foreign Relations Committee, one by the Foreign Affairs Committee of the House, and a third by a committee appointed directly by President Eisenhower and headed by steel magnate Benjamin Fairless and labor magnate John L. Lewis.

All have considered the state of the world and of the United States Treasury. All have arrived at the same conclusion that this country must continue a program of foreign aid for an indefinite number of years.

All have shared a quality this newspaper deplores—a tone of apology and defense in talking of future spending abroad. Not one has hit the dynamic note of a program that would stimulate the American economy and

strengthen the American position in the cold war that sweeps the world.

The trouble is that foreign aid has become the favorite target of the political budget cutters. They gaze upon it with beady eyes, not because it has failed, but because it is not supported by a large group of people who benefit directly from its bounty and who also vote in American elections. Any program in our domestic budget has such determined and vocal friends. Not so foreign aid, despite what it has meant to American farmers and manufacturers since the war.

A BLUEPRINT AVAILABLE

The United States Chamber of Commerce made a recent survey of businessmen's attitudes on foreign aid. Not surprisingly, a large majority of them thought it ought to be cut. But when asked to guess the present cost of the program, about three-fourths of them chose much too high a figure. The favorite guess was $10 billion a year. That is twice the actual amount for military and economic aid.

This paper believes the United States should spend somewhat more money for foreign economic aid in the next few years, not less. But we believe it should only be spent according to a new and bold pattern. There is too much waste in the present grudging, frittering, year-by-year spending into which we have fallen since the end of the Marshall plan.

What we need is an entirely new Marshall plan, designated for the conditions of today, not of 1947.

A blueprint of such a program is to be found in a little book by two professors at the Massachusetts Institute of Technology, Max F. Millikan and W. W. Rostow. It is called A Proposal—Key to an Effective Foreign Policy, and Harper publishes it. It should be required reading for anybody who wants to think or talk intelligently about foreign aid.

Millikan and Rostow go on the sound assumption that the underdeveloped areas of the world are going to be developed in the next decade or two, by some agency and in some direction. We are in the midst of a revolution of rising expectation. The only question is whether these countries, mainly in Asia and Africa, will develop along lines hostile to the West and Western tradition. Such a result would present our country with a very grave set of problems. More than half of the world's people, and a heavy proportion of its strategic materials, lie in this area.

They state the simple truth that "the goals, aspirations, and values of the American people are in large part the same as those of people in other countries." Our ultimate national interest is a world made up of free democratic societies.

A STRICTLY NEGATIVE APPROACH

We have never succeeded in getting this thought across to millions of the uncommitted peoples. One reason is that we have talked almost exclusively in terms of combatting communism. This approach has two big faults, especially in Asia and Africa. One is that it is purely negative, a crusade against something rather than for something. The other is that people who live on the thin rim of starvation feel much less interest in political theory than in the question of food and shelter for themselves and their children. The Communists have too often succeeded in identifying themselves with these burning belly issues. We have passed along in the guise of a rather disdainful Lady Bountiful, willing to give help but wanting to exact a promise that those who take it will be good little boys according to our American standards.

The MIT professors have spent 5 years working up their plan. Here are its main elements, boiled down to the simplest essence:

A new worldwide program of aid to underdeveloped nations; a program based entirely on economic needs, without military or political considerations; a budget of three and a half billions a year (about two billions from American Government sources) over a period of at least 5 years; the establishment of a board of international experts capable of judging the projects submitted by the various nations seeking aid; the granting of loans only where the money "could be effectively used and the loans repaid within a reasonable time"; a provision for direct grants, but only where the economy of the nation aided could not sustain payment of a loan, and where the project would build a stronger future economy; a total absence of any political strings—"such strings yield satellites, not partners."

A group of expert technicians would have to help in both the planning and administration of projects in the most backward states, which lack technical resources of all kinds. States such as India, with some technical competence but a howling need for capital, could mainly administer their own projects.

There would of course be difficulty in getting such a program launched, even with enthusiastic American leadership. The fact that a quarter of a billion dollars a year of the program's cost could be covered by surplus farm commodities would help to sweeten the political kitty. All the same, there would be arguments as to whether the program should be administered by the United Nations, by the World Bank, or by some new agency set up for the purpose.

As to our ability to finance our portion of such a scheme, there can be no serious question. We are now spending about two billions a year on nonmilitary foreign aid, but a billion and a half of this is going to such weak countries as Formosa, South Korea, and Vietnam as an addition to our military support.

The new program could combine the best features of point 4, of the Colombo plan, and of the Marshall plan. It would require two new and important elements: An act of broad and bold imagination and a determination to commit some $10 billion to be spent over a period of 5 years (the Marshall plan was laid out as a 4-year program, and it ended that way). The MIT authors say it will need "the same kind of concentration of first-class minds on a specific problem that has produced one breakthrough after another in military technology."

TO MAKE SPENDING EFFECTIVE

We might as well face facts. The United States is going to go on buying straight military support for the anti-Communist cause. It is also going to spend some money to bolster the economy of nations outside the Iron Curtain. The question is not really how much we are going to spend, within reasonable limits, but how effectively we are going to spend it.

A new look program would not cost us much more than we are now spending in a piecemeal and grudging way. It would help us to develop new markets abroad, to grow as the future grows. It would strengthen our position as the enemies of human want and suffering, not simply the enemies of a Communist philosophy that means nothing to many millions of people. It would give us back our historic role of the defenders of freedom instead of our seeming to be, as we are now, the defenders of the status quo.

And as a final touch, in the words of the MIT economists, "we need the challenge of world development to keep us from the stagnation of smug prosperity."

The committees already exist who have made a study of our past and present aid programs. Why not put them to work at once to develop a future aid program of a new order that will help us as well as the people we are trying to aid?

Two Choices

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 5, 1957

Mr. GUBSER. Mr. Speaker, I submit herewith portions of an editorial which appeared in the San Juan Mission News, on Friday, March 15, 1957, regarding the proposed partnership plan for the development of the Trinity River.

After referring to a previous editorial endorsing the partnership proposal, the editor of the San Juan Mission News continues:

TWO CHOICES

This newspaper wasn't the only one in California to come out emphatically in favor of the P. G. & E.'s partnership plan. We know of 17 newspapers thus far that have favored private enterprise's plan versus Government ownership. The 17 include the Call-Bulletin, the Manteca Bulletin, Oakland Tribune, Los Angeles Times, Petaluma Argus-Courier, Chico Enterprise Record, San Francisco Chronicle, Sacrament Union, San Rafael Independent-Journal, Oroville Mercury, Bakersfield Californian, Grass Valley Union, Redwood City Tribune, Marysville Appeal-Democrat, and the Redwood City Star-Advertiser.

To this newspaper, the issue is very clear and simple.

It is a case of two choices:

No. 1: The United States Government could build the power facilities and sell the electricity, to a few favored customers at tax-subsidized rates. All other taxpayers would pay for what the privileged few would save by getting Federal power at the subsidized rates.

No. 2: The cooperative offer by P. G. & E. would be to have the company pay full value for the falling water; to build and pay for the power facilities; to pay taxes on them and their operation, and to market the power at State-regulated rates over the company's system which now serves 6 million Californians.

To us, the No. 2 plan, already approved by Secretary of the Interior Fred A. Seaton, makes complete sense.

Remember this: There is no magic or secret way by which Government can furnish goods or services at cheaper rates than private enterprise.

The magic touch can only be provided by Government using its powers to subsidize the few who directly benefit by shifting the costs to all the taxpayers.

This is socialism and nationalization. No private business can compete successfully against a Government agency which has tax exemption and access to the purse and police powers of Government.

And besides this important issue, look at the money angle: The P. G. & E.'s offer would provide $310 million in benefits to the public which would be lost otherwise.

Isn't that important?

Here's how it would be saved:

During the repayment period, there would be a net gain of $165 million from revenue of the project, plus $145 million paid by the company in Federal, State, and local taxes, a total of $310 million.

Also, if the company built the power facilities, the Government would save $56 million immediately, because company money would be used, not taxpayers' money.

Out of the $145 million in taxes during the repayment period of the Trinity project, the United States Government would receive $83

million in taxes from the company. The State and local governments would receive $93 million.

Thus, instead of being a tax burden, the project would be a taxpaying enterprise.

United States Budget Aid Endorses Joint San Luis Project

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. MOSS. Mr. Speaker, I rise to congratulate our colleague from the 12th District of California, Mr. SISK, on his bill, H. R. 6035, which would authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, and to enter into an agreement with the State of California with respect to its construction, operation, and maintenance.

Mr. SISK's bill was prepared after a series of conferences with the State engineer of California, officials of the United States Bureau of Reclamation, and the local interests. It provides for a Federal-State partnership in the utilization of a portion of some 7,500,000 acre-feet of fresh water which now waste to the ocean in California every year.

This water could be used to irrigate urgently needed 500,000 acres of highly productive lands in California's rich San Joaquin Valley, and to enable the State to serve areas of deficiency outside the San Luis unit service area. To transport this water to the San Luis Reservoir, Mr. SISK's bill contemplates the use of the existing Tracy pumping plant, the Delta-Mendota Canal, and other Central Valley project facilities.

The San Luis project is needed urgently now if a most important agricultural region on the west side of California's vast Central Valley is to survive and if the critical needs of other water-deficient areas in the State are to be alleviated.

The Bureau of Reclamation recently reported that the ground-water bank account in the San Luis unit area is being drawn upon at the rate of over 1 million acre-feet per year and is only being recharged at a rate of 210,000 annually. It is, therefore, not surprising that the ground-water table is dropping at the alarming rate of over 25 feet per year.

Mr. SISK's proposal embodies a most efficient use of the San Luis project for service to these lands and for its joint use by California in connection with the State's admirable efforts to do all it can in the solution of its critical water problems.

I was happy to note in an article in the Fresno Bee for March 22, 1957, that Robert Merriam, Assistant Director of the Bureau of the Budget, endorsed Mr. SISK's general approach to the authorization of the San Luis project in California. The article follows:

UNITED STATES BUDGET AID ENDORSES JOINT SAN LUIS PROJECT

(By Charles S. Hurley)

SACRAMENTO.—A sympathetic attitude toward the proposed joint Federal-State development of the San Luis project was expressed by Robert Merriam, the Assistant Director of the Federal Budget Bureau, in an interview here.

Merriam also emphasized the Budget Bureau, which has a strong hold on the Government purse strings, is not opposed to Federal appropriations for flood-control features of the Oroville Dam. The dam is a key feature of the Feather River project, which the State plans to integrate with the San Luis project.

Merriam said he has not seen the bill recently introduced by Congressman B. F. SISK, Democrat, of the 12th, Fresno, District, authorizing the San Luis development on the San Joaquin Valley's west side.

ANTICIPATES APPROVAL

"The general picture I have of the plan, however, indicates it is the sort of thing the administration would look on favorably," he commented.

Merriam was to fly over the valley today with officials of the Army Corps of Engineers to view flood-control and reclamation accomplishments and needs. The plane tour was to go down the east side of the valley as far as Isabella Dam on the Kern River and return along the west side, flying over the San Luis Reservoir site in southwestern Merced County.

Merriam strongly commended California officials for the overall State water plan and the State's willingness to participate with the Federal Government in project building.

"I don't think that in any part of the country can we accomplish the things we need to do through the Federal Government alone," he said.

"I am encouraged after getting a firsthand report on the State's water plans. I only wish some of the other States would get into the same detail as here."

Merriam volunteered a statement of the Bureau's open mindedness on the Feather River project to counteract what he said were false reports of opposition to it.

"We merely raised a question of whether Congress wanted to appropriate the money before a survey is made by the engineers," he said. "I understand the omnibus bill will provide for such a review. In that case we would have no objection."

Merriam declined to comment specifically on the proposal of the Pacific Gas & Electric Co. to develop the power features of the Trinity River project now being constructed by the Federal Reclamation Bureau. However, he remarked:

"I think something the people have to understand is that problems of water resource development are too big for the Federal Government alone. Even in the power area, where money is repaid over a period of years, the Government has to make the money available originally and the appropriations have to be considered in the light of overall budget problems."

HOPES FOR INCREASE

State Water Director Harvey O. Banks told Merriam he hopes there will be continued "and even enlarged" Federal participation in California Water Department.

Banks also said he believes the State should put itself in the position of cooperating financially with the planning and building of future Federal projects.

"We would not frown on that," Merriam remarked.

Banks said he expects to ask the State legislature next week for a $1 million advance of State funds toward the Federal San Luis project so it can be hurried along.

We Need Federal School Aid

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. PERKINS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Bridgeport Sunday Herald of March 10, 1957:

WE NEED FEDERAL SCHOOL AID

It is probably because Federal aid to school construction has a good chance of passage in this session of Congress that the opposition is opening fire with the biggest guns. In Connecticut and elsewhere the battle has been joined.

The current antiaid propaganda message is that congressional mail is running 5 to 1 against aid.

This is correct. But it is also correct that the last Gallup poll on the subject came out 4 to 1 in favor of Federal aid.

The reason for this discrepancy is clear: congressional mail is inspired by the antipressure groups. The poll registers the people's view.

Add to this the fact that the White House conference voted better than 2 to 1 for Federal aid, and the will of the country should be plain—without the shadow of a doubt.

The Herald believes Federal aid to be essential. We urge all those who agree or disagree with us to write both to this newspaper and to their representatives in Washington.

But because we respect the honest convictions of the opposition we want to present the case for Federal aid fully.

We do not like Federal aid as such. We do not like such aid for anything—whether it be roads or airlines subsidy. We do not like income tax as such.

But we acknowledge that—for better or for worse—we live in an interdependent, complicated, costly world. Ignorance or poverty in one part of the country hurts Americans everywhere.

The inequalities—especially in the educational opportunities for our children—are a denial of basic democratic rights and a shortchanging of the American dream.

The opposition in Connecticut points out that this State would not get back as much in Federal aid as it would contribute. There are several replies to this:

We are all Americans first, and it is shortsighted for any of us to isolate ourselves from the general welfare of the Nation.

We cannot, just because of our good fortune of greater wealth, build a roadblock against national emergency measures.

But most important, it is unrealistic to talk of paying in and getting money back. We will be paying into the Federal Treasury anyway. The question is whether Connecticut is to get something or nothing, not whether we get more or less than others.

It is amazing that the antipropaganda accepts the United States Office of Education statistics when it announces that 67,000 classrooms were built last year but refuses to accept from the same source the fact that the country is now short at least 160,000 classrooms.

In Connecticut the average yearly addition of classrooms since 1953 has been about 800. As of this moment (unless we are willing to condone unsafe, overcrowded, and part-time schools) Connecticut is 2,500 classrooms short of what it ought to have.

Or forget about buildings. Just keep in mind that 12,572 elementary-school children and 12,778 high-school pupils in Connecticut, right at this time, are getting only part-time education.

We do not believe Federal aid will solve all school problems. We urge strongly that Federal-aid legislation include safeguards, both against Federal interference and against relaxed local and State efforts to provide maximum support for the schools.

But we hold the need for Federal aid to be immediate and indisputable.

The Birth of an Industry

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. COLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Raymond Moley in the March 18, 1957, issue of Newsweek entitled "The Birth of an Industry." Mr. Moley's column of that date under his usual head of Perspective concerned itself with the growing industry of atomic energy for peaceful uses:

THE BIRTH OF AN INDUSTRY

Back in the dark years of the 1930's, when people talked of means by which we might pull ourselves out of depression, there inevitably came the comment: "If only a new industry might arise." The so-called liberals of that day deprecated any solution, and F. D. R. himself was induced to say that "the industrial plant is built."

But every long step toward economic growth and higher standards of living in this country has come by the birth of vast new industries such as railroads, electric power and light, automobiles, airplanes, and other applications of internal-combustion power. In these cases the creative imagination and drive came from private individuals. The only great industry that can be attributed to Government has been war or preparation for war.

But modern liberals have not learned this plain fact. They propose now that the brightest prospect for a new industry—the various developments of atomic energy for civilian purposes—shall be a Government monopoly of a size and consequence that defy imagination. Such a belief in Government omnipotence is always supported by the deprecation and denial of the value of private enterprise.

THE GORE BILL

The Gore bill, which died in the 84th Congress but which has reappeared in the 85th, and many of the speeches of candidates Stevenson and Kefauver in 1956 propose the building by the Government, with taxpayers' money, of a series of atomic-power plants over the country which will produce, under the collectivist preferential clause, electricity in competition with the private power industry. The cost, according to the Gore bill, would be $400 million, and the Government plants would be of various types and in various places.

This proposal for a Government superstructure runs directly counter to the present provision in the law, that the Atomic Energy Commission should seek to strengthen free competition in private enterprise. It also runs counter to the express policy of the AEC since 1948, that its purpose is to move away from Government monopoly as fast as possible.

The very premise from which the Gore proposal proceeds—i. e., that private industry has been lagging—is denied by the facts.

In a comprehensive statement by Chairman Lewis L. Strauss last month before the congressional Joint Committee on Atomic Energy, there is a specific description of a new and rapidly growing "atomic-energy industry free of Government monopoly." Strauss said: "The forces of traditional American free enterprise are moving forward on a broad front."

In the 2 years since the AEC's access program opened certain facts and methods to private industry there has been active development in several directions.

RAPID GROWTH

At least 21 American firms are building or have orders to build 59 reactors for civilian purposes. These will be for private United States buyers, for the Federal Government, and for export.

American firms have signed contracts or announced plans for 9 uranium-ore-processing mills, a feed-materials plant, 5 nuclear-fuel element-manufacturing plants, 7 critical facilities, and 3 zirconium and 2 beryllium production facilities. The total cost of these will run far beyond the mark set by the Gore bill, and a great part of this will be paid by private investors' money.

One of the great contributions to medical care, agriculture, and industry by the AEC has been the making of isotopes. Forty different firms in private industry are already making use of these.

There is also the rise of a uranium-mining industry. The United States is already the leading uranium-producing nation of the world. Only 9 years ago 90 percent of our uranium supply came from overseas. Today 60 percent originates in North America, and by 1958 we shall be producing 80 percent. All of our mines and all but one of the processing mills are privately financed and operated.

With this bright prospect of a new industry, competitive and privately operated, with hundreds of millions of investment and countless jobs, it is a poor time to impose the paralyzing grip of Government monopoly.

Mutual Security in Iran

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. HAYS of Arkansas. Mr. Speaker, in view of the talk about our suspending aid to Iran because of the tragic killing of three of our own employees and their Iranian companions in a dangerous area, I feel that it is appropriate to call attention to the fact that the continuance of this program is vital to the security of the United States. I am pleased to insert in the RECORD a letter I recently received on this subject from Mr. Frank C. Laubach, great humanitarian and religious leader, as follows:

NEW YORK, N. Y., *April 2, 1957.*

The Honorable BROOKS HAYS,
Member of Congress,
Washington, D. C.

MY DEAR BROTHER: I was pleased that you agreed so heartily with the view I expressed to you over the telephone, that the killing of these three representatives of ICA in southern Iran should be made an opportunity to cement our friendship with Iran and the Middle East. They were working in a dangerous area, infested by outlaws, and are really martyrs to a cause. It is highly important for us to look upon this incident as a time to pray, and to love, and to carry on the cause for which they died.

There has been some talk of withdrawing our aid to that part of Iran, but if we did so we would be deserting the cause for which they died, providing we can continue working in that area. It is a cause for rejoicing that the Shah of Iran and his government are doing all they can to show their affection for those who died, and to punish the guilty bandits.

I hope that writers in this country with a Christian viewpoint will see that our press takes the right position and gives the right interpretation to this. If they do so, this tragedy can be turned into a blessing.

God bless you in your magnificent work.

FRANK C. LAUBACH.

Why Federal Aid Not Needed

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the March 21, 1957, issue of the Clarksdale (Miss.) Press Register:

WHY FEDERAL AID NOT NEEDED

On the surface, Federal-aid proposals for education now pending in Congress appear to be a juicy plum for Mississippi. Truly, it would be a case of getting a big slice of that mystic something for nothing, since the State would receive much more than it would pay in.

For instance, under Senate bill 889 now pending, Mississippi would receive $7,772,000 for public schools while paying in only $1,312,000—or a 6-to-1 grant. Other bills now pending would give the State similar percentages.

Why turn this down, you may ask? There are many reasons. In the first place, Federal aid will inevitably bring with it Federal controls. These controls will be either direct or indirect, but the effect will be the same.

Also, it will be another usurpation of States rights by the Federal Government. Education was one of the fields left by our Founding Fathers to the States.

One of the bills now pending specifies that States, in order to qualify, "will comply with orders of the courts of the United States to insure that * * * the school facilities will be open to all children without regard to race."

Despite the fact Mississippi might receive more than she pays in, at first, it means additional increases in Federal taxes—already near the breaking point. Federal taxes took only 7 percent of the national income in the 1930's, but by 1954 Federal taxes took more than 20 percent of total income, and it continues to rise.

The measure would add additional numbers to the growing Federal payroll, calling for more bureaucracy and redtape. Most taxpayers now agree we are supporting enough Government employees, and already

have plenty of Federal forms to fill out. You can think of other reasons.

A number of State groups, including the Mississippi Economic Council, are opposed to further extension of Federal aid to education. They believe State taxpayers are able to finance our own school system, and to operate them to the best interest of citizens. Calling for a halt toward federalization, the MEC says that it believes that Mississippi, "a State law in the scale of economic ability and one which on a short-range view stands to gain most in immediate material benefits from a federally aided school system, will inspire other States to make similar action," if it does not request Federal aid.

Washington State Fishermen Have an Interest in Alaska Fisheries

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. TOLLEFSON. Mr. Speaker, I have received a copy of a letter written by Mr. George Johansen, secretary-treasurer of the Alaska Fishermen's Union, in which he points out the very definite interest which fishermen from the State of Washington have in Alaska fisheries. Inasmuch as Congress may soon consider legislation granting statehood to the Territory of Alaska, it might be well for Members of Congress to determine what protection must be given to fishermen from the States who operate in Alaskan waters. I recommend that they read Mr. Johansen's letter which follows:

MARCH 25, 1957.

DEAR SIR: In conformity with our conversation in Washington, I am writing you a few thoughts on the statehood of Alaska bill and also on the fish-traps issue, which has been somewhat controversial at times. Because of your position on the committee which will consider these matters, I feel you should know our thinking on them, and I am also going to send a copy of this letter to Senator MAGNUSON so that the two of you can discuss it informally and advise me relative your opinion.

We are keeping an open mind on statehood for Alaska, and, while we are not opposing statehood, we do believe in many respects that there are fundamental issues which must be taken into consideration and that unless proper legislation affecting these issues is enacted, statehood would be to our complete disadvantage.

Speaking of statehood, our thoughts are related to the fisheries, and I have recently sent a letter to the Washington congressional delegation and copies to the Senators of Oregon and California, and some of the Congressmen in those States. That letter shows what discriminatory legislation has been enacted and is in the process of being enacted by the Territorial legislature, and there are other bills which I did not mention that are just as discriminatory, as far as the taxing on fish is concerned. I believe that the representatives of the west coast States cannot ignore these warnings. I particularly feel that our own delegation from the State of Washington should, as far as it is possible for them to do so, follow up and introduce legislation which would render discriminatory laws against United States citizens illegal in the future.

There is absolutely no reason to think that if Alaska is granted statehood, the Legislature of Alaska will in any way change its thinking and cease enacting discriminatory legislation.

It can, of course, be said that one cannot impose legislation in an enabling act for Alaska which was not imposed on other States at the time of their entry into the Union. On the other hand, I know of no other States that, as Territories, had enacted and introduced discriminatory legislation of the kind about which we are writing here. I want to repeat what I said to one of our Congressmen—that as secretary-treasurer of the Alaska Fishermen's Union, I am responsible for the welfare of the members of our organization. It follows then that as representatives of the people of the United States, our duly elected Senators and Congressmen are responsible for legislation that will effectively safeguard the legitimate interests of the United States citizens.

We have no ways or means other than to write to our delegation, pointing out these abuses. If Alaska is not contemplating any further discriminatory legislation, the delegates and representatives of the Territory could not, in all good conscience, oppose legislation that would safeguard rights of United States citizens.

With these comments I would like to go into the question of the fisheries if Alaska becomes a State. The fisheries of Alaska are of an extensive nature and are probably one of the most valuably fishery resources in the entire world. This is particularly true as far as the salmon is concerned. It is also the most important protein food resource in the United States in the fishery field.

The coast of Alaska consists of thousands of miles, and the fisheries are scattered from one end to the other. This means that regulations must be based on the difference in conditions which exist in the various districts. In other words, one cannot sit down and write one regulation for the entire coast and, consequently, it takes a thorough, detailed study by many teams of fisheries people to properly write regulations which will be effective and beneficial for each district. We also have the same problem as far as enforcement of regulations is concerned.

We have an enormous fishery research program that must be carried out if we intend to keep this resource at the sustained-yield basis. Our national interests with regard to maintaining food resources demand that the job of properly regulating and maintaining these fisheries is carried out with competence and in such a manner that this great natural resource is not depleted. We certainly do not believe that Alaska would be in a position at this time to take over the fisheries as, to the best of our knowledge, they have neither the technical staff nor the money available to carry out the manifold duties involved in a complex fishery of this kind. I wish to point out that technical men in the fishery field are not easy to obtain.

We could not recommend that Alaska should be given full control over the fisheries because the necessary assurance which our national interest demands is lacking. While in the past there has been some criticism that the Fish and Wildlife Service has not properly discharged its duties, some of the criticism has come from persons who would like to take over these fisheries by offering severe criticism, but failing to offer constructive proposals which might have had some influence on changing the picture. We certainly have criticized the Fish and Wildlife Service on many occasions when we thought such criticism was necessary. However, our criticism was on a constructive basis for the purpose of changing conditions which we deemed incompatible with good research and management.

We are happy to note that the present management of the Fish and Wildlife Service in Alaska is probably the ablest we have ever had. It is our sincere opinion that these people must be given a chance to rebuild the salmon runs to their former levels. It is our further opinion that they are in a better position to do the job than anyone we know.

In line with these thoughts I would like to say that, if Alaska is granted statehood, there should be a transfer of control of the fisheries extending over a period of years, so that Alaska would have the opportunity of gradually gaining the experience necessary for a competent management of these fisheries. During the transition period the United States Government should, as in the past appropriate the necessary money to carry out the fishery research necessary, and all the other duties connected with the fisheries. Due to the national interest involved in this natural resource, to proceed on any other basis would lead to a disruption of these fisheries, which would be exceedingly harmful to everyone concerned.

I cannot buy the argument that, because other States have gained immediate full control of all their resources, we must of a necessity follow this out in the fisheries field in Alaska. I think it is that type of argument which continuously gets us into trouble—where we follow tradition instead of doing what necessity and commonsense demand being done.

Only those who have spent time in Alaska actually working in the industry can fully realize the complexities and the difficulties of properly managing this resource which is spread out over so many thousands of miles. While theories can be evolved that will look good on paper, those of us who depend upon this fishery for our bread and butter and our business know that it is going to take any new management several years to fully grasp the problems and be able to properly solve them.

With regard to the fish traps, we have heard a lot of statements on the evils of the fish traps in Alaska and many allegations that these traps are exceedingly destructive to the fishery resource. I am not in a position to argue about the conditions which existed years ago but I can truthfully explain the conditions as they exist today. The traps have steadily decreased in number. Today, we have approximately 239 traps operating in Alaska; out of this number, there are 40 or more hand traps which are operated by independent residents of Alaska. When one considers the total number of traps and the size of the Territory, there is no big concentration in any of the districts. In the Port Moller and Bristol Bay districts, there are no traps at all. If the claims made as to the destructiveness of the traps are true, there should be no fisheries problem in existence in the Bristol Bay area. However, the record will show that the conservation problem is just as acute, and perhaps more so, in Bristol Bay, as in other districts of Alaska. I could also point out that in the Cook Inlet district, the traps have steadily decreased in number and more mobile gear has come in. It appears to me that the resource in that particular district is under as much strain, and perhaps more so, due to mobile gear, than it ever was with trap fishing. The record certainly does not show that the traps decreased the run, when they were in the majority.

Further, we cannot find a single responsible fishery research or management man who will say that the traps are destructive to the fisheries. It is easier for the Service to regulate and control the traps, than other types of gear. There are, of course, persons in Alaska who claim that the traps are the major cause of the depletion of the fisheries, but they cannot prove that with any scientific evidence.

The Alaska Fishermen's Union has always taken the position that regardless of curtailment in fishery efforts, if such curtailment is beneficial to conservation, we have been agreeable to go along. We recognize and realize that in order for us to be able to go to Alaska year after year, we must have a resource that is maintained on a sustained-yield basis. In order to have such a resource, it is necessary to accept curtailments and other limitations. We would cheerfully accept the elimination of the traps, if the traps could be classified as hard to regulate and, therefore, destructive, but we cannot necessarily agree with persons, who in order to further their political ambitions, will make any number of misstatements which have no rhyme or reason when they are examined in the light of the facts.

It is debatable whether the elimination of the traps would even prove beneficial as far as the Alaska resident fishermen are concerned. To our knowledge, those who wish to fish are fishing in the Territory today, and the elimination of the traps would create an empty space which would be filled by other fishermen. This, again, would create a problem of added enforcement as there would be a much increased mobile-gear fleet.

The creek-robbing and fishing in waters prohibited by regulation have been causes of the depletion of the fisheries, and certainly the elimination of traps would do nothing to solve them. Another point is that at present in southeast Alaska, there is a very small gill-net fleet in operation. It is reasonable to assume that the gill netters would demand a wider scope for their fishing, and the fight which we now have between purse seiners and traps would continue, only this time it would be between purse seiners and gill netters.

We also have to consider the elimination of jobs of persons who have worked in Alaska all of their adult lives and who would be completely thrown out of employment, if the traps were abolished. These men and women are not necessarily all from the Pacific Coast States, but include many residents of Alaska as well. When the traps were reduced 50 percent under the Farley plan, several canneries shut down their operations and consolidated for the purpose of effecting necessary economies. If all the traps should go out of existence, further consolidations would again take place. Local people residing in the vicinity of these canneries have always been given preference of jobs, working in various capacities. In many instances, it has been exceedingly helpful for a resident fisherman's wife to be able to earn this extra money. Several of these people lost their jobs during the last consolidation and many more will lose their jobs if the traps finally go out.

Taking these things in consideration, and forgetting for the moment the political aspect, I cannot see any specific gains that could be made for anyone, if the traps were eliminated. I realize, of course, that this may happen sooner or later, but I certainly do not believe that Congress should pass any legislation to destroy employment, because it may be politically expedient. I could, of course, point out that the fish caught in the traps are of the best quality, as these fish have not been subject to very much handling and are delivered in the freshest condition to the canneries. It can be said that I have a selfish interest in the protection of the jobs for our membership. On the other hand, I am willing to submit my arguments to the judgment of any responsible fishery research man.

The paramount duty resting upon all of us is to protect and maintain our fishery resource, because it is only through such protection and maintenance that we will have a fishing industry that will provide employment for residents and nonresidents of Alaska. This resource belongs to all of the American people—not just a few—and it should be protected on a national, rather than on a regional basis. We will render our best efforts to fight for our rights as United States citizens and for a conservation program that will accomplish a sustained-yield fishery.

This letter was unanimously adopted by our biggest meeting of the year, held in Seattle on March 22, 1957, and the membership joins me in asking for a your wholehearted support in this matter.

Sincerely yours,

GEORGE JOHANSEN,
Secretary-Treasurer, Alaska Fishermen's Union, LIU 1821, AFL-CIO.

Mexico Sets an Example

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. MULTER. Mr. Speaker, our country is blessed with a good neighbor to the north and good neighbors to the south. I commend to the attention of our colleagues the following editorial which appeared in the New York Times of April 1, 1957:

MEXICO SETS AN EXAMPLE

Latin Americans have a customary and on the whole justified criticism of the press in the United States. American newspapers, they say, never print any news about a Latin-American country until something bad happens—a revolution, an assassination, an earthquake, a political crisis.

Conversely, it would follow that no news is good news. This rule can be applied to Mexico today. How unfair it is, journalistically speaking, to forget about Mexico just because everything is so peaceful there. The Government of Ruiz Cortines goes quietly and efficiently toward its end of term, which comes next year. The economy progresses steadily. The army has been relegated to its proper place as defender of the nation and custodian of order.

The Communists have lost control of all the big unions and are now a very minor factor in national affairs. There isn't a single political prisoner in jail. Internal peace is complete and it is not imposed by the army and police, as in the dictatorships; it is a civic development. No Mexicans have had to go into exile.

Best of all, Mexico is a democracy. Her detractors argue that since there is only one political party, elections provide no choice. Mexicans say this is not very different from the system of electing a governor in a Southern State like Georgia. Such a governor is going to be a Democrat. In Mexico the next President is sure to belong to the Party of Revolutionary Institutions—the PRI. But, as Paul P. Kennedy reported to this newspaper yesterday, President Ruiz Cortines and former Presidents Cardenas and Aleman are already in a brisk contest to name the candidate. The result is not a sure thing.

In most other respects Mexicans have the same civic freedoms we have, and they do not have segregation. Weaknesses in Mexico's democracy lie in the high degree of illiteracy and the low living standards of millions of peasants. The judicial system is not on a high democratic standard. However, the picture as a whole is of a mature, settled society living in an atmosphere of freedom.

When Americans think of the nations below the Rio Grande as hotbeds of revolution, dictatorship, and discontent, they would do well these days to think of Mexico, their nearest neighbor, with whom they live as peacefully as they do with Canada. And Mexico is not the only country in Latin America of which things like this can be said.

Central America

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to call attention to possible ill effects of recent criticism in the House of Representatives of some of our friends in Central America.

The countries of Central America and the Caribbean area, namely, Cuba, Haiti, the Dominican Republic, Panama, Costa Rica, Nicaragua, Honduras, El Salvador, Guatemala, and Mexico, have been historically friendly to our own Nation, and although in recent years the continuation of anti-Communist programs within their borders has become steadily more difficult for their governments, these steadfast nations have not relaxed their vigilance.

It might be well to keep in mind the importance the continued friendship of these nations occupies in the total security picture for our country. Not only have we assurances our Latin American friends will lend us moral support, but agreements such as the pact recently signed with the Dominican Republic whereby the United States gains the privilege of operating a loran, or long-range aid to navigation, station on the northern coast of that country, are an an aid to the security of the United States which should not be underrated.

Referring particularly to the Dominican Republic, I speak from personal experience when I say that accounts of terrorism and so-called brutal dictatorship in the Dominican Republic are best described as gross fabrications. Criticism of this type coming from official sources can be made by the Communists to fit in with the picture they like to paint of the United States as the meddling, imperialistic menace to to the north bent on destroying independence and freedom in Latin America.

Certainly as the situation stands today, none of these nations may be considered a threat to our national safety. Instead, they are outposts of resistance to attempts by world communism to establish a foothold on this hemisphere.

It seems to me self-evident that rather than contribute to the revival of the old myth of a North American power-mad colossus which our diplomacy in South America in past years has been diligently directed toward debunking, we should make positive efforts to encourage peaceful people-to-people cultural inter-

change and attempt to establish the kind of understanding between the peoples of these nations and our own which is the only solid basis for American foreign policy.

Texas Election Analyzed

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. DORN of South Carolina. Mr. Speaker, the $64 question today is, Who was the Republican high command really backing in the Texas Senate race? Could it be that the modern exponents of Republicanism are secretly trying to destroy the States rights, southern, Jeffersonian wing of the Democratic Party? The following article by David Lawrence in the Washington Evening Star of April 4 might help us answer these questions.

The article follows:

TEXAS ELECTION ANALYZED—BULK OF REPUBLICAN VOTES WERE CAST BY CONSERVATIVES IN LONE STAR STATE

(By David Lawrence)

The story of the Texas election is the story of what happens when conservatives split—a so-called "liberal" wins out.

It wasn't a clear-cut battle between Republicans and Democrats as such in the election for United States Senator just held in the Lone Star State. The conservatives gave Representative MARTIN DIES, Democrat, more than 276,000 votes, and they gave Thad Hutcheson, Republican, more than 214,000 votes. This combined total of 489,000 conservatives was far in excess of the 340,000 votes cast for RALPH YARBOROUGH, the winner. Searcy Bracewell, Democrat, who supported Ike in the 1956 election, got 31,000 votes that would not have gone to YARBOROUGH.

If it be assumed that some of the Republican votes might have been spread among the other 17 Democratic candidates, it still is true that the bulk of the Republican votes cast were from the ranks of conservatives.

Had there been a runoff election permitted so that MARTIN DIES, on the one hand, and RALPH YARBOROUGH on the other, could have fought for the Democratic nomination, it seems likely that YARBOROUGH would have lost out.

There was considerable agitation for a runoff, in which only the two candidates receiving the highest number of votes in the first election among several candidates are pitted against one another in the second contest.

Texas voters are accustomed to runoff elections to determine the top two who fight it out for the nomination, and it is most unfortunate that the Democratic Party didn't put through the State legislature the bills introduced which sought to bring about that kind of election first, before challenging the Republican Party at the polls in the final contest. But one reason, of course, was that many of the supporters of Senator-elect YARBOROUGH thought he had a better chance in an election that split up the Democratic votes, and isolated the Republican conservatives behind their own candidate.

Mr. YARBOROUGH has been up for elective office in Texas on a statewide basis 5 times and has lost 4 times. He ran once for attorney general and three times for governor. He is the standard bearer of the so-called loyalist faction in Texas politics which is made up largely of the Truman-Stevenson wing of the party.

The Democrats in the North are, of course, crowing over the great victory of the Democrats over the Republicans in Texas. Also, the Republicans in the north are arguing that this election was an encouraging step toward a two-party lineup in the South. A few more episodes of this kind and the Republican Party will have succeeded in sending to the Senate and the House many exponents of radical philosophy, and in the end, the coalition in Congress of northern Republicans of the conservative school and conservative Democrats from the South will be broken down, if indeed it isn't largely wiped out.

Partisans naturally want to see their respective parties built up, but in the struggle over conflicting ideologies nowadays it is far more important to the future economic welfare of the country for the conservatives to avoid schemes that break down the conservative representation in Congress from the South.

Presidential elections can be fought on a two-party basis in the South, but until there is a clearer definition between the Republican and Democratic Parties on State issues it is sheer folly for the national Republican organization to stimulate the selection of Republican nominees for the Senate and the House in the deep South.

There are a few districts in the South where the preponderance of conservatives is such that putting up a Republican nominee for the House of Representatives becomes a logical means of defeating a Democrat from the radical side. This could happen also in some Senate races in the South, but unless there is a runoff primary to eliminate the many candidates who usually enter these contests, the risks to the conservatives of such an election as Texas had this week are obvious. It was the conservatives who defeated themselves this time.

Logical Decision

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. GUBSER. Mr. Speaker, I submit herewith an editorial from the Oakland Tribune of February 14, 1957, which clearly points out the advantages of the proposed partnership between the Pacific Gas & Electric Co. and the Bureau of Reclamation for development of the Trinity River.

The editorial follows:

LOGICAL DECISION

Secretary of the Interior Fred Seaton has recommended to Congress that it approve the proposal of the Pacific Gas & Electric Co. to build and operate the powerplant phases of the Government's Trinity River project.

In so doing he is carrying out one of the cardinal principles of President Eisenhower's domestic policies. That is the principle of partnership between Government and private enterprise when that partnership is the most feasible approach.

The recommendation by Mr. Seaton was in response action initiated in Congress. About 18 months ago, the P. G. & E. submitted the proposal that it be allowed to construct and operate the hydroelectric phases of the Trinity River project. It proposed to make the initial outlay of $56,700,000 and to pay the Government for falling water uses in producing power. It also did not ask for any tax concessions.

A subcommittee of the House Interior Committee conducted hearings on the proposal. It asked the Secretary of the Interior to report back to Congress by February 12 on its findings, and to recommend which would be the more feasible; the Federal Government assuming the entire cost of the project, or accepting the offer of the P. G. & E. Mr. Seaton recommended in favor of the partnership.

His recommendation now is in the hands of the House Interior Committee. Congressional action is necessary in order to make the Government's share of the partnership available.

It is to be hoped the recommendation becomes actuality. The P. G. & E. proposal means private enterprise providing the initial capital outlay, private capital paying the Government for the water it uses, and private enterprise paying taxes on its investment, with the efficiency of private business making it a paying proposition.

Statement of 39 Organizations Endorsing President Eisenhower's Immigration Recommendations

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. KEATING. Mr. Speaker, I recently had the honor to address a distinguished meeting in New York City of the American Immigration Conference. This organization is composed of numerous fine groups dedicated to the revision of this Nation's immigration laws. Their efforts are a powerful force in this important cause.

As House sponsor of President Eisenhower's recommendations for amending our immigration statutes, I was particularly pleased to receive yesterday a copy of a statement signed by 39 organizations—most of them members of the American Immigration Conference—endorsing the President's proposals. Under leave to extend my remarks, I am happy to insert the statement at this point in the RECORD:

STATEMENT ON IMMIGRATION POLICY

President Eisenhower is to be commended on his message to Congress calling for prompt action for revision and improvement of American immigration policy. Adoption of the President's recommendations would be in accord with a humane immigration policy consistent with our national tradition.

We believe action without delay is imperative.

The President proposes a reasonable increase in immigration quotas, a practical approach to the utilization of unused quotas and the elimination of mortgages on future quotas. These proposals are, in our judgment, wise and represent an important step toward the elimination of discrimination from our immigration law.

We commend the President's proposal for a permanent plan for admitting escapees from communism. We hold that this, however, should be expanded to include any victims of religious or political persecution.

We urge cooperation of both parties in Congress to bring about prompt action.

LIST OF SIGNERS

American Baptist Home Mission Boards.
American Branch International Social Service.
American Civil Liberties Union.
American Committee on Italian Migration.
American Federation of International Institutes.
American Friends Service Committee.
American Fund for Czecholsovak Refugees, Inc.
American Service Institute of Allegheny County.
Americanization School Association of the District of Columbia.
Brethren Service Commission.
Church World Service, Department of; National Council of the Churches of Christ in the United States of America.
Commission on World Service, Evangelical and Reformed Church.
Common Council for American Unity.
Congregational Christian Churches, Council for Social Action.
Congregational Christian Service Committee, Inc.
Czechoslovak National Council.
Governor's Commission on Refugees (Massachusetts).
International Rescue Committee.
Italian Welfare League, Inc.
Iuliu Maniu-American Romanian Relief Foundataion, Inc.
Los Angeles Conference on Immigration and Citizenship.
Lutheran Refugee Service.
Methodist Committee for Overseas Relief.
Michigan Committee on Immigration.
National Board of the YWCA.
National Catholic Rural Life Conference.
National Catholic Welfare Conference.
National Conference of Catholic Charities.
New York Committee on Immigration and Naturalization.
Polish Immigration Committee in New York.
Presbyterian Church in the United States of America, Committee on Resettlement Services.
Selfhelp of Emigres from Central Europe, Inc.
Synagogue Council of America.
Tolstoy Foundation, Inc.
Ukrainian Workingmen's Association.
United Automobile Workers.
United Friends of Needy and Displaced People of Yugoslavia.
United HIAS Service.
United Steelworkers of America.

The Southern Viewpoint

EXTENSION OF REMARKS
OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the following editorial by the Honorable J. Oliver Emmerich, editor of the McComb, Miss., Enterprise-Journal:

THE SOUTHERN VIEWPOINT

There are six of us on this panel today—the pastor of an integrated Chicago Methodist Church, the pastor of an Alabama church upon whose lawn was burned a fiery cross, the pastor of another Chicago integrated church which has been disturbed by aerial bombs, the executive secretary of the NAACP, a North Carolina attorney, and myself, the publisher of a Mississippi newspaper. I assure you that any similarity between my situation now and that of Daniel in the lions' den is purely coincidental.

The moderator announced that notwithstanding that this is a Methodist chapel that applause is permissible. I fear my address will end with your resounding silence. However, to give you an opportunity to applaud my remarks permit me to say that I have never before stood before such a fine lot of white and Negro Methodist ministers seated together.

Thank you for your generosity. And now in the spirit of Christian fellowship may we get down to cases.

Democratic-minded people endorse that concept which upholds the dignity of the individual.

Enlightened people everywhere reject the master-servant relationship as applied to an entire race of people.

Civilization must frown upon injustices of all kinds or civilization will revert to savagery.

Opportunity for self-improvement must be an open door through which people of all nationalities can walk with confidence.

The status quo must yield to man's progressive march upward in search of a better life.

Men of good will everywhere embrace these concepts and cherish this idealism.

The purposes are clear. The problem, particularly in the realm of racial matters, lies in the acceptance of a plan for the successful attainment of these coveted purposes.

Racial problems throughout history have been characterized by low volatility. History has made them so. The explosiveness of these problems is part of the problems themselves—and an obstacle to their solution. To ignore this volatility is to invite defeat—even disaster.

In matters of racial adjustment the idealistic are often too unrealistic and the realistic are often too unidealistic. Nevertheless it is a mistake to charge that the South is opposed to racial progress. Neither the North, the East, nor the West has a monopoly on idealism.

We cannot solve our race problem until we know the cause of it. To find the solution we must apply the law of cause and effect. Too many people who think they are authorities on this subject are confusing the effects of the problem with the causes of the problem.

When the ugly head of intolerance shows its face, some people say, "Shoot down that cause." The truth is that intolerance is an effect and not a cause of the problem. When passions are inflamed and violence breaks out in Chicago, New York, or the South, the naive and the inexperienced cry out in effect and say, "There is the cause. Destroy it." The truth is that violence is an effect and not a cause of racial conflict.

The root of racial conflict is historic. It is a product of the ages. It stems from a conflict in cultures. The current attempt to bring these conflicting cultures into closer contact will increase rather than diminish racial tension. And it does not follow—as it is sometimes suggested—that individuals who hold to this realistic view are lacking Christian sympathy or Christian idealism.

Now, let me reply to Mr. Wilkins, of the NAACP. He says that this is a panel, not a debate. But he applied the tactics of debate by attempting to brush aside the statistics presented by Paul Erwin, of North Carolina. Mr. Erwin has said that 79 percent of the people in his community are white and that 21 percent are colored and that during the past 11 years that 21 percent—the colored people—committed more than 80 percent of the crimes. Mr. Wilkins says, "Those statistics do not bother me at all." And you, an audience of dedicated Methodist ministers, laughed with him and applauded his statement.

I say we cannot brush these statistics aside so lightly. In my State in 1 year, out of 28,000 Negro births, 7,007 were illegitimate. The 50 percent of our Negro population were responsible for 94 percent of the cases of venereal diseases. In 1 year in Mississippi 6 Negroes were killed by white people; 8 white people were killed by Negroes; and 183 Negroes were killed by Negroes. Mr. Wilkins may toss these statistics aside and say, "These statistics do not bother me at all." But you cannot. You are all Methodist ministers. Are we to conclude from your laughing with Mr. Wilkins and your applauding his statement that you as Methodist ministers are giving endorsement to wanton murder and wholesale illegitimacy? Is this part of Methodist theology? Last year 1 Memphis hospital recorded 2,085 cases of illegitimate births out of a total of 7,401. Of these 2,085 cases, 2,061 were Negro.

I can understand your enthusiasm for a cause, but I challenge the wisdom and morality of your willingness to deemphasize these statistics.

Mr. Wilkins says that these statistics reflect the fact that the Negroes of the South are treated as wards and not as citizens. I say to you that the reverse is true. Our Negroes at times are treated as wards because the masses of the Negro race refuse to accept the responsibility for improving these conditions. Much has been said here today about the Negroes who live here in South Chicago, where we are now meeting. I say to you that there are hundreds of Negro men right here in Chicago today who have left their wives and children in my immediate community. Many of these Negro people at home are on our welfare rolls because these Negro men are unwilling to accept family responsibilities.

We cannot in good conscience deemphasize this irresponsibility as if it were of no importance.

The racial problem will cease to be a problem in direct proportion to the Negro masses' manifestation of a willingness to share the responsibilities in expanding the values of a civilized society.

Don't tell me that Methodist ministers can laughingly brush aside the demand for a greater sense of Negro acceptance of these responsibilities. Now I ask you in the spirit of Christian fellowship if you want to applaud my position in this respect? [The audience immediately responded with heavy applause.]

Now, one more thought in refutation of Mr. Wilkins' remarks. He says that the sole purpose of NAACP is to advance the citizenship rights of the Negro people. I say to you that the NAACP is not advancing the citizenship rights of the Negro people when it comes into my State, or goes into other Southern States, and openly supports convicted rapists. This is not a contribution to law and order, and Methodist ministers cannot deny this accusation. Rape is a terrible thing and the NAACP has given repeated support to rapists. There is no ethical or logical way to associate the crime of rape with the rights of citizenship to any people.

Now may I ask indulgence. I speak with a southern accent. I want you to understand how I use the term "Negro." I use the long "e" and the long "o" as Negro. A great deal of importance is placed these days on the pronunciation of this term and I do not want the things I say to be depreciated because of the way I say them. I do believe, however, that this is an example of misplaced emphasis.

America's racial problems were bequeathed to this generation. The dead, not the living, created them. This suggests Christian patience; not the will to correct in a matter of months the ills which through the centuries have been in the making.

There is a Chinese fable about a man who, in order to make his garden grow faster,

went over it and pulled his plants a little farther through the ground. He was rejoicing in his foresight only to go out into his garden the following morning to find that his plants were dead.

Racial reforms must be stimulated with the tempo of statesmanship. But reform stimulated by demagogery can only cause the gardener to go out into his garden and find his plants wilted.

America in the middle of the last century became embroiled in national hysteria which forced a civil war upon our people. More than a million men were killed or wounded. And with what result? For nearly three-quarters of a century misery and despair was heaped upon our Negro people and the white people of the South, where our Negroes were concentrated, were too economically and spiritually prostrate to help them. Had the tender plants not been pulled farther out of the soil peaceful emancipation would have been achieved just as it was achieved without war in every other Caucasion country in the world.

Today we are again pulling the plants a little farther out of the soil. Today America is evincing the same emotional turbulance, the same explosive passions, the same stubborn refusal to be realistic that characterized our country on the eve of our tragic civil conflict.

I reluctantly use the term demogagoguery. It is not a cordial word. It does not win friends and influence people. I do not want to make a volatile question more volatile.

But how can we escape the ugly truth of demagoguery as a dominant factor involved today in racial reform? Both major parties fear the Negro vote. Many political leaders publicly talk about racial idealism and in private admit the existence of influencing realities which they steadfastly refuse to mention in public. Surely Methodism does not share this political fear.

No subject yields to the art of demagogery with greater dynamic impact than does this problem. Despite the friendship which exists between the members of different races no subject can stimulate more intense hatred. Involved in politics the racial problem creates sectional difference. There are extremists in the North as well as in the South. Because of the extremists' views and the propaganda used in expressing their views, there is in progress what is tantamount to a campaign of hate against the South. In retaliation there are some people who hold the North in contempt. This is not in keeping with the pattern of Christian evangelism nor the concept of American patriotism.

The pointed question in this meeting is, How does Methodism fit into this picture? Shall Methodists adopt a policy of collaborating in campaigns of deep emotional vigor, or shall Methodists seek the Christian solution through better understanding and enlarged good will?

Methodism has the opportunity of upholding the rights of men, the dignity of the individual, the improvement of human relations, and escape from the status quo, without becoming a part of the current political confusion.

It has been said that no individual is inferior except when he neglects his resources. In this spirit no person need feel that his finer sensibilities are involved when I refer to the cultural lag in which the Negro race is emerging. This is not the fault of the Negro race. The white man once roamed the plains of Europe—as much a primitive man as was the Negro when he lived in the wilderness of Africa. The difference is historical. Neither determined his environment nor his period of history. But both races must push upward through the acceptance of self-imposed discipline. Without self-imposed discipline there can be no civilization.

This cultural lag is the essence of the realities which impregnate the racial crisis. To ignore this cultural lag is to stubbornly refuse to understand the problem. I insist that it is not an un-Christian offense but a Christian obligation to study the realism of this crisis. To ignore the realities is to further complicate the crisis and to postpone its solution. The best interests of the Negro as well as the white person is involved in an understanding of the realities while earnestly seeking to advance the related idealism.

In the South today our people are building Negro schools—excellent Negro schools. The purpose is to give every Negro child the identical educational facilities that are provided to white children.

In the communities of America where there is a large percentage of both races, two things are going to happen:

First, there will be some communities with large numbers of white and colored children where exuberant integrationist leaders, feeling the first full flush of legal victory, will demand complete integration and attain it. In such a school a monument will be erected to the success or failure of integrated schools.

Second, in some communities where the Negro and white children are nearly equally divided, where well-paid teachers and good schools will be provided for each race, separate schools will be operated. It should be borne in mind that equal but separate schools are not unlawful where both races prefer to work separately—each maintaining its own racial integrity. Again, a monument will be erected—to the success or failure of segregated schools.

It is the firm belief of many American people that voluntary segregation with the determined removal of discriminations, is superior to compulsory integration with less assurance of removing discriminations, plus a vast potential for the creation of increased racial hate and strife.

It should be pointed out here that the United States Supreme Court has not ruled that equal but separate schools are illegal where the people voluntarily accept the plan.

The South today—despite the repeated headlines given to isolated stories stemming from extremist views—a valiant effort is being made to improve the status of our Negro people. Enlightened leadership opposes the status quo. Dynamic planning calls for the enlargement of Negro education—to give the Negro boys and girls the same facilities which are given to the white boys and girls.

Despite the criticism aimed at the South where most of our Negro population is concentrated, the Negro has made greater progress—has gone faster and further than any race of people in the history of mankind. This progress has been achieved with the cooperation of millions of white people of the South during a period when the white people themselves were extremely handicapped.

In Providence, R. I., a few years ago, I was interrupted while making a talk before the National Editorial Association.

"Do you have the dual system of education?" asked a member of the audience.

"Yes," I replied.

"How do you justify it in good conscience?" asked the inquirer.

"From what State are you?" I asked.

"New Hampshire," he replied.

"How many Negro college presidents do you have in New Hampshire?" I asked.

"None," he replied.

"We have 10," I said, and added. "They are respected men holding positions of influence and prestige. But if we pursued your policy, we, too, could say that we have no Negro college presidents."

America stands to lose much if the advocates of complete integration are successful in their campaign. Unfortunately anyone who opposes the integrationists is placed in the category of the unidealistic. It is forgotten that men who favor equal but separate facilities for educating our youth can also be backed by Christian idealism. There is no finer example of idealism in history than that ideal that supports the concept of racial integrity.

Too often the suggestion of a cultural lag is greeted with denunciation and abuse. This should not be so. We can be humanitarian and academic at the same time. After all, what is wrong in suggesting that the masses of our Negro people should be brought to a higher level? And who can be so lacking in academic perception as to deny the truth of this need? This is the avenue to greater race recognition, greater race dignity, and greater race opportunity.

There is nothing wrong in suggesting that Negro people be permitted to build their own traditions. What finer example of individual dignity can be found than in the life of Dr. George Washington Carver. He built it with his own people and made the Negro race and the world richer in so doing.

Political demagoguery, capitalizing upon discontent, has sought to make a whipping boy out of the South. What the people of other areas must know is that the South is interested in seeing the Negro race improved. Race delinquency has long kept the South from achieving greater cultural and economic gain.

It was a Negro who said, "I will not let any man drag me so low as to cause me to hate him." Here is a philosophy presented by a Negro which should dominate the realm of race relations.

The church knows that conscience cannot be forced. Congress knows that it cannot legislate a better race, white or black. Experience teaches us that more intimate race relations do not create better race relations. History teaches us that race problems are not solved overnight; they are doggedly persistent, almost eternal.

The northern viewpoint wagers that the more intimate the contacts between the races the greater will be the resultant racial peace and harmony.

The southern viewpoint holds that racial justice can be attained without this intimate race contact—and that persistence in attaining intimate race relationship will inevitably lead to disaster.

History suggests that the greatest test which God gave to man was the test of race relations. When all is said and done, the answer must be found within the individual Christian heart—the Christian heart of the white man and the Christian heart of the Negro. Any program which arouses hate violates this required objective—and invites failure.

What It Means to Me To Vote

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 25, 1957

Mr. KEATING. Mr. Speaker, I had the pleasure this morning to meet a young man about whom I have heard many fine reports. He is Herbert Wabnitz, Jr., of 143 Yorkshire Road, in Irondequoit, N. Y. Last fall Herb won a get-out-the-vote contest sponsored by the Monroe County Youth for Eisenhower, by obtaining the signatures of more than 300 persons on pledges to register and vote on November 6.

By winning that contest he became eligible for the statewide essay competition on the importance of voting. His fine essay was judged winner of the State contest and as his prize he won the trip which brought him to Washington this week.

I am extremely pleased to insert, under leave previously granted, Herb Wabnitz' prize-winning essay.

The essay follows:

WHAT IT MEANS TO ME TO VOTE

(By Herbert Wabnitz, Jr.)

To vote is the privilege and duty to which I was born. It is an honor to have a voice in the great democracy for which our forefathers fought and died, which provides that no matter what my race, creed, or color, I may choose my party in freedom without coercion or force. Whether I am rich or poor, educated to the highest degree or only to a preliminary diploma, I have equal right to vote. This is what voting means to me. With the grace of God may it continue to be my privilege and duty.

Over the Brink

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1957

Mr. MULTER. Mr. Speaker, I have referred to Mr. Dulles as being many things, but I have never referred to him as a gambler. Is this one title I missed?

The following editorial, which appeared in the Washington Post and Times Herald of April 2, 1957, makes most interesting reading:

OVER THE BRINK

Just when you begin to think that Mr. Dulles has moderated his brinkmanship, along comes another article or book based on conversations with the Secretary of State to prove you wrong. There are many passages in John Robinson Beal's adoring biography, John Foster Dulles, that will cause heated controversy and indignation through the free world; but the most provocative is the assertion that Mr. Dulles carefully planned the manner in which last summer he withdrew the offer to help Egypt build the Aswan Dam. As Mr. Beal describes the situation, "It was necessary to call Russia's hand in the game of economic competition. * * * Nasser combined the right timing, the right geography, and the right order of magnitude for a truly major gambit in the cold war."

This is a shocking indictment, although Mr. Beal patently did not intend it as such. Communist arms going to Egypt in large quantities, and an increasing number of antiwestern moves on the part of Colonel Nasser, made the decision to withdraw the aid offer logical enough in itself. Yet up until recently the general assumption had been that Mr. Dulles' insult to Nasser in his conversation with the Egyptian Ambassador was more or less accidental, and that the Egyptian reaction was not anticipated. The British, for example, knew of and supported the decision to cancel the offer; they understood, however, that the dam project would merely be indefinitely postponed.

But no. According to Mr. Beal, "Since the issue involved more than simply denying Nasser money for a dam, a polite and concealed rebuff would fail to make the really important point. It had to be forthright, carrying its own built-in moral for neutrals in a way that the ormolu of applied propaganda would not cheapen. As a calculated risk the decision was on a grand scale, comparable to the calculated risks of war taken in Korea and Formosa."

It is of course always possible that Mr. Beal overstates the case, if not as to the facts, at least as to motivations (no one would quarrel with the basic judgment that Nasser was intractable). Nevertheless, the account squares with a recent speech by C. D. Jackson, also of Time and Life and a former White House special assistant. It fits into the pattern of Mr. Dulles' three other brinks in Korea, Indochina, and Formosa. Mr. Beal adds a significant footnote to Formosa policy by telling of a hitherto secret letter from President Eisenhower to Chiang Kai-shek "satisfying him that the United States would help defend Quemoy and Matsu"—a tacit commitment in which Congress ought to be intensely interested.

All of this serves to paint Mr. Dulles as the most reckless sort of gambler. Always before it has been possible to regard the Aswan-Suez episode as an accident. Now Mr. Dulles is portrayed as the champion of purposeful irresponsibility, the inventor of the calculated blunder. The tale places on Mr. Dulles an additional share of the blame, not only for Nasser's nationalisation of the Suez Canal Co., but also for the increasing desperation in Britain and France, the Suez invasion and the drastic erosion of Western interests.

It is hard to believe that Mr. Dulles could be so totally Machiavellian. But he will have a difficult time climbing out of this hole; and there will properly be increasing demands for a white paper on the whole story of relations with Nasser. If the Beal account is correct, is it any wonder that Mr. Dulles is mistrusted abroad?

Civil Rights Versus Natural Rights

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, legislation relating to so-called civil rights will soon be considered by this body. Under leave to extend my remarks I am including an important article by Mr. Frank Chodorov entitled "Civil Rights Versus Natural Rights," which appeared in the March 30 issue of Human Events.

CIVIL RIGHTS VERSUS NATURAL RIGHTS

(By Frank Chodorov)

Congress is big with a litter of civil rights bills. Activity in the two Committees on the Judiciary indicates that both Houses will soon be in labor pains. Unless public clamor or parliamentary maneuverings result in miscarriages, some of these pups will be inflicted on the public during the present session.

There is nothing in the purposes of these rights bill that bears more than a wordy resemblance to the American doctrine of natural rights or to the constitutional Bill of Rights. Whatever comes out of Congress on this subject is likely to partake of centralism, which has long been the single greatest domestic threat to freedom.

The titles of these bills are misleading, perhaps designedly so, since they hint at some relation to the Declaration of Independence and bear a semantic reference to the Bill of Rights. But this is the old trick of using prestige words to make collectivist poison palatable. Before we take a swallow, we would do well to brush up on the indigenous American tradition of rights; it will then be seen that the words "civil" and "rights" on the labels of these bills are merely patent medicine words.

The American doctrine holds that men "are endowed by their Creator with certain unalienable rights." To be sure, the idea did not originate with Jefferson, for we find traces of it in the writings of the Stoics of ancient Greece, and it is indeed the political phrasing of the Christian doctrine of individual dignity. But, though the idea is of ancient vintage, the organization of the United States was the first attempt in history to found a nation on it. Though the Declaration of Independence is not the law of the land, and "unalienable rights" does not appear in the Constitution, the deliberations of the Founding Fathers were bounded by that frame of thought, and to this day, despite twistifications, it is the context of American polity. "I have a right," is the immediate reaction of every American who comes into conflict with authority, and legislators are under constant obligation to square their official acts with this tradition. Unless the rights of the people appears or is implied in the preamble of a proposed law, it will not swallow well.

Now, we must never forget that the concept does not ascribe authority for these rights to the Government. They inhere in the individual by virtue of his existence and come with him when he is born. Government is instituted for the sole purpose of preventing a person (or a gang of persons, even a majority) from invading the rights of any person or persons coming under its protection. That is, the Government is a policeman only, having no other competence in the field of rights.

Above all—and here is the essence of Americanism—the Government is itself enjoined by this concept from using its monopoly of power to invade the God-given rights of the individual. To pin down this injunction, the Bill of Rights was put into the Constitution. As every schoolboy should know, the bill tells the Government "this is what you must not do."

What are these "unalienable rights"? The Declaration says that "among these are the right to life, liberty, and the pursuit of happiness." John Locke, with whose writings the Founding Fathers were quite familiar, made it "life, liberty, and property." The Declaration is simply more extensive; unless a man is free to own and enjoy the product of his efforts, he has no liberty and his pursuit of happiness is delimited; a slave has no right to property.

Let us now consider the purport of the civil-rights bills in relation to this enumeration of natural rights.

First, nothing is said in the latter about the right to vote; it would be difficult to maintain that participation in government is a prerogative that stems from God, and the Founding Fathers certainly did not so hold. Suffrage is a human convention, the rules of which are fixed by the majority. As a preventive for majority arrogance or ruthlessness, the Founding Fathers made the business of suffrage a local matter as far as feasible; each State made its own rules. In the beginning, all the States attached property qualifications to the voting privilege, and it was not until the modern era that women were allowed to vote. Even now there is an age qualification; also, aliens residing in the country, even though they must pay taxes and obey the laws, are not included in the electorate. Conviction of a crime automatically abrogates the voting privilege. Thus, suffrage is a concession, not a natural right.

By no stretch of the imagination can it be said that social equality is a natural right. In fact, one who so maintains inferentially denies the right of the individual to pursue happiness in the way he sees fit. Companionship is undoubtedly an essential ingredinent of happiness, but only if it is congenial, and that is a matter of individual discrimination. A prudish woman would find little joy in being compelled to fraternize with a woman of light morals, a man of literary tastes would find no contentment in the company of illiterates—particularly if he had no choice in the matter. Association without discrimination is the rule of the prison, which is no place for pursuing happiness. A law which prescribes social integration, on any score, transgresses a natural right of man.

The energumens of civil rights are dead set against discriminatory practices on the grounds of race or religion in the hiring of employees. However, they find nothing wrong with laws that enable unions to exclude from employment those workers who do not wish to belong to them. One kind of discrimination is wrong, the other is right. Yet, the fact is that discrimination in the selection of business associates is a matter of conscience and convenience, a natural prerogative, and not within the scope of the law. If an employer prefers an incompetent worker to a competent one, for any reason, he may be acting foolishly, as the market will shortly inform him, but he does not violate a natural right; the worker cannot derive from his kinship to God any claim to a particular job. Likewise, the worker who refuses to work alongside another, for any reason, is pursuing happiness in his own peculiar way. Wherein in the nature of things is it writ that an atheist may demand employment in a religious publishing house?

In one respect, the civil-rights bills now pending do pay homage to natural rights; it is in a provision that some of them contain outlawing lynching. Lynching is murder, which is not only in violation of natural rights, but is also in violation of statutes now on the books. Why this new concern with lynching, a form of homicide far less prevalent than love murders? The answer to this question lies in the enforcement clause that appears in various forms in all of these bills; it puts apprehension and punishment in the hands of Federal, rather than local, authorities, not only for lynching but also for violation of any of the proposed civil-rights laws.

The title of one of these bills reveals the purpose of those pushing for their enactment. It reads: "To protect the civil rights of individuals by establishing a Commission of Civil Rights in the executive branch of Government, a Civil Rights Division in the Department of Justice, a Joint Congressional Committee on Civil Rights, to strengthen the criminal laws protecting the civil rights of individuals, and for other purposes."

There we have the real motive of the agitation. The concern of the agitators is not in what is called civil rights but in the further strengthening of the Federal Government, the establishment of another powerful bureaucracy, the putting of another club in the hands of a national police. The title of another of these bills makes this point clear: "To declare certain rights of all persons within the jurisdiction of the United States." That is to say, the citizen is to be deprived of the protection of his local government, over which he has some measure of control, and placed under the jurisdiction of a government less amenable to his inclinations. If he violates any provision of the civil rights legislation—even though in pursuance of his natural rights—he will be subject to arrest by Federal police and punishment by a Federal court; local sentiment, operating through a jury of peers, will not protect him. Civil rights, therefore, becames a vehicle for that concentration of power which the Bill of Rights specifically prohibits, and for the further downgrading of the authority of the States.

Speaking on one of these bills, Representative WILLIAM E. MILLER, Republican, of New York, said: "This bill in its present form gives no right, no privilege, no benefit to a single individual in the United States that he does not already have. But what does it do? It creates a commission with authority to subpena us any place, to Washington, California, or Texas, and hold us under subpena at our own expense interminably. On what? Some allegation perhaps that I am exerting unwarranted economic pressure on somebody. Who? The corner grocer who alleges that I do not trade with him and get my friends not to trade with him because he is a Jew or a Catholic."

The bill in question, illustrative of the entire batch of bills, gives the Attorney General authority to hale into court a State official who, in performance of his duties, enforces local voting laws, whether in respect to literacy requirements, residential requirements, or whatnot. It makes it possible for the proposed Commission to drag a man away from his home to a distant court, on its own whim or on a charge made by an unnamed neighbor, for examination of the secret thoughts of his heart or of his secret opinion. Furthermore—and here we see how the proponents of civil rights think—it provides that the Commission may utilize the services of volunteers in the detection of violators of its decrees; thus it opens the door for that malicious snooping on neighbors and relatives that characterized nazism and is encountered in communistic countries. What would prevent the Commission from offering a fee for information leading to prosecution? And would not the morally deficient collectivists be the most willing volunteers?

The target for this crop of civil-rights laws is the South where the impact of the infamous reconstruction has left its mark in legal disabilities imposed on the Negro. The same racial prejudice is present in the North, but is more subtly expressed, as, for instance, the exodus of whites from Manhattan and Brooklyn to the suburbs of New York, leaving large residential districts in these two boroughs in possession of Negroes and Puerto Ricans. But in the South there are laws, and laws are more vulnerable to attack than social customs and habits of mind. The reason for selecting the anti-Negro laws of the South is purely political: the Negro vote is at stake.

If the truth were known, it would show that many of the Congressmen plugging for these laws on humanitarian grounds do not practice what they preach. In Washington, where Negroes constitute 35 percent of the adult population and 70 percent of the school population, these Congressmen move away from neighborhoods as the Negroes move in. They make sure that their children are educated either in public schools where Negroes constitute only 1 or 2 percent of the student body, or else in private schools, which, though they do not discriminate against Negroes, are financially out of their reach. Except in political clubs, neither legislators nor their wives socialize with Negroes. Their enthusiasm for civil rights is in proportion to the number of Negro voters in their respective districts.

The civil rights bills, if enacted, will not accomplish the purposes ascribed to them. More likely, the prejudice which the years have been gradually eroding will be revived and exacerbated by this attempt to make people good by law. The difficulties of enforcement will in short order give these laws nothing but a nuisance value for the purposes of professional do-gooders and determined collectivists. The politicians who are now urging these laws will lose interest in them as soon as the primary purpose, the capturing of the Negro vote, shall have been accomplished.

One more thing will remain. That is the accretion of power in the Central Government. The bureaucracy will be enlarged, and to insure itself of an improvement of its perquisites and an expansion of its prerogatives it will find reason for widening the provisions of the laws by interpretation. For instance, there is some agitation at present for the abolition of college fraternities on the ground that these voluntary associations are discriminatory; the Commission could bestir itself in that direction. It could, by interpretation, justify an investigation of discriminatory practices in the handling of unemployment funds on the local level, say, the exclusion of Communists from the largess or the preference given them. Conceivably, the Commission might look into local laws putting disabilities on prostitutes. And so on.

The issue involved is not North versus South. Basically, it is constitutional government versus government by commission. It is civil rights versus natural rights.

Let's Look at Russia Honestly

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 4, 1957

Mr. FEIGHAN. Mr. Speaker, the Russian problem is an important one to the people of the United States. It causes the American taxpayers to pay out about $40 billion per year for programs calculated to build and maintain an international security system to defeat the Russian imperialists. It is also important because the present-day Russian Empire is the graveyard of once free and independent nations—many of which aspired to associate their destiny with that of the United States. Finally, we seek a solution to the Russian problem in order to restore freedom and dignity to millions and millions of people enslaved and exploited by communism—the new whip of Russian despotism.

Before we can resolve the Russian problem, we must first understand it. To understand it we must strip away the many layers of Russian and Communist propaganda which have concealed the very core of this urgent problem. To look at Russia honestly—and dispassionately—we must use the eyes of competent and proven scholars and statesmen from the nations now enslaved within the Russian Empire. One such scholar is Reuben Darbinian, who served as Minister of Justice for the Independent Armenian Republic of 1918–21 and served in that capacity with distinction until the Russians, by concerted acts of subversion, infiltration, and military aggression, destroyed that independent Republic. Dr. Darbinian understands the Russian problem and takes an honest look at it in the spring 1957 issue of Armenian Review. His article entitled "The Great-Russian and the Communist Movement," is a penetrating analysis of how some Americans have been so taken in by Russian propaganda propaganda that it is impossible for them to really

understand the power behind the conspiracy of communism. Under leave obtained, I include the article on the Great-Russian and the Communist Movement:

THE GREAT-RUSSIAN AND THE COMMUNIST MOVEMENT

(By Reuben Darbinian)

A FUNDAMENTAL DISTINCTION

The Great-Russians, or the Velikorussians, as they call themselves, constitute less than half of the population of the Soviet Union, and yet they, as well as many westerners, have persisted in dubbing the non-Russian nationalities of the Union as minorities.

Few are not the westerners, especially the Americans, who think the population of the Soviet Union is the same kind of conglomeration as the population of the United States, and by the same logic, the so-called Republics of the Soviet Union, from the population viewpoint, present a phenomenon which is analogous to the 48 States of the United States. The presumption is, since the population of the 48 States present no radical differences nationally, and since they all speak the English language, America is comparable to the peoples of the 15 Republics of the Soviet Union. This fallacious analogy places the Soviet Republics in the same category as the American States.

In reality, however, the 15 Republics of the Soviet Union are totally unlike the 48 States of the American Union because the overwhelming majority of each of these Republics speak different languages and constitute different nationalities.

In Soviet Armenia, for instance, the overwhelming majority of the people are Armenians and the dominant language is the Armenian. The same is true of Georgia, where the dominant element and the spoken language is Georgian. In Soviet Azerbaijan the dominant element are the Tartars and the spoken language is a Turkish dialect. This is also true of Ukrainia and the rest of the so-called Soviet Republics.

As seen, every one of the so-called non-Russian minorities of the Soviet Union, within its own frontiers, is in reality a majority, therefore, it is both wrong and a rank injustice to call them minorities, especially when we consider that, in their totality, they outnumber the Great-Russians.

After establishing this basic, indisputable fact, it might correctly be observed that the Soviet Union also includes minorities in the accepted sense such as prevail in the United States and other western countries. Each of the 15 Republics of the Soviet Union has its own minorities.

In Soviet Armenia, alongside the native majority, live Turkish and Russian minorities; Georgia has Armenian and Turkish minorities; and Azerbaijan Tartars have their Armenian and Russian minorities.

These minorities exclude those masses of people who have become minorities artificially, and through administrative or political separation have been annexed to the territory of a foreign nation, such as the Armenian province of Akhalkalak, which was unjustly annexed to Georgia, or the Armenian-populated mountainous Karabagh, which was made a part of Azerbaijan.

The real minorities in the accepted sense are those which voluntarily or by forced deportations have been planted on the territory of an alien nation and have become reconciled with living alongside the native majority. These naturally cannot have any right to political independence.

What interests us here are not debatable mass segments which have been grafted on the body politic of a foreign people, but the non-Russian nationalities of the Soviet Union which erroneously have been called minorities, notwithstanding the fact that within the frontiers of their own historical fatherlands they constitute overwhelming majorities, have merited the exalted title of Soviet Republic and, at least on paper, have even the right of seceding from the Union and forming an independent state if they so desire.

It is these nationalities which the great Russians have succeeded in branding with the derogatory name of minorities. The great Russians succeeded in this business of defamation by virtue of their armed conquest of minorities which, taken as a whole, outnumber the Russians, but taken each separately are smaller than the Russian population.

This is no reason at all, however, why this fallacious tag, outrageously forced on the non-Russian nationalities, should cause such confusion of minds as to lead men to think that these nationalities are real minorities in the commonly accepted sense, and, therefore, they have no right to aspire to political independence.

One of the most stubborn obstacles to a proper understanding of the psychology of Russia's non-Russian nationalities is the Great-Russian reluctance to reconcile themselves with the idea that these peoples who were conquered by the czars and the Soviet masters, now striving for their independence, have a perfect right to secede from mother Russia. This is most unfortunate, because any ultimate solution of the nationality problem in the Soviet Union is contingent on Great-Russian willingness, understanding, and cooperation. Secession from mother Russia the Great-Russians regard as nothing but the dismemberment of the one and indivisible Russia, an unpardonable crime.

No matter how strong the Great-Russian opposition, the dismemberment of the Soviet Union, however, is a foregone conclusion as an historical inevitability. The days of all types of imperialism are numbered and all subjugated peoples will achieve their independence sooner or later, one way or another. Already a number of peoples under English, French, and Dutch imperialism have won their independence and the rest are on the road to complete emancipation. It is only the Soviet or Russian imperialistic empire which, although having changed the form but never having denied the substance, still persists in fighting off the course of history with its huge armies. The persistence will avail the Soviet nothing. As recent events in Poland and Hungary have demonstrated, sooner or later the Soviet Empire will be forced to follow the road of all other imperialisms.

Somewhat different but partly consistent with the Great-Russian stand is the view prevalent among the anti-Communist democratic groups of Great-Russians who regard as imperialistic acquisitions only those conquests which were made after World War II—Poland, Hungary, Rumania, Bulgaria, Albania, Czechoslovakia, and Western Germany. They never regard the forced acquisitions of Armenia, Georgia, Azerbaijan, Ukrainia, Byelorussia, and the Transcaspian countries as imperialistic conquests. They justify this preposterous stand by the absurd contention that these non-Russian republics have historically become organic and inseparable parts of Russia. Curiously enough the conquest of these peoples was no different from the conquest of the above-mentioned satellite states of Eastern Europe. The fact that the latter peoples have assimilated some elements of Russian culture in no wise changes the political situation. It does not doom the subjugated peoples to eternal servitude of the Russian state. Even accepting the oft advanced parent-and-children relationship between the Great-Russians and the subjugated non-Russian nationalities, it stands to reason that, once these children have come of age, they have a perfect right to leave the paternal hearth and seek a separate life of their own.

Another attitude peculiar to the anti-Communist segment of the Great-Russians is their keen resentment whenever anyone holds the Russian people responsible for the creation of the Communist establishment. They resentfully point out, alongside the names of Lenin, Bukharin, and Rykov, such non-Russian names as Trotsky, Zinoviev, Stalin, Miasnikian, and Mikoyan. Is it not true that representatives of all nationalities of Russia took part in the Communist revolution of 1917? Why pick out, necessarily, only the Russians and not the rest?

It is quite true that Lenin's collaborators included a large number of non-Russians who, as individuals, had a great share in the Bolshevik victory. The issue here is not the responsibility of individuals, but the responsibility of peoples insofar as they can be responsible for good or bad deeds in a given country.

Approached from this angle, it is incontestible that the introduction of Soviet tyranny was the work exclusively of the Great-Russians. The Soviet evil became entrenched in Russia proper through internal conspiracy, without external aid, and even despite foreign opposition, whereas in all the rest of the non-Russian nationalities of the Czarist empire the Soviet was implanted through the intervention of the armed forces of Russia proper, i. e., through foreign intervention.

This is an irrefutable historical fact which deserves a bit more comprehensive treatment.

AN IRREFUTABLE HISTORICAL FACT

What happened in the Russian Empire when Lenin and his confederates through internal conspiracy seized the power in Petrograd and Moscow was no mere accident. Nor was it a mere accident when they were trying to consolidate their power in Russia proper—Veliko-Russia, to be precise, when they emerged victorious over the anti-Communist opposition, that all the rest of non-Russian nationalities of the empire not only refused to recognize the Soviet Government of Moscow but they went one step farther and declared their independence.

Lastly, it was no mere accident that in all the non-Russian nationality regions the domestic Communists always proved a contemptible force despite their all-out subversive activities. They not only failed to seize the power but they did not even become a serious danger to the established anti-Soviet governments of their own new republics.

It is an irrefutable fact of history that bolshevism, or communism, became entrenched exclusively in Russia proper through internal conspiracy and without outside aid, even despite foreign opposition. And while it is quite true that the majority of Great-Russians never sympathized with bolshevism and even waged a fierce civil war against it, nevertheless, it is equally true that only in Veliko-Russia could bolshevism appeal to the masses to a sufficient degree to shatter all internal opposition.

After registering this ringing fact, it is pertinent to note that all the rest of non-Russian regions of the Russian Empire were sovietized solely by the Red armies sent from Moscow and never through the triumph of the domestic Communists, or internal conspiracy.

No one will gainsay the fact that, quite naturally, there were many non-Russians who assisted in the Bolshevik conquest of Russia proper. But who can deny also that there were many foreigners and Russians who collaborated with the domestic Communist conspirators in the non-Russian regions? And while this riffraff of Russians and non-Russians succeeded in creating a formidable force in Russia proper which enabled them to seize the power, in the non-Russian nationality regions the same kind of riffraff did

not get to first base without outside aid, namely, the Russian Red armies.

Indicative of the non-Russian peoples' disposition toward the Soviet is a characteristic incident. When Lenin seized the power in Moscow, he appointed his friend, the well-known Armenian Communist Stepan Shahoumian as "Viceroy" of Transcaucasus. Shahoumian met with such hostility in Tiflis, the capital of the Transcaucasian government consisting of the Armenians, the Azeri and the Georgians, that he was forced to flee Tiflis to avoid arrest.

Again, during the May uprising of the Communists in Armenia in 1920, the conspirators were easily defeated by the people of Armenia. Similar attempts to overthrow the governments were tried in all the non-Russian-nationality countries of the Soviet Union but everywhere the conspirators miserably failed. It was after these failures that the Soviet Government in Moscow mobilized its armies and conquered these independent countries one by one.

The fact is, the 14 non-Russian republics of the Soviet Union were conquered by Moscow precisely in the same manner as the satellite countries were conquered by the Soviet after World War II. Poland, Hungary, Rumania, Bulgaria, Albania, and Eastern Germany were conquered outright; Czechoslovakia was sovietized by the mere threat of the Red army in 1948; and the Baltic States of Latvia, Lithuania, and Estonia were annexed without any ceremonies, even though they had enjoyed an independent life over 20 years and they had shown no disposition to join the Soviet Union.

Curiously enough, even the greatest exponents of western democracy among the Great-Russians make a fine distinction between the Soviet satellites and the non-Russian nationalities which had been incorporated by the Czars and their Soviet successors. They are reluctant to accord the same right to the latter through various facetious arguments. In reality there is no basic difference either in the form of their conquests or their aspirations to a separate, independent national life.

There can be no doubt that the Great-Russian people itself is a victim of the Soviet tyranny, and we might say the first victim. On the other hand it cannot be gainsaid that, unfortunately, it has also become the tool of the same tyranny in its imperialistic ambitions and in the enslavement of countless non-Russian peoples.

Another curious aspect of Great-Russian mentality is their emphasis on what might be interpreted as Russian chauvinism. In all the republics and the satellites of the Soviet Empire it is only Russia proper, or Veliko-Russia, whose nationalistic vanity or great state ambitions have received and are receiving satisfaction from the conquests of Soviet tyranny. Only in Veliko-Russia can communism be tolerated as a means of the preservation and the extension of extreme Russian chauvinism, whereas in the satellite and subjugated countries communism not only does not serve as nationalism in disguise but it is an alien force imposed from the outside, diametrically opposed to the national sentiments of these peoples.

It is safe to say that either in the satellite countries or the 14 non-Russian republics of the Soviet Union the Soviet power will not last 24 hours once the Red armies depart from their frontiers or the Soviet tyranny in Moscow is overthrown.

In other words the governments of these countries are plain puppets, therefore it is meaningless to wage war against them without waging war against their masters who are entrenched in Moscow and are held in power mainly through the support of the Great-Russian people. The recent developments in Eastern Germany, in Poland and Hungary have clearly proved that until the Soviet power is overthrown in Moscow or Veliko-Russia, no Soviet-enslaved nation can breathe freely and recover its lost independence.

The struggles of these enslaved peoples cannot be waged successfully in isolated effort. A united effort is necessary to overthrow the Soviet tyranny.

The question is, What really is the Soviet tyranny? What sort of imperialistic power is the Soviet? Is it the Communist international which threatens the peace of the world today? Or is it another sort of power which, under the guise of communism, has been entrenched in Moscow and which, with its armies and its gangs of arsonists, threatens to engulf the whole of mankind?

COMMUNISM OR GREAT RUSSIAN NATIONALISM?

From the days Stalin exterminated Lenin's collaborators and all the old Bolsheviks who posed as a menace to his personal dictatorship, communism, as an internationally ideological social movement ceased to exist as far as the Soviet Union was concerned.

Indeed, what sort of ideological movement could linger in a land where even the Communists could not give free expression to their honest convictions, where every man, to save his skin, was forced to conform to the commands of the dictator under penalty of death, and where, lastly, no one could be sure of even a brief and barely tolerable life for himself and his family without simulating enthusiastic zeal for everything which the dictator said and did? In the world of Stalin's creation it was not honest conviction but the motive of fear, gain, personal safety, and the possibility of a career only which drove men into the lap of the reigning Communist Party.

This fact became obvious during World War II when Stalin set aside his Communist slogans which he well knew could never appeal to the human heart and promulgated patriotic slogans and aims which spoke to all hearts. Once again it was eloquently demonstrated in Hungary where the Communist Party, with a membership of 900,000, literally melted away during the first few days of the popular uprising.

Nevertheless it is noteworthy that, after the experiment of World War II, Stalin saw fit to return to his bankrupt communism which had become perfectly odious to the people and to retain it as the official religion of the Soviet Government. He did this not because he wanted to establish communism as his primary aim but because its retention was felt necessary as the only instrument for the realization of objectives which had no connection whatsoever with communism.

What were these objectives?

First and foremost, there was the matter of the preservation of the Soviet dictatorship at any price. At least for Stalin there was no higher objective than the security of his personal dictatorship for the sake of which he did not hesitate to exterminate even the foremost apostles of communism. But Stalin realized that, to be able to justify his dictatorship, he needed a far more powerful lever than communism as such. Such a lever could easily be found only in the concept of a Great-Russian nation, clearly demonstrated during World War II when he invoked not the founders of communism—Marx, Engels, and Lenin—but the historical heroes of the Great-Russian nation, such as Dmitri-Donskoy, Minin, Pojarski, Field Marshals Suvorov and Kutuzov, and others. At the conclusion of the war at the victory celebration at the Kremlin, his historic speech was an unrestrained eulogy of the Great-Russian people which merited the main honor of the victory and which he proclaimed as the big brother of all the non-Russian nationalities of the Soviet Union.

Since the Great-Russian nation was Stalin's supreme weapon, it will be asked quite naturally why, after the war, did he not discard the hated communism and make Russian nationalism the official religion of the Soviet Union?

The answer to this question is very simple. Stalin could not have done it even if he wanted to do so. Why? Because the communism which the Bolsheviks created in Russia is such a system of political, economic, social, and spiritual enslavement that, without it, he could not have supported his total dictatorship. Besides, in the eyes of the outside world his prestige would be immeasurably enhanced through the promotion of communism rather than Russian nationalism. Only communism could have rallied around him his fifth columnists in the free west.

Needless to say, the same considerations are being utilized by Stalin's successors who are no less champions of Great-Russian nationalism both in the Soviet Union, the satellite countries, and the free world. Communism, they maintained, was ever ready for international "peaceful" cooperation. It was through this game only that Stalin's successors tried, and still try, to win over the neutrals, all the way from Tito's Yugoslavia to Nehru's India and Indonesia. The Kremlin bosses well realize that Great-Russian chauvinistic declarations would redound adversely much the same as Hitler's German chauvinism was his undoing.

Russian democratic leaders resent keenly every time Western leaders identify the Soviet imperialistic policy with czarist imperialism, interpreting it as the continuation of "Great-Russian" ambitions which basically remain unchanged, although they operate under a different name and form.

While the czars extended their empire by armed force, their successors who call themselves Communists, aside from armed force, make use of other means for the extension of their empire. Sometimes these means are even more effective than armed force, such as the economic weapon, the fifth columns, the propaganda arm, subversion, and internal penetration. And if these weapons are not wholly successful, at least they pave the way for the success of armed intervention.

Could it be that the non-Russian leaders and the journalists are wholly unjust when they consider the present Soviet imperialism as the continuation of the czarist policy? Is the Soviet imperialism of today really very different from the erstwhile Great-Russian nationalistic ambitions for expansion?

Had there been a fundamental difference between the two, after the overthrow of the czarist despotism when the non-Russian nationalities seceded from the Great-Russians and declared their independence, why then did the new government entrenched in Moscow reconquer these peoples with armed force and reanhex them to Great-Russia?

If there had been any fundamental difference between the "Great-Russia" concept and the present Soviet imperialism, why then did the Soviet Government at the close of World War II profit from the spoils of the war much the same as the czarist government assuredly would have done?

Be it remembered that the Great-Russians even lack the German excuse for their expansionist policies because few peoples on the globe command such extensive territories as Russia does. Therefore Great-Russia has no cause for casting covetous eyes on the territories of her neighbors, much less to enslave them. Even if all the non-Russian peoples who have been subjugated by the Great-Russians should secede from the empire, there will be enough territory left for Russia for her normal development. Therefore, Russia has no valid cause for holding on to the territories of the non-Russians which she has conquered by armed force,

often profiting by the use of the forces of the very nations.

CHAUVINISM IN THE GARB OF COMMUNISM

Whenever there is a question of nazism the Russian anti-Communist democrats, as well as many Western journalists, never make a sharp distinction between nazism (national socialism) and the German people as they do between bolshevism and the Russian people. They never say the German people were not responsible for the emergence of nazism. On the contrary they insist that nazism was the child of the German people, therefore the latter can never shake off the responsibility for nazism's crimes.

But when the discussion turns to bolshevism, there is a strong tendency on the part of Russians and many Westerners to absolve the Russian people of the crimes of bolshevism. It turns out that bolshevism is essentially an international phenomenon and never Russian, and this makes all the nations responsible for the crimes of communism.

This conclusion is, of course, highly superficial.

It is quite true that bolshevism under the label of communism has become an international movement with international slogans and ideology, and it is equally true that bolshevism has managed to win followers among all peoples. Nazism, on the other hand, was essentially a national movement based upon the concept of the superiority of the German race.

Nevertheless it will not be gainsaid that nazism under the name of fascism, took root in other countries as an international movement which strove to arouse in those peoples the spirit of their national excellence. Similarly bolshevism, garbed in the internationalist uniform, is essentially a chauvinistic movement which strives for the supremacy of Great Russia, with this difference that bolshevism is more cleverly disguised under the cloak of communism.

It can confidently be stated that, had communism first triumphed in any western European country, it would have been far different than the Russian bolshevism which became entrenched strictly through the means of the Russian people. In reality, the power, or the movement, which under the label of communism today threatens the peace and the freedom of entire mankind is nothing but a movement which was conceived and molded in the womb of the Russian people, and stamped with the worst characteristics of that people.

Actually bolshevism is the nazism of the Russian people, even as nazism was the bolshevism of the German people. Essentially both are the one and the same thing, differing from each other only in their ideological garb. Like nazism, bolshevism did not drop down out of a clear blue sky. As nazism took forms of varying degrees in Italy and Germany befitting the characteristics of each people, so bolshevism with its familiar attributes could have triumphed only in Russia. This circumstance in no wise detracts from the splendid qualities of the Russian people—their invaluable contributions to the arts, the sciences and literature, much the same as nazism could not obscure the contributions of the German genius in the fields of science, philosophy, music and literature.

True, communism is not a Russian concept but was born and took form as a "social science" in Western Europe. Similarly, the international Communist movement is not of Russian origin and communism took root in Russia not as a Russian movement but essentially as an international nonpatriotic, and even an antipatriotic movement.

But it is equally true that, after seizing the power the Russian leaders of communism, beginning with Lenin and especially Stalin until the present day Khrushchevs, slowly and imperceptibly became the ringleaders of Great-Russian chauvinism to whom communism is no longer an aim but a means to an end. Essentially it was this circumstance which enabled them to perpetuate their power in Russia. Essentially it was this circumstance which enabled them to emerge victorious in World War II. And it was this same circumstance which enabled them to reconquer the non-Russian nationalities which had recovered their independence on the ruins of the czarist empire.

There can be no question that, had Russian bolshevism faced the free world without a disguise and had operated as the exponent of Great-Russian imperialism, it would have made little headway in the free countries of the world in gaining followers. Unquestionably the Communist mask is a great aid in hooking countless gullibles among the non-Russians, something which German nazism was unable to accomplish because it lacked any such clever ideological masquerade.

This fact was made apparent by the inveterate hostility which Stalin and his heirs exhibited toward all national Communist movements and their leaders of the non-Russian nationalities under their control. During the last 30 years the leaders of these national Communist movements attempted to deviate from the path mapped out by Moscow in their effort to arrive at communism in their own individual ways. These attempts were made not only in the non-Russian nationality countries of the Soviet Union but in the satellite countries as well. However, they all were liquidated with the exception of Tito and his comrades and quite recently Gomulka of Poland.

If the bosses of the Kremlin were really bent on serving the interests of communism and not their Great-Russian chauvinism they would not have forced their will on the Communist governments of the non-Russians, nor would they have insisted on the teaching of the Russian language as obligatory. To men who are sincerely dedicated to the cause of communism it would have made little difference by what road or in what language the final goal is reached. The thing which would have mattered would have been loyalty to those objectives.

True, after the death of Stalin, the Khrushchevs and the Bulganins showed a more tolerant attitude toward the Titoists and even went so far as to promise to recognize the right of all nationality Communists to pursue the path of communism in their individual national way. They made substantial concessions to Gomulka in this respect. But after the uprising in Hungary, even Khrushchev who only a few months before had discredited Stalin was forced to confess that he and his comrades were firm Stalinists. As to what real Stalinism means the Central Committee of the Communist Party of China only recently gave an eloquent definition:

"Stalin in his relations with the brotherly countries showed a certain tendency to Great-Russian chauvinism. This he expressed in his denials of the independence and the equality of rank of Communist parties and Communist countries. Stalin sometimes unjustly intervened in their internal affairs—an intervention which resulted in serious consequences."

If the Communist Chinese were not vitally interested in cooperating with the present Soviet dictators they would surely have admitted that, no less than Stalin, his successors are running a Great-Russian imperialistic policy. It is highly significant that the greatest friends of Red Moscow, such as the Chinese Communists, publicly emphasize, even if indirectly, the Great-Russian chauvinism of the Soviet leaders.

It is a deplorable fact that the Russian democrats, while fiercely fighting against the Soviet dictatorship, fail to perceive the chauvinism of the Soviet leaders under their masquerade. By such an attitude they render exceedingly difficult, if not impossible, any concerted action against the common enemy, to say nothing of their indirectly encouraging chauvinism among the Russian people.

There can be no question that the Russian people itself will greatly benefit once it sheds off its imperialistic airs and retrenches itself within its ethnological frontiers; for only then will the Russian people be able to develop its innate great talents and to insure for itself a free, untroubled and autonomous national existence. Only then will Russia cease to be a menace to the freedom of neighboring nations and to the peace of the world.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

United States Foreign Policy

EXTENSION OF REMARKS
OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, April 8, 1957

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the Advertising Council at Washington, D. C., on Monday last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR MORTON'S ADDRESS BEFORE THE ADVERTISING COUNCIL

Good evening. It is a pleasure for me to have the opportunity to be here with you tonight and to be able to discuss important matters relating to the foreign policy of the United States with this group which is so intimately connected with the formation, dissemination and instrumentation of ideas and policies. Beyond this, your Advertising Council has in the past year been instrumental in the expenditure of nearly $150 million in public service advertising. You have given your time, effort and money to aid neighborhood improvement, to obtain better schools for our young, to help the Red Cross and the CARE food crusade and numerous other causes as well as special efforts in the Hungarian crisis. I understand you are attempting to increase your work this year. For your efforts and achievements I salute you—as a citizen, I thank you. No group would know better that friendship and cooperation have few borders.

As you so well know, there is no longer any question as to whether or not this country has a major and permanent role in the affairs of men. In his inspiring inaugural address last January the President of the United States clearly laid down the responsibilities of this Nation to the totality of mankind. The question is rather—how can we best conduct and discharge this obligation with honor and justice in an enlightened self interest and in the interest of all the peoples of the world?

George Washington's Farewell Address has often been quoted as a warning against what have been termed "foreign entanglements." A letter from Washington to Lafayette, dated August 15, 1786, has received consideraly less attention. In this letter Washington wrote: "As a member of an infant empire * * * and as a citizen of the great republic of humanity at large, I cannot help turning my attention sometimes to this subject * * * I cannote avoid reflecting with pleasure on the probable influence that commerce may hereafter have on human manners and society in general. On these occasions I consider how mankind may be connected, like one great family, in fraternal ties. I indulge a fond, perhaps an enthusiastic, idea that * * * the period is not very remote when the benefits of a liberal and friendly commerce will pretty generally succeed to the devastations of horrors and war." I propose, ladies and gentlemen, that this time is surely now upon us.

There has been a great deal of discussion recently about the foreign policy of the United States. Some voices have been raised in the suggestion that we have no clear foreign policy or that it is a changing one without basic cohesiveness. I suggest, rather, that we have been going through a period of evolution in world affairs and that, concomitantly, our foreign policy has been evolving in response to the new world conditions and necessities.

Historically the foreign policies of nations have been based on certain aspirations and interests—many of these have been self-interests. There have been considerations as to territory, resources, strategic position. There have been particular loyalties toward certain peoples or nations, or antipathies toward others. There have been noble motives and other motives. Indeed, the list of reasons for policies may be as long as the number of policies or alliances of all history. I do not tonight condemn these reasons or considerations but merely point them out as factors which have existed and influenced the foreign policy of many nations throughout the ages.

I do tonight come before you with the firm belief that we have reached the time when the basic underlying principle of the foreign policy of the United States has evolved and can be clearly defined. It is the principle of principle. Woodrow Wilson once said, "Let us remind ourselves that we are the custodians in some degree of the principles which have made man free."

We find ourselves in a very unique position in the history of mankind. Our birth as a nation was in itself unique. Our creation was in response to a purpose based on principle. History has thrust upon us the role of leader of the free world. This is not a role that we as a people sought or even wanted. We are faced by a militant and amoral Communist force that has as its avowed intention the enslavement of the peoples of our world. Ours is a time when nationalism has reached fervent heights in all parts of the world. We see in our time the birth of new nations—all with high hopes, many with old cultures, few with any experience in self-government or the conduct of foreign affairs. For these reasons we must have a policy which goes beyond the basis of loyalty or friendship, or of cultural, racial, or religious ties. This policy can only be based on principle.

What do I mean by policy based on principle? Any definition, in full form, would be rather broad and I shall elaborate on it throughout the course of my remarks. However, I believe that this principle which must now guide us has an essence. It means that we must strive, in our relationships with the rest of the world, to work always for that harmony, understanding and accord which will epitomize the highest and noblest aspirations, not only of our own Nation, but of the entire world. And if we feel that there are, in the American way, things of universal value which could benefit all mankind we must dedicate our efforts to helping others to adapt such of these as may be beneficial to their way of life.

We must never confuse friendship, or even leadership, with paternalism or self-righteousness. We must make it abundantly clear that our motives are honest and sincere, and we must be prepared to state them clearly.

We desire a world at peace, where all men may live according to their own cultural traditions in societies of their own choice. We want all people to possess the freedom of thought, belief, and choice to which every human being is entitled and we want for all a fuller and richer daily life. And we hope that through mutual understanding, clear expression, and dedicated effort we will all come closer together.

It has become generally accepted that the task of free world leadership has fallen to the United States. It is essential that we discharge this task with the conscience of principle. Our policies must not be based on affection for or antipathy toward any nation or people. Particular loyalties must not be allowed to overshadow the tremendous burden of principled world leadership. We cannot be permitted the indulgences that biased likes or dislikes forbode.

There will be times when public opinion at home is influenced by cultural, racial, or religious loyalties to friends abroad. At such times, although our road will be even more difficult, we must be prepared to bear the additional burden.

We recently have had just such an example. I refer to the Suez crisis, when principle forced us to take a strong stand against our traditional allies in their use of force to settle the dispute in that area. I firmly believe that our stand in this instance was just and correct. It was an example of leadership by principle. Nevertheless it shows that it is more difficult to lead by principle than by loyalty, friendship, or interest.

I am understanding of those who motivated by loyalty supported the position taken by our historic friends in the Suez matter and were sharply critical of the position taken by this country. But I point out that none of these persons or nations has the unique responsibility that rests on the United States in the troubled and explosive world of today. That responsibility is constant and must be consistent. I do not mean to imply that loyalty does not have its place in our dealings with other nations. Loyalty we admire and disloyalty we deplore. In this country and elsewhere the strongest loyalty is the family loyalty. We recognize this in our own judicial processes. We do not require husband or wife to testify one against the other. Yet in the discharge of our unique responsibility there can be only loyalty to principle. This concept does not relieve us of any commitment into which we may have entered. Certainly we will be loyal and faithful to our obligations to our many allies just as we have been in the past. However, we cannot discharge our responsibility by condoning any action taken by a member of the family of nations just because that nation happens to be a member of a friendly alliance. All actions must be measured against the yardstick of principle.

Let me again quote our illustrious first President who said in his farewell address, "It will be worthy of a free, enlightened, and, at no distant period, a great nation, to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence. * * * In the execution of such a plan, nothing is more essential than that permanent, inveterate antipathies against particular nations and passionate attachments for others, who be excluded; and that, in place of them, just and amicable feelings towards all should be cultivated. The nation which indulges toward another an habitual hatred, or an habitual fondness, is in some degree a slave.

It is a slave to its animosity or to its affection, either of which is sufficient to lead it astray from its duty and its interest. * * * The peace often, sometimes perhaps the liberty of nations, has been the victim." Once more the wisdom of Washington is clear.

This policy of principle which I have tried to describe and to illustrate by reference to George Washington was clearly put to the test by the tragic chain of events which has taken place during the past 8 months in the Middle East. In my judgment those responsible for the conduct of the United States' foreign affairs faithfully applied the measure of principle to the actions of other nations. Our reaction to this chain of events was in keeping with our own tradition of justice and our avowed purpose to achieve the settlement of such disputes by peaceful means.

In charting our course this country did not take the easy way. Principle demanded that we take the hard way and stand in firm opposition to our very closest traditional friends and allies. During these trying months we made it clear both within and without the United Nations that if our friends would abandon forceful intervention in Egypt we would undertake definite responsibilities. Now we cannot allow Colonel Nasser to think we will turn away from our responsibility just because he turns so readily from his own country's international responsibility. As a small nation and early in our history we stood up to powerful tyranny. Surely as a great nation we will now stand up to petty tyranny.

In the formation and execution of this policy based on principle we must avoid the influence of inveterate antipathies or prejudices of the past. We must be on guard against our natural tendencies to condemn the political and social systems of those who do not completely agree with us. We have a deep belief in our own form of government and political system. I share this belief. But the role of world leadership demands a willingness to work with others toward whom we may be unsympathetic or whose systems differ from our own.

This country has worked out a successful program of what has been termed person-to-person diplomacy. This means that as a nation we are willing to sit down face to face, as if man to man, to discuss agreements, disagreements and many matters of mutual concern. And yet recently a head of state who had travelled to this country for just such a talk was publicly insulted upon his arrival. At this very moment, other heads of state whose visits might prove of ultimate benefit to all peoples cannot participate in this new dynamic diplomacy for fear of similar acts of shortsightedness.

I do not wish to imply that we should spread the welcome mat for the architects of the international Communist conspiracy. Nor should we do so for those who illegally hold innocent American nationals imprisoned. I do maintain that we should be big enough to overcome prejudice in talking to those whose political system we may not approve or whose neutralist stand we may not favor.

I do not suggest that we abandon any of our traditional beliefs or standards. On the contrary, we should attempt to foster and strengthen these standards where we may. I do say we must be openminded and accept other peoples with their standards and traditions. However, I wish to state very plainly that this respect for tradition does not mean that we shall ever fail to acknowledge the natural and just desires of all people for freedom and personal dignity. And we shall never fail to recognise the validity of natural and just change and progress.

I contend that no nation has any cause to doubt such intentions on our part. We have never sought to conquer or to annex. We seek no ones territory or interests. We have such abundance that seeking is not necessary. Instead we must wish to give, not so much of substance as of those eternals which we have always held self evident. We will not hurt ourselves by so doing. In fact, we will greatly help ourselves, both practically and as men of good will.

We must seek greater intercourse with less restriction, greater clarity with faith in its return, and better understanding based on deeds and acts. And through all, our primary consideration must be, not race, not religion, not color, not similarity of culture, not propinquity, not community of interest, but principle, absolute and yet understanding, as right alone can be.

I would like to conclude by quoting a distinguished American writer whose words seem particularly appropriate: "American freedom has its being in principles which do not belong to America but to the world. Our whole evolution is based on the action of these principles, and our hope of future solutions rests upon our further ability to apply them. To withdraw is to undermine ourselves. And to define our defense in purely military terms is to deny ourselves the further development of our own free institutions.

In the last analysis, then * * * the formulation of a sound policy for America involves spiritual as well as military and economic considerations: * * * in the sense that we must continually rediscover within ourselves, and continually learn to implement, those universal human principles of which our version of freedom has been created. Without these principles we cannot hope to be free. Yet we cannot hope to understand them if we consider them exclusively our own. The isolationist cliche that America should serve her own ends exclusively has little meaning when viewed in this light. We must so frame our policies that we may discover in ourselves, as individuals, and learn to implement, that which we hold in common with all humanity.

There come times in the history of every people when destiny knocks on their door with an iron insistence. In the history of America, destiny has knocked thus three times; once when we faced the seemingly impossible odds of British power to gain our independence; once at Fort Sumter, when we faced the bloody task of preserving our Union; and it is knocking today.

It is true that on other grave occasions Americans have heard the knock of destiny. They heard it in 1917 when they sent their first expeditionary force to Europe. They heard it even more loudly in 1941, when they roused out of an isolationist lethargy to fight—again against odds—one of the most brilliant and important wars in history. Yet on neither of those occasions did the knocking have the iron clang that we hear today. In World War I, and even in World War II, a mold existed into which we could pour our vast energies. Our power—and in the second war our leadership also—was essential to victory. But it was not our task to make the mold. It was not our task to determine either the geographical contours or the moral content of the battle. That had already been done by the rest of the world.

But today, though we again have allies, though we have the United Nations, though we have access to resources all over the world, it is we who must shape the struggle; we must make the mold. That is the meaning of the iron clang. Our outlook is the same as it was at the time of the Revolution, and again at the time of the Civil War; the shape of things to come depends on us; our moral decision, our wisdom, our vision, and our will." Thank you.

Address by Republican National Chairman at Testimonial Dinner for Representative Hugh Scott, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1957

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Meade Alcorn, Republican National Chairman, at a testimonial dinner honoring Representative HUGH SCOTT, of the Sixth Pennsylvania District, and others, at Philadelphia, Pa., on April 3, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY MEADE ALCORN, REPUBLICAN NATIONAL CHAIRMAN, AT A TESTIMONIAL DINNER AT THE BELLEVUE STRATFORD HOTEL, PHILADELPHIA, PA., APRIL 3, 1957, HONORING CONGRESSMAN HUGH SCOTT, SIXTH DISTRICT; GEORGE BLOOM, PENNSYLVANIA REPUBLICAN STATE CHAIRMAN, AND CHARLES SMITH, AUDITOR GENERAL-ELECT FOR THE STATE OF PENNSYLVANIA

It's always a great pleasure to visit Pennsylvania. Through the years I have enjoyed the warmest of welomes here. When I was asked to speak at this testimonial for 3 outstanding Republicans—including 2 old friends—I told the planners of this dinner I would eagerly accept and for several reasons: I count HUGH SCOTT among my oldest friends. His outstanding service to the Republican Party—as a Congressman from the Sixth District, as Republican national chairman, and now as general counsel for the Republican National Committee—has made him one of the most respected personalities in Washington today.

I might point out right here that HUGH SCOTT is the only Republican to be elected to Congress from the great city of Philadelphia for almost 10 years. This is a tribute to his remarkable vote-getting ability and a tribute also to his record in Washington where he is known as a working Congressman.

Your State chairman, George Bloom, is a man I have known and worked with for many years. He has been a loyal and active supporter and advocate of the principles that now make our party great. I can pay him no higher tribute than to say: he is a real pro.

The third guest of honor, Charles Smith, I have had the privilege to meet for the first time today. It is apparent that the people of Pennsylvania have exercised splendid judgment in electing him to the high office of Auditor General, a post of great trust and responsibility, which I am sure he will discharge with distinction.

I am happy, not only to share in your tribute to these three fine Republicans here this evening, but I am also delighted to return to the home State of so distinguished a statesman as Senator MARTIN. His fine service to you and to the Nation is ably matched in the House by a fine group of Republican Representatives with all of whom it is my privilege to have frequent contact. Congressman SIMPSON, the chairman of the congressional campaign committee, is performing an especially noteworthy service for

the party and I enjoy a close-working relationship with him.

Pennsylvania is one of the States which offers great challenge to the Republican Party in 1957 and 1958. Over 56 percent of the voters in this State endorsed the Eisenhower Republican program in 1956. Notwithstanding that, we find a Democrat administration in the governor's office, one Democrat representing this State in the United States Senate, 13 of your 30 Representatives in the Lower House are Democrats, and this great city of Philadelphia is served by a Democrat administration. That picture presents a challenge to every Republican in this State.

The roots of Republican philosophy run deep in Pennsylvania. The long history of Republican achievements here should make it easier in meeting the challenge in 1957 and 1958—because instead of attempting to change the voting habits or patterns of generations you will be seeking to return to the voting habits and patterns which made this State a fortress of Republicanism.

Your State chairman has already demonstrated the kind of vigorous, inspired leadership which the campaigns of 1957 and 1958 require. His recent telegram to party officials was a stirring call to action. If the Republicans of Pennsylvania heed that call and follow that kind of leadership we are entitled to expect victory at the polls in 1957 and 1958.

The election returns of November 6, 1956, have been characterized as something less than a complete victory for the Republican Party. While President Eisenhower and Vice President NIXON carried 41 of the 43 States and amassed the staggering plurality of 9½ million votes, our party failed to elect a Republican majority in either the Senate or the House. That latter fact has at times attained such prominence in the thinking of some people as to lead them to believe that we "lost" the 1956 election.

Let's take a look at that for just a moment. It is reliably reported that the research department at Democratic National Committee headquarters recently concluded that there had been an alarming decline in their party's strength throughout the country, principally in the large cities and in the South. Their survey, it is said, disclosed that the percentage of the two-party vote polled by the Democrat Party was in fact less than they received in the congressional elections of 1954. To add further to Democrat National Chairman Butler's distress, the survey is said to have shown that the 24 States where Democrats won congressional majorities reflect a total electoral vote of only 242, which is not enough to achieve a victory in a presidential race. If these figures mean anything, they do mean a continuing marked decline in Democrat strength. But they also contain a sober lesson for us for they indicate that 51 seats in the House of Representatives were captured by Democrats by a margin of less than 5 percent of the vote cast for Congress in those districts. Those figures point up the distressing fact that we have been losing seats in the Senate and in the House which, with a little more aggressiveness a little more ingenuity and a little more work, we could have won. We can't afford to repeat those mistakes—and from what I learn about the preparations being made here it appears that you are going to put on a campaign of unprecedented intensity in 1957 and 1958.

I hope the series of regional Republican conferences which we have planned—including one in Trenton, N. J., on May 24 and 25 which Republican officials from this State will attend—will prove to be a big help in the campaigns that lie ahead.

I know that election campaigns for county offices might not be as exciting as a presidential campaign. But winning the battle of the courthouse is every bit as important as winning elections for governor or Congress. Victories this year for Republican candidates in local elections will lay the groundwork for the bigger victories which we are working for in 1958.

Pennsylvania's State government is bogged down in Democrat ineptness, inefficiency, fumbling, and foundering. Governor Leader's pitiful record presents the Republican Party with one of its biggest opportunities in 1958. The people of Pennsylvania have found through bitter trial that a Democrat governor is an expensive luxury. I know that George Bloom and the rest of Pennsylvania's Republican leadership are planning to offer the people of Pennsylvania candidates who stand for efficiency, economy, and sound Republican principles that have made this State the great State it is today.

I want to take a few minutes to explode the old hoax that there is no real difference between the two major national parties.

The Democrat Party as it is constituted today—indeed as it has been constituted since 1932—call it the New Deal or Fair Deal—is the party which stands for bureaucracy, centralization of power in Washington, big government. It is the party which has demonstrated repeatedly an inability to keep us out of war. It is the party which not only practices deficit financing but appears actually to believe in it. It is the party which coddled Communists. It is the party which provided the unhealthy climate in which corruption, five-percenters, mink coaters and all their ilk were bred and flourished. It is the party under which the dignity and prestige of the White House deteriorated to an alltime low. It is the party which talked more and did less about civil rights than any party in our history. It is the party which by its repeated acts showed either contempt or condescension for the decency and worth of the individual. I could go on and on—and so could you—identifying the Democrat Party, its New Deal or its Fair Deal, as the very antithesis of everything in which you and I believe.

But what does the Republican Party stand for? You believe, and I believe that the best government is the least government, that political power should be kept close to the people; that centralization of power in Washington with its bureaucracy and redtape are fundamentally bad; that a government, like a family, must live within its means to be truly prosperous; that prosperity can be maintained without war; that the people's affairs can be administered by a government without trampling on individual liberties and that they must be administered without impairing the dignity and worth of the individual. These are some of the things that you and I believe in. Because we believe these things we believe the Republican Party is the best instrument known to man for the government of a free people. Now, when we consider what the Democrat Party stands for, is it fair to utter such a preposterous comment as the one I received in that letter? Of course not. The chasm which separates the Democrat Party from the Republican Party is wide and impassable.

The Republican Party—indeed even the Democrat Party—is alive today with discussion about what the Republican Party stands for, where it is headed.

What does "Modern Republicanism" mean? There is a lot of talk about "Modern Republicanism." I think that is a healthy and worthwhile condition. The self-examination which we are today undergoing is one of the surest signs of the vigor and vitality of which the party is possessed. Let's not discourage it. The great progress we have made as a party is the result of reasoned compromise among conflicting opinions. I have several times said I believe it is easier to describe than it is to define. It seems to me it can be described as the belief in and adherence to all of those traditional principles which have made our party great, but with one important added ingredient—a sense of mission. "Modern Republicanism" is a crusading Republicanism. Whether we call it by that or any other name it is essentially traditional Republicanism with a sense of mission. Perhaps one can describe it by visualizing two Republicans sitting side by side on the porch. One is rocking contentedly back and forth in his chair saying to himself, "I am a Republican, and I believe in all the things that make our party great."

The other is sitting alertly on the edge of his chair and is saying to himself, "I am a Republican, and I believe in all the things that make our party great, and I am going to do something about it. I am going to put those principles and those beliefs to work. I am going to make them live and move and do things that keep our country strong and prosperous and at peace." It is the latter kind of Republican—Republicans with a sense of mission, with a sense of urgency to meet and solve the problems of today, that I visualize as the "Modern Republican" we have heard so much about. If that be so, every person here is that kind of Republican whether you call him modern, liberal, crusading, or what have you, for we are today a party of action. We are today a party alert and sensitive and responsive to the needs of the people and fully equipped to meet and solve those needs. We are solving them and can continue to solve them without surrendering or retreating from any of the fundamental political beliefs which have made the Republican Party great.

Of course there are differences of opinion within our party respecting the manner in which we should achieve the ends the people have set for us. But our points of agreement as Republicans are more numerous and more important than our points of disagreement. On the other hand, in the Democrat Party the points of disagreement are more numerous and more important than the points of agreement. The Democrat Party is torn with inner dissensions, with bitter sectional differences and with utterly irreconcilable philosophical divisions. The Democrat Party is today a loose confederation of politicians held together by no deep-rooted political philosophy but by a common, desperate desire to exercise power. They are groping to find an issue on which they can go to the voters in 1958. The Republican Party, on the other hand, is today strong, vigorous, and united under the dedicated, unselfish leadership of Dwight D. Eisenhower and RICHARD M. NIXON. The Nation is at peace. Our people are enjoying unparalleled prosperity. We are going forward in every conceivable field of activity under an administration which welcomes and nourishes individual initiative and which has a deep faith in the dignity and worth of the individual citizen.

The task we face in 1958 will require our utmost in ingenuity and vigor. President Eisenhower has stated as our major objective the election of a Republican majority in the United States Senate and House. To succeed in that we must present the best possible candidates, the best possible program, and the best possible organization. We need every single one of these elements in every district to assure a victory. The manner in which you yourselves have demonstrated your recognition of this is a source of great reassurance to me. We no longer can enjoy the luxury of offering the voters passable candidates running on mediocre programs and supported by a half-hearted organization effort.

I would like to suggest that all of us Republicans add a further ingredient in preparing our organization effort for 1958. I would like to see us develop a greater pride in partisanship. I would like to see us develop a keener sense of team spirit—a feeling that anything Republican is good because it is

Republican. I would like to see us instill as much enthusiasm into our Republican organization throughout the Nation as many of us have for our favorite football team or baseball team. We need to develop more vociferous cheerleaders within the party and fewer eloquent dissidents. Let's keep our family differences within the family and remember that the Democrat Party is our common adversary and not some other Republican. If we develop a team spirit along with good candidates, a good program and good organization, we have, I believe, the prescription for victory.

The Republican Party is today the party of action, the party of the future. Unlike the Democrat Party, we Republicans believe that worship of the past or cynical adherence to the expediency of the present is not enough to win and hold the confidence of the voters. We have won the confidence of the people because we are unwilling to be a party of inaction or a party of reaction. We shall hold the confidence of the voters so long as we keep alive our sense of mission—keep alive a keen awareness that we must always be responsive to the needs and aspirations of the people. That is the road to victory—and to continued peace, prosperity, and progress.

Lives or Dollars

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. CANNON. Mr. Speaker, are we building our new highways for the safety and enjoyment of the public or for exploitation by private greed? Shall we make them safe and give the people an opportunity to see America first? Or shall we erect billboard canyons and ribbon slums, hemmed in with blatant advertisements of pink pills for pale people and 57 kinds of beer, interspersed with pinboard carnivals and hotdog stands?

The question involves not only the safety of the individual but the safety of the Nation. Rear Adm. Neill Phillips testified before a congressional committee that the restriction of billboards along our superhighways is necessary for national defense.

He said billboards would impede movement of troops and refugees in emergencies and interfere with directional signs vitally important in civil defense operations. He contended that billboards would distract drivers and present fire and splinter hazards to civil defense.

He insisted that the Government properly can protect aesthetic values by controlling the nuisance characteristics of billboards.

Referring to arguments that billboards would stimulate business, he said:

I just don't believe that the voters of America can be made to believe that it is good for the national economy to squander millions of dollars to deface our country with a hideous rash of billboards along the network of our new superhighways.

The St. Louis Post-Dispatch said editorially in its issue of March 29, 1957:

BEAUTY, NOT SAFETY, THE ISSUE

A great many people must respond favorably to the idea that the new interstate highways should be protected against the commercial exploitation that has turned many existing highways into rural slums.

We reach that conclusion because the outdoor advertising industry has begun to fight back. It sponsored a study at Iowa State College which concluded that billboards along highways have some slightly beneficial effects in that they keep drivers from succumbing to highway hypnosis. Another paper based on research in Iowa and Michigan concludes that there is no significant relationship between outdoor advertising signs and highway accidents, and that the evidence, if any, is slightly in favor of signs as a safety measure.

These conclusions are tenuous enough to warrant being ignored, but we do not expect the billboard people to ignore them.

Actually the safety issue is not the basic one. The new highways should be protected from commercial exploitation because the motorist is entitled to see some natural beauty just for the fund of it—or the good of his soul. And there are other ways of combating highway hypnosis than obscuring the view with signs.

And the Washington Star on March 30, 1957, said:

ROADSIDE EYESORES

The movement to safeguard the proposed 41,000-mile Interstate Highway System from roadside eyesores of the type so familiar to travelers on United States Route 1 is worthy of public support—although the movement is a bit belated. It would have been better if some statement of policy, at the least, had been included in the 1956 Federal Highway Act which authorized the network. For it is evident that a strong fight will be waged by commercial signboard and other interests to make the most of the new roadside locations opened up by the huge highway program.

The law's deficiency was brought to public attention last December by Robert Moses, New York's park chief, in a Harper's article. He wrote that the new expressways would be "all left exposed to an indiscriminate mushroom growth of ugly filling stations, hotdog stands, and all the other familiar roadside eyesores." He warned that "if the billions of public investment * * * are to be protected and the value of our scenery and natural assets is to be preserved, steps to prevent the onslaught of commercial advertising must be taken before construction gets underway." Since then several bills have been introduced calling for varying degrees of Federal control of roadside defacement—either by the setting of standards voluntarily to be enforced by the States or by the withholding of Federal funds for noncompliance with the standards. Hearings on some of these proposals are being held this week.

We hope that some reasonable method of control can be worked out, so that the new vistas of natural scenery through which the new highways will run will not be desecrated as some of our older highways have been.

We have at the gates of Washington one of the most convincing demonstrations that could be made. Driving out of the city on Highway No. 1 we find an arterial highway so blinded by obscuring billboards—although it has not yet reached its ultimate nuisance potential—such a discordant riot of gaudy billboard excesses as to completely hide one of the most beautiful countrysides to be found in historic Virginia.

On the other hand, entering the city from the same direction is the famed Shirley Highway from which the reckless dollar-crazed exploiters have been excluded and which is a delight to the eye of the tired city dweller who enjoys a Virginia landscape of surpassing beauty, uncontaminated and unspoiled by the blare and glare of vandal billboards.

Drive over these two highways and take your choice.

Alexander Hamilton's Philosophy of Government, Then and Now

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1957

Mr. MUNDT. Mr. President, as chairman of the Alexander Hamilton Commission, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Alexander Hamilton's Philosophy of Government, Then and Now," which was delivered by David F. Maxwell, of Philadelphia, to the American Bankers' Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ALEXANDER HAMILTON'S PHILOSOPHY OF GOVERNMENT, THEN AND NOW

(Address delivered by David F. Maxwell, of Philadelphia, at American Bankers Association, Trust Division, New York City, February 6, 1957, at Waldorf-Astoria Hotel)

This year we are celebrating the 200th anniversary of the birth of Alexander Hamilton, the first Secretary of the Treasury of the United States. It was Alexander Hamilton, you will recall, who above all others in the Constitutional Convention of 1781, advocated a strong central government. It seems, therefore, particularly appropriate in connection with the observance of this event to review this great American's political philosophy and to superimpose upon his thinking the recent significant changes in constitutional interpretation which have resulted in the concentration of vast power in the Federal Government.

Alexander Hamilton, as you know, was born January 11, 1757, and died on July 12, 1804, at the age of 47, the victim of a duel with Aaron Burr. If he were to return to New York today in the manner of Rip Van Winkle, a short span of little more than 150 years later, he would be utterly amazed—not only at the sight of our streamlined automobiles, our jet planes, and our nuclear-powered submarines, but what is even more relevant, at the transformation which has occurred in the influence of the Federal Government since he participated in the framing of our Constitution back in 1781.

For you gentlemen, the tenets of Alexander Hamilton should be of special interest because they stemmed from his knowledge of finance and his experience in the law. It is interesting to note that he was admitted to the bar of New York after reading law for only 6 months. This is indicative of his tremendous capacity for learning.

He was dedicated to the proposition that the future of the country rested in the establishment of a strong central government with complete autonomy over the several States. In this respect he was at the op-

posite end of the pole from his contemporary, James Madison, who is given credit for formulating the ideas embodied in the Constitution. Mr. Hamilton, you will remember, urged that the Executive should be elected for life and that the power to govern should be concentrated in the hands of a few aristocrats.

Although he was the only delegate from New York whose signature appears on the final document, his disappointment with its provisions was thinly veiled. "Better than nothing," was his curt comment following the adoption of the Constitution which was later to be described by William Gladstone, the great British statesman and Prime Minister, as "the most wonderful work ever struck off at a given time by the brain and purpose of man."

Hamilton firmly believed, as did most of his colleagues, that the Constitution had merely brought into being a loose confederation of States. If the old adage, "coming events cast their shadows" is true, then Alexander Hamilton must have been the shadow in the Constitutional Convention for it was he who predicted that the Federal Government had to be strong to be effective. Yet little did he realize that without changing a word of the Constitution, there could emerge a concentration of power in the Federal Government which would be far beyond even his most cherished dream.

Despite his dissatisfaction with the final result of the efforts of the 55 delegates at the Convention, he saw, through the medium of the Treasury, an opportunity to accomplish in some small measure by indirection what he had failed to bring about by direct action in the Convention. You will remember that it had been Hamilton who outlined for Robert Morris a comprehensive system of public credit to be founded on a foreign loan, a bank, a responsible Minister of Finance, and some taxes in hand. Behind the plan, Hamilton showed a more acute understanding of the potentialities of the capitalist system than any man in America of his time. Said he, "The only plan that can preserve the currency is one that will make it the immediate interest of the moneyed men to cooperate with the Government in its support."

Immediately upon his assuming the office of Secretary of the Treasury, he launched a program consistent with these views and designed to enhance the prestige of the Central Government. His main objective was to build for his country a union of government and business which would make possible the development of modern capitalism.

Hamilton subscribed to the belief that the word "government" means a complete sovereignty having the force of a law of nature. He was convinced that the Constitution as drafted fell far short of this concept and vested entirely too much sovereignty in the several States.

It is too bad that his life had to be snuffed out at such an early age for had he lived but 15 more years, he would have been elated to discover that the instrument which he had created—the national bank—became the medium through which the powers of the Federal Government were expanded by constitutional interpretation.

On March 6, 1819, the Supreme Court of the United States handed down its historic decision in *McCulloch* v. *Maryland*. Its effect on the people was immediate and electric. Howls of protest reverberated throughout the land.

The facts in that famous case were that the Congress had authorized the incorporation of a second bank of the United States which then established a branch in Baltimore. The Legislature of Maryland had passed an act requiring all banks "established without authority from this State" to issue notes in accordance with certain regulations or in lieu thereof only upon payment of a tax. The Baltimore branch of the national bank disregarded the requirements and refused to pay the tax. As a result, the treasurer of the Western Shore of Maryland sued the cashier of the Baltimore branch to recover the penalties prescribed by the Maryland statute.

It was Chief Justice Marshall's opinion in that case which established the doctrine of implied powers and thereby overnight strengthened the powers of the Central Government. As the Chief Justice so eloquently explained, the National Government had been granted specified powers to lay and collect taxes, to borrow money, to regulate commerce, to declare and conduct war, and to raise and support armies and navies. The establishment of a bank, he reasoned, was a necessary means by which the great delegated powers could be carried into execution. "The power being given," stated the Chief Justice, "it is in the interest of the Nation to facilitate its execution." By way of illustration he pointed out that Congress has the specific power to establish post offices and post roads which would be meaningless unless there went with it the power to carry the mail from post office to post office and the right to punish those who steal from the post office or rob the mail. These were implied powers necessarily following in the wake of the specifically delegated powers.

In that opinion appeared one of the most celebrated passages ever delivered by a Justice of the Supreme Court: "Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited but consistent with the letter and spirit of the Constitution, are constitutional."

We have come to regard that decision as the polestar, lighting the way for expanding Federal powers through constitutional interpretation. Yet in those days it sparked a debate which was not to be finally settled until the Civil War. The current criticism being leveled at the Supreme Court in certain sections of the country by reason of the segregation cases is comparable to the vitriolic attack against the Court in 1819 following the McCulloch decision. Leading in berating the Court was Hezekiah Niles, editor of the Weekly Register, who was a contemporary prototype of Horace Greeley. In the first issue of the Register after Marshall's opinion, Niles wrote:

"A deadly blow has been struck at the sovereignty of the States and from a quarter so far removed from the people as to be hardly accessible to public opinion."

Nevertheless the Court weathered that storm as well as it later withstood in 1937 the attempts of the late Franklin Delano Roosevelt to "pack it" and as it will undoubtedly survive the current attack.

The McCulloch decision, in its effect, was like a ripple on a lake compared to the mighty tidal wave of Federal legislation which engulfed the country in the 1930's. Coming in the wake of an unparalleled era of prosperity, a devastating depression struck with the suddenness of lightning. Out of it emerged a Federal Government with powers far transcending the intent of the Founding Fathers.

During the early 1930's, the Congress passed in rapid succession the Agricultural Adjustment Act, the Gold Reserve Act, the National Recovery Act, the Tennessee Valley Authority Act, and many other laws designed to stem the tide of the depression. Considering the emergency program in its entirety it constituted a more far-reaching assertion of Federal authority over national economic life than had theretofore ever been attempted. Once again the Hamiltonian powers of nationalism were in the ascendancy. They relied upon the general welfare clause of the Constitution to enable the Federal Government to deal with the emergency situation with which the States seemed unable to cope. The passage of this flood of legislation led to a clash between those who believed that Federal bureaucratic controls over private enterprise were pernicious and those who were convinced that strong and immediate Federal intervention represented the country's only solution.

At first it seemed that those who espoused the ideals of James Madison would prevail. The first of the New Deal statutes reached the Supreme Court in January of 1935. Then within 16 months the Court decided 10 major cases. In 8 the decisions went against the New Deal. Stricken down in succession were the National Recovery Act, the farm mortgage loan, the Railroad Pension Act, the Bituminous Coal Act, and the Municipal Bankruptcy Act. Only two measures, the Emergency Monetary Standards Act of 1933 and the Tennessee Valley Authority Act were given approval in carefully circumscribed and conditional terms.

The public furor created by these decisions was reminiscent of the days of the McCulloch decision. Aggressively entering the fray, the President himself condemned the decisions, charging that the Court's reasoning took the Constitution back to the "horse and buggy days." He implied that if the Court threw down the gauntlet on the issue of constitutional reform, he would gladly accept the challenge.

There then ensued the historic court-packing fight of 1937 which the President lost. But in losing he ultimately emerged the victor because of a modified personnel, the Court immediately thereafter, in a remarkable series of decisions, executed the most abrupt change of face in its history and accepted all the major constitutional postulates underlying the New Deal.

It was a great day for the Hamiltonians for since then, there seems to be no limit upon the powers of the Federal Government. Both the commerce clause and the general welfare clause have been stretched beyond recognition.

On the basis of the commerce clause, the Court, in the case of *United States* v. *Darby*, in 1941 established the constitutionality of the Fair Labor Standards Act. Subsequently this act was held to apply to employees engaged in the maintenance and operation of buildings in which large quantities of goods for interstate commerce were produced, to the employees of a window-cleaning company which cleaned windows of people engaged in interstate commerce, to the employees of a local newspaper with a limited circulation, and to women doing embroidery work for pay in their own homes.

Similarly, the early view that the activities of foreign insurance companies engaged in writing insurance within the State did not constitute interstate commerce was exploded by the Court in 1944 in the *Southeastern Underwriters Association* case.

In the field of social legislation, the result has been even more phenomenal. When the Social Security Act was passed, many competent lawyers, in as well as out of Government, questioned the validity both of national old-age insurance and of the Federal system of unemployment compensation. In a group of sweeping decisions handed down in May of 1937, the Supreme Court sustained both. The collection provisions of the law were, it held, a valid exercise of the taxing power and the spending provisions were a valid exercise of the spending powers under the general welfare clause.

This is how the Court justified its conclusion in the *Steward Machine Company* case:

"The problem had become national in area and dimensions. There was need of help from the Nation if the people were not to starve. It is too late today for the argument to be heard with tolerance that in a crisis so extreme the use of the moneys of the Nation to relieve the unemployed and their

dependents is a use for any purpose narrower than the promotion of the general welfare."

And in the case of *Helvering* v. *Davis*, the Court used this language:

"Nor is the concept of the general welfare static. Needs that were narrow or parochial a century ago may be interwoven in our day with the well-being of the Nation. What is critical or urgent changes with the times."

It might be helpful for us to take a quick look at the so-called general welfare clause. It is contained in section 8 of article I of the Constitution which enumerates the powers of Congress. Clause 1 of this section, in defining the powers of Congress, says: "The Congress shall have the power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the general welfare of the United States."

Hamilton, with his fervent desires for a strong central government, took the view that this clause authorized taxes for any purpose which was not purely local.

Chief Justice Marshall, a contemporary of Hamilton's, in *Gibbon* v. *Ogden* exprcssed the opinion that the power is broad but that "Congress is not empowered to tax for these purposes which are within the exclusive province of the States."

Neither one of them, I think, would have anticipated that the general welfare clause would have been used to justify the introduction of a bill in the Congress that would establish a national system of compulsory health insurance. Yet that is what happened.

In fact, if Mr. Hamilton were with us today, leafing through the pages of history, he might not be too happy with the extent to which the Federal Government has appropriated power unto itself.

It was his theory that a strong central government and the private enterprise system were inextricably interwoven—that the one followed as a corollary to the other. It is difficult to believe that he would have reconciled the objectives of the "welfare State," as it is sometimes called, with the free enterprise system. One wonders under the guise of a strong central government, Mr. Hamilton would have anticipated that the Federal Government would take control of important phases of the conduct of local and interstate business, transportation, finance, production and distribution. Such activity on the part of the central government marks a trend away from individualism and toward socialism which certainly would not have been consistent with Mr. Hamilton's views.

If the present trend continues it is not beyond the realm of possibility that one day the Federal Government will take over key industries and that the exercise of the power will be adjudged permissible within the framework of the Constitution. Mr. Truman tried it with the steel mills. That he failed was probably only because of the manner in which the attempt was made. A carefully drawn law under proper circumstances might succeed. It happened in England—it could happen here.

In the brief time allotted to me this morning, I have attempted to illustrate the extraordinary potential reposed in the Congress through the broad interpretation of our Constitution in the past two decades. You, as bankers, are interested in the preservation of the private enterprise system. This objective cannot be attained by confining your attention to the administration of your client's estates. It is important that you study and deal constructively with the problems which, unless handled effectively and promptly by the private enterprise system itself, will stimulate governmental intervention.

For instance, many of the powers vested in the Congress by the type of judicial interpretation I have described, are exercised through administrative agencies and tribunals, sometimes denominated the fourth branch of the Federal Government. There are more than 70 such agencies in which are comingled executive, legislative, and judicial functions. The activities of these agencies were the subject of investigation by a task force of the second Hoover Commission of which I had the honor of being a member. Based upon its report, the Commission itself made sweeping recommendations for reforming the practice and procedures of these tribunals.

The American Bar Association approved these recommendations in resolutions adopted in February 1956, and a special committee of the association has drafted bills embodying these reforms which are being introduced in the current session of Congress. These bills are worthy of your careful consideration and we hope, your support.

The Byrds of Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1957

Mr. JOHNSON of Texas. Mr. President, the editors of the Abilene Reporter-News, a great west Texas newspaper, are not an easily discouraged crew when they think they have a story to tell, especially when that story raises the possibility that Texas can somehow connect itself with the illustrious Byrds, of Virginia, and with the distinguished senior Senator from Virginia himself. I ask unanimous consent to have printed in the RECORD a recent editorial from the Reporter-News confirming the fact that there were Byrds helping shape the course of Texas history as well as that of Virginia.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Abilene Reporter-News of March 26, 1957]

THE BYRDS OF TEXAS

When the late great Adm. Richard E. Byrd, famous explorer and aviation pioneer, passed to his reward a few days ago the thought occurred to us that the Byrd family had played a part in Texas' history somewhere down the line.

None of our reference works threw any direct light on the connection between the Virginia Byrds and the Texas Byrds, so we wrote the admiral's brother, Senator HARRY BYRD, for information.

Yes, said the Senator, Col. William Byrd was his grandfather, who went from Virginia to Texas, where he married Miss Jennie Rivers, and became the father of Richard Evelyn Byrd, who in turn became the father of "Dick, Tom, and myself."

Dick, of course, was the admiral, and the E. in his name stood for Evelyn, after his father. The given names of the three Byrd brothers worked out to Tom, Dick, and Harry.

Their grandfather William came to Texas in 1853 after graduation from Virginia Military Institute, settled temporarily at Webberville, and moved to Austin in July 1853, where he practiced law. He was elected city treasurer of Austin in 1856, ran for the legislature in 1857, and took a prominent part in Democratic Party organization. He and Jennie Rivers Byrd became the parents of nine children, says the Handbook of Texas. In 1860 he served as editor of the Texas Gazette in the absence of John Marshall, and many years later his grandson HARRY FLOOD BYRD at age 15 started to work for the newspaper in Winchester; his son is now publisher.

Colonel William Byrd became adjutant general of Texas in 1861 for a few months, was also ordnance officer at the outbreak of war, became lieutenant colonel of the 14th Regiment, Texas Infantry, C. S. A. While in command of Fort DeRussy, La., he was captured in March of 1864. He was exchanged in July of 1864, and in April he was stationed near Hempstead, Tex. After the war Colonel Byrd returned to Virginia to practice law at Winchester. He died in 1898.

Let's Call a Halt to Integration Programs in the Broiler Industry

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1957

Mr. BRIDGES. Mr. President, of real interest to all Members of Congress should be an article entitled "Let's Call a Halt," written by Jim Hall, and published in the March 2 New England edition of the American Agriculturist.

The development of integration programs in the broiler industry is regarded by many as presaging the end of the independent farmer in the Northeast. Mr. Hall has made a penetrating analysis of this form of farm operation.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S CALL A HALT—EGG PRODUCERS CAN PROFIT FROM BROILER GROWERS' EXPERIENCES

(By Jim Hall)

Is something underway that will change our whole system of farming? Will poultrymen, livestock men, and dairymen be running their farms 10 or 20 years from now? Or will they be on their own farms for a guaranteed wage?

If you consider it ridiculous to think of someone other than yourself making decisions and giving orders on your farm, you'd better take time to look at what's happening. Don't think that this new word, "integration" applies only to the broiler business. If you, in exchange for a market or income guarantee, or credit, agree to let someone else make production decisions or supply any material of his choice, then your program is integrated, no matter what you produce.

Let's take a look at what's going on. First, let's look at the broiler business in which at least 9 out of 10 farms are integrated. How did this industry get out of the hands of independent farmers?

SECURITY OFFERED

When the first processor or feed dealer offered broilers growers a straight so much per week per bird and assumed all marketing, credit, and loss risks, it seemed like the answer to many prayers. In some areas where making a living out of cows was getting

tougher and tougher, even dairymen snapped at the chance. Stanchions were ripped out, extra floors and windows installed and, presto, they were in the broiler business.

Dozens of different arrangements were made but it was not uncommon 10 years ago for a farmer to get 1 cent or event 2 cents per week per bird for his labor and the use of his buildings. The processor or feed dealer—and in some cases, the processor was a feed dealer—supplied the chicks, the feed, medication, veterinary services, and even the litter.

It seemed that everyone had struck a bonanza.

The farmer could handle 10,000 to 20,000 broilers easily with the ceiling limited, usually, only by the size of his buildings. Ten thousand meant $100 a week for his labor and buildings—without risk—and he could still use his land for whatever cash crops he could manage.

The processor who dressed and marketed the broilers didn't have to compete with others to buy the birds he needed. He could control exactly how many would be ready at his plant every day. By operating at full capacity, without shutdowns one day and overtime another, he cut his costs to the bone.

The feed dealer participating in these contract arrangements never had it so good. His feed sales were steady and assured because the farmer had nothing to say about what feed he'd use. His collections were assured because he marketed the boilers every 12 to 13 weeks himself or through a processor who was a third party to the contract. As he made more contracts, his tonnage soared and his costs dropped due to the big volume.

The buyer or broker for retail stores was happy. He had a large, dependable supply of birds grown, processed, and packaged to his specifications; delivered where and in the quantities he wanted. The buyer for big, steady outlets was so valuable to everyone along the production line that processors passed much of their cost-cutting efficiency along to him in a lower price to get his big business.

The final consumer was happy. Low price, quality meat was always available.

Utopia? No.

A perfectly natural thing happened: Everyone said, "This is good. Guess I'll expand." Farmers built new, up-to-date buildings so they could contract for more birds and handle more per man. Processors and feed companies encouraged more contracts to sew up more tonnage. In the next few years anothed natural thing happened: Too many birds.

When that happened, the buyers shopped around for the lowest price. This meant that to stay in business, costs had to be cut more and more all along the line. Growers got different contracts. These involved changes in the guarantee per bird per week—down to ½ cent and in some cases ¼ cent—and a percentage of the profit, if any, when the sale was made. Some contracts extended credit for chicks, feed, etc. until sale time and a guaranty of no cash loss if the sale was at a loss. Those supplying feed added 8 to 12 percent to their feed prices to create a fund to take care of such losses.

SURPLUS GROWS

Because it was cheap and plentiful, people ate more broiler meat than ever—but not enough to keep the selling price higher than most operators' costs. In Maine, where 35 to 40 million are produced a year, broilers were selling in January at 17 cents a pound which was a good 6 cents a pounds under producers' costs. In Georgia, where nearly 200 million are produced a year, the farm price was 16 cents a pound.

In Georgia, as in Maine, practically all of the birds are grown under contract. There, however, the guaranties to growers are dropping faster. Now most of them guarantee only 2 cents per pound, live weight, for the farmer, and all or a share of the profits. In that State, most of the financing is done by feed companies and, to protect themselves, they "mark up" price of feed an average of $15 a ton.

The trouble, of course, is due to production of about 20 percent too many broilers for a stable market. It's easy to see why there are few independent broiler growers left in the business—they have to make a profit on the birds, as they have no feed or processing profits to fall back on. It has been some time since there have been any profits to share. Actually, there have been only 8 months in the past 3 years when the price of finished broilers averaged more than costs of production.

In the Northeast, some feed companies are already stating that they will take on no new growers. Due to the guaranties to growers, some of the feed companies are losing money despite the feed markup. To meet this in Georgia (and perhaps elsewhere), another new type contract is being used by some feed dealers. It's really based on efficiency. They pay the grower so much per 1,000 birds based on the difference between the weight of the bird and that particular grower's feed-meat conversion rate. In other words, if a man uses 3 pounds of feed to produce a pound of meat, and the birds weigh 3½ pounds, he gets $50 per 1,000 birds.

LOW INCOME

With 10,000 birds reaching market in 10 weeks, the grower in the above example would be getting $50 a week for his labor, buildings, equipment, taxes, etc. and he also has to stand the cost of litter and fuel. Some dealers are now building their own huge, full-time broiler houses containing every modern cost-cutting device and operating them with hired labor.

The independent farmer, willing to take his own risks, arrange his own credit, buy whichever feed he wants in order to enjoy his right to compete for a fair share of profit, is out of the broiler business.

What appeared 10 years ago as a chance to gain security due to lack of risk, has put him in the same category as a hired man following the boss's orders. He has already lost his opportunity and the security he sought can disappear at the end of any contract period, when his wage gets too low. He'd still have his broiler houses and whatever debt he incurred to enlarge them but what will he do with them?

He wont reenter the broiler business when he knows that feed-company-operated broiler businesses are producing broilers for as low as 16 cents a pound and a few even lower. Average costs in our area are better than 20 cents.

Many feed company representatives bluntly admit that getting into the broiler and turkey business was not a matter of choice with them. Many were faced with losing all their feed tonnage for broilers or "fighting fire with fire." The answer was the usual one we'd expect of any enterprising American business, "Let's get in the fight." Now some are contracting for eggs with producers who use their feeds to keep competition from getting their customers.

At a meeting of Chautauqua County, N. Y. poultrymen in January, one feed company representative said that poultry "integration" had progressed to a point where, "Poultrymen may either become partners of private enterprise, ask the Government for aid, or quit the business." Unfortunately, in some areas, he'd have to change that first choice to "hired men" instead of "partners." The Chautaugua Poultrymen Association passed a resolution opposing integration and recommending that feed companies end their integration program as soon as possible. They know what's happening with broiler integration programs.

WHAT ABOUT LAYERS?

There are those who say that the contract production of eggs which is now spreading through the Midwest will never be accepted in the Northeast. One reason I've heard is that a northeasterner, rather than work as a hired man on his own farm, would take a job in one of the thousands of industries in our area and just make a home of his farm.

Broiler people didn't do that. Early contract arrangements looked so secure and profitable that many built huge plants to raise more and more. Could they just abandon the plant and take a job in town and still carry the mortgage? It's worth a lot of thought to egg producers who, due to current low prices, are beginning to ask questions about this minimum price guaranty.

Already some feed companies are having to dig into their feed profits to make up to egg producers the difference between what eggs are actually bringing and the guaranty. They just wouldn't be good businessmen if they kept that up. If prices continue low, there are going to be changes in contracts and, as with broilers, they may start their own "factories."

If they do, their egg factories will be huge, modern, and mechanized to the last detail. It is conceivable that they may carry the whole egg production line from breeding and hatching right through to the processing of the old hens as they are retired from the production line. One such outfit could make just a tiny profit at each stage: hatching, eggs, fowl and, of course, behind it all, feed profit.

The independent grower who bought all his services and materials would have a tough time meeting such competition through the sale of eggs alone.

WHAT ABOUT DAIRYING?

In one instance, at least, integration has happened already in the beef business. In fact the production line is even longer—extending all the way from the raising of beef under contract to the retail supermarket counter. One big food chain is now hiring farmers to raise beef of a stated quality, contracting for slaughter near the source of supply, processing such things as sausages, and selling in their hundreds of stores to Mrs. Consumer.

This was not done to make a hired man of the farmer, to lose the cattle buyer's job, or to put the meatpacker out of business. It was done to meet and beat the price of meats in other stores. All along the line their new plants are designed to turn out just a little less than their total needs. This means that at each step of the lifeline—from farm to table—this particular concern operates at full capacity, therefore, lower cost all the time.

If other chains decide to do the same thing—and most of the big ones have ample capital resources—will competition and production do the same as in the broiler business and squeeze the man raising the meat? Will they get into hogs? Lambs? Dairying? Will the whole livestock business become industrial rather than agricultural?

In spite of what has happened, I don't think so.

In the first place, the selling below cost of production that has been continuing too long in the broiler business is no secret. Egg producers and other farmers are aware of how grower contracts can change when production is stimulated beyond demand.

In the second place, corporations are not farmers. When a farm family is hit by low prices and suffers losses, "They just naturally tighten their belts and suffer through low income until the market changes," says an economist friend. "On the other hand, when red ink shows up on a corporation's balance sheet, they are quick to get out of that part of their business that causes the red ink."

As it is common talk that many feed companies are using much red ink to keep track of their broiler deal, it is hard to imagine many of them sticking their necks out too far to gamble on eggs or beef or pork.

Finally (and this is so new that few know about it), labor unions see in this whole contract business a wonderful opportunity. In the Southwest, notably Texas, they are proposing that contract growers join a union to gain a lot of strength to bargain for better contracts with the feed and process companies. It's also rumored that they plan to set limits on the number of broilers any man can raise in order to get the price up. It's pretty obvious that anyone not in the union would have a pretty tough time marketing anything because it's the butchers' and slaughters' union.

There will be much more thinking about this union proposition, too. Farmers know too well that unions, basically, want lower food prices. Others, not yet in any kind of contract deals, won't look too favorably on any plan that eventually will leave them only the choice of the frying pan or the fire.

I'm sure Northeast farmers will look further into the results of any integration program than the guaranteed minimum price for a short time.

A Self-Defeating American Foreign Policy

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. C. L. Sulzberger, which appeared in the New York Times on April 3.

This article, I believe, expresses clearly and simply the truth about an extremely important matter confronting this country in Asia. I hope that the administration will take note of the views of Mr. Sulzberger. As we all know Mr. Sulzberger represents a paper which has been very friendly and favorable to the administration, and therefore they should take his suggestions and criticism to heart.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOREIGN AFFAIRS—A SELF-DEFEATING AMERICAN POLICY IN ASIA

(By C. L. Sulzberger)

PARIS, April 2.—United States foreign policy as applied in South Asia displays a disturbingly schizophrenic aspect. Our aspirations are clearly both benevolent and sound. But the methods by which we seek to achieve them are almost surely self-defeating.

Our fundamental objective is to seal off the Sino-Soviet bloc and prevent communism from intruding southward. To bolster the underdeveloped countries affected we are sponsoring a dual program.

One phase is purely military. This endeavors to strengthen defensive capabilities of nations committed to the western camp. Pakistan comes specifically within this category as a member both of SEATO and the Middle Eastern Baghdad Pact. The second phase is economic. This endeavors to strengthen the social, agricultural, and industrial structure of all south Asian nations, neutral, or otherwise, enabling them to resist subversive pressures.

In this category we include not only our ally, Pakistan, but countries often irritatingly unsympathetic to our aspirations—to wit, India, Ceylon, Burma, Nepal, and Afghanistan. Of these India is overwhelmingly the most important.

Even those in Washington, most angered by Nehru's tendency to lecture us while excusing Communist transgressions and his own violation of principles he preaches, admit that the West has an immense stake in Indian democracy's success. For India is the only massive Asian nation that remains non-Communist.

INDIA VERSUS CHINA

A curious competitive coexistence exists between New Delhi and Peiping. The Russians, recognizing the importance of this contest, are pouring vast material, technical, and financial aid into China. We likewise, are investing a considerable amount in efforts to help Nehru's democratic revolution—much as we tend to dislike his personality.

If, during the coming generation, India can succeed in modernizing its antiquated plant, educating its illiterate masses and becoming self-sufficient, the cause of freedom will have achieved a triumph. Ultimate repercusions in other Asian nations, even ironbound China, might be boundless.

However, the chances of Indian success in this competition with China are being hampered by an arms race with Pakistan. Part of India's budget is supported by our economic generosity. But another part is drained off by New Delhi's determination not to lag behind Karachi militarily. Pakistan's materiel comes from us.

Both countries spend on defense infinitely more than they can afford. The amount in each case is probably over half the national income. Neither, within the foreseeable future, can become strong enough to stave off open Soviet aggression. But each is rapidly attaining a capability to cripple the other.

American policy of arming Pakistan tends indirectly to weaken disastrously the Indian economy. It has also provoked another neighboring land, Afghanistan, to make an unhealthy weapons deal with the U. S. S. R. on the assumption such equipment is required because of a frontier argument with the Pakistanis.

FRUIT OF OUR POLICY

Therefore, by our policy, we encourage indirectly a sterile military spending race. None of the south Asian countries can afford this. And India's new 5-year plan—upon which we ultimately base such hopes—is going down the drain.

Even if New Delhi continues to receive American economic aid at present rates—which Nehru's political gyrations render less likely—and even if a new World Bank loan is forthcoming, there will be a short fall in financing the second 5-year plan amounting to perhaps $750 million.

As a result the plan, upon which India's ultimate political health relies, must now be drastically cut. Projected new developments have been halted and imports restricted. Many undertakings are being stopped half finished. Equipment already purchased, therefore, lies wasting.

This situation allows Moscow two political choices. The Russians have already offered India a $125 million credit. They may suggest still larger amounts in an effort to gain controlling leverage on India's economy. Or they may withdraw proposed help in the hope of stimulating collapse and possible disintegration of Asia's largest democratic nation.

By our well-intended policy of arming Pakistan we are unwittingly helping to sabotage India's social revolution—upon which we bet so heavily. Clearly the time has come to think this through more carefully.

Pakistan, as our ally, is surely entitled to be strong. But hasn't the moment already arrived to cut down military assistance to that country and help develop its disturbingly backward economy? Should we make such a decision it is certain that India can be prevailed upon to reduce investment in unproductive weapons.

It would be short-sighted folly if, for the sake of strengthening one ally's limited fighting potential, we helped destroy Asia's most important non-Communist revolution—and, by so doing, lost Asia itself.

State Senator Andrew J. Naterlin, of Newport, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1957

Mr. NEUBERGER. Mr. President, a man who can recover his courage and spirit from the handicap of blindness is a source of inspiration and admiration to us all.

In this category are such people as Victor Riesel and others. One such individual is State Senator Andrew J. Naterlin, of Newport, Oreg., who represents the great seacoast counties of Tillamook and Lincoln in the Oregon State Senate at Salemn. I have long known Mr. Naterlin, and campaigned with him and for him throughout those counties in the election campaign of 1956.

I ask unanimous consent that an article describing Senator Naterlin's career, from the Pendleton East Oregonian of March 18, 1957, be printed in the Appendix of the RECORD. The author of this able discussion is Mr. Gorman Hogan, correspondent for the Associated Press in Salem, Oreg.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BLIND LEGISLATOR PLUGS HARD FOR THINGS HE BELIEVES IN

(By Gorman Hogan)

SALEM.—A cheerful man with a shock of heavy dark hair, sits in the Oregon Senate today, listening intently as he fingers the spectacles that cover his two artificial eyes.

Being blind, of course, has sometimes been a bother in the past 26 years to Senator Andrew J. Naterlin, of Newport but it hasn't kept him from being mayor of his home city, a director of one of Oregon's few people's utility districts, business executive and past president of half a dozen civic and fraternal organizations.

This is the first time Naterlin, a Democrat, has been sitting inside the Senate, but he has spent many hours on the outside. For he has been lobbyist for the people's utility districts and the fishing industry for Oregon for years, buttonholing representatives and senators alike, seeking support for the things he believes in—things he is certain are good for the State and its people.

LEANS HEAVILY ON WIFE

As a senator Naterlin, who squeaked into office by a bare 121 votes, leans heavily on his

handsome wife, as he has over their 29 years of marriage.

"God never put breath in a finer woman," he says.

Serving as his secretary, she reads the legislative bills to him, reads the newspapers aloud, answers the mail and transcribes the notes he makes during sessions and committee meetings.

They have a 16-year-old daughter adopted at the age of 3.

Naterlin, born in Oregon City 56 years ago, attended the University of Oregon and the University of Idaho and traveled for a year in Europe as a youth. Summers he worked as a commercial fisherman, owning his own boat when he was only 19.

CINDER STARTED TROUBLE

He started going blind after getting a cinder in his eye at an Idaho basketball game. Glaucoma developed and the eye was removed in 1928, the same year he was married.

Four years later glaucoma had spread to his other eye and it had to be removed. This was the low spot of Naterlin's lifetime. Combined with the loss of his eyesight and the depression, he lost the cold storage business he had started at Newport.

He was named supervisor of the National Recovery Act (NRA) program in the area. But before he could get the job done, with the help of his wife, and collect his first paycheck, the NRA was ruled unconstitutional.

Naterlin couldn't learn Braille, the touch system by which the blind are able to read. His years handling ice and frozen fish had blunted the sensitivity of his fingertips.

But that didn't bother him too much since most of the things he needed to know about weren't written in Braille anyhow. Besides, he had a phenomenal memory which he had been developing since childhood.

"I guess my mother was responsible for that," he says. "She couldn't write and so I had to remember what she wanted when she sent me to the store or had me take a message to somebody else."

COUNTING STEPS HELPFUL

Another thing that turned out to be helpful was Naterlin's mania for counting steps, an almost indispensable asset for a blind man.

"A few years ago I went back to the school I had attended as a boy and I remembered exactly the number of steps that led to the schoolroom door," he says.

Sound and smell help guide him and a highly developed sense of feel is valuable too. Naterlin says he can feel when he passes a pole for example, or approaches a curb.

He recollects one occasion when he was walking along the path to his home at Newport when he felt something strange ahead of him. He backed off cautiously and waited. A friend happened along and Naterlin asked him what was ahead.

JUST AN OLD COW

"It turned out to be a gentle, old cow," Naterlin says, "and I suppose she was as puzzled by my antics as I was over her."

The Senator has traveled extensively, making trips alone by bus and train to Boston, Florida, Los Angeles, and other distant points.

While Naterlin is modest about his accomplishments, friends say he is an expert steelhead and salmon fisherman. "Maybe that's because I don't have as many distractions as the other fishermen," he explains with a quick smile.

"On top of that I've been studying the habits of fish since boyhood."

Of all the things he has done in his busy lifetime, Naterlin perhaps is proudest of the cabin he built single-handed on the Alsea River.

"I really didn't do it all myself," he explains. "I had a fellow put in the fireplace."

Now in the insurance business, Naterlin is former executive secretary of the Commercial Fisheries Association of Oregon, managed the New England Fish Co. at Newport for several years and was one of the original sponsors of the Central Lincoln PUD, serving 17 years as a director until his resignation when he became senator. In that time assets of the PUD grew from $850,000 to the present $8 million.

ACTIVE IN MANY GROUPS

He is a member of the Pacific Marine Fisheries Commission advisory board, the Bonneville Power Administraiton advisory council, and a director of the Northwest Public Power Association. He was Newport's first citizen in 1939.

Naterlin is sponsoring legislation to clarify laws affecting people's utility districts. His stand on PUD's: They have an important place and should be permitted where needed.

Naterlin is a strong booster for the Oregon coast. And daily before senate adjournment he puts in a different plug. Like this:

"The beautiful Sea Lion Caves are on highway 101. They are a notable tourist attraction well worth your time."

Petals and Pearls

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, April 8, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk one of the columns of our distinguished Chaplain, the Reverend Frederick Brown Harris, which appeared in the Washington Star, concerning the current beauty of Washington's cherry blossoms and the crown of pearls recently presented by Japan for our cherry blossom queens. Entitled "Petals and Pearls," Dr. Harris' column is deserving for all to read. For that reason, I ask unanimous consent that it be printed in the Appendix of the RECORD.

Incidentally, Dr. Harris' column appears in the Anderson Independent, the daily morning newspaper of my native county in Anderson, S. C., and will appear in that newspaper in the near future.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PETALS AND PEARLS

(By Dr. Frederick Brown Harris)

In the city beautiful, which belongs to all America, now that April's here, the famous flowering trees have witnessed an international marriage. Petals and pearls have been joined in an enduring partnership. In all the treasure chest of nature there is no loveliness to surpass blossoms and pearls. Spring in lavish profusion scatters its blooms until common bushes are on fire with the eternal and ordinary trees are sacraments of the holiness of beauty.

Spring is not only miraculous, it is miracles by the wholesale. A lover of nature's wonders asked sadly as his enraptured eyes gazed on the miracle once more, "How many more springs can I hope to see—5 or 6 perhaps—the miracle of the earth reclad, the vision of splendor and loveliness which tongue has never yet described, is again set before me." That is indeed the grateful response of every normal soul, glad for the tint of the tiniest flower. Spring is the sure antidote for blighting boredom which, alas, often saps the wonder of life's dewy morning. We are apt to grow tired of some things which once captured our interest. But when spring comes with bounding, bursting, risen life, if one is tired of daffodils he is through. He is more dead than those whose names are in today's obituary list when a flower knocks upon his heart in vain. That is exactly what Teresa Hooley had in mind when she sings:

"If I should ever wax so old and weary
That, when spring comes, my heart would fail to thrill
To the first white windflower waking in the copice
Or the tossing gold of the first daffodil."

If so she pleads that her physical existence might be brought to an end with "life in my limbs and gray death in my soul."

Now truly there is one glory of the blossoms and another glory of the pearls. But pearls are not flung about in wild abandon. Their beauty must be sought. They are fashioned by a strange alchemy under fathoms of concealing waters. Across the centuries men have risked direst dangers to search out their hiding places beneath the waves, where the precious substance is held firmly within the vitals of shelly creatures. Up from the depths come the hardy divers with rounded things of exquisite beauty touched with an entrancing luster which is its own secret. But what radiancy is now on the way to grace milady's neck or arms or to adorn some royal diadem. No wonder the myriad-minded Shakespeare with his almost uncanny insights tie together flowers and pearls in his lines, "I must go seek dewdrops here and hang a pearl in every cowslip's ear."

Man has but known that in those strange laboratories on the bottom of the sea a living creature, encased in its hardened house, can take an irritation and transmute it into a gem of irridescent glory. But within recent years has come the cultured pearl industry with its center in Japan. That does not mean that man can manufacture pearls. He has only learned the secret of how to pierce the sensitive organism of the bivalve—how to manipulate the sword with which to wound. Then out of the hurt the oyster produces a pearl. The magic recipe which starts a pearl was discovered in our own lifetime by a Japanese named Mikimoto. In vain Thomas Edison labored long to find the process which would result in so rich a deposit, as in the depth of the sea a gash could be turned into a gem. But strange to say, while the Japanese finally won the quest, they can only do it with the aid of sharp shells found only in our own Mississippi River. So now it comes to pass by a gracious gesture from beauteous Nippon which gave the cherry trees more than threescore years ago is added a fabulous crown of pearls to bedeck the fair brow of the yearly queen of the blossom festival. Henceforth, for multitudes as by the quiet Potomac will be unveiled when spring trips north a picture of ineffable beauty—a vision of petals and pearls. There are the trees with rainbow ribbons caught in their hair and over spreading arms a fairy-flowered robe delicate as a bride's veil, pure as lustrous white pearls. Mirroring lake and flower-fringed river are trysting places where blue and blossoms meet and mingle and where the sky itself seems in bloom. From the gardened land whence came the trees America gratefully accepts the pearls to grace the tresses of the queen chosen by lot to ascend the throne as, surrounded by her princesses charming, she reigns as a worthy symbol of winsome young womanhood.

As the blossoms speak to us of the surging tides of returning life climbing to a soul in leaf and flower, there is felt throughout our

very beings the throbbing life of which our veins are scant. As one all atingle with the vision of a waking world exclaims, "In clapping our hands at the gliding of the daffodils and the coming of the feathered songsters we are bearing witness to the love of living. We are giving three cheers for life itself."

And does not all that April is saying and meaning and bringing lead us through the blossoming boughs to see a gentle figure who said and says, "I am come that ye might have life and have it more abundantly."

"I like to think the spring before she started
Upon her lovely quest
Knelt low at Christ's own footstool and departed
With her sweet mission blessed.

I like to think her gown in fairest order,
With bud and bloom made bright,
Brushed something of its fragrance from the border
Of His pure robe of white."

We cannot forget that that One in vestured witness in the days when in the flesh He was here among men walking in sandalled feet along the lake shore, paused to teach, and in one hand was a flower and in the other a pearl. He spoke of the blossoms' breath-taking beauty in its many-colored robes surpassing royal attire, and then in the beauty of the lilies He held before them a petalled miracle. He told of the kingdom for whose coming He has taught the ages to pray. He called it the Reign of His Father God's order of brotherhood and love and service. Then, thinking of the lure some great and famous jewel has always exercised with a subtle fascination on men's questing minds, He said, "The realm of heaven is like a trader in search of fine pearls. When he finds a single pearl of high price he is off to sell all his possessions in order to buy it."

And so, when it's cherry blossom time in Washington, we find ourselves with the entranced multitudes gazing with awed rapture at the rosy tunnels as we hear Him say, "consider the flowers"—and then as there is lifted up the gorgeous pearls, again our ears are His as He whispers, "Think of the one pearl of great price," and thus bowing in reverence at the vistas of wonder and at the reaches and ranges of splendor we listen to the parable of the petals and the pearls.

Airport at Burke, Va.

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Burked," which appeared in the Washington Star of last Saturday evening. It relates to the proposed Burke Airport. I regret exceedingly that so much time has been lost in the final decision on this particular airport. I think the editorial is timely.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BURKED

Senator MONRONEY's impatience over the dillydallying with respect to a second national airport for Washington is shared by the airlines, their customers and the general public. He is particularly concerned over the latest hitch in the Government's plans for proceeding with the stalled Burke project, a delay occasioned by the necessity for a CAA study of Representative BROYHILL's revival of the Belmont Bay site proposal. The Oklahoman's urgent request that the CAA expedite its study is justified, for every new delay, every new stalling tactic on the airport problem raises the hopes of supporters of Friendship as a supplemental Washington airport.

The ultimate objective of the delay strategy, of course, is to burke Burke. Webster's International Dictionary defines the verb "burke" thus: "To dispose of quietly or indirectly; to suppress; to smother; to shelve; as to burke a parliamentary question." The word is of old English coinage—but its fits admirably the present parliamentary situation as to the much-kicked-around Burke airport issue.

State University in New Jersey

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "New Model University," from the March 17, 1957, issue of the Chicago Tribune.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW MODEL UNIVERSITY

At this late date, the State of New York is stirring itself to create a real State university. It has never had one, as such, although the State has financed specialized branches of study at universities that are primarily supported privately, like the college of agriculture at Cornell and the forestry courses at Syracuse. After World War II the State also organized some State colleges, largely on an emergency basis in makeshift housing.

Now the New York Legislature is being asked to authorize a bond issue of a quarter of a billion dollars, subject to a statewide referendum. (Illinois has probably spent about the same sum on the University of Illinois since it opened 90 years ago. The proposed State university of New York would have branches scattered throughout the State.

One proposal deserves attention in Illinois. It is for a so-called senior university on Long Island that would take students in their junior and senior years, and also provide graduate studies. Students would get the first half of instruction toward their bachelor's degrees in three community (junior) colleges to be established in the area.

This scheme is subject to criticism, but only on the grounds that the community colleges will not get going in time to fulfill their part in the plan. No one seems to regard the basic idea as horrendous, although to our knowledge it has not been put in effect anywhere in the country.

The same plan might be adopted in the expansion of the University of Illinois' activities in our metropolitan area. The idea has gained strength from the proposals of the Chicago board of education to expand its junior college system substantially.

The junior college in the home town is cheap without being inferior. Its instructional costs are lower than those of a full fledged university. It is far cheaper for its students, because they can live at home while studying. And the record in general is that when they move on to 4-year colleges, their scholastic accomplishments average just as high as those of classmates who spent their first 2 years on a campus away from home.

If the junior college student sacrifices anything to get far less expensive training it is in the field of amenities and campus fun even though these community institutions are not necessarily dreary. The question then rises what his diploma is supposed to attest—social polish or an education?

Jury Trial in Danger

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Right of Trial by Jury in Danger," from the March 20, 1957, issue of the Metropolitan Herald of Atlanta, Ga.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIGHT OF TRIAL BY JURY IN DANGER

One of the most precious heritages we have, as citizens of this great Republic, is the right of a trial by jury. The Founding Fathers recognized this to be one of the foundations of any free government and wrote this guaranty into the Constitution.

Yet, this week, 17 members of the House Judiciary Committee voted to destroy this basic right, and in the name of civil rights. What sham. What hypocrisy.

Thomas Jefferson and James Madison knew what they were doing when they insisted that this right be written into the Constitution. The framers of the Constitution understood well the dangers to ordinary citizens if they were not protected by this right. Until recent years no American dared challenge this great principle.

However, alien ideologies have gained a grip in this Nation. Many segments of our population have been "brainwashed" by subtle propaganda wrapped in the cloak of such seemingly fine phrases as "civil rights" and "brotherhood." Many well-meaning citizens, who believe in civil rights and brotherhood, have been used and are being used by those who would destroy our form of free government.

In Communist Russia and other Soviet-dominated nations, citizens have no right to a trial by jury. Commissar judges, try, convict, and condemn those citizens at will. There is no appeal. There are no civil rights. There is no liberty, no freedom.

Now we are faced with a similar tragedy in this Nation. Petty politicians, fearful of the bloc vote, would destroy the fundamental civil rights of every American citizen to appease a small segment of our population.

If this measure, now before the Congress, passes in its present form, it will mean that Congress officially repudiates the Jeffersonian principle of a republican form of government and replaces it with the Marx-Lenin doctrine of the all-powerful central state which controls and dictates every facet of human life.

Surely we in the United States are not ready to replace the doctrines of Jefferson with those of Marx. Surely we are not willing to destroy our constitutional liberties for a mess of political pottage.

God have mercy on us if we do.

Patriotism in Modern America

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following winner in the American Legion Statewide essay contest on Patriotism in Modern America:

PATRIOTISM IN MODERN AMERICA
(By Judith C. Richards, Defiance, Ohio)

The word patriotism is an honored and beloved term to all who love their country.

History has preserved for us the records of many whose lives and acts of devotion have elevated the general welfare and safety of the people of their own day, and accelerated the progress of civilized society. History proved that true patriotism preserves and improves not only the good in a given nation, but also makes that good a part of what is most to be desired by all peoples.

Is it a common fault of our thinking that we associate patriotism with times of active warfare? Patriots in history often are great military figures. We think of Washington, Lincoln, Grant, Eisenhower; we remember the unnamed heroes of Corregidor and Iwo-Jima, and we are proud to be Americans. There is a glory and color to the patriots of wartime that robs our minds of the ability to easily honor the patriots of peace.

It may be that patriotism in modern America will be made more difficult because the dedication and consecration of those who love their country will have to survive without the thrill of great deeds performed under dramatic conditions. No bands will play, no flags will fly, no crowds acclaim.

WHO IS THE PATRIOT?

Consider the scientist working quietly, and probably alone, in his laboratory. He dedicates his life in the service of his country, yet not a single band will stir the blood of those who are indebted to him; no artist will picture him at his lonely vigil. His patriotism must be great to survive the absence of public acclaim.

The patriotism of those in public life demands greatness of purpose, and perseverance under criticism, scorn, and, ofttimes, repudiation.

The educator and teacher work with little recognition, often with little honor accorded them. Yet, unless they train the minds of young people in citizenship, honor, and character, our whole social order will collapse.

There are those who devote their lives to the improvement of what we call the American way of life; the labor leaders who seek to improve the lot of the workingman; the industrialists who keep always in mind the stability of the American economy; the great body of religious leaders whose love of God, and devotion to mankind lead them into sacrificial service.

All these citizens are patriots in a very real sense in that they contribute to the greatness and safety of the American way.

There is another group which probably does more than any other to set the standards of patriotism in modern America.

I am speaking of those who have known the costs of patriotism in active warfare. They have proven their willingness to lay down their lives in battle to preserve their country; now they are finding ways to consecrate themselves in the days of peace to the general welfare of the country they love so much.

The truest patriotism in modern America is that which combines love of country with love of humanity and love of God. It is not at odds with the Christian doctrine of the brotherhood of man. It does not require the elevation of one nation at the cost of the exploitation or subjugation of another. It recognizes that to impose one culture on the world would be to impoverish the world.

Today the citizens of this great United States are living up to these doctrines. Patriotism in modern America is writing a thrilling chapter in the book of mankind.

Postal Pay-As-You-Go Plan

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk an editorial from the Bismarck Tribune, of Bismarck, N. Dak., March 30, 1957, which I believe should be brought to the attention of the Senate.

This editorial entitled "Postal Pay-As-You-Go Plan" discusses with sharp insight the problems of making the postal service self-sustaining. Especially it urges everyone concerned with this problem to study the advisory council report made by the special advisory council set up by the Senate Post Office and Civil Service Committee.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD in order that it may be available to all the Members of the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POSTAL PAY-AS-YOU-GO PLAN

Postmaster General Summerfield wants to put the post office operation on a pay-as-you-go basis, which on the surface is commendable.

Accordingly, measures have been introduced in both Houses of Congress to increase first-class rates 33⅓ percent, air mail 16⅔ percent and second class (newspapers and magazines) a total of 60 percent over 4 years.

A year ago the House passed a bill which would have increased second-class rates up to 120 percent over a 5-year period, but it died in the Senate.

Newspaper publishers generally are not opposed to a reasonable increase in second-class rates, if necessary, despite a 30 percent increase in 1954. They wonder, however, why a 60-percent increase should be proposed for second class (on top of the 30 percent) as against a mere 33⅓-percent increase for first class, which is the principal business of the post office.

That all is not as it appears on the surface is borne out by a 2-year study just completed by an advisory council appointed by the Senate.

Congress, the council's report said, "should enumerate and separate the costs to be borne by users of the mails from those to be met in the public interest by appropriation."

The report added that for the last fiscal year for which the council found complete figures the postal deficit was $363 million while public welfare costs totaled $392 million, indicating that users of the mails are paying their way.

Among public welfare costs, said the seven-man council, are nonpostal services performed by the post office ($12.4 million); free services for newspapers within county of publication, free mail for blind, and free registered mail for Government agencies ($15.9 million); and preferred rates on books and exempt publications ($60.5 million).

Other costs cited are the loss on postal cards ($35.8 million); losing special services such a registered and special delivery mail ($48 million); the loss on parcels diverted from the mail because of a size and weight limitation ($73 million); estimated loss on rural delivery ($95 million); and loss in operating third- and fourth-class post offices which do not meet expenses ($51.8 million).

The Council also declared that economies could be effected in postal operation, declaring more is being paid for transporting mail than commercial customers pay outside the mails.

History "supports the public service concept," the reports continues. It cites contributions made by the postal system through the years to American progress, stressing the role the mails have played in uniting a fast area into a cohesive nation with a common culture, common language, and democratic ideals.

Probably users of the mails should pay their own way, but should they or the public be charged for the free services?

And what effect would the sharp increase proposed have on second-class volume? Many publishers already have abandoned second-class service, particularly in the heavily populated areas, finding that they can deliver their product in better fashion at no more cost than mail rates. Many publishers now pay auxiliary hauling costs for better service on top of second-class rates.

And in line with the pay-as-you-go concept, will the Postmaster General eventually propose closing third- and fourth-class post offices? We think not.

Congressmen owe it to their constituents to study the Advisory Council's analysis.

American Economic and Technical Aid for Poland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram sent to me by Mr. Louis Slivinski, president, Northeastern Pennsylvania Division of the Polish American Congress, on the subject of American economic and technical aid for Poland:

Hon. DANIEL J. FLOOD,
Congressman, House Office Building, Washington, D. C.:

On behalf of the northeastern Pennsylvania division of the Polish-American Congress representing fraternal, civic, political, and religious organizations, we urge you to support economic and technical aid for Poland. Traditionally pro-American and anti-Communist Polish people will know that the United States is helping them and not the Red regime forced on Poland by Russia. It is in the best interest of America that Poland be kept from complete Soviet enslavement.

LOUIS SLIVINSKI,
President.

EDWARDSVILLE, PA.

Need for Community Colleges

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "More Community Colleges Needed," from the February 26, 1957, issue of the Moline Daily Dispatch, of Moline, Ill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORE COMMUNITY COLLEGES NEEDED

Senator CLIFFORD CASE, Republican of New Jersey, an able fellow, proposes an emergency program of Federal aid to provide classrooms at public community colleges for more than a half million young men and women who otherwise will have no place to go in the next 5 years.

These colleges, he says, would be designed to provide 2 years of college credit education at a low-cost college in preparation for the final 2 years at a 4-year college, and provide a terminal program of 2 years of post high school general education with opportunities for vocational training for the subprofessions and occupations of a technical nature.

"In this country we do not want only an educational elite," remarks Senator CASE. "Our goal, stated by President Eisenhower's Committee on Education Beyond the High School, is that 'every individual, regardless of race, creed, color or national origin, shall have the opportunity to develop his or her best self, to continue to appropriate education up to his or her personal point of optimum development.'"

The New Jersey Senator makes some impressive arguments in support of community colleges:

1. They offer higher education at the lowest cost because dormitories aren't needed; students live at home.

2. They increase resources for adult education, in itself a need of critical importance.

3. They serve as a screening device for the 4-year college, permitting the 4-year colleges and the professional schools to do a more effective job.

4. They reflect local patterns and are not so much the more impersonal State school.

We believe, up to a point, Senator CASE has a good program. That point is the extent to which Federal money should be used in it.

Federal aid, whether on a matching basis or a flat grant, and whether apportioned according to population or to assessed valuation, should not be used to accomplish what local and State people are able but not willing to accomplish for themselves, it is our view. Federal aid should be used only where the need and the desire exist but not the capability.

Although he isn't specific, Senator CASE sounds as if he wants to make this a 48-State project. If that is so, it is not realistic because obviously a number of States are able to support community colleges, and some are doing more and more in that direction.

Senator CASE assures that he intends that there be no "Federal control" in his program, but if the Federal Government spurs a program in areas where there has been no interest in such a program, it is entirely evident that it is, in effect, a Federal program and not one fathered by the State or local community.

But if Federal money is used as a supplementary aid and not as a means of coercion, we believe this is a fine thing. The community college holds untold promise for the future of American education.

Patriotism in Modern America

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following essay winner in statewide contest in Ohio American Legion, subject: Patriotism in Modern America.

PATRIOTISM IN MODERN AMERICA

(By Robert Putnam, Port Clinton, Ohio)

Who can be a patriot? You? I? I believe that the answer to this question can best be found by looking at the lives of several modern American patriots.

In 1888 in Temun, Russia, a child was born to the Baline family. When the boy was 4, the family emigrated to the United States. As an adult Irving Berlin has enriched the lives of millions of his adopted countrymen with his beautiful songs, among them the stirring God Bless America. In his compositions, Mr. Berlin has expressed his love for his adopted homeland.

A poor Negro child from the slums of Philadelphia—what chance had she of displaying patriotism? Not much. But this girl grew up; she became one of America's leading goodwill ambassadors. Her name, of course, is Marian Anderson. She has used her voice to become a great patriot.

In 1955 the world learned with immense relief that an antipolio vaccine had been developed. The discoverer of this serum is still another modern American patriot. Dr. Jonas Salk, who came from New York City, is helping to defend his country also, not from other nations but from the ravages of disease.

On any Monday night one can watch and listen to another patriot. This man has come a long way from a small town in the Midwest to a national television program. He is one of the leading anti-Communists in the world today. Bishop Fulton J. Sheen is a patriot who fights ideas instead of battles.

Carl Sandburg has expressed his patriotism in a way everyone can appreciate. Son of a midwestern blacksmith, he has written flowing verses that truly describe our country. This modern patriot inspires all Americans with his poems.

Very few men have had a chance to show their patriotism in several fields. One of these men is Dwight D. Eisenhower. His career has encompassed both the defending of his country with arms and now the protecting of world freedom and peace. President Eisenhower, like George Washington, is a patriot in every sense of the world.

These, then, are the patriots of modern America. These and many others. They hold the answer to our question. A Russian immigrant, a poor Negro from the slums, a smalltown midwesterner, and all the rest are helping to keep our Nation great. No longer does the word "patriot" only mean one who defends his country with his life. Now it includes all who are fighting in the laboratory, in the opera house, in the government, for the ideals of democracy.

The answer to our question, then, is, anyone. Anyone can vote, serve on a jury, and perform the duties of citizenship. Anyone can use his own talents to the best of his ability in the furthering of freedom and democracy. A poet, a scientist, and opera singer—if all these are patriots in their own way, then anyone can be a patriot. And in our country the answer can, and must, be as it always has been—everyone—a patriot in his own way.

Neglecting Latin America

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the March 30, 1957, New York Times. I especially call attention to the statement below referring to our excessive friendliness to Latin American dictators as one of the most bitter criticisms leveled against American policy by Latin Americans. I also point out that it criticizes our diplomatic representatives who have often gone out of their way to show an unnecessary degree of friendliness and says that this is especially true today of the Dominican Republica and Cuba.

The editorial follows:

NEGLECTING LATIN AMERICA

The perennial question of whether Latin America is being neglected or not by the American Government came up again in Secretary Dulles' latest press conference. Mr. Dulles, of course, argued that the Eisenhower administration has given a great and unusual amount of attention to Latin American relations. James Minotto, who prepared a report on foreign aid for the Senate Foreign Relations Committee, said that in the Caribbean area it is felt that the United States is neglecting our hemispheric friends. The feeling is not confined to this region.

The target is a fair one to shoot at because even before taking office in 1953 Secretary Dulles stated that he and the Eisenhower administration were not going to neglect Latin America the way Secretary Acheson and President Truman presumably did. The charge against the Truman administration was a weak one. It was based on the fact that Secretary Acheson only once went out of his way toward the end of his term to visit a Latin American country—Brazil. The Inter-American Bureau of the State Department was in the last years of the Truman administration under the able and energetic direction of Assistant Secretary Edward J. Miller, Jr., who certainly did not neglect his duties and who made many trips.

There has not even been an Assistant Secretary of State for 7 months, since Henry Holland resigned. The Department is in the hands of a competent and devoted career officer Roy R. Rubottom, but he has not the rank or authority of an Assistant Secretary and cannot leave his desk. Secretary Dulles has not made any trips to Latin America except to attend a few major conferences. The one important gesture of the Eisenhower administration was to send the President's brother, Dr. Milton Eisenhower, on a trip around South America in 1953. While generally valuable, it was marred by kowtowing to Argentine Dictator Perón.

The whole record of the present administration, in fact, has been marred by excessive friendliness to Latin American dictators.

This is one of the most bitter criticisms leveled against American policy by Latin Americans. The fault probably lies in our diplomatic representation, which is generally of a high order but which in the case of the dictators has curiously enough been characterized by envoys who have often gone out of their way to show an unnecessary degree of friendliness. This was true in Argentina under Perón, in Nicaragua under Anastasio Somoza, and in Venezuela. It is especially true today of the Dominican Republic and Cuba.

In this respect our good neighbors would like to see us be rather more neglectful of the dictatorships and more friendly and cooperative with the democracies. A good start could be made with Argentina, which has not by any means had the help it needs and deserves in this difficult post-Perón period.

Iowa General Assembly Urges Repeal of Excise Taxes on Transportation

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. GROSS. Mr. Speaker, the 57th General Assembly of the State of Iowa has adopted a resolution urging repeal of excise taxes on transportation of persons and property. The resolution follows:

Senate Concurrent Resolution 21

Whereas during the emergency of World War II, the Congress of the United States enacted an excise-tax levy on the transporation of property and persons; and

Whereas the tax on transportation of property and persons was designed for a double motive, to supply revenue and for the principal purpose of discouraging unnecessary civilian use of common carriers when their services were needed in the war effort; and

Whereas though the hostilities have long since ceased, the tax on transportation of property and persons still continues to be an effective deterrent to such transportation and is now effective in weakening the national transportation system contrary to the best public interest; and

Whereas the national policy declared by the Congress of the United States in the Interstate Commerce Act calls for the development and preservation of a national transportation system adequate to meet the needs of commerce, postal service, and the national defense; and

Whereas the publicly regulated carriers are the collectors of the tax for the Government, the tax adds to the shipping cost paid by the shipper or receiver who uses the regulated carrier and it, therefore, places an undue and unfair advantage in the hands of those who can afford to furnish their own transportation as against the small shipper or receiver who, because of his economic station, is compelled to use the regulated carrier. It also creates an inequality between the shipper who has a long haul and one who has a short haul on the same regulated carrier because the excise tax is levied as a percentage of the cost of the transportation; and

Whereas transportation is not by any standard a luxury, and sound reasoning allows us to distinguish between the excise tax on transportation and other excise taxes on luxury items; and

Whereas it is the opinion of the General Assembly of the State of Iowa that the best interest of the citizens of the State and the Nation will best be served by the removal of the excise taxes on transportation: Therefore be it

Resolved by the senate (the house concurring), That it shall be the manifest expression of the 57th general assembly that the discriminatory and burdensome excise taxes on transportation of persons and property be removed by the Congress of the United States; and be it further

Resolved, That a copy of the resolution be communicated to the Members of Congress from Iowa and that a copy of said resolution be communicated to the Committee on Ways and Means of the House of Representatives and to the Committee on Finance in the Senate of the United States Congress.

W. H. TATE.

We, William H. Nicholas, Lieutenant Governor of Iowa; Richard W. Berglund, secretary of the senate; W. L. Mooty, speaker of the house of representatives; and William R. Kendrick, acting chief clerk of the house of representatives, hereby certify that the above and foregoing resolution was adopted by the Senate and House of the 57th General Assembly of Iowa.

RICHARD W. BERGLUND,
Secretary of the Senate.
WILLIAM R. KENDRICK,
Acting Chief Clerk of the House.
WILLIAM H. NICHOLAS,
Lieutenant Governor of Iowa.
W. L. MOOTY,
Speaker of the House.

Patriotism in Modern America

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. VORYS. Mr. Speaker, I want to place in the CONGRESSIONAL RECORD the essay entitled "Patriotism in Modern America," written by Hershal Amburn, 353 North Cassingham Road, Columbus, Ohio, a 10th-grade student.

Hershal is one of the 12 winners of the statewide essay contest sponsored by the American Legion of Ohio, in which thousands of students participated. The purpose of this contest is to promote patriotism and good citizenship. Hershal's essay effectively sets forth these principles. Here is how he describes what patriotism means to him:

PATRIOTISM IN MODERN AMERICA

(By Skip Amburn, Bexley, Ohio)

The dictionary simply states that patriotism is "love of one's country." But to me patriotism is much more than this. It is an inner, almost automatic force that makes men (and women, too) do both horic and unselfish deeds for their country. It is the ingredient on which freedom was built. It is the hope on which freedom will survive.

There are some among us who feel that modern America's brand of patriotism has grown soft; that patriotism has become more a matter of words, historical quotations, and "let Joe do the good deeds." I don't agree.

There are those who are working on secret and dangerous scientific projects so that their fellow men and country may become stronger and more capable of beating off any enemy who may attack. This is patriotism.

There are those who, of their own fee will, enlist in the foreign espionage service of our country to guard against the propaganda and intrigue which may sap away the strength of our country. This is patriotism.

There are those who work at the deadly task of developing germ warfare—without question of why they do it. This is patriotism.

There are those who test new fighters and bombers, who work with explosives, who work with guided missiles, who work for the cause of freedom—diligently, patiently, determinedly. This is patriotism.

There are scientists, technicians, and engineers who make a stronger America their life's work—freqeuntly with lower pay than could be made in commercial occupations. This is patriotism.

There are the 80,000 people at the football game who stand and sing the naional anthem as the flag is raised. This is patriotism.

There is the mother who bravely smiles as her only son, by his own wishes, enlists in the Armed Forces of his country. This is patroitism.

There is the neighbor next door who raised Old Glory on the Fourth of July and leaves the picnic early so that his flag can be lowered before sundown. This is patriotism.

There is the man who prays for his country and its people. There was the soldier in Korea who volunteered, without hesitation, to lead a patrol into enemy territory—with little hope of survival. This is patriotism.

There are the parents who deny themselves in order to educate their children so that they may become useful and good citizens. This is patriotism.

Patriotism is all around us in modern America, if we will only stop long enough to see it at work. It is not generally the same kind or same form as that practiced by our forefathers who fought for the cause of liberty and religious freedom. But it is with us and a part of us. Our country will remain strong and great so long as patriotism is taught in the home and in the schools, and so long as its power comes from the faith we have in Him above. This, to me, is patriotism in modern America.

Interoceanic Canals Commission Resolutions

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. FLOOD. Mr. Speaker, under leave granted to extend my remarks, I quote the 1957 resolutions of the Panama Canal Society of Florida and the American Coalition of Patriotic Societies with respect to the Panama Canal, as follows:

RESOLUTIONS RE PANAMA CANAL BY THE PANAMA CANAL SOCIETY OF FLORIDA, ST. PETERSBURG, FLA.

Whereas the Panama Canal situation has been dangerously simmering for over 10 years without constructive results; and

Whereas the inadequacy of the Panama Canal to meet increasing traffic requirements has become more and more acute and the absolute need for a speedy determination of the overall subject is of the most vital importance; and

Whereas there is developing a determined movement to force the Congress into authorizing a sea-level canal and to which radical change practically all engineers familiar with

local Canal Zone conditions are unalterably opposed as a dangerous and costly experiment not warranted or supported by experience gained over 42 years of Panama Canal operation and maintenance: Therefore be it

Resolved by the Panama Canal Society of Florida at its annual reunion at St. Petersburg, January 15–16, 1957, as follows:

1. That the society respectfully and most earnestly urges the Congress of the United States to enact without further delay legislation providing for the creation of an independent Interoceanic Canals Commission to study and review all the problems involved in the matter of increased capacity for the canal, with recommendations in the premises.

2. That copies of this resolution be furnished the press and the Members of Congress.

3. That copies of this resolution also be furnished each of the 2,400 members of the original canal construction force now comprising the membership of the Panama Canal societies located throughout the United States, with the request that these members utilize every opportunity to support in the public press and through their congressional representatives the action recommended in this resolution.

TROY HAYES, *President.*
Mrs. LUCILLE S. JUDD,
Secretary.

RESOLUTIONS RE THE PANAMA CANAL BY THE AMERICAN COALITION OF PATRIOTIC SOCIETIES, 1025 CONNECTICUT AVENUE, WASHINGTON, D. C., ADOPTED AT ITS ANNUAL CONVENTION IN THE MAYFLOWER HOTEL, WASHINGTON, D. C., JANUARY 31, 1957

Whereas the Panama Canal is not adequate and many plans have been proposed to increase its capacity; and

Whereas the Soviet Government, its satellites, and certain internationalists seek to remove American ownership, operation, and control of the canal: Therefore be it

Resolved, That the American Coalition of Patriotic Societies (a) urges Congress to provide for an Interoceanic Canals Commission to resolve the problem of increasing the capacity of the Panama Canal and (b) is unalterably opposed to relinquishing American ownership and control.

Federal Economy

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. McGOVERN. Mr. Speaker, in view of the current concern with the problem of economy, I am including in the RECORD two commentaries on the subject of Federal economy.

The first item is in the form of a letter to the editor of the Washington Post by Prof. John K. Galbraith under date of April 6, 1957.

I would also like to include an editorial from the Yankton (S. Dak.) Press and Dakotan of April 4, written by a thoughtful student of public issues:

[From the Washington Post and Times Herald of April 6, 1957]

SINCLAIR WEEKS' WORDS

On December 2, 1953, the Secretary of Commerce, Sinclair Weeks, in an address before a luncheon session of the 58th Congress of Industry of the National Association of Manufacturers, summarized the work of the administration of which he was then, as he remains, a member during the first 10 months. Following were among the "actual accomplishments" which he listed:

"Thirteen billion dollars have been slashed from requested appropriations.

"An honest dollar has been restored and is being kept.

"Inflation has been checked * * * and the cost of living is leveling off.

"Federal agencies are being reorganized for economy and efficiency and for elimination of duplication and waste * * *."

The Secretary warned that "if for any reason the bough of economic stability should break, down goes business, labor and all." But he concluded with the assurance that "sound and efficient Government was being restored."

My purpose in recalling these words is not because, on purely literary or historical grounds, I would deem them worthy of enduring fame. And I would indeed be sorry if anyone thought me motivated by any tendency to petty, carping or even remotely partisan criticism. One hears so much of this.

Rather it only seems to me that the measured judgments of the servants of our democracy should not, under all circumstances, be too quickly forgotten. Also, it occurs to me that the Secretary may wish to report on the further progress along these lines since 1953.

JOHN K. GALBRAITH,
Professor of Economics,
Harvard University.

CAMBRIDGE, MASS.

[From the Yankton (S. Dak.) Press and Dakotan of April 4, 1957]

ALSO IMPORTANT

The preservation of peace in the world is an objective that overrides high taxes in importance, President Eisenhower told a group of business leaders a few days ago in discussing the administration's controversial budget.

"Every other objective must bend to that," he declared. "The world must have peace or we come close to the point where we say it must perish."

There can be no disputing his contention that the preservation of world peace is all-important. Moreover, current governmental expenditures and taxes are unquestionably low compared with what they would be if this Nation were to be plunged into an atomic war.

One may go along also with the further contention that, since the preservation of world peace seems to depend on this Nation remainfng strong, expenditures for that purpose are justified, being in the nature of national insurance.

Disappointing, however, is Mr. Eisenhower's failure to recognize the fact that there is much spending by the Federal Government which contributes very little if anything to the cause of national security or world peace.

There was no apparent recognition of the fact that the spending, both for national defense and otherwise, continues to edge upward, year by year, while the threat to world peace is not reduced correspondingly, to all appearances, as it is supposed to be.

Senator BYRD, of Virginia, champion of economy, pointed out the other day that the Federal civilian payroll hit an all-time peak in January of a billion dollars a month.

That figure did not include the Military Establishment. Total civilian employment by the Federal Government reached 2,390,507 in February of this year, an increase of 3,492 over January, according to the Senator.

This indicates clearly that the trend toward increased spending and higher taxes is continuing.

Unfortunately, that trend is likely to continue as long as officials put most emphasis on the need for spending rather than on the need for economizing.

Preservation of world peace is an important objective, as Mr. Eisenhower said, but the preservation of our Government's solvency is also important.

Economic Phoenix in Europe

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an editorial which appeared in the St. Louis Globe-Democrat on Tuesday, April 2, 1957, entitled "Economic Phoenix in Europe":

ECONOMIC PHOENIX IN EUROPE

Few American huzzas greeted the signing of six-nation treaties linking European states in an economic union and a joint development of atomic power, called Euratom. The event last week was relegated to inside news pages. Yet this move can herald one of the most important, profoundly intelligent trends of this midcentury.

The treaties may presage the rising of new, vital economic power on the Continent, through unity of these often antagonistic states. They can foreshadow the re-creation of a strong, integrated European community, springing like a Phoenix from the tired, ancient ashes of European jealousies, wars, and political isolationism. The agreements are a long step toward the ideal of a United States of Europe.

This goal has been supported by the United States, because we seek prosperity for our European allies, have subsidized it with our billions, in the knowledge the Continent requires economic health as a cornerstone for its defenses. Europe's economic stability also is imperative to our own economic welfare.

The treaties would set up a common market among France, Italy, West Germany, and the Benelux countries—Belgium, the Netherlands, and Luxembourg. This market program would provide for gradual but firm elimination of tariff barriers.

In addition, the six continental states would form an atomic pool for mutual development of peace power. Atomic power is practicable in Europe, where production of electricity now costs twice as much as in America.

The pact must be ratified by each nation's Parliament but prospects are good. Some objection exists in France, which however is a leader in European-union plans. Paris will probably sanction the program, and the Bonn government follow suit. Highly productive Germany wants to cut back tariffs. If these 2 countries approve, the other 4 nations will quickly hope on the bandwagon.

Economic, especially electric, coal and steel unity in development of Europe can give the Continent tremendous cohesion. It can pave the way for a political federation, or a union of Europe, and a great new civilized power emerging upon a centuries-old battleground.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. PERKINS. Mr. Speaker, it is my intention to give both sides of the foreign-aid program. On Friday, April 5, I inserted on page A2741 a Louisville Courier Journal editorial outlining their reasons for increasing foreign aid. Today I wish to insert an editorial from the same paper, dated April 3, commenting on the adventures of Secretary Dulles and his biographer's story on his foreign-aid program.

It is my conclusion that the actions of Mr. Dulles have been such as to justify a cut in certain areas of our foreign aid program. The editorial follows:

THE ADVENTURES OF MR. DULLES AND HIS ADULATORY BIOGRAPHERS

Surely the time is coming when correspondents for Time and Life will shy away from chances to become the biographers of Mr. Dulles. The first man who took advantage of his opportunity wrote for Life an absorbing, if rather chilling, account of how the Secretary consciously led us all to the brink of war on various occasions when the risk seemed worth taking. The furore arising from this Russian-roulette type of diplomacy brought forth a typical Dulles explanation, which delicately implied that he had never said any of the things the article quoted him as saying, but did not actually deny having said them.

The same thing is happening now, in response to an adulatory biography of the Secretary, by the State Department specialist of Time magazine, John Robinson Beal. Mr. Beal is obviously devoted to his subject and, equally obviously, he has benefited from many conversations and discussions with Mr. Dulles and those close to him. He has dwelt upon and expanded the "brink" theory, and indeed has produced a few additional brinks from which his hero steps back in the nick of time.

But he obviously hasn't got Mr. Dulles' signature on some of his exclusive material. The result is that even before publication, Mr. Beal's work is being repudiated piece by piece, by its principal beneficiary. Mr. Beal says flatly, in a chapter on Formosa: "It is not known, for example, that Free China's president, Chiang Kai-shek, received a personal letter from Mr. Eisenhower satisfying him that the United States would help defend Quemoy and Matsu, for that fact has not appeared in print until now."

Understandably, at least two Democratic Senators have demanded an explanation of this sentence, in view of the repeated State Department declaration that no secret commitment exists between us and Chiang. Mr. Dulles now says that we have never made any such commitment, which leaves Mr. Beal out on a long limb with his hitherto unknown "fact."

An even more provocative chapter sets forth in exhaustive detail the reasons which led Mr. Dulles to back out of an offer to finance the Aswan Dam construction in Egypt. The most charitable explanation for this action, which publicly affronted Egypt's President Nasser and led directly to his seizure of the Suez Canal a week later, was that Mr. Dulles acted impulsively and out of pique.

According to Mr. Beal, the action was coldly calculated, as "a moment of cold-war climax." We were to call Russia's hand in the gamble for Middle East support, we were to make a "grand demonstration." And, says Mr. Beal, "Nasser combined the right timing, the right geography, and the right order of magnitude for a truly major gambit in the cold war."

So Mr. Dulles made this grand demonstration in the most humiliating manner possible for the touchy Egyptians. He waited until Nasser's ambassador arrived in Washington with an acceptance of the British-American offer of financing and then told them that the offer was withdrawn. This may have been, as Mr. Beal proclaims it, a demonstration that we are not to be trifled with, but it also seems to be a demonstration that we can be as ruthless and crude as the Russians themselves when we set our minds to it.

Mr. Beal makes a very persuasive case for his view and makes it seem very unlikely that this explanation was pieced together without consultation or discussion with those most concerned. But, again, Mr. Dulles says it never happened. The refusal was given because Congress forbade the use of foreign-aid funds for the dam, he told his news conference, and because—a truly remarkable switch—"there was a strong feeling that the burden of building of the dam would react against the United States in Egypt and further that Egypt was trying to play off the United States and Russia against each other."

All of these subsidiary reasons are probably valid, but they do not explain Mr. Beal's most interesting point, which was the timing of the refusal so that it had the effect of a brutal and calculated snub. Its results are now history. Egypt seized the canal; France, Britain, and Israel took matters into their own hands and invaded Egypt and the Middle East is more of a powder key than ever. If this be diplomacy, make the most of it.

Alaska Statehood Endorsed

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. BARTLETT. Mr. Speaker, the Seafarers International Union at its biennial convention held in San Francisco in late March of this year went on record in support of Alaska statehood. Under leave to extend my remarks, I should like to include here the resolution adopted:

STATEHOOD FOR ALASKA

Whereas the Seafarers International Union of North America assembled in San Francisco March 25 to March 29, 1957, reaffirms its former action in support of statehood for Alaska; and

Whereas the action taken recognizes the valuable resources of the Territory of Alaska, which if developed, would result in a great State where the products of resource development in timber, mining, oil, fish, and other valuable resources would greatly add to the wealth and importance among States of the United States; and

Whereas the Organic Act now in existence prevents the proper development of the resources of this great Territory; and

Whereas through statehood and the proper development of resources will aid and add to this strategic and military important area for the protection of the United States; Now, therefore be it

Resolved, That the delegates assembled representing seamen, fishermen, fish cannery workers, and all allied maritime trades urge Congress to grant statehood to Alaska without restriction that would prevent the early, gradual and complete development of what can become one of the richest States in the Nation.

A Gambit

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the Daily News, McKeesport, Pa., dated April 6, 1957, entitled "A Gambit."

I hope that many Members of the House shall read it as I believe this expresses very thoroughly the actions of Mr. Dulles, our present Secretary of State. Utterances one day and denials the next by the Secretary, I am sure, are confusing not only to American listeners and readers, but to those representing foreign countries.

I feel that the editorial of the McKeesport Daily News has contributed much in exposing the workings of our State Department and the "on again, off again" policy they are pursuing.

A GAMBIT

Did Mr. Dulles withdraw promises to pay the costs of the Aswan Dam in Egypt as a "gambit" to bring a showdown with the Soviet Union in the Middle East?

A new biography on Mr. Dulles says he did. Mr. Dulles says he did not.

Thus we have another dispute involving the Secretary of State as intriguing as that caused by his reputed brink of war statement which the Democrats tried to make something out of in last year's election campaign.

Mr. Dulles has more trouble with his quotations than anybody else in Washington, except Defense Secretary Wilson. There is a difference, however. Mr. Dulles denies the quotes which prove embarrassing. Mr. Wilson sticks by them.

Still the quotes, which Mr. Dulles denies, are so much like him, in the way he talks, that many will insist that, if he didn't use the exact words, he did use their synonyms.

His brink-of-war statement was thoroughly Dulles and we doubt, if the Democrats hadn't grabbed it, the Secretary would have realized that he was misquoted. In his public pronouncements, he's always speaking as though our foreign affairs were a game in which his role is to outsmart the Soviets.

Thus, the gambit quote was Dulles in character. Gambit is a chess term, meaning an intentional sacrifice to trip up an opponent. In checkers, it would be to allow an opponent to jump a checker, so you could jump two.

The facts are that Mr. Dulles did hold out several millions of our tax money to Egypt's Nasser for the Aswan Dam and that, when Nasser started to buy arms from the Soviet bloc, Mr. Dulles withdrew them.

But the gambit, or whatever Mr. Dulles wishes to call it, didn't work. Nasser gambited back by seizing the Suez and so we have had a bad crisis ever since, with no one quite knowing at the moment how it will cost us to get it settled.

In diplomacy, the move by Mr. Dulles would be spoken of as a calculated risk, but, if reduced to chess terms, it would have been

a gambit, albeit one that didn't work. Nasser's gambit worked better and, at last report, the Soviets weren't playing as Mr. Dulles suspected, but only kibitzing.

So Mr. Dulles is having trouble making his denial of a gambit stick. If he didn't use the word in his interview with the biographer, then he did use some word which put gambit in the writer's mind, because this is the way Mr. Dulles plays the diplomatic game. He moves and countermoves, checks and double-checks, and hopes that he can be more skillful than his opponents.

Because he plays this kind of diplomacy, we Americans have a tough time keeping up with him. One day we're mad at the French, the British, and the Israelis as aggressors. The next day, on cue from Mr. Dulles, we're mad at Nasser. We like Tito and then we don't like Tito. We smile at the Russians on a summit and frown on them when we find ourselves down to earth again.

The Dulles gambits have been very confusing in a nation which has a lingering memory of the time when its diplomacy wasn't a game of skill and chance engaged in by the Secretary of State, but rather something based firmly on principle and national interest. But, apparently, that old-fashioned diplomacy is gone and this, of course, is a pity because it wasn't nearly so dangerous or costly.

Star and Herald Newspaper of Panama Celebrates 108th Anniversary

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. FLOOD. Mr. Speaker, on February 24, 1957, the Star and Herald, the well-known bi-lingual Latin-American newspaper of Panama, Republic of Panama, celebrated its 108th anniversary of publication. Featured by wise and conservative direction, its editorial policies have long had statesmanlike qualities that have been international in their constructive influence.

These eminent traits were effectively illustrated in its campaign to prevent the liquidation of the Panama Railroad. Under the able direction of President T. Gabriel Duque and Editor Luis Bunting, its influence should continue to expand.

Not only this, researchers who have read the past issues of the Star and Herald always find that a rewarding experience. Many worthwhile books have used material available in its files.

The career of the Star and Herald, which started on February 24, 1849, was admirably summarized in its leading editorial on February 24, 1957, which should be recorded in the annals of the Congress of the United States and thus be made available to a far wider distribution.

Under leave granted to extend my remarks, I quote the indicated editorial:

STAR AND HERALD HAS BIRTHDAY

The Star and Herald, oldest English-language daily on the west coast of the three Americas and 2 years older than the "good, grey" New York Times, celebrates its 108th anniversary today.

Its long and colorful history covers a century-plus of one of the greatest stories ever told: the development of these Americas. One of its greatest triumphs is the story its yellowing pages tells of the several eras in which the Isthmus of Panama, both before and since this Nation's achievement of independence, has participated in actual world history.

Panama was visited by Columbus on his last voyage to the Americas. He thought he had hit the route to the Indies he sought, but when he learned from the native Indians that there was a far stretch of ocean on the other side of this narrow Isthmus he ceased and desisted and went home a very ill man. Vasco Nuñes de Balboa "discovered" the Pacific from a hill in Darien, also thanks to Indian lore and guidance. These events are part of Panama's age-old history.

But perhaps the greatest story, at least for Panama's future, was the discovery of gold in California. Such discoveries were old stuff to the early Spaniards who had been mining both gold and silver for generations up and down the west coast. But the California discovery brought the Grin-goes from the more populated Eastern United States. Some had attempted the trek to the west coast in covered wagons. There were then no transcontinental railroads. They had to buck hostile Indians, hardships on the plains and worse in the Rockies. Some never got there. It fell to little Panama to acquire the first Atlantic to Pacific railroad. And, when completed, this less-than-5-mile-long railroad coined money carrying the gold-seekers to the Pacific side, there to await slow and infrequent transportation to California, later carrying them back with their knapsacks laden with nuggets.

That's where the Forty-niners came in. They were fortune hunters, men of many callings. Among these were a few printers who found time hanging on their hands awaiting sea transportation. To brighten the tedium of their wait, they proceeded to do the only thing for which they were trained: get out a newspaper. They called it the Panama Star with their motto "Press onward," meaning they were pressing on their errand, let others take over their presses. Naturally it was in English. Also it was tiny as to size. It was merely a temporary pastime with perhaps the hope of realizing expenses if nothing more.

These printers, J. B. Bidleman, S. K. Henarie and J. P. Bachman produced the tiny Panama Star February 24, 1849. As each secured transportation to the goldfields he departed forthwith, leaving the others to carry on. Thus there was a succession of editors and printers, as also periodical lapses in publication as the tiny sheet changed hands.

Eventually the little Star was left an orphan but others came forward to take a shot at its publication. Some editors were experienced newsmen. Others were not. But in those early editions one can find more blood and thunder, more gossip and chit-chat, and more general color than can be found in any young newspaper in the world.

There were massacres of returning gold-diggers laden with nuggets as they traveled by riverboat along the Chagres or on mule-back over the mountains. The trail produced as many wild west stories as ever came out to the United States wild West. There were lynchings and revolutions, even conflicts between the local New Granada authorities and the Forty-niners. And holdups were mere grist to the mill.

The best that can be said was that Panama was regaining its strategic point between the Americas, the importance won centuries gone by Portobelo, its Atlantic seaport, so-named by Columbus because it was so beautiful.

The original printers of the little Star were replaced by others, more accomplished technicians. In fact the Star had to buck opposition from other sheets, among them the Herald. Compromise was reached and the two papers eventually joined as the Star and Herald. During the French Canal regime the English and Spanish editions made room for one in French.

We think it safe to say that no newspaper having such a precarious and colorful start has survived so long or served so many readers in so many areas. And we are proud of it.

Economy Does Not Mean Cutting Our Benefit Programs

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news column entitled "Keenotes":

KEENOTES

(By Representative ELIZABETH KEE)

The place to begin effecting economies in Government spending should not start with those programs which affect the welfare of an overwhelming majority of the American people. Traditionally, however, this would seem, unwisely, to be the point where most efforts to cut the Federal budget usually begin, and for the most part end. The economy drive which is now on in Congress, and properly so, to cut the largest budget ever submitted in this country's peacetime history, is proving, unhappily, to be no exception to the rule.

So far, in this session of the Congress, the House has passed 6 appropriations bills, one, the urgent deficiency bill to help Government Departments and agencies meet their underestimated expenditures for the balance of the 1957 fiscal year; and the other 5 to provide funds for the fiscal year 1958, beginning July 1, 1957. A comparison of House action on these 6 bills will, I feel, offer a clear illustration of the point I wish to make in this issue of "Keenotes."

On February 5, the House passed the urgent deficiency appropriation bill for 1957. As approved, the bill provides (in round figures) $335 million for the United States Departments of Agriculture, Commerce, and Health, Education, and Welfare, the Small Business Administration, and the legislative branch for the last quarter of this fiscal year. The only floor action by the House, beyond approval of the Appropriations Committee's recommendations, was to adopt an amendment placing a limitation of $15,728,000 on the amount that may be spent for State and local administration of public assistance grants. The bill is still in conference between the House and Senate. But if this limitation is upheld, it will mean that, instead of the Federal Government providing 50 percent of the cost of administering the public assistance program in the States, only 35 percent will be paid for the balance of this year.

This could gravely affect the public assistance program in West Virginia, where grants to the needy have already had to be cut because of the increase in the number of individuals on the relief rolls. Obviously, the more needy there are to serve, the more the cost of administering the program increases.

On February 20, a bill appropriating funds for fiscal 1958 for the United States Treasury, the Post Office Department, and the Tax Court passed the House. This bill authorized appropriations totaling more than $3,-

$94,000,000 for these three agencies. This was a little over $80 million less than the President requested in his budget. But it is almost $251 million more than was appropriated for these same agencies in fiscal 1957.

On February 26, $454,395,700 was appropriated for the Interior Department, some $61 million less than the budget request, but only about $3.7 million less than was appropriated for fiscal 1957. On March 13, the House approved slightly over $16 million in appropriations to run the Office of the President, which was nearly $5 million under the budget request.

Then on March 20, the first really big cuts in the President's spending proposals were approved when the House sliced over $500 million from the appropriations requested for 19 Federal agencies comprising the so-called independent offices of the Government, such as the Federal Civil Defense Administration, the National Advisory Committee on Aeronautics, and other boards, commissions and corporations. This represents a reduction of almost $600 million under what was appropriated for fiscal 1957. Veterans' Administration funds account for 82 percent of all funds appropriated for the independent offices.

Then, on April 4, after 7 days of strenous debate on the floor, the House passed the Labor-Health, Education, and Welfare appropriations bills. I think I may safely say that, with the exception of the Veterans' Administration, these two departments of the Federal Government more closely and intimately serve the well-being of a greater number of Americans than all of the other agencies an departments put together.

By this time, every newspaper reader, TV and radio listener, knows that the House Appropriations Committee approved cuts amounting to $118,774,700 from the budget requests for these two departments; and that subsequent action on the House floor increased this amount to more than $134 million, almost $19 million under the appropriations for 1957.

But what I fear has not been made clear to the American people is just how these cuts will affect the businessman, employed people, retired workers, the older age groups, and the public assistance, public health, and other essential service programs that benefit the entire community. For example, the reduction in the funds available to the Bureau of Employment Security will curtail research programs invaluable to the average businessman. West Virginia, in particular, has special interest in several of these programs—one of which keeps track of the effect of tariff policies (the lowering of tariffs) on our domestic industries. Another program provides assistance to the "one industry" surplus labor commodity by affording studies and data as to how its resources can be used to provide diversified industrial development and greater employment opportunities.

One of the most consequential restrictions written into the bill has serious implications for West Virginia. This is the ceiling of $104 million placed upon the Federal share of administering the costs of the public-assistance program—aid for the needy aged, the blind, dependent children, the physically handicapped, and the permanently and totally disabled. By law, the Federal Government pays half the administrative cost of these programs on a 50–50 matching basis with the States. If the Senate upholds the House-passed limitation, every State will automatically be compelled either to drastically curtail these programs or to carry the added cost alone.

Only the most vigorous fight I have seen waged in the House in many a long year saved a ruinous cut in the funds available to run the Food and Drug Administration in the next fiscal year. The Food and Drug Administration is literally the policeman, the sure protector of the fit-to-eat food we put on our tables, of the purity and safety of the medicines we give to our children and other loved ones. As a mother and housewife, as well as the Representative of the people in the Fifth Congressional District of West Virginia, I gave of my best efforts to prevent a cut which, to my mind, would have been calamitous for the health and welfare of every family in this country. I am happy to report that this cut, tentatively approved by a voice vote, was defeated when a rollcall or registered vote was demanded by the floor managers of the bill.

What to me would have represented another catastrophic cut was likewise saved by the demand for a rollcall vote. This was the first tentative move on the House floor to repeal the Water Pollution Control Act by denying the Public Health Service funds with which to administer its provisions. This act provides Federal aid to local communities to build sewage treatment plants and so assure uncontaminated, pollution-free water for consumption of the local citizen. It renders an absolutely vital service for thousands of our cities and towns built along the rivers and harbors of the Nation.

I am economy-minded. I believe that untold sums of money can be saved by efficient administration, by eliminating any excessive profits on the part of those who supply goods and services to the Government and by doing away with the war-essential "rapid tax-write-off" programs intended to induce industry to expand in a period of national emergency. I also believe that only that overused rubber stamp "classified" prevents Congress and the public from knowing of possible waste, extravagance, and duplication in the Department of Defense, and the foreign-aid programs.

But the service agencies and departments of the Federal Government that cope with the problems, the often-tragic needs and the health of the average citizen, the small-business man, the veteran and the aged, have no "classified" stamp to use. They are the easy prey of the indiscriminate budget-cutter who swings a meat-ax—let it fall where it may—without thought for the consequences—to all of us who willingly pay our taxes for the benefits and advantages this richest and most blessed of all lands can well afford its people.

Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. ROOSEVELT. Mr. Speaker, in view of my insertion in the CONGRESSIONAL RECORD of March 29, 1957, it gives me pleasure to insert the following letter addressed to the Honorable CLYDE DOYLE, a copy of which has been sent to me.

I am sure that my colleagues will be glad to know of the attitude of the California State Bar as expressed by their president, Mr. Joseph A. Ball:

THE STATE BAR OF CALIFORNIA,
OFFICE OF THE PRESIDENT,
Long Beach, April 2, 1957.

Hon. CLYDE DOYLE,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR CLYDE: The resolution of the board of governors of the State bar of California stated that "the proceedings of the committee and the committee's conduct were improper and lacking in dignity and impartiality which should govern the conduct of agencies of the United States; they resulted in grossly offensive personality directed at counsel for witnesses." This statement was not directed at any statement made by you as chairman of the Subcommittee on Un-American Activities of the House of Representatives. The board was particularly concerned with the questions asked by Richard Arens, who bears the title of staff director and who was acting counsel for the committee and the remarks made by committee members directed toward counsel for certain witnesses. The record does not disclose that you, as chairman, directed offensive or insulting remarks to anyone at the hearing.

Cordially,

JOSEPH A. BALL,
President.

Hells Canyon Issue Still Stirs Northwest

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. ULLMAN. Mr. Speaker, the April 8 issue of the New Leader carried an article by Samuel Markham which I believe effectively summarizes some of the reasons why Congress should promptly authorize Federal construction of the high dam at Hells Canyon. Failure to do so will certainly mean that the Pacific Northwest will, as Mr. Markham correctly points out, "remain short of low-cost electricity and helpless to cope with the rampaging river."

I wholeheartedly recommend this article to my colleagues and under unanimous consent I include it in the Appendix of the RECORD:

HELLS CANYON ISSUE STILL STIRS NORTHWEST
(By Samuel Markham)

PORTLAND, OREG.—Once again, a Senate Interior Subcommittee is holding hearings on a bill to authorize Federal construction of a multipurpose dam in the great canyon of the Snake River that separates Idaho and Oregon. The fact that the Idaho Power Co. is well along in the construction of a dam on the site apparently does not bother the committee or the bill's sponsors.

In the last session of Congress, the Hells Canyon bill was defeated by a sizable majority in the Senate. It never came to a vote in the House. The Eisenhower administration used every device at its disposal to pressure Republican Senators to vote against the bill. It succeeded—but the issue didn't die. In fact, Hells Canyon became a ringing battle cry in the 1956 election, and the people heeded it: One Republican Congressman from eastern Oregon went down to defeat, a Republican Senator in Idaho was unseated, and Oregon Democratic Senator WAYNE MORSE, a sponsor of the present bill, won an overwhelming victory against Douglas McKay. The latter, while Secretary of the Interior, abandoned the Government's claim to the magnificent Hells Canyon site.

Nevertheless, almost to a man, the GOP is still against additional large Government dams in the Pacific Northwest. This is even evident in State politics. The Oregon Senate has just voted along strict party lines on a resolution urging Congress to authorize the Hells Canyon project; 15 Democrats

voted for it, 15 Republicans against it. Thus, the resolution, which had been passed by the Democratic-controlled lower house, was defeated. Even the senators from eastern Oregon, where power and flood control are badly needed, voted against the resolution.

Why this stubborn GOP refusal to look commonsense in the face? The answer is not easy to unravel; it is mixed up with political ideologies, campaign contributions and a dogged do-nothingism that has rarely been equaled in the history of this country's resource development.

The story goes back to 1948, when the Corps of Engineers published its main-control plan for the Columbia River, one of the classic documents of its kind. In proposing a series of multipurpose projects for harnessing the river's flow, the Corps found that a high-head dam at Hells Canyon—one of the deepest river canyons in the world—was the key to flood control. The dam would store almost 4 million acre-feet of water in times of rampaging floods, or about one-fifth of the 20 million needed to assure flood control in the entire Columbia-Snake Basin.

Soon afterward, the Bureau of Reclamation drafted a bill that was introduced in Congress to gain authorization for the dam. Immediately, the private-power lobby went into action. The Idaho Power Co., which had long regarded the Snake River as its private domain, applied to the Federal Power Commission for a license to build a series of dams, including one on the Hells Canyon site.

The Department of Interior, then under Oscar Chapman, intervened and succeeded in waylaying the Idaho Power Co.'s application, but it could not get the Hells Canyon bill through Congress. The struggle was fierce but undecided. When the Eisenhower administration came in, the climate in Washington changed. Former utility lawyers who favored private power were brought to the FPC, and the new Secretary of the Interior—McKay—was a private-power man. Consequently, the Government abandoned its claim to Hells Canyon, and after a year-long hearing the FPC gave the Idaho Power Co. a license for three small dams on the Snake. The company lost little time in making good on its application; dirt soon began to fly at Hells Canyon.

But the people did not give up so easily. The Hells Canyon Association, organized by the grange and members of rural electric co-ops, raised enough money to carry the fight to the courts. The United States Court of Appeals upheld the IPC license. The intervenors then appealed to the United States Supreme Court, and the four Pacific Northwest Senators—MORSE, RICHARD L. NEUBERGER, HENRY M. JACKSON, and WARREN G. MAGNUSON—vowed to introduce another bill in the 85th Congress.

It is not likely that the Hells Canyon bill will ever be passed by Congress, and it is even less likely that the Supreme Court will invalidate the IPC license, though that license clearly violates the Federal Water Power Act provision calling for development of United States rivers on a comprehensive plan. The loss of some 3 million acre-feet of storage at Hells Canyon—the IPC dam will store only 1 million feet—will be keenly felt for all time in the Snake River Valley. Towns that need protection will continue to suffer, main streets will be flooded every time the rivers go berserk, fields will be washed out, and homes will be abandoned.

The people of eastern Oregon and northwestern Idaho are up in arms. But they are at the mercy of a political party that is beholden to the Idaho Power Co. and other utilities for substantial campaign contributions.

The Hells Canyon drama will roll on, and the people will continue to mutter their resentment. Meanwhile the IPC will probably have its dam and will undoubtedly sell power at a rate four or five times that of Federal power in the Pacific Northwest. Investors in the company will continue to reap large dividends, but the region will remain short of low-cost electricity and helpless to cope with the rampaging river.

Pastureland and the Soil Bank

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1957

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks I would like to call attention to a statement made April 3 to the Livestock and Feed Grains Subcommittee of the House Agriculture Committee by Mr. N. J. Post, director of the division of special services of the National Milk Producers Federation. His thorough study of the question at hand drew favorable comments from some of those who heard him testify. He notes that his organization has been studying a proposal to encourage slaughter of dairy-type heifer calves through premium payments to producers for marketing them for slaughter. The goal would be to reduce the total number of milk cows to a level predetermined by the Department of Agriculture as the number needed to produce sufficient milk and dairy products. His statement follows:

Mr. Chairman, members of the committee, we appreciate having this opportunity to discuss with this committee, H. R. 3984, a bill introduced by Representative JOHNSON designed to expand the soil-bank program to include pastureland; and those bills, H. R. 2771 and H. R. 5857, introduced by Representative ALBERT; and H. R. 2860, introduced by Representative DIXON.

The National Milk Producers Federation is a national farm organization. The federation represents over 500,000 dairy farm families and some 800 dairy cooperatives owned and controlled by these dairy farmers. The dairy cooperatives in the federation have farmer membership in 47 of the 48 States. Many of the cooperative associations represented by the federation are manufacturing associations engaged in the processing and marketing of milk in the form of manufactured products.

The record of this committee membership has amply demonstrated its interest in and support of legislative measures designed to improve the economic position of dairy farmers. The committee should know that the federation's membership appreciates this.

Milk, butterfat, and cull cows and calves from dairy farms account for nearly 20 percent of the Nation's gross farm income, making dairying the largest single segment of our national agricultural economy. Our product is produced in practically every county in the United States.

The dairy industry is unique. Our crop—milk—must be harvested twice each day and marketed every day. Because of this, prices paid dairy farmers for milk and butterfat—unless they are stabilized—are subject to frequent and wide fluctuations. When a small surplus develops in the industry, prices tumble. When a small shortage develops, consumer prices for dairy products skyrocket. Such violent fluctuations in price benefit neither the farmer nor the consumer.

The term "price-cost squeeze" frequently mentioned is not merely a label on the situation facing us today—it is a concise description of a set of economic facts. In analyzing the present situation facing dairy producers and recognizing the wide gap between the dairy farmer level of prosperity and the overall national level of prosperity, we find that the source of our problem is the 4 percent of our total annual milk production that is not at this time being taken up through the commercial channels of trade. This 4 percent of our total annual production is the amount of milk in the form of butter, cheese, and nonfat dried milk that the Commodity Credit Corporation has bought for each of the past several years. This 4 percent has set our prices. Those prices are too low and have been too low.

The current price-support level for manufacturing milk and butterfat ($3.25 per hundredweight for manufacturing milk—58.6 cents per pound of butterfat) is far below parity. These dollars and cents support levels compare with $3.74 for manufacturing milk and 67.3 cents per pound for butterfat in 1953.

In spite of the substantial progress made by dairy producers toward improving the efficiency of dairy farming evidenced by such developments as bulk tanks, pipeline milking and herd improvement, hourly earnings of dairy farmers are far below minimum-wage rates prescribed by law for labor. For example, published statistics from the United States Department of Agriculture show that in eastern and western Wisconsin, the hourly returns to dairy farmers are 30 and 35 cents, respectively. In the central northeast, the highest of the test areas, hourly returns are only 81 cents.

The expansion of the soil bank program to include pastureland is in line with the policy of Congress and the purposes of the program "* * * to protect and increase farm income." The application of congressional policy underlying the program to dairy production would make a substantial contribution toward bringing much needed stability to the production side of our industry.

If pastureland were included in the soil bank program five significant developments could occur: (1) a betterment of dairy farmer income; (2) a reduction in the production levels for milk; (3) an improvement in soil fertility thereby providing insurance to the Nation that production capacity would always be available when needed; (4) the absence of dairy products in CCC inventories would bring genuine stability to our industry; and (5) it would be less costly to the Government to make soil bank payments rather than purchase dairy products together with the fact that such payments go into the farmer's pocket and not for warehousing and transportation.

In further support of the recommendation we stress and reiterate the fact that the "surplus" milk production that creates our problems amounts to about 4 percent of our total annual production. This small percentage is an unstabilizing force in our industry. Dairy farmers are well aware of the repressing effect this "surplus" in Government inventories has on market prices. At the same time they are faced with a real situation of meeting their financial obligations. Under present conditions with low milk prices and increasing costs, these obligations can only be met by maintaining or raising the level of gross income. We believe that substantial participation by dairy producers in the soil bank program would bring us much closer to that point at which milk availability and commercial demand would be in balance. We would at the same time be maintaining our productive resources in a condition in which they would be ready and available when needed to meet increased demands occasioned by population growth or other causes.

The extension of the conservation-reserve program of the Soil Bank Act to include graz-

ing lands and provide for the reduction of livestock numbers as authorized in H. R. 5857, as well as the proposal in H. R. 2860 to establish a grazing-lands conservation and improvement program is the type of legislation which, if made applicable to dairying, would attack the dairy-farm problems at its source. We have been developing a proposal along similar lines for dairy farmers which would expand the soil-bank program by encouraging the slaughter of dairy-type heifer calves and/or dairy-type heifers or cows. The proposal would reduce the total number of milk cows to a level predetermined by the Department of Agriculture as the number needed to produce adequate supplies of milk and dairy products, taking into account the efficiency per cow that would be steadily increasing.

This would be accomplished by paying a premium to producers for the marketing for slaughter of dairy-type heifer calves. The amount paid would be set by the Secretary of Agriculture at a level which would induce the increased marketing desired. It is contemplated, for example, that the goal for the first year might be 1½ million additional heifer calves. The goal for each year would be separately determined.

The cost of increasing the number of dairy-type heifer calves slaughtered under this program would be much less than the cost of buying the surplus milk they will produce if the problem is not attacked at the source.

The cost of the program would be limited to $75 million per year. Once the cow numbers are adjusted to demand, the cost should decrease to a very low level. The cost of purchasing surplus milk should begin to decline sharply in about 2 years and would soon be practically eliminated.

The program contemplated in this proposal would accomplish several things. First, it would bring about an immediate increase in the income to dairy farmers. Second, it would raise the level of efficiency of our milk herds. Third, it would attack the problem of surplus at the source.

Further justification for the expenditure of Government funds for this proposed program is the fact that with milk production continuing to reach record levels, the Commodity Credit Corporation will be purchasing considerable quantities of dairy products under the price-support program with a resulting substantial outlay of Government funds. It is likely under the proposal that within 3 years or less, milk production in this country could be at a level where CCC purchases of dairy products would be unnecessary. If the increased slaughter rate contemplated in the proposal were reached, milk production at a maximum of 3 years hence would be stabilized at present levels and the increased need occasioned by population growth would wipe out the present almost-5-billion-pound surplus.

We thank the committee for giving so freely of its time and attention.

How Trujillo Attempts Reprisals Against a Congressman in His Own District

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Coos Bay Times, an outstanding liberal newspaper in Oregon, whose editors had reported to me previously of special news releases of a derogatory nature with respect to me. Furthermore, I am informed that a private investigator has been making inquiries about me in my home town, purporting to represent a tourist agency, and on at least one occasion, using a pseudonym, "John Reed." I won my election by more than 4,500 votes last fall but I am confident that none of the 85,000 people who voted for my opponent are likely to be swayed by anything of this sort sent to them by the Dominican Government. The people of Oregon will not be deceived by such transparently malicious tactics.

The editorial follows:

TRUJILLO BACKER IGNORING FACTS

Put another name on the list of organizations occupied with keeping Dictator Trujillo of the Dominican Republic in his position of political favor with the United States. The Pan American Anti-Communist Association sent us an airmail news release the other day, labeling Representative CHARLES O. PORTER (Democrat, of Oregon), as "a leftwing McCarthy who is conducting a one-man war against the friendly governments of Generalissimo Franco of Spain, Batista of Cuba, Generalissimo Trujillo of the Dominican Republic, and Somoza of Nicaragua."

Lest anyone think this grand organization totally indicts Senator MCCARTHY along with Representative PORTER, we'll point out that the release adds that "Senator MCCARTHY at least attacked enemies of the United States, whereas PORTER * * * attacks nations that are in the vanguard of the battle against communism."

Finally, the PAACA release says that the only newspaper in New York which has wholeheartedly supported Representative PORTER is the New York Post, which "has editorially attempted to discredit the FBI and other Government and civilian anti-Communist organizations." Unfortunately for the support of this last statement, the PAACA sent along an editorial from the Post which is supposed to prove its pro-Communist bent, but which instead shows up the PAACA statement as a falsification.

It is hard to choose a starting point to pick apart this batch of half-truths and outright lies. But in the first place, Representative PORTER's attacks have been primarily against the Trujillo regime, although he has mentioned other dictatorships by way of illustration of the evil systems of government which the United States supports.

In the second place, although he is now perhaps the most vigorous, and surely the most prominent, person attacking the Trujillo regime, he hardly has a one-man campaign. Others all over the country who are indignant over the favorable treatment the bloody Trujillo regime gets from the United States have chimed their voices with Representative PORTER's. It is true that prominent persons are not numerous in the forefront of this attack; many of those who have led such assaults on Trujillo have turned up either dead or missing, which tends to keep their numbers down. And, contrary to PAACA's statement, there is at least one other New York paper which has supported Representative PORTER—just the New York Times, one of the world's leading newspapers, which termed his speech against Trujillo, given on the floor of Congress, a public service.

As for the Dominican Republic's Government being friendly to the United States, and in the vanguard of the battle against communism * * * well we should think it would be. Trujillo has nothing to lose and all to gain by staying friendly with powerful business elements in the United States. He has nothing to gain and everything to lose by allowing any system of government, from communism up the line through socialism, democracy, and so on—to replace his total stranglehold on the people and the economy of the Dominican Republic. Naturally he'd fight communism, which doesn't make him a good guy when he'd also fight democracy.

Finally, regarding the reference to the New York Post editorial, its content carries its own answer to the implied charge that the Post coddles Communists. All it says is that we are expending too much time and energy on local Communist hunts when the Soviet Union is gaining all over the world, that our intelligence agencies should be more concerned with the threat of Russian espionage than with chasing the remnants of the Communist battalion (which) are bitterly torn among themselves and that all of the hoopla about American Communists stimulates the curiosity of our youth about communism and restores to the Communists an aura of political seriousness and significance to which they have no legitimate claim.

If that is pro-Communist, we're Karl Marx.

Now, with these points answered, we have a few questions of our own. The major one is: "Why all this smokescreen of trying to make a Communist out of anyone who speaks ill of Trujillo; why not just explain why the United States should support the regime which violates every important principle on which the United States Government is based?"

There are nagging things like the $50,000 indemnity payment to the family of Gerry Murphy, of Eugene, Oreg., from the family of a low-paid Dominican flier, who supposedly "accidentally" killed Murphy. Who really put up that bribe money to take the heat off any investigation into Murphy's disappearance in the Dominican Republic?

And then there were these Trujillo enemies: two writers shot to death in New York City and another murdered in Haiti; two labor leaders in Havana, one stabbed to death and the other disappeared; a farmer who disappeared in Haiti; and Dr. Jesus de Galindez, who disappeared from New York a year ago, on the night that young Murphy flew a mysterious "patient" from New York to the Dominican Republic.

There is the fact that Trujillo, wise investor that he is, owns and reaps the profits from the majority of big business in his country, while the standards of the people remain miserable.

But most of all, there is the wonderment that the people of the United States have not had an opportunity to know the facts of the Trujillo government, and that their elected President and his State Department have had access to these facts, but have done nothing about the situation.

A Pennsylvanian Views Georgia Race Relations

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received from Hon. William Burton Steis, of Hamilton, Ga., giving an example of the high regard and sincere concern which southern people of both races have for the welfare of the other. Mr. Steis, a native of Pennsylvania, is a respected attorney in Hamilton, and has served as a member of the Georgia State Senate.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HAMILTON, GA., *March 20, 1957.*

Hon. HERMAN E. TALMADGE,
United States Senator from Georgia,
Senate Office Building,
Washington, D. C.

DEAR SENATOR, TALMADGE: I have been following, as closely as possible, the information and testimony that has been presented before Congress regarding civil rights. My observation of the conditions in Georgia prompts me to send this letter.

As you know, I was born and reared in northwestern Pennsylvania. Therefore, I believe that I have a different perspective than an individual reared here. I first came to Georgia in 1942 while in the military service. I purchased my home in Pine Mountain Valley, Harris County, Ga., in 1946 while in the military service, and have lived here since that time. After my separation from the military service in 1947, I opened my law office here in Hamilton.

I have a case in my office at present which involves a Negro soldier who is stationed at Fort Benning, Ga. The facts that I wish to bring to your attention are as follows: The soldier, whom I represent, and a friend of his, also a Negro soldier stationed at Fort Benning, were returning by automobile from LaGrange, Ga., to Fort Benning. The soldier who owned the automobile became sleepy, and asked my client to drive. While driving through Harris County, it appears that the driver also became drowsy, dozed for an instant, which was sufficient to allow the automobile to run off the highway into the ditch and strike the culvert at a driveway. The automobile caught fire. This happened at approximately 3 o'clock in the morning.

The white family, in front of whose house this accident occurred, became aroused, and ran to the wrecked automobile to render assistance.

They assisted the driver in extinguishing the fire and in removing his friend from the automobile. The owner of the car was critically injured. The members of this family brought a blanket from their house and covered him, and rendered other assistance until the ambulance arrived and took him to the hospital at Fort Benning where he was pronounced dead on arrival.

The driver of the automobile remained at the scene until the highway patrolmen arrived to investigate this accident.

After the injured man was removed, this white family took the Negro soldier into their home where they gave him coffee, and painted merthiolate on the few cuts and abrasions which he sustained in the wreck. They kept him in their house where it was warm until the patrolmen arrived. They extended every possible courtesy to these men.

The highway patrolmen, in their investigation of this accident, saw fit to prefer charges against the driver of the vehicle. At a hearing before the judge of the superior court of this county, for the purpose of fixing the amount of the bail, the wife and mother of the family where the accident occurred voluntarily came to court and testified on behalf of this Negro soldier. The other members of the family were excused from testifying at the hearing in order to avoid their absence from work. I am assured that they will all be available to testify on his behalf in case he is indicted by the grand jury and brought to trial.

It is my observation that this course of conduct is customary between members of both races here in the South. Each is willing to assist the other in any time of necessity or emergency. In my opinion, the Members of Congress would be able to consider pending legislation and arrive at a more accurate conclusion if matters of this nature were brought to their attention.

I would also like to add this further information. I have been the county chairman for my political party in this county since 1949, and I know of no case when any member of the Negro race or any other race was denied the right to register and vote in any of the elections that have been held in this county during this period.

I have no reason to believe that race conditions are any different in Harris County than in any other county here in the South.

I am also sending this letter to Senator RICHARD B. RUSSELL and to Hon. E. L. FORRESTER, the Representative from this district, as well as the other Representatives from Georgia.

Yours respectfully,

W. B. STEIS,
Attorney at Law.

The Gerry Murphy Case

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. PORTER. Mr. Speaker, I read with interest the remarks in the April 1, 1957, RECORD by my distinguished friend, the gentleman from Louisiana [Mr. LONG], with respect to the Gerry Murphy case.

With much of what my senior colleague says, I agree, but none of that has anything to do with the disappearance of my constituent, Gerry Murphy, in the Dominican Republic on December 3, 1956, or with the overpoweringly strong evidence pointing the finger of accusation at the Dominican Government itself.

My esteemed friend from Louisiana asks me to go to the Dominican Republic and investigate for myself "what goes on there." If I thought such a visit offered the slightest prospect of finding Gerry Murphy or even definite indications of what happened to him, I would leave tomorrow.

The gentleman would do well to consider the evidence outlined in my speech before this House, February 28, 1957, which evidence was largely confirmed by the State Department note to the Dominican Republic, March 23, the text of which appears in the Appendix hereof, March 25.

The circumstantial evidence that the Dominican Government itself is responsible for the disappearance of both Dr. Galindez and Gerry Murphy is formidable. The concrete evidence of Dominican guilt is also formidable and, in my opinion, conclusive. Consider, please, Mr. Speaker, that the official Dominican explanation of Gerry's disappearance turns on a "suicide note" written by one De la Maza who said in the note that he killed Murphy in a scuffle following improper proposals and insulting remarks by Murphy.

The note, our FBI experts ruled, is a forgery. Who else but the Dominican Government could have staged a fake suicide in a Dominican jail? Moreover, this sort of "suicide" is a familiar pattern in that unfortunate country.

So I must disagree with my distinguished colleague and deny that I spoke "upon facts gained only by hearsay."

Further, Mr. Speaker, I must say that my friend from Louisiana is mistaken if he believes that the Dominican Republic is not under the dictatorship of Rafael Trujillo. I venture to suggest to the gentleman that he consult our own State Department in that respect.

The gentleman states that he inquired and found that "the representatives of our Government in the island Republic of Santo Domingo are completely satisfied with the cooperation which they received from the officials of that nation in the case involved." I make two observations: Our State Department is not satisfied, as witness its very stern note, an answer to which is long overdue. Secondly, our Ambassador in that country, Mr. Pheiffer, is much too friendly with the dictator and has seriously compromised the United States—this is not just my opinion but was also specifically stated in the New York Times editorial columns the other day.

My esteemed friend, the gentleman from Louisiana, carries his usual Christian charity too far by several light years when he states that Rafael and Hector Trujillo "have always been on the side of God and Christianity." I refer him to the massacre of the Haitian peasants upon order of Rafael, where more than 15,000 defenseless men and women were cruelly slaughtered by Dominican soldiers. And I refer him to the writings of any responsible, objective journalist who has had occasion to write about Trujillo.

The great State of Oregon is, I grant, Mr. Speaker, farther away from the Dominican Republic than is my colleague's great State, Louisiana, but I must say in all candor that my version of the Gerry Murphy case is closer to the facts than his is.

The simple, definite facts are these:

First. The Dominican Republic is ruled by a tyrant, Rafael Trujillo, and has been for 27 years.

Second. He spends great sums of money on public relations, much of it in the United States. His techniques for keeping control are based on the use of first, cold terror, and second, cold cash.

Third. Dr. Galindez was about to publish in English a book that would show Trujillo up for the merciless tyrant he is, so Trujillo had him kidnaped in New York.

Fourth. Gerry Murphy piloted the plane that spirited Galindez to Trujillo's domain from New York.

Fifth. Gerry talked openly in the Dominican Republic about the identity of his passenger, so he was killed and the cock-and-bull explanation based on the forged suicide note was contrived to forestall further investigation.

My concern for Gerry Murphy and for the anguish of his parents is shared, I feel sure, by my esteemed friend from Louisiana. I sincerely hope the gentleman will undertake to confront the undisputed facts about the Dominican Republic and join me in resolving that its savage policies will not again result in the death of an American boy and, further, that one day soon its citizens will once more be allowed to emerge into the warmth of Christian justice and freedom.

California Republican Senator Disagrees With the Administration's "Partnership" Policy on Water and Power Development

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. EVINS. Mr. Speaker, I ask unanimous consent that an article by able Columnist Thomas L. Stokes, regarding the attempt of the Pacific Gas & Electric Co., a private utility in the Pacific Northwest, to "muscle in" on the great Trinity River development in California, be included in the RECORD. This proposal of a private utility corporation to have the Government to turn over power which belongs to all the people is interesting but certainly not novel. The proposal for the Trinity River takeover follows the customary pattern of the private utilities to endeavor to move in on a great public development for their own private interests and profits.

The article by Mr. Stokes shows again the pattern followed by the private utility concerns and serves as a warning to protect against those who would invade public property and the public treasury.

The article relating to the Trinity River and the Central California Valley follows:

ANOTHER RIVER POWER ISSUE—UNITED STATES SEEN PLANNING TO CUT PRIVATE FIRM INTO FEDERAL DAM PROJECT IN CALIFORNIA

(By Thomas L. Stokes)

Every now and again the social welfare, New Deal, modern Republican cockade affected by the Eisenhower administration for sweet politics' sake will slip askew and reveal the bald head of mighty business, industrial, and financial interests which contribute so heavily to Republican campaigns and call so many tunes here these days.

How powerful they are we are learning now in the case of a river in northern California—the Trinity—which has assumed an importance far beyond its size for what it tells us of administration aims.

The Trinity River is part of the great Central Valley project, a public project like TVA in the Southeast, and the folks in California are just as proud of it as the folks in the Southeast are of TVA, for each has broadened the lives of the people. The Central Valley project, built by the Federal Government, as was TVA, embraces an integrated system of dams, reservoirs, canals, and transmission lines. Its function, as described by Representative CLAIR ENGLE, Democrat, of California, is "for comprehensive development of the basin to protect the people and land from floods, to furnish a dependable water supply for agriculture, and for defense purposes, and to furnish power and energy at lowest rates possible consistent with project repayment."

The Government now is building a dam on the Trinity River which is in Representative ENGLE's district.

But these days they don't get very far along with such things before someone comes along to try to mess it up. So with the Trinity River. The scheme this time, devised by Secretary of Interior Fred Seaton, is to cut the Pacific Gas & Electric Co., the Nation's second largest electric utility, into the Central Valley project by selling it the "falling water" from this dam paid for by the public. The company would be permitted to install a powerplant there on the public domain and rake in all the profits. In 50 years it would own the plant. This is known as "partnership" in the Eisenhower book, whereby the Government builds the dam, and for its money and pains controls the flood-regulating works, from which it gets no revenue, and controls the fish ladder, where there is one, from which there is no revenue—and the company gets what is sometimes loosely and colloquially called "the gravy."

This is all too much for Republican Senator THOMAS KUCHEL, of California. He rose up, along with Representative ENGLE, to condemn this attempted disruption of the Central Valley project. In the criticism now of this latest Eisenhower "partnership" venture, you hear it compared with the attempt to undermine TVA with the Dixon-Yates deal that finally got so noxious with its behind-the-scene finagling that the Eisenhower administration abandoned it. The Seaton plan, says Senator KUCHEL, is "fraught with many perils" and he will not support it.

Both he and Representative ENGLE pointed out that it not only would disrupt a project intended throughout to be a public project, but also would violate the 51-year-old principle established by Congress in 1906, and reenacted 13 times since. This is the guaranty for preference to public agencies, municipalities, and cooperatives in the sale of electricity from such public projects.

Representative ENGLE sees it as the beginning of an attack by the Eisenhower administration on the preference principle that would be extended elsewhere. In a comprehensive analysis for the CONGRESSIONAL RECORD, he showed that, rather than being good business for the Government as Secretary Seaton claims, this Pacific Gas and Electric cut-in would be bad for the Government in the long run, bad for consumers, and a bonanza for P. G. & E.

To anybody who read carefully last November's election returns from the West and Northwest, in which champions of the Eisenhower "partnership policy" were mowed down right and left, it would seem foolhardy for the Eisenhower administration to try to put over this patent donation to the utilities.

But a casual peek into the big book on campaign contributions compiled recently by the Gore Senate committee offers a clue. That shows with what an authoritative voice California now speaks in the Republican Party. Contributions to the Republicans in California totaled $1,913,176, as publicly acknowledged, compared with $260,079 to various Democratic candidates, national and State, in the State.

Five officials of P. G. & E. contributed $13,950 to the Republicans. This was listed in donations from officials of the 88 corporations which participate in the Government's atomic energy program. Of the total of such, $397,342 went to the Republicans; $34,700 to the Democrats. Most of the donors were, like P. G. and E., electric utilities.

They look to the administration to be kind to them; and it can be said that their trust is well placed.

Dominican Dictatorship

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. PORTER. Mr. Speaker, the following foreign-policy resolution was adopted at the 10th Annual Convention of the Americans for Democratic Action at the Willard Hotel in March of this year:

DOMINICAN DICTATORSHIP

For more than 25 years, the Dominican dictator, Rafael Trujillo, has ruthlessly suppressed all liberties in his country and relentlessly persecuted and silenced every form of opposition. No political or moral reproofs have ever been exerted by the United States against this violations of human liberty. He has now gone beyond his own boundaries and set up a system of extraterritorial intimidation and terrorization not only against the Dominican political exiles but against everyone who protests his regime.

Under the protection of diplomatic immunity, his consular and embassadorial offices have become focal points in this organization of terrorization, the latest crimes of which, it has been charged, have been the abduction and murder of Jesus de Galindez, Columbia University professor, and the subsequent death in the Dominican Republic of an American pilot, Gerald Murphy of Oregon, involved in the abduction of Galindez.

The ADA strongly supports the proposal of Representative CHARLES O. PORTER in the House of Representatives, asking for an investigation of the disappearance of pilot Murphy in the Dominican Republic, and also of the continued and systematic harassment and intimidation of every critic of the Trujillo regime within the boundaries of the United States.

Magsaysay Will Live On

EXTENSION OF REMARKS
OF
HON. JOHN J. McFALL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. McFALL. Mr. Speaker, under leave to extend my remarks, I include the following editorial by Mr. Manuel M. Insigne, editor and publisher of the Bataan News of Sacramento, Calif., concerning the late President of the Philippines, Ramon Magsaysay:

MAGSAYSAY WILL LIVE ON

In the tragic plane crash that took the life of President Ramon Magsaysay and 26 others in a thickly forested mountainside on northern Cebu Island in central Philippines early in the morning of March 17, perhaps God worked in strange ways, His wonders to perform, as the Good Book reminds us.

Sometimes, as in the case of a kind and dutiful father, or in the case of a true and loyal friend, an honest leader of a free people fighting for a universal cause—however righteous—may be taken for granted while alive. But, dead, especially in a manner so stunning and shocking as the late President Magsaysay died, he will be missed painfully and not without contrition of heart by all friends and followers: In the Philippines, in the United States, and in countries of the free world.

It was said that at the time of the tragedy, Magsaysay was aboard his 14-year old C–47 twin-engine plane which, until that fatal morning, was made airworthy only through the ingenuity and resourcefulness of Filipino mechanics, who constantly patched up the old crate with surplus or rebuilt parts.

The tragedy of Magsaysay's death may be measured in terms of his youth that was so quickly ended in its prime. He was only 49 years old.

Given a reasonable time for active leadership of the Philippines, it was hoped that he could have accomplished much more than he already had done for his country and people, for the United States as an ally, and for the free world in general—with his relentless and uncompromising fight against godless, totalitarian communism. Given a few more years in which to carry out his working program for the rehabilitation, reconstruction, and development of his country, it was hoped that Magsaysay, who fully understood the rights of his people, could have provided more and more of their needs: industrially, commercially, agriculturally, socially, and culturally.

All these were geared to his program of raising the standards of his people's social and economic living, and of safeguarding the country's security, free enterprise, and free labor.

In life, Magsaysay virtually became a part of every Filipino who had tasted of the first fruits of a strong democratic government in realistic partnership with a truly free people. We emphasize a strong Philippine Government under Magsaysay in league with the people, who had found a new birth of real freedom and democracy because history, more often than not, records only the nauseating disparity between a strong government and a cowed and repressed populace under it in any given country. In contrast, the Philippines, under Magsaysay's short-lived administration, could well be recognized as a real democracy in action, is we may use a wornout tagline.

Beyond the seas, Magsaysay, the leader of true democracy, became kindred to peoples who had recently won their freedom from centuries of colonial bondage. He had become a moving inspiration to those peoples who are still fighting for their freedom, for their fights and dignity as human beings, and for the integrity of their sovereign nations.

At least in the Philippines, Magsaysay was the infallible link that forged strongly the honest and sincere intentions of the American people in friendship and fraternal brotherhood with the freedom-loving peoples of Asia.

Magsaysay had the courage and the wisdom to proclaim his stand against the sinister tide of ultranationalism in his own country. And, had he lived longer, he would have gladly met his opponents frontally on that issue in the coming November elections. He condemned with all his being the suicidal stand of neutralists in the deadly fight against Communist conspiracy throughout the world; and, proudly and loyally, he ranged his own people on the side of the United States in the event of another world war.

And now, too early in useful life, Magsaysay has passed into history.

Being human, incapable of emotional balance at weak moments of sorrow and grief caused by the sudden loss of one so precious as a loyal friend, one so deeply revered and loved as a people's leader, one so true as the personifications of fierce honesty and untarnished integrity in public life, we may weep silently and, incredulously, ask the eternal question—to which there is no ready answer: Why did he have to die?

Then, in faith alone, we may recover our shattered emotions from the depth of an abysmal unbelief and resolve with all our soul to continue in the path of progress which the honored dead had blazed for us. That is, if we are to prove our loyalty to his memory; if we are to be deserving of the gifts of democratic ways of life which he had shared with us—regardless of race, creed, or nationality.

Today, the untimely passing of Magsaysay has left a premature void—temporarily, we hope—in the art and science of building the Philippine nation. That void would have to be filled by a leader of clear vision for the good of the young country. We have no gift of prophecy to foretell what the future may bring to the Filipino people after the death of Magsaysay. But, like any ordinary mortal, we may be allowed an honest appraisal of the unfortunate situation.

We believe that the Filipino people will not allow any backward steps from the path of progress which they had gained with their late President Magsaysay. To indulge in a somewhat florid language, we dare say that that progress is the people's nectar which they shall not allow to filter in a sieve of expediency, only to go back to the old order of things.

In the last 3½ years, the Filipino people have won for themselves a valuable prize of freedom in national life for which they and their ancestors had fought, suffered, and bled in more than 350 years of governmental derangements of sorts. That prize of freedom, to them, is their Holy Grail which they will not allow anyone to desecrate with impunity and without resistance.

The Filipinos—if we interpret them correctly—have a distinguishing characteristic as a people. They are known for their rational discipline in straight thinking. It's true they love politics and fiestas, two strong incentives for graft and corruption in public and private life when handled without scruples. But they necessarily don't love politics and feastings that they would have to burn down their nipa huts in order to roast a pig for politicians and free-loaders. Amidst nonChristian lands, their soul as a nation and as a people rests in faith and love of God. Having faith in the Almighty, they have faith in themselves and in what they can do when the chips are down.

The old order of things where the government is strong at the top and the living population is repressed below, without hope to live for, is forever gone in the Philippines and no one, we earnestly hope, dare bring it back to super-impose again upon the people.

The untimely passing of their great leader, Ramon Magsaysay, is a challenge to all Filipinos who now find themselves at the fork of a road that has no turning back. Perhaps the fates are dealing with them in a strange way, and they may yet find some hidden blessings from the tragic loss of their beloved leader.

In that light we are confident and we have faith that Magsaysay will live on.

Are Farm Subsidies Worth the Price?

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. HOSMER. Mr. Speaker, whenever anyone voices questions as to the wisdom of agricultural subsidies he is pretty sure to get his larynx in the farm bloc wringer as well as become the target for some pretty abusive letters. Since the largest agricultural project in the congressional district I have the honor to represent seems to be a 12-foot window box currently growing nonprice supported petunias, perhaps I can bring up the subject with less risk of political suicide than a majority of my colleagues. It may be, however, that I will henceforth lead a lonely and friendly existence on Capitol Hill.

However, an editorial appearing in the Long Beach Press Telegram newspaper, of April 2, 1957, seemed to express so many sound ideas on the subject I believe it should be given the publicity this RECORD can supply. At least, the many hundred thousands of prosubsidy words herein oft contained will be little diluted by these of the Press Telegram and myself. I would judge from the editorial's style that it is the work of that newspaper's brillant young staffer, Harry Karns. He could have gone one step farther and calculated just how big a personal income tax reduction could be gained from cutting the $5½ billion farm subsidy from the budget. It amounts to some $32.35 per capita for 170 million people, just about $100 for a family of three. It is just possible that the subsidies are not worth that much to the country as a whole.

The editorial follows:

THE $5½ BILLION ITEM

While Congress is doing so much talking about gargantuan national budgets, perhaps it is timely to note that $5½ billion in the proposed new budget has been earmarked for special favors to one segment of the population at the expense of all the taxpayers. Yet, Congress gives no serious consideration to cutting in that direction. It is not fashionable to antagonize the so-called farm bloc.

A government that spends $5½ billion on a single domestic program ought to take a careful second look—if it is really serious about wanting to trim the essentials.

With certain features of the agricultural program there can be no serious argument. Most persons will agree that there ought to be a Department of Agriculture and that it should offer certain advisory and educational services.

Beyond that, the farmers themselves disagree as to the extent to which the Federal Government should go in regulating the affairs of American agriculture. Most of the $5½ billion will go into subsidies, price supports, and various handout programs for farmers. The farmers will get, as they have been getting for years, gifts of money and favors which no other group in our society enjoys. Yet, many of the Nation's farmers remain discontented with the interference of Government and feel that the interest which the Government takes in them is unjustified. The American Farm Bureau Federation, to name one of their organizations, looks toward the time when Government will get out of agriculture and let the farmers find their own economic levels in our competitive society, just as do others.

Some of the Farm Belt legislators spend a great deal of overtime worrying about the problem of what the Government can do for agriculture. They talk about the welfare of submarginal farmers as though the Government has a responsibility to retain in farming all those who aren't capable of or interested in successful farming.

This solicitude, which isn't shown to the other struggling people of our society, totally ignores the cold, realistic fact that farming has become enormously more efficient. In the prewar area, for example, it took 12 weeks and 18 pounds of feed to produce a 3-pound broiler. Science has made it possible to produce the same bird in 9 weeks and with less than 10 pounds of feed. Similarly, scientific discoveries are making the tilling of the soil easier and more productive.

Thus, our farmers have long been producing more of certain things than is consumed. The Government has spent enormous sums trying to cope with this overproduction—either paying farmers for growing too much of something or paying thef or not growing it, but, in any event, paying them.

Meanwhile, many of the same legislators who are convinced the Government should

be responsible for this problem of overproduction also support the vast and often fantastic land-reclamation projects that come out of the Interior Department.

Twenty years have passed. It has not been proven that Federal interference is the answer to the farm problem. Yet we go right on pouring billions every year into Federal programs for agriculture. This outpour has become a crutch, an assurance to the farmer that if he doesn't use good sense in his planning it won't really make any difference because Uncle Sam will make it up to him.

We are not so naive as to believe that Congress is going to take the Government out of the farm business this year, next, or even the next. But surely the day must come when the "emergency" which prompted this interference in the first place will be considered ended. When it does come, Congress will be in a vastly improved position to cope with that other yearly emergency, the overweight national budget.

An Intimate Message From the Pacific Coast—"Shortsighted" Partnership Policy Condemned

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. EVINS. Mr. Speaker, I ask unanimous consent that an article by Mr. Harlan Trott of the Christian Science Monitor, of recent date, be reproduced in the Appendix of the RECORD.

The article follows:

SENATOR KUCHEL DISSENTS—AN INTIMATE MESSAGE FROM THE PACIFIC COAST

(By Harlan Trott)

SAN FRANCISCO.—An Eisenhower Republican from California has taken issue with the administration's "partnership" policy on water and power development so far as one project is concerned. Senator THOMAS KUCHEL has vetoed Interior Secretary Fred Seaton's recommendation to turn over the Trinity River power site in California to the Pacific Gas & Electric Co., of San Francisco.

Secretary Seaton feels it would be a good thing for the taxpayers to make this private company a partner with Uncle Sam in the project to tame the west-going Trinity and turn it south through mountain tunnels into the Central Valley. Mr. Seaton says the Government would save $55 million by letting the Pacific Gas & Electric Co. install a wheel in the dam and sell the current.

Congressman CLAIR ENGLE, Democrat, of California, quickly challenged Secretary Seaton's proposal and said Congress would never buy it. The upstate Congressman is a very vocal public-power advocate; so his views were somewhat discounted on that score.

But Senator KUCHEL has spoken right out in opposition to his own party. After studying the Interior Department ruling, this California Republican says: "I disagree with them." He feels Interior's recommendations "do not serve the interests of the people of California. I cannot and will not support them."

A spokesman for the P. G. & E. says Senator KUCHEL is being shortsighted and that if the Senator's views were applied to future California water development projects it could result in prohibitive water costs and retard water conservation.

Senator KUCHEL has finally come around to a conclusion which had much to do with Senator WAYNE MORSE jumping clear of his Republican traces and landing before long in the Democratic Party. In Oregon last fall, Mr. MORSE made a campaign issue of the "partnership" plan which the P. G. & E. and the Idaho Power & Light Co. helped to draft. The voters of Oregon sent him back to the Senate in preference to former Interior Secretary Douglas McKay, a "partnership" defender.

Making private utilities "partners" with the Federal Government is "fraught with many perils," Senator KUCHEL now concludes. "It would change, if not destroy, the basic concept of the Central Valley project which is to give priority to beneficial consumptive use of water."

Furthermore, Mr. KUCHEL believes it would wreck the power-preference provisions of Federal reclamation laws. These give cities and other public bodies priority over private utilities in the use of these public water and power resources.

Private utilities here in the West have based their "partnership" proposals on the advantages they claim as big taxpayers. But these claims have been extensively aired of late and questioned by the voters. Some people have begun to feel that private utilities could be in effect tax collectors rather than taxpayers.

Private utilities' taxpayments are said to be figured into the rates allowed them by State public regulatory commissions. Thus the consumers would seem to be paying the utilities' taxes which are computed into their monthly bills.

The crack in the administration's partnership theory of western water development is now extending into the Republican Party. Mr. KUCHEL's stand shows this.

The California Republican has swung toward a concept of water-resources policy spelled out long ago by Senator George Norris, the father of TVA.

"This is my doctrine," Norris once said. "I have no fault to find with any power man if he wants to put in a dam, sell the water to the farmers, and then sell the electricity to the rest of us. That's his right; that's his privilege; but when we build it, when we take out of the Public Treasury money to build the dam to generate electricity, I will never consent that the Government turn over the product that already belongs to the people to some private corporation to sell it back to us."

Public policy has long decreed that as between electricity and water for irrigation, water comes ahead of power. Private utilities understandably are not interested in the water; hence that part of the operation is left in any case to Government action.

Senator KUCHEL now seems to believe the Government should do all of the Trinity River job, since otherwise control of the water for power purposes might conflict with the proper functioning of the Central Valley project.

Patriotism in Modern America

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. VORYS. Mr. Speaker, I want to place in the CONGRESSIONAL RECORD the essay entitled "Patriotism in Modern America," written by Charles H. Hegenberger, 754 South 17th Street, Columbus, Ohio, an 11th-grade student.

Charles is 1 of the 12 winners of the statewide essay contest sponsored by the American Legion of Ohio, in which thousands of students participated. The purpose of this contest is to promote patriotism and good citizenship. Charles' essay effectively sets forth these principles. Here is how he describes what patriotism means to him:

PATRIOTISM IN MODERN AMERICA

(By Charles R. Hegenberger, of Columbus, Ohio)

America, a land of dreams come true, a land of hope, a land of freedom, and the greatest Nation in the world. What can we do to keep America great, what can we do today to be true patriots?

Patriotism is the love a man has for his country and how he uses this love to better his country so that it might gain respect from the nations of the world. Patriotism can be carried out each day of our lives by the man at his job, the housewife in her home, the children in their schools, the family in the community, and the community in the Nation.

The man on his job, who works hard to better his company and his position in an unselfish manner, is a modern patriot. His work of the improvement of his company helps to build a strong America.

The housewife in her home, who works to have a clean home, a home of love and a home with high moral standards, is a modern patriot for if every home is kept of this basis then all America is kept on this basis.

The boys and girls in the schools who strive to earn good grades, take subjects that are not always easy, but are to be used in later life, and the child who cooperates with school laws and his teachers is also a patriot, for these are the people who will replace the leaders of today.

When a community works to improve its schools, homes, business places, and people, it works to improve America and in doing so shows true modern patriotism.

We also in many special ways show patriotism. We offer aid to those of our country who have been hit by tragedy as well as to people in other nations, we obey our local, State, and national laws, we serve in the armed services, we serve in civil defense work, serve in our churches, serve when called for jury duty, salute and honor our flag, sing the national anthem and we vote for the men best qualified to carry out and make our laws. This is patriotism.

Patriotism is not dead just because there is not a war going on at this time. Patriotism today truly parallels the patriotism of Washington, Jefferson, and the formers of the Constitution. When each man strives to make America better and works with the people around him, no matter their color, creed, or religion, he and they carry on modern American patriotism.

Patriotism in Modern America

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay by one of the 12 winners in the Ohio Legion essay contest:

PATRIOTISM IS MODERN AMERICA

(By Patricia Zammary, of Campbell, Ohio)

As I walked down the street on a cold, bleak November day, I thought about the essay Patriotism in Modern America, which my classmates and I had been asked to write in school. At the moment this title didn't seem appropriate to me as I thought about this modern day and age. Why hadn't we been asked to write on communism, lasting peace, or a variety of other subjects?

I was now walking past the local voting precinct. I wondered what all the people—millworkers, housewives, schoolteachers, college students, and other people were doing here away from their daily routine. Could exercising the privilege to vote be a form of patriotism? This seemed to me to be the most important and least appreciated duty of each and every citizen of voting age. Yes, I could very easily include this in my essay.

By now I was further along my way, my mind recalling an outstanding Independence Day parade and the brilliance of the young soldiers marching so stanchly. This in itself was a form of patriotism. I thought about how different these same boys would look in the face of war. Serving their country, they would certainly be patronizing this magnificent country, one so worthy of respect and loyalty.

I hastened my steps, as I remembered that I was to help at home tonight, so that my mother might attend a Red Cross meeting. She and many like her are doing all in their power to see that those men in war and those at home can be made as comfortable as possible. My father, along with his friends, was going to a civil defense meeting. I guess many of us never realize it, but all of these little things play so great a part in displaying patriotism in our modern America. Perhaps I am also being a patriot by helping those who are continually helping others.

I walked up the steps to my home as I decided that perhaps this title "Patriotism in Modern America," is more important than I thought. We must display patriotism in our country if we expect it to continue to prosper and be truly great. All true Americans are patriots, most without realizing it. Summed up, voting, obeying laws, holding public office, defending our country in both war and peace, and helping community and national causes are among the many ways of saying, "This is my country: land of the free."

Army Recruiting

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. WHITENER. Mr. Speaker, recently the Army recruiting program in our area of North Carolina has been reflected upon by news stories alleging misconduct in recruiting of Army personnel.

It appears that the alleged wrongdoing by the enlisted and officer personnel in our area was not really misconduct on the part of these men. It seemed to be more of a matter of innocent men being victimized by following an ill-advised program which, they state, was countenanced by high officials in the Department of the Army.

To point out the contentions of some of the enlisted personnel involved, I call to the attention of the Members of this body a news story which appeared in the Shelby Daily Star, Shelby, N. C., on April 4, 1957. I hope that this story will be read by those who have the real responsibility for the situation of alleged improper recruiting practices:

SHELBY, N. C.—A former Army recruiter charged with coaching enlistees on Army entrance tests said here today the practice was fully condoned by his Charlotte headquarters.

A. D. Greene, discharged last week, told a Shelby newsman he had a copy of the test to use in assisting enlistees, and that it was given to him by his immediate superior.

Capt. Thomas S. Nelson, Charlotte Army recruiting chief, was fined $150, reprimanded, and relieved of his command a few days ago. Nine sergeants were reduced in rank.

The officer who replaced Nelson, Capt. Charles F. Shoudy, asked for comment on Greene's charges, said in Charlotte today: "I just hope it's true, because if it isn't, the Army is going to take a dim view." He did not elaborate. Greene said he had a copy—not marked restricted—of the test young men are given when they enlist.

"All recruiters in western North Carolina, working out of Charlotte, were giving assistance," he said.

In fact, we were informed to get copies of a Sears, Roebuck & Co. catalog, and use the catalog in instructing potential enlistees to identify tools. Identification of tools is part of the test.

"I have called Charlotte many times and told headquarters there I was teaching school and would have a certain number of men shortly," Greene said. "A man could be tested only once," Greene added, "and the tests were tough."

"I believe honestly that the recruiters involved did it out of loyalty to the main station Charlotte office," Greene said. "I had nothing personal to gain. I was not worried about meeting a quota. I feel I gave the Government a good day's work for a day's pay." The recruiting scandal resulted in a big turnover in the Charlotte office last week.

Greene, a veteran of two wars, said he wants to "clear the record with people in Shelby, for the community has accepted my family and me and we would like eventually to settle here." He charged officials at Third Army Headquarters in Atlanta knew this was going on.

"The chief recruiter told us that his only regret was the he hadn't taken some action to stop it," Greene said. Greene added that his only mistake was "not reporting the practice—but who would turn against his boss?"

"Many nights," he said, "I have stayed in the recruiting office until 10 o'clock drilling men who were trying to enlist."

Though he and others had copies of the tests, Greene said he did not have the answers. He said he did not appeal the case because his enlistment was nearly up, and an appeal would have extended his tour of duty.

Ann Cook, of East Cleveland, 1 of 12 Winners of American Legion Essay Contest

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mrs. BOLTON. Mr. Speaker, one of the events which we Ohio members anticipate every spring is the trip to Washington of the winners of the year's American Legion essay contest. It is always heartening to see the intense interest of these young people for what is usually their first visit to our Nation's Capital.

I am very proud of the fact that this year one of my constituents, Ann Cook, 1352 Hampton Road, East Cleveland, Ohio, a ninth-grade student, is among the winners. Under leave to extend my remarks, I include her winning essay herewith:

PATRIOTISM IN MODERN AMERICA

(By Ann Cook)

Webster defines patriotism as "love or devotion to one's country." To me, though, it means much more.

It is a love of all that is good, a devotion to an idea or ideal.

It is the excitement which wells within when I think of the rockbound coast of New England with the rough waves of the Atlantic Ocean spilling its foam onto the shores of the best country in the universe.

It is the warm feeling which engulfs me when I picture the sun-kissed shores of California washed clean with the soft waters of the vast blue Pacific.

It is the strength which rises up as my thoughts wander to the tall straight, green pines of the great Northwest with Mount Rainier standing as a guardian over all.

It is the thrill which comes over me as a picture of our glorious South passes in review.

It is the courage I feel as I gaze down on Plymouth Rock and see again a small band of Pilgrim feet setting foot upon that rock, praising God for giving them the zeal to seek feredom of worship in a new country.

It is the weariness which comes when I think of George Washington and a small handful of faithful soldiers enduring the hardships of Valley Forge that this freedom might not be taken from them.

It is the glow of pride as I hear again the ringing words of the great patriot, Nathan Hale, "I only regret that I have but one life to lose for my country."

It is the resoluteness which made Patrick Henry hurl in defiance those famous words, "Give me liberty or give me death."

It is the feeling of sadness when I read again the story of the Man Without a Country—a man who thought so little of his country he never wanted to see it again. Yet evidence at his death showed he loved it more than anyone ever dreamed.

It is the reverence which steals over me as my eyes wander over the battlefield of Gettysburg, hearing again the muffled sounds of Tramp, Tramp, Tramp, as a tall, rugged Lincoln utters, "That these men shall not have died in vain, but that this Nation, under God, shall have a new birth of freedom."

It is the sorrow which dismays me as I look at the tomb of an unknown soldier, whose name is known only to God.

It is the shuddering repugnance when I think of the brutality of the Batann death march.

It is the quake of fear when there dawns upon my consciousness the necessity of having had to use an A-bomb to bring others into submission.

It is the humility which mantles me as I think of the lady with the torch standing guard and saying to those who are oppressed and downtrodden, "Give me your tired, your poor, your huddled masses yearning to breathe free."

It is the apprehension which comes when I think there are those who would sell this country down the river and destroy the freedom, the happiness of millions who love her, even as you and I.

It is the hope knowing that there are Eisenhowers who hold fast the faith of our fathers.

It is all these emotions and others like them which surge through me as I behold Old Glory flying in the breeze and these events and many, many more passing in a panorama.

Yes; this is what patriotism in a modern America means to me.

Freedom of Navigation and Admission to the United States of Jewish Refugees from Egypt

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. GARMATZ. Mr. Speaker, on March 28 the Federation of Jewish Women's Organizations of Maryland met in convention. The delegates, representing 20,000 members, gave careful study and consideration to the situation of the State of Israel as a result of its withdrawal of its troops from the Gaza strip, the plight of the Jews who were expelled from Egypt. As a result of their deliberations, the following resolution was adopted, and under permission to extend my remarks, I wish to include it in the RECORD, as a matter of interest to all Members of Congress:

Whereas the State of Israel has, at the strong urgence of the President of the United States, and out of "a decent respect for the opinion of mankind," withdrawn its troops from the Gaza strip and from the islands commanding the straits of Tiran at the entrance to the Gulf of Aqaba; and

Whereas this Federation of Jewish Women's Organizations of Maryland views with deep misgivings the restoration to Egyptian administration of the Gaza area, despite Egypt's persistent declarations that it considers itself at war with Israel and will not negotiate or conclude a treaty of peace; and

Whereas, unless the United States exerts its great influence in the Council of Nations to bring conditions of justice and peace, there is grave danger of a renewal of the violence which existed before Israel moved into the area last October; be it

Resolved, That the Federation of Jewish Women's Organizations of Maryland, exercising the right of petition enjoyed by citizens of the United States, respectfully urge the Government of the United States to assert its leadership in behalf of peace in the Near East, and particularly to withhold support from any plan for turning over Gaza to Egypt so long as it does not renounce its policy of belligerency; be it further

Resolved, That we ask our Government to stand behind the principle of freedom of navigation, without discrimination, so that Israel shall not have imperiled its security by reliance upon assurances that it will not have cause to regret its withdrawal from the said straits.

Believing that in these issues the security of Israel and the national interests of the United States and the cause of world peace are one, we bespeak our Government's energetic efforts to achieve the above ends; be it further

Resolved, That we heartily commend our Government for granting opportunities for admission to the United States to victims of persecution in Hungary; we further point out that the confiscation and expulsion of Jews by the Government of Egypt, in violation of all law and right, and in disregard of humane considerations, has created a swelling stream of refugees from that land; and we accordingly urge that these victims of oppression be granted similar opportunities for admission to the United States.

We deem such acts consistent with our natural welfare and in accordance with traditional American policy; be it further

Resolved, That a copy of this resolution be sent to the President of the United States, to the Secretary of State of the United States, and to all Maryland Members of the Senate and House of Representatives.

No Mail Cut Here Till After Friday

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks I wish to include the following article, in part, that appeared in the New York Times, Saturday April 6, 1957:

NO MAIL CUT HERE TILL AFTER FRIDAY—BUSINESS GROUPS PROTEST REDUCTIONS IN SERVICE SET FOR NEXT WEEK

(By Robert Alden)

Normal postal service will continue in New York at least through next Friday.

A sharp curtailment in postal serivces because of a shortage of funds has been ordered by Arthur E. Summerfield, Postmaster General, for Saturday, April 13.

However, New York's Postmaster, Robert H. Schaffer, said yesterday that he was heartened by word that the House Appropriations Committee would consider the Post Office Department's request for an additional $30 million in funds on Friday.

Should this additional appropriation be made no curtailment of services would be necessary.

Meanwhile, business and political groups in the city bristled at word of the curtailments.

The New York Chamber of Commerce said that reduction of the postal service "would inevitably have a costly and disruptive consequence for business and industry in New York City."

Through its executive vice president, B. Colwell Davis Jr., the chamber said that adequate mail service was vital to the conduct of business in New York. It called on Congress to appropriate the necessary additional funds to maintain full services until the end of the current fiscal year in June.

RATE INCREASE URGED

At the same time, the chamber asked Congress to increase the postal rates so that, in the future, the postal deficit would not have to be paid out of general tax revenue.

The Commerce and Industry Association said that the postal curtailment "could be particularly disastrous for many of the area's smaller firms."

In separate telegrams to Mr. Summerfield and Mr. Schaffer, the association urged the Post Office Department to defer any curtailment until its dispute with Congress over funds was resolved.

Thomas Jefferson Miley, the association's executive vice president, said that mail transactions were vital to the concentration of exporters and importers, financial houses, insurance companies, manufacturers, sales organizations and retail stores in the metropolitan area.

"The time element is of the essence," he said. "Even slight delays in mail delivery can be costly."

The Post Office Department maintains that it must receive a supplemental appropriation of $47 million ($17 million of this amount seems assured) to continue full operations through the final quarter of the current fiscal year.

DELAYS PREDICTED

Mr. Schaffer said on Thursday that the curtailment would mean delays of 1 or 2 days in both outgoing and incoming mail in the New York district.

It also will mean discontinuance of all deliveries on Saturday, the closing of post offices on Saturday, the discontinuance of money orders sales and an embargo on the acceptance of all third-class mail except for merchandise.

Patriotism in Modern America

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. VORYS. Mr. Speaker, I want to place in the CONGRESSIONAL RECORD the essay entitled "Patriotism in Modern America," written by Kay Chambers, 121 East Whittier Street, Columbus, Ohio, a ninth-grade student.

Kay is one of the 12 winners of the statewide essay contest sponsored by the American Legion, of Ohio, in which thousands of students participated. The purpose of this contest is to promote patriotism and good citizenship. Kay's essay effectively sets forth these principles. Here is how she describes what patriotism means to her:

PATRIOTISM IN MODERN AMERICA

(By Kay Chambers, of Columbus, Ohio)

Patriotism is that intangible compilation of attitudes and emotions which inspire one to courage, loyalty, and heroic service to his country. These ideals and emotions are not suddenly aroused; they are the result of early teaching in the home, the school, and the church.

Everyone in our democracy has many opportunities to display patriotism in its various forms. It doesn't matter what race or creed, what political party you represent, or from what foreign land you claim your roots you are all Americans, with equal rights and privileges and the same patriotic obligation to defend them.

Many times you have seen the flag of your country hanging from its staff or waving proudly in the breeze. You say that is your flag, but have you ever stopped to think what it means. Your country's flag. Do you have for it a deep devotion, which you cannot express, or do you think of it simply as a bit of colored cloth?

The flag of the United States stands for the first settlers who left their homes, and cames across the seas, to live in the wilderness. It stands for the hardships of Jamestown and Plymouth; it stands for the hardy pioneers who climbed the Alleghenies and began to conquer the boundless West; it stands for the Declaration of Independence. Altogether, the flag means the Nation which guards and protects us. It is a privilege to

live under the stars and stripes of freedom rather than be like the people of Hungary, who still live in fear and war trying to win their freedom.

The men who led our country are very important. To George Washington, Abraham Lincoln, and all the rest we must give sincere thanks for the courage they showed in behalf of their country.

Does patriotism in modern America mean that you must fight, discover, or win a battle to be patriotic? No. We have no need to do this for there are things that every one of us can do. Children should go to school to secure a good education, so that they will understand our needs and problems for the years to come. Scientists, engineers, and many people give as much skill as they can for our country. But even the smallest job has the greatest importance.

Camp Fire, Girl Scouts, Boy Scouts, and 4–H are character-building organizations which help to make great men and women in this patriotic country of ours.

Patriotism in America today means the heart can swell with pride, that we are citizens of the red, white, and blue. That we can love God as we believe, and that freedom is our heritage.

More Opposition to the Federal Aid to Education Bill

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, a recent editorial in the Tablet deserves to be reprinted in the CONGRESSIONAL RECORD. It calls attention to the fact that Archbishop John O'Hara, of Philadelphia, has performed a constructive task in informing people of the fraudulent character of the proposed Federal aid to education bill. The article follows:

SCHOOL AID BILL

Archbishop John O'Hara, of Philadelphia, has performed a constructive task in informing people on the fraudulent character of the proposed Federal aid to education. The figures he presents indicate clearly the exaggerated claim of those striving to pass the measures at Washington which starts with an original appropriation of $1.3 billion.

In this respect we are happy to note that the two impressive articles on Federal aid by Archbishop O'Hara—and which the Tablet carried substantially on page 1—have been reprinted in pamphlet form by our contemporary, the Catholic Standard and Times, of Philadelphia.

Representative RALPH W. GWINN, of New York, comes up with an illuminating comment on the whole subject. He gets his material from William M. Adams, who is chairman of the municipal securities committee of the Investment Bankers Association of America.

Mr. Adams dug up records of school bonds sold recently in all 48 States. He figured the average cost of 1 schoolroom for 30 pupils at $30,000, and put that alongside the bond sales. He concluded that the school financing for the 4 months beginning October 1, 1956, "projected for a full year, would mean an expenditure for school construction of approximately $2.9 billion to provide about 96,600 classrooms in addition to the 69,200 scheduled for completion."

That total of 165,300 annihilates Marion B. Folsom, Secretary of Health, Education, and Welfare, for alleging a shortage of 159,000 classrooms. Mr. Adams' data would seem to be a lot more reliable than Secretary Folsom's, considering that the latter bases his figures on a lot of questionnaires sent into various States. Some of these weren't even answered.

Here is another interesting sidelight. The United States Office of Education (in Folsom's department) says Oklahoma needs 500 new classrooms. Raymond Moley, reporting in Newsweek from Oklahoma City, says the Sooner State and various local communities already have raised the money and are planning to build 1,200 new classrooms. It is also said that a prominent Oklahoman named Steve Stahl went to Washington recently to tell these things to a congressional subcommittee. He was booed and otherwise mistreated by two of the committee members, Representative C. M. BAILEY, of West Virginia, and Representative PETER FRELINGHUYSEN, JR., of New Jersey.

It seems to us that they are important enough straws to warn Congress not to be too hasty about writing the Eisenhomer school aid program into law. There may be no need for it whatever. Or the need may have been greatly exaggerated by professional ducationists and tax-and-tax, spend-and-spend advocates.

Talk Not Votes

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1957

Mr. HOFFMAN. Mr. Speaker, in these days of high prices, the man with a family, the man or woman who is past 45, dependent upon a fixed income, has difficulty in getting suitable food, clothing, and shelter.

The principal reason for that situation is unnecessary, though desirable, extension of services by the Federal Government. Additional reasons are inexcusable waste and inefficiency. Also, the unjustifiable giving of billions of dollars for what is called foreign aid.

Our waste and extravagance here at home grow out of the insistent demand by the home folks that the Federal Government do for them things which they can and should do for themselves.

THE DOLLAR SHRINKS

When your tax dollar makes its trip to Washington, if and when it comes back it buys you but 70 cents worth of merchandise or service. So why insist that some Federal employee spend it for you?

Hundreds of letters come to my office, as to the office of every other Congressman, demanding economy.

Some Congressmen solemnly and repeatedly promise relief from wasteful unnecessary expenditures.

But when the chips are down, as they were, for example, yesterday, the economy votes fade away. They fade because individual Members of Congress, subject to pressure or not completely aware of the merits of each proposal, lack either the desire or the courage to vote for a reduction of the additional expenditure.

Yesterday, the House, by a yea and nay vote, went on record 14 times on the appropriation bill for the Departments of Labor, and Health, Education, and Welfare, and related agencies. Each time my vote was for the cut. Next election you will find the Democrat candidate yelling about that.

Not one of the proposed amendments would have cut any item below what the Department interested received last year.

But, when the roll was called, the House voted 5 times to give the Departments more money than last year, on only 9 votes did it hold the line.

No need to write me to cut expenditures, because my vote will be cast for economy. Of course, I am very glad to hear from the home folks, but if you want economy write other Members of Congress who, classified as "liberals," vote away your money, but be sure to tell each one you write that you have already written me, that he need not refer the letter you write to me, that you are asking him for his support.

The people will never get either a reduction in the budget, a lessening of the national debt, nor a lighter tax burden, until they elect a majority in both House and Senate who will vote for instead of just talking economy.

Equalization of Retirement Benefits, the Congressional Intent

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1957

Mr. HUDDLESTON. Mr. Speaker, I should like to refer again briefly to H. R. 689, a bill which I introduced on January 3, 1957, and which is entitled "A bill to clarify paragraph 4 of section 15 of the Pay Readjustment Act of 1942, 56 Statutes, page 368." On February 14, 1957, I was privileged to give the House a short résumé of the bill, and some comment on its intent and its method of achieving that intent. I shall not now repeat that explanation, but will merely emphasize a few of its major points.

First, let me emphasize that this bill neither expands nor otherwise amends the intent of Congress when it enacted this measure originally in 1942, nor its intent in its reenactment in the Career Compensation Act of 1949. My bill would serve simply to restate the plain intent of the Congress that there shall be no discrimination between regulars and reserves with comparable service. That intent has been both confirmed and denied by conflicting administrative and legal decisions, and as it remains therefore in doubt this bill appears needful to terminate this confusion.

The Congress has repeatedly said that there shall be no discrimination between regulars and reserves with comparable service. Notwithstanding this long-established policy and the clear, unam-

biguous words effectuating it, the administrative agencies have persistently applied the 1942 law and its 1949 reenactment only to Regular officers. Evidence is clear and unequivocal, and includes statements of two Senators who served on the committee of the Senate which drafted this measure in 1942, including the chairman of the subcommittee which was charged with it, that it was intended to apply without discrimination to Reserve as well as Regular officers with World War I service.

H. R. 689 reads as follows:

Paragraph 4 of section 15 of the Pay Readjustment Act of 1942 (56 Stat. 368) is clarified to read as follows: "The retired pay of any officer of the Armed Forces of the United States, including the Reserve components thereof, who served in any capacity as a member of the military or naval forces of the United States prior to November 12, 1918, heretofore or hereafter retired with pay under any provision of law, shall, unless such officer is entitled to retired pay of a higher grade, be 75 percent of the active duty pay of his rank and length of service."

The only purpose of this bill is to clarify the 1942 law and its 1949 reenactment, and to confirm the expressed will of Congress. Neither the intent of Congress nor the legal significance of the 1942 and 1949 acts is changed in the least. As confirming and emphasizing this fact, I have received only this last week a letter from a man whose word must necessarily be regarded as the highest possible authority available as to congressional intent in the original enactment of the 1942 act. That man, former Senator and former Governor of Colorado, the Honorable Edwin C. Johnson, now retired, was the Senate sponsor of the 1942 act, and also chairman of the subcommittee of the Armed Services Committee which considered the bill. It is a privilege and an honor for me, with the indulgence of the House, to be able to put into the RECORD the statement of former Senator Johnson, whose letter to me, dated March 30, 1957, reads as follows:

H. R. 689 AND S. 1085

DENVER, COLO., *March 30, 1957.*

Hon. GEORGE HUDDLESTON, Jr.
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR SIR: I am advised that you have introduced in the present Congress a redraft of a former bill clarifying paragraph 5, section 15, of the Pay Readjustment Act of 1942 and confirming the applicability of that bill to qualified Reserve and National Guard officers.

As the Senate sponsor and the chairman of the subcommittee handling the Pay Readjustment Act of 1942, and as a member of the Senate-House conference which wrote the very paragraph which is the subject of your bill, I say without reservation that it was clearly the understanding and intention of the Senate in 1942 that there be no discrimination between Regular, Reserve, or National Guard officers in pay for similar military service.

I think the Comptroller General and the Court of Claims were in error in holding otherwise.

However that may be, I believe the Congress should correct the matter now and remove all doubt with respect to such discrimination by the early enactment of your bill.

May I commend you for sponsoring the bill and wish you success in its passage.

With kindest regards, I am

Sincerely yours,

EDWIN C. JOHNSON.

Permit me to point out that, the congressional intent having been established beyond question by former Senator Johnson's statement, the only other objection raised to the enactment of this measure has been its allegedly prohibitive cost. In sober fact, there are about 7,000 Reserve component officers, otherwise qualified for retirement, who are or may become entitled to 75 percent retired pay for World War I service. By actuarial computation, they are dying off at the rate of something over one a day, and nearly all will be gone within the next 25 years. The average annual cost as to them will be approximately $6,956,400, which cost, of course, was anticipated by Congress when the law was passed in 1942 and reenacted in 1949. According to highway engineers of whom we have inquired, this sum is about enough to defray the cost of 8 miles of a normal, modern four-lane highway. It amounts to considerably less than one one-hundredth of 1 percent of the Federal budget currently under consideration by this Congress.

It is universally acknowledged that a strong, vital, enthusiastic, and experienced Reserve is absolutely essential to our national defense. Since we as a Nation are committed to the utmost use of voluntary service in that defense, we must assure its personnel that fairness will characterize their Government's treatment of them throughout their participation in their country's defense, and afterward.

The Congress has many times declared its adherence to the principle of equal treatment as to retirement for all components of the armed services. The enactment of H. R. 689 will serve to establish this principle once and for all in the organic laws of the land.

TVA Yardstick Still Serves Vital Role

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1957

Mr. EVINS. Mr. Speaker, the TVA last year paid an average of more than 6 percent of its income in lieu of tax payments. The TVA also last year paid into the United States Treasury $54 million or 4 percent of the Government's interest.

The Federal Government requires and receives 56 percent of TVA's entire electric power production for defense plants, and at preferential rates, which represents additional great savings to the Government.

On flood control the TVA system, during the recent southeastern floods, saved for the people of this Nation an estimated $50 million in flood damage.

Yes; TVA continues as a tremendous asset for the entire Nation, and the TVA yardstick still serves a vital role.

In this connection, I ask unanimous consent to have reproduced in the RECORD a timely and factual editorial from the Nashville Tennessean of recent date.

The editorial follows:

TVA YARDSTICK STILL SERVES VITAL ROLE

In commenting editorially last week on the Tennessee Valley Authority, the New York Times noted that the agency has served well and urged that it not be crippled, or overexpanded. In ending it also took note of TVA as proof of good American engineering and good American farsightedness and urged that point not be forgotten, even though "the somewhat romantic dream of the late Senator George Norris as to yardsticks may dim a little with the passage of the years."

Inadvertently perhaps, there the Times struck an unfortunate note. The enemies of TVA would like nothing better than to bury the Agency with honors as an engineering triumph, but lacking that, the burial of the yardstick idea is their most pressing and dedicated desire. It is a point that these enemies argue endlessly.

Shortly after TVA announced its wholesale and retail rates in 1933, a number of the large power companies in and adjacent to the TVA area reduced their rates sharply. In later years various adjustments were made throughout the industry. There is considerable evidence to show that TVA's influence has been felt widely and there is little doubt that it will continue to be felt as long as TVA and its distributors continue to show that low electric rates are a financially sound proposition. But even lacking this evidence of influence, the biggest argument supporting the yardstick's influence is the bitterness with which private power fights that conception.

"Look what TVA doesn't pay in taxes," is often the cry. In testimony this week before a House subcommittee, Mr. G. O. Wessenauer, TVA power manager, had some figures in answer. Mr. Wessenauer noted that TVA last year paid an average of a little more than 6 percent of its income in lieu of tax payments. He said the average private utility paid about 9 percent but some paid as little as 4½.

He also noted that TVA paid to the Government $54 million or 4 percent of the Government's investment.

Federal defense plants require and get fantastic amounts of electricity—56 percent of TVA's output last year—at preferential rates, and consequently at a saving to the Government. On river navigation, TVA returns about 4 percent of the Government's navigation investment. TVA's flood-control program prevents Government allocation of funds to flooded areas as "disaster loans." So, in order to determine costs of power and TVA's returns, the cost of flood control and navigation must also be determined. Add to that the cost of other programs such as fertilizer research, basic agronomic research and forestry, TVA's return is a great deal more than its enemies will admit.

Add on the other side the billions of dollars that have been written off for tax purposes in plant expansions by private power and the various funds to private power under the atomic power program—which moved even Senator HARRY F. BYRD to cry "subsidized" and the picture that TVA's enemies would like to paint becomes blurred indeed.

As a yardstick of rates, TVA looms monumentally high. And that is what its enemies would soonest have everyone forget.

The Budget

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, April 8, 1957

Mr. BARRETT. Mr. President, it has been a good many years since the people of this country have become so exercised about the cost of government. The world situation has made it imperative that our defense establishment be maintained in a strong fashion for security purposes, and as a result the budget has reached the highest point in the peacetime history of our country. Many people take it for granted that many savings can be effected in a budget of enormous size of the one presently under consideration by the Congress. My colleagues, the senior Senator from New Hampshire [Mr. BRIDGES] and the senior Senator from Virginia [Mr. BYRD] have documented specific cuts in the budget which would bring about substantial savings. I am hopeful that the Congress will reduce this budget by over $3 billion.

I presume that, while many Senators will agree in the main with the cuts proposed by my two colleagues, they would differ on some of the proposals. By the same token, Mr. President, I take it for granted that nearly every Member of the House and the Senate would disagree with some of the proposals made by Mr. Theron J. Rice, special coordinator of the Hoover Commission program for the United States Chamber of Commerce. I may say that his survey indicates that a thorough and exhaustive search was made of the budget, and I am sure that the suggestions made by him merit serious consideration by every Member of this body.

I ask unanimous consent that Mr. Rice's article on the budget be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOOVER REPORTS PINPOINT $1 BILLION BUDGET CUT—ANALYSIS REVEALS 24 PLACES WHERE APPROPRIATIONS CAN BE REDUCED

"Everybody's for cutting the budget—the question is where."

That's the complaint heard most frequently in Washington.

The purpose of this special study is to help you show your own elected representatives, executive agency heads, and economy-minded Americans everywhere exactly where and how to cut 1958 appropriations at least $1 billion by adopting and implementing promptly certain recommendations of the bipartisan Hoover Commission.

To be even more specific, this study shows you 24 places to cut a total of $1,145,014,448, without impairing a single essential project or program of the Federal Government.

In most instances, the savings estimates are taken from the budget itself. In others, they are conservative estimates based upon carefully documented information.

In a few cases, the action that is needed to achieve these savings is within the jurisdiction of the House and Senate Appropriations Committees. In most cases, however, substantive changes in existing statutes are necessary and must be initiated by one of the legislative committees.

Report and recommendation	Supporting arguments	1958 savings estimate	Committee jurisdiction
Business enterprises, No. 8 (b); to make prices in post exchanges adequate to cover all costs.	Extensive indirect use of appropriated funds (military pay) is in violation of law and intent of Congress.	$7, 400, 000	House and Senate Armed Services.
Business enterprises, No. 9; to review and, wherever possible, repeal laws permitting or requiring armed services to engage in business-type activities.	Under program begun more than 3 years ago, Department of Defense has completed review of only 1,200 of more than 2,500 business-type activities and decided to curtail or close only 525. Many statutes authorize activities that no longer can be justified.	75, 000, 000	House and Senate Armed Services or Government Operations.
Business enterprises, No. 10; to liquidate Postal Savings System.	Conditions that justified its establishment no longer exist. Competes unfairly with privately owned banks and other savings institutions. Alleged profits of system are result of bookkeeping transactions.	6, 300, 000	House and Senate Post Office and Civil Service.
Business enterprises, No. 11; increase parcel-post rates to cover indirect costs.	Subsidized Government parcel-post system is unfair competition with common carriers. Many indirect costs, such as contributions to Government retirement fund, are not now reflected in rates.	50, 000, 000	Do.
Lending agencies, No. 15; to terminate the program of loans for college housing.	Adequate financing is available from private lenders. Unprecedented postwar increase in college enrollments—which partially justified start of program—has leveled off.	146, 910, 000	House and Senate Banking.
Lending agencies, No. 19; to terminate the program of Housing and Home Finance Administration advances to municipalities for public-works planning.	Federal Government should encourage such activities and provide advice, but grants and interest-free loans for planning public improvements is an improper Federal activity and increases tax burden on all citizens.	8, 500, 000	House and Senate Banking or Appropriations.
Lending agencies, No. 32; to require the Farmers' Home Administration to pay its administrative expenses out of interest, premiums or other fees.	During the existence of FHA and its predecessors, administrative expenses have exceeded income from interest and other sources by more than $400 million. Thus, taxpayers generally are financing, without their knowledge or approval, a subsidy to a fraction of the people.	29, 914, 000	House and Senate Agriculture.
Lending agencies, No. 35; to require the Federal Crop Insurance Corporation to pay its administrative costs out of premiums, cover own losses, and provide reserves.	Current premiums are inadequate to pay administrative expenses, despite fact agency now has 16 years of actuarial experience, and law intended that it be self-supporting.	7, 300, 000	Do.
Lending agencies, No. 36; to require the Rural Electrification Administration to finance its operations out of receipts and secure its financing from private sources.	Treasury borrows money at better than 3 percent interest, advances funds to REA which, by statute, charges its borrowers only 2 percent interest; taxpayers—including 90 percent of farmers—pay the difference.	9, 620, 000	Do.
Lending agencies, No. 39 (c); to require the Small Business Administration to pay its operating expenses out of interest receipts.	Taxpayers generally—including the majority of small-business men—should not be compelled, without their knowledge or approval, to finance subsidized loans to small businesses that private lenders regard as poor risks.	6, 000, 000	House and Senate Banking.
Lending agencies, No. 40; to require that the veterans life insurance program be self-sustaining.	14 million veterans who no longer hold VA life insurance policies, plus all other taxpayers, are being forced to pay 7,000,000 policyholders a $24,500,000 subsidy. These expenses could be paid out of receipts and VA still could declare a $200,000,000 dividend in 1958.	24, 800, 000	House Veterans' Affairs; Senate Finance.
Business Organization of Department of Defense, Nos. 8, 9, 10; to integrate military supply programs by establishing a Defense Supply and Service Administration, directly under the Secretary of Defense.	The degree of integration that is necessary cannot be achieved within the framework of the present military supply organization. The Armed Forces have failed to carry out repeated congressional mandates that this goal be achieved through appropriate administrative actions.	250, 000, 000	House and Senate Armed Services or Government Operations.
Business organization of Department of Defense, Nos. 13, 14; to permit high degree of specialization in support activities and clarify proper roles of military and civilian personnel assigned to such activities.	Many management positions that are reserved for military personnel, who are rotated excessively, should be career positions for civilians. Duplicate staffing is prevalent and can only be resolved by statutory clarification of military-civilian roles.	160, 000, 000	House and Senate Armed Services or Appropriations.
Personnel and civil service, Nos. 11, 12, and 13; to require a new performance rating system; to limit the appeal rights of veterans, and to minimize the impact of reduction-in-force orders on career nonveterans.	Absolutely essential to reduce costly and wasteful 25 percent annual turnover of Federal employees. Present performance-rating system does not measure relative merits of employees. Veterans' Preference Act creates inequities and complicates dismissal procedures.	50, 000, 000	House and Senate Post Office and Civil Service; House Veterans' Affairs; Senate Finance.
Water resources and power No. 1 (c); to limit Federal participation to projects involving a specific national interest and which are beyond the means or needs of local or private enterprises.	Despite the increasing load of industrial and domestic wastes going into our rivers and streams, pollution control remains a primary local and State responsibility and the financial condition of every State is far better than that of the Federal Government.	54, 110, 000	House and Senate Public Works or Appropriations.
Water resources and power, No. 10; to require that the Tennessee Valley Authority cease the building of steam plants.	The proposed expansion of TVA's hydroelectric capacity is an unjustifiable expansion of Federal intervention into a commercial field to provide subsidized power for a select few at the expense of taxpayers generally.	30, 000, 000	House and Senate Public Works.
Water resources and power, No. 11 (b); to require that no additional transmission lines be undertaken where such service can be provided by non-Federal agencies.	Proposed expenditures for this purpose by Southwestern and Bonneville Power Administrations cannot be justified because private utilities are willing and able to provide needed services, using private instead of tax dollars.	14, 006, 000	House and Senate Public Works or Appropriations.
Transportation, No. 3; to require that if a car is desired for personal use abroad by military or civilian personnel, the owner should pay for its transportation to and from his station overseas.	Approximately 6,000 privately owned cars are shipped abroad each month—all on Government vessels—at a cost to the taxpayers of $27,000,000 annually. On occasions, entire ships have been devoted to this movement.	27, 000, 000	House and Senate Armed Services or Appropriations.

Report and recommendation	Supporting arguments	1958 savings estimate	Committee jurisdiction
Transportation, No. 13 (c); to require maximum utilization of commercial carriers and to restrict MATS activities to military necessities.	Despite policies stressing maximum reliance on commercial carriers, these carriers handled only 14.6 percent of the total military air passengers and only 2.7 percent of military cargo and mail. This substantially increased the subsidies paid to international carriers.	$10, 000, 000	House and Senate Interstate Commerce or Appropriations.
Federal medical services, Nos. 7, 8, 9; to require tighter administration of medical-care program for veterans with non-service-connected ailments, and to require verification of statements of inability to pay.	More than half of VA hospital patient load is veterans with non-service-connected ailments. No veteran who really cannot afford hospital care should seriously object to having his "inability to pay" statement verified.	100, 000, 000	House Veterans' Affairs; Senate Finance; House and Senate Appropriations.
Federal medical services, No. 5; to rescind authorizations and appropriations for general hospital construction, except those already under construction or contract.	There already are more VA "general" hospitals than are needed. Provision of additional beds to insure care for larger number of veterans with non-service-connected ailments cannot be justified.	31, 000, 000	House and Senate Appropriations.
Federal medical services, No. 15; to terminate Government-financed hospital and clinical service to American merchant seamen.	This care amounts to a subsidy to employees of one industry and not to its airline and rail competitors. Care was justified in early days, but seamen are highly paid now and many health insurance plans are open to them.	13, 945, 448	House Interstate and Foreign Commerce; Senate Labor and Public Welfare.
Real property management, Nos. 7, 8; to require that the General Services Administration consolidate Government office space in large urban centers and promote relocation from high-cost areas.	Economical and efficient management practices, plus giving GSA appropriations for all Government-owned or leased buildings, could cut in half 10-percent vacancy rate.	3, 500, 000	House and Senate Government Operations.
Real property management, No. 9 (d); to give Director of Office of Defense Mobilization authority to establish policies governing retention and disposition of industrial properties for mobilization purposes.	Task force said 100 of 288 plants in National Industrial Reserve can and should be disposed of without harm to national security. Some are obsolete or in poor condition; some compete unfairly with privately owned facilities. Their retention creates costly maintenance problem.	30, 000, 000	House and Senate Armed Services.

Iran in the Middle East Adds TVA Concept to Plan for Economic Development

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. EVINS. Mr. Speaker, in a recent article appearing in the Nashville Tennessean, there appears an account of the plans by the Iranian Government in the Middle East to build a system of storage dams and power developments in that area, modeled along the concept of the Tennessee Valley Authority. The idea of the TVA has captured the imagination of people all over the world as it has become a symbol of progress and hope. Projects patterned after TVA have been built in several countries and planned in others.

The article concerning the plan of the Iranian Government is written by Mr. Gordon R. Clapp, former Chairman of the TVA Board, who is now a member of the firm providing planning and advice to foreign countries in resource development work.

The article follows:

IRAN ADDS TVA CONCEPT TO ECONOMIC PLAN—SYSTEM OF STORAGE DAMS ON FIVE RIVERS KEY TO NEW PROGRAM OF HOPE IN THE MIDDLE EAST

(By Gordon R. Clapp)

(Editor's note.—Gordon R. Clapp, former Chairman of the TVA Board, is a member of a firm which provides planning and administrative services to foreign countries in resource development work. This is a condensation of an article he wrote for the Middle East Journal telling of the TVA idea in Iran.)

A new approach to the challenging problems of economic development is taking shape in the Khuzestan region of southwestern Iran, where five rivers flow in the broad plain north of the Persian Gulf and the vast oilfields feed the gigantic refinery at Abadan.

For this region, Iran has asked a new kind of American company to take responsibility for a program of unified development of water and land resources.

National planning is not new in Iran. Her government is now embarked on the second 7-year plan, calling for a long list of projects—new highways, dams, irrigation facilities, airports, schools, hospitals, and industries. But building a program of economic development on the interrelated natural resources of one of its great regions is a new approach in Iran. Indeed, it had not been done anywhere until the Tennessee Valley Authority was launched in the 1930's to try the idea in a sorely depressed area of the southeastern United States.

It does not seem strange to anyone familiar with the worldwide interest in TVA that Iran should covet the TVA concept for the region of her greatest river valleys. The success of TVA has brought a steady stream of visitors to the Tennessee Valley—technicians, officials, and heads of state—to see and study the approach and the methods used. In many lands, the TVA has become a symbol of progress and hope. In recent years, projects patterned after the TVA experience have been built in some countries, and planned in others. Until 1956, however, the concepts on which the TVA was established had gained no firm footing in the Middle East.

AGREEMENT SIGNED

Then in March of that year, the Iranian Government took up the TVA idea as part of its vigorous effort to raise the standard of living of its people through full utilization of the nation's resources. Iran signed an agreement with Development and Resources Corp., of New York, which was formed in 1955 by David E. Lilienthal (former chairman of TVA) and this writer, together with the investment banking house of Lazard Freres & Co. of New York. Under this agreement our company will plan and help carry out a long-range program of agricultural and industrial delevopment of the Khuzestan region, along TVA lines.

The heart of the program, as tentatively conceived, will be a system of storage dams on the five rivers of the region, to permit irrigation of vast lands in the Khuzestan Plain. Special treatment of drainage and salinity problems will have to be devised. The dams will also control floods and make possible the generation of electricity on a large scale for industrial, commercial, and residential use. Mineral resources, too, are to be developed, including large quantities of natural gas.

For Iran, as for any nation, the ultimate importance of such an undertaking can depend a great deal on the kind of planning and foresight that go into it.
